The letter A to which the specification refers shows that part of a track over which the roller carrying the core rides where the track begins to rise slightly, so that the roller riding upon the track slightly raises the core in the cone, and the drawing shows that the track continues at the same level from A to B, where the sections of the mold begin to be opened; and then on to C at the same level, where the mold is fully opened. The specifications state that the core is connected to the roller by a swivel ball connection, so that the movement of slightly raising the core would not disturb its centering in the cone, where it continues to be held until the sides of the mold are unlocked and their separation begins, and remains in the same position until they are fully separated at C. This core is made of iron and weighs about two pounds, and if held within the cone, only slightly raised from its original position, so that it is freed from the cone and centered within it by means of the swivel ball connection, it will operate as a finger to strip the cone from either side of the mold to which it may adhere, and will co-operate with the unlocking and separation of the sides of the mold in disengaging the cone.

If the applicant desired to make his claim for his extraction method more specific, he had a right to do so and restate his claims.

In *Hobbs* v. *Beach*, 180 U. S. 383, 396; 21 Sup. Ct. 409, 414; 45 L. Ed. 586; 94 O. G. 2357, the Court said:

The patent had been the subject of an earnest contest in the Patent Office for four years, had been put in interference with five other devices, and it was scarcely possible that, after this long litigation, the patentee should not have detected defects in his original application, and have taken this opportunity of correcting them. His experience in this litigation had doubtless apprised him of the weak points in his prior specification and claims, and it was perfectly competent for him to restate them, provided his patent was not essentially broadened to cover intervening devices.

In *National Hollow Brake Beam Co. et al.* v. *Interchangeable Brake Beam Co.*, 106 Fed. 698, 709; 45 C. C. A. 544, 560, the Court said:

An inventor is not called upon to state in his specification or claims for a patent all the functions of his device, or all the uses to which his invention may be put. When he has plainly described and claimed his machine or combination, and has secured a patent for it, he has the right to every use to which his device can be applied, and to every way in which it can be utilized to perform its function, whether or not he was aware of all these uses or methods of use when he claimed and secured his monopoly—citing *Roberts* v. *Ryer*, 91 U. S. 150, 157, 23 L. Ed. 267; 10 O. G. 204; *Miller* v. *Manufacturing Co.*, 151 U. S. 186, 201; 14 Sup. Ct. 310; 38 L. Ed. 121; 66 O. G. 845.

Doubtless a patentee is entitled to every use of which his invention is susceptible, whether such use be known or unknown to him. *Potts* v. *Creager*, 155 U. S. 597, 606, 15 Sup. Ct. 194, 198; 39 L. Ed. 275; 70 O. G. 494.

See, also, *Dowagiac Mfg. Co.* v. *Superior Drill Co.*, 115 Fed. 386; 53 C. C. A. 36; *Kirchberger* v. *American Acetylene Burner Co.*, 128 Fed. 599, 606; 64 C. C. A. 107; *I. T. S. Rubber Co.* v. *Panther Rubber Mfg. Co.*, 260 Fed. 934; 171 C. C. A. 576; 271 O. G., 512.

The slight raising of the core, and then holding it projected into the cone while the mold plates are separated, introduced a novel and patentable feature, and constituted the contribution of Bruckman to the art of baking ice-cream cones.

[1] The core performs a very important function, which is obvious and inherent within the mechanism claimed in the original application.

[2] The district court erred in finding that the Brookfield and Stivers patent, No. 835,235, anticipates the patent in suit in the method of extraction of the cone. That is a patent for a molding machine, in which glass insulators are molded, and the material introduced by hand. The office of the core in the Brookfield and Stivers patent is to keep the glass insulator from tipping or tilting when it is being released from the mold, and is clearly distinguishable from the office of the core in the patent in suit. In the Brookfield and Stivers patent two cores are introduced into the molten glass, one of them for the purpose of creating a threaded opening in the glass insulator, and another above that to form an oblong opening, which will allow the insulator to be adjusted to any object upon which it is to be placed. The core which made the threaded opening in the insulator is entirely withdrawn from this opening, and the other core is fully withdrawn from the oblong opening created above the threaded opening. The core which has been withdrawn from the threaded opening is then allowed to remain in the oblong opening, in order to keep the insulator from tilting, so that it may fall out of the molds when they are opened without obstructing the passage. If the glass in cooling should adhere to the side of the mold, it could be broken off only by the use of a cold chisel. The evident purpose, therefore, of the cone remaining in the oblong opening at the top of the insulator, is not to strip the insulator from the sides of the mold, but to keep it straight, so that it will not tilt and obstruct its passage out of the molds.

In the patent in suit the core is but slightly raised within the cone, enough evidently to disengage it therefrom, and it remains projected into the cone until the sides of the molds are fully separated, for the very obvious purpose of stripping the corrugated sides of the cone from either of the mold surfaces. We can see no other purpose in retaining the core within the cone when the mold plates are opened, except that it may act as a stripping finger, and we think, as stated, that this is obvious and inherent in the mechanism claimed by Bruckman.

Glass molding is a nonanalogous art. The molten glass which is introduced into the mold is not heated; but it assumes the form of the mold when it cools. It does not expand, as does the batter introduced into the molds in suit, nor is there obviously the difficulty to be overcome which arises when batter, sweetened with sugar, is baked, of the molded product adhering to the sides of the molds, which are roughened and corrugated in order to hold the cone firmly while the core is slightly lifted within it.

The Brookfield and Stivers patent was considered by Judge Van Valkenburgh in *Bruckman et al.* v. *Stephens et al.* (D. C.) 268 Fed. 874, who found that it was distinctly in another art, and

that it did not anticipate the Bruckman patent. His opinion is cited with approval by the circuit court of appeals in *Roberts Cone Mfg. Co.* v. *Bruckman*, 266 Fed. 986. In both of these cases, which arose in the eighth circuit, the court had before it the history of the patent, its file wrapper, and considered the prior art. The rule of comity is not one of courtesy only, but has been established for the very practical and useful purpose of producing uniformity of decisions, where the records are substantially the same, as is the case here, and should not be departed from, except for sound and convincing reasons.

We have carefully studied the history of the proceedings in the Patent Office, as shown by the file wrapper, which discloses that the patent in suit was placed in interference with several patents in the pastry-making art, and also in the glass-molding art; that some of the original claims were canceled, and others were amended. No one of the 15 claims of the patent in suit, which it is alleged were infringed by the defendant, was amended or narrowed, and all are in the same form as when the application was presented. They therefore should not be considered as having been restricted or narrowed by any action of the Patent Office upon the other claims, but are entitled to a broad construction. See *Hess-Bright Mfg. Co.* v. *Fichtel*, 219 Fed. 723; 135 C. C. A. 421; *Pangborn* v. *Sly* (C. C. A.) 284 Fed. 217; 317 O. G. 501; *Veneer Machinery Co.* v. *Grand Rapids Chair Co.*, 227 Fed. 419; 142 C. C. A. 115; *Stromberg* v. *Zenith*, 254 Fed. 68; 165 C. C. A. 478; *Goodyear* v. *Davis*, 102 U. S. 222; 26 L. Ed. 149; 19 O. G. 543; *Weber Electric Co.* v. *Freeman*, 256 U. S. 668; 41 Sup. Ct. 600; 65 L. Ed. 1162; 288 O. G. 631.

While the manner in which the batter is supplied to the molds by the defendant differs from that used in the patent in suit, as does also the specific mechanism used by the defendant for locking the molds after the cores have been introduced into them, and also for unlocking the molds, yet we think these devices infringe the claims in suit, giving them the broad scope to which they are entitled.

[3] While Bruckman had made use of well-known elements, all of them old, yet by a new combination and sequence of operations, which he introduced in his step-by-step method, and the ingenious and novel method which he contributed for extracting the cone from the molds automatically, thus doing away with the unsanitary conditions caused by extracting the cones by hand, he produced a new and beneficial result never attained before and largely cheapened the cost of production. All this is evidence of invention. *Webster Loom Co.* v. *Higgins*, 105 U. S. 580, 591; 26 L. Ed. 1177; 21 O. G. 590.

We are fully in accord with the language of the opinion of the circuit court of appeals in *Roberts Cone Mfg. Co.* v. *Bruckman*, supra, and quote the same:

> This examination of the prior art in connection with the Bruckman patent results in the conclusion that Bruckman, though using several known elements, has added other new essential elements, has in a novel manner assembled and combined all in one machine, operated through a single transmission of power, and thereby has accomplished a new and desirable result. Bruckman has created a machine which automatically takes a semifluid adhesive batter from a tank, carries it through all intermediate stages of formation, baking, trimming, and conveyance, and finally deposits it as a finished, fragile, commercially perfect crust cone on a table ready for packing into cartons. No such result had ever been accomplished before; it was a useful result, and accomplished in a highly satisfactory and sanitary manner. This entitles his machine to be considered a pioneer in the field of automatic production of sanitary batter cones.

We are also in accord with the court in its finding and ruling that:

> For the purpose of testing the character of this patent as a pioneer, it should be considered as a whole, having in mind the entire invention, its purposes and its results.

The evidence discloses that Bruckman's device went into a large commercial use; that 44 machines have been manufactured, which show the elements set out in claim 66; that one-quarter of all the ice-cream cones manufactured in the United States are made on the Bruckman machines, and the price has been reduced for cones from $15.50 and $17.50 per thousand in 1908 to $3 per thousand soon after the Bruckman machines came into use.

The number of machines given above includes, not only those which have the dip method of introducing batter to the molds, but also the pump method of introducing the same. The defendant makes use of a rotatable wheel, upon which female molds are placed, and uses the step-by-step method of the Bruckman patent. He introduces batter into these molds by dropping it into them before the cores close down in them, and his mechanism for locking the molds and securing the cores within them is somewhat different from that of the patent in suit, yet we think they are covered by its broad claims in these respects.

In the matter of extracting the cones from the molds after they are baked, the defendant makes use of the same principle set out in claims 66 and 67 of the patent in suit, and uses the core, while suspended in the cone, to strip it from the sides of the molds when the same have been opened, and we think infringes these claims.

The appellee filed a motion that the arguments of counsel before the court below be added to the record, and we have been supplied with printed copies of these arguments. Counsel upon both sides had ample time for oral argument before us, and have filed extensive and comprehensive briefs, and the motion is denied.

The decree of the district court is reversed, and the case is remanded to that court for further action not inconsistent with this opinion; the appellants recover costs of appeal.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

889,480, S. Moss, Telephonic horn, or horn for talking machine, final consent decree sustaining patent, adjudging infringement, and granting injunction, Feb. 25, 1925, D. C., S. D. N. Y., Doc. E 31/75, *Sheip & Vandergrift, Inc.*, v. *World Loud Speaker Mfg. Corp. et al.*

Interference Notices.

U. S. PATENT OFFICE, *Washington, Apr. 6, 1925.*

Stanley Clague, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Fred A. Smith, 1426 West Third Street, Cleveland, Ohio, for registration of a trade-mark and trade-mark registered December 20, 1910, No. 80,410, to Stanley Clague, First National Bank Building, Chicago, Ill., and a notice of such declaration sent by registered mail to said Stanley Clague at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Stanley Clague, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 9, 1925.*

Mark Miller and Charles D. Miller, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Stockport Milling Co., Stockport, Ohio, and Butler County Milling Company, Poplar Bluff, Mo., for registrations of trade-marks and trade-mark registered November 20, 1894, No. 25,545, to Mark Miller and Charles D. Miller, Vassar, Mich., and a notice of such declaration sent by registered mail to said Mark Miller and Charles D. Miller at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mark Miller and Charles D. Miller, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 9, 1925.*

The American Radio Sales and Service Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Multiple Electric Products Company, Inc., 61 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered July 11, 1922, No. 156,611, to The American Radio Sales and Service Company, of Mansfield, Ohio, and a notice of such declaration sent by registered mail to The American Radio Sales and Service Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless The American Radio Sales and Service Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 14, 1925.*

The Brighton Chemical Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Agnes C. Graves, of 425 East Water Street, Milwaukee, Wis., for registration of a trade-mark and trade-mark registered July 28, 1908, No. 70,095, to The Brighton Chemical Co., 232 East Fourth Street, Cincinnati, Ohio, and a notice of such declaration sent by registered mail to The Brighton Chemical Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless The Brighton Chemical Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

Arnold Zweekly, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Arnold Zweekly, 289 Fourteenth Avenue, Astoria, Long Island, N. Y., and applications for patents filed by Kimball H. Stark, 1707 University Avenue, New York, N. Y.; William A. Ready, 112 Winthrop Road, Brookline, Mass.; and Walter W. Wood, R. F. D. No. 3, Canton, Ohio, and the Office having failed to secure service on the said Zweekly, notice is hereby given that unless said Zweekly, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

Arnold Zweekly, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Arnold Zweekly, 289 Fourteenth Avenue, Astoria, Long Island, N. Y., and applications for patents filed by Kimball H. Stark, 1707 University Avenue, New York, N. Y., and William A. Ready, 112 Winthrop Road, Brookline, Mass., and the Office having failed to secure service on the said Zweekly, notice is hereby given that unless said Zweekly, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, MAY 5, 1925.

[VOL. 334. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 142,939. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE NUCOA BUTTER COMPANY, New York, N. Y. Filed Jan. 29, 1921.

No claim is made to the words "Golden Flake—Pure Vegetable Shortening" apart from the mark shown in the drawing.

Particular description of goods.—Vegetable Shortening.

Claims use since Dec. 13, 1920.

Ser. No. 148,559. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) EDWIN B. STIMPSON COMPANY, Brooklyn, N. Y. Filed June 2, 1921.

46,206. PENS. Registered September 12, 1905. THE SPENCERIAN PEN CO., New York, N. Y., a Corporation of New Jersey. Renewed September 12, 1925.

46,208. CLOCKS. Registered September 12, 1905. WATERBURY CLOCK CO., Waterbury, Conn., a Corporation of Connecticut. Renewed September 12, 1925.

46,214. A PROPRIETARY MEDICINE FOR THE TREATMENT OF THE ILLS OF CHILDREN. Registered September 12, 1905. THE ANGLO AMERICAN DRUG CO. Renewed September 12, 1925, to Anglo American Drug Company, New York, N. Y., a Corporation of New York, assignee.

46,215. HAIR RESTORER AND DANDRUFF CURE. Registered September 12, 1905. JAMES LEFEVER BRADLEY, Plainfield, N. J. Renewed September 12, 1925.

46,229. A TONIC COMPOUND. Registered September 12, 1905. THE PURDUE FREDERICK CO., New York, N. Y., a Corporation of New York. Renewed September 12, 1925.

46,403. BOILERS. Registered September 19, 1905. RICHARDSON & BOYNTON CO., New York, N. Y., a Corporation of New York. Renewed September 19, 1925.

46,431. CORDS, LINES, TWINES, AND ROPES. Registered September 19, 1905. SILVER LAKE COMPANY, Boston, Mass. Renewed September 19, 1925, to Silver Lake Company, Newton, Mass., a Corporation of Massachusetts, assignee.

46,449. A LIQUID MEDICINAL PREPARATION. Registered September 19, 1905. WILLIS F. DARLING, West Derry, N. H. Renewed September 19, 1925, to Felix Seeler, doing business as Hemlock Oil Co., Derry, N. H., successor.

46,459. MALT EXTRACT. Registered September 19, 1905. MALT-DIASTASE CO. Renewed September 19, 1925, to Maltzyne Company, Brooklyn, N. Y., a Corporation of New York, assignee.

46,465. TOILET SOAP. Registered September 19, 1905. MÜLHENS & KROPFF. Renewed September 19, 1925, to Mulhens & Kropff Inc., New York, N. Y., a Corporation of New York, assignee.

46,466. A CREAM OINTMENT. Registered September 19, 1905. NATIONAL TOILET COMPANY, Paris, Tenn., a Corporation of Tennessee. Renewed September 19, 1925.

46,506. STOVES, FURNACES, AND PARTS OF STOVES AND FURNACES. Registered September 26, 1905. CHARTER OAK STOVE AND RANGE COMPANY, St. Louis, Mo., a Corporation of Missouri. Renewed September 26, 1925.

46,507. STOVES, FURNACES, AND PARTS OF STOVES AND FURNACES. Registered September 26, 1905. CHARTER OAK STOVE AND RANGE COMPANY, St. Louis, Mo., a Corporation of Missouri. Renewed September 26, 1925.

46,508. STOVES, FURNACES, AND PARTS OF STOVES AND FURNACES. Registered September 26, 1905. CHARTER OAK STOVE AND RANGE COMPANY, St. Louis, Mo., a Corporation of Missouri. Renewed September 26, 1925.

46,509. STOVES, FURNACES, AND PARTS OF STOVES AND FURNACES. Registered September 26, 1905. CHARTER OAK STOVE AND RANGE COMPANY, St. Louis, Mo., a Corporation of Missouri. Renewed September 26, 1925.

46,526. BRAIDED CORDS. Registered September 26, 1905. SILVER LAKE COMPANY, Boston, Mass. Renewed September 26, 1925, to Silver Lake Company, Newton, Mass, a Corporation of Massachusetts, assignee.

46,556. VARNISHES, JAPANS, OIL FINISH, AND BRONZING LIQUID. Registered September 26, 1905. MAYER & LOEWENSTEIN. Renewed September 26, 1925, to Mayer & Loewenstein, New York, N. Y., a Corporation of New York, successor.

46,561. TABLE SIRUP. Registered September 26, 1905. NEW YORK GLUCOSE CO. Renewed September 26, 1925, to Corn Products Refining Company, New York, N. Y., a Corporation of New Jersey, assignee.

46,562. TABLE SIRUP. Registered September 26, 1905. NEW YORK GLUCOSE CO. Renewed September 26, 1925, to Corn Products Refining Company, New York, N. Y., a Corporation of New Jersey, assignee.

46,564. WATCHES, WATCHCASES, AND WATCH MOVEMENTS. Registered September 26, 1905. PHILADELPHIA WATCH CASE CO. Renewed September 26, 1925, to The Keystone Watch Case Company, Philadelphia, Pa., and Riverside, N. J., a Corporation of Pennsylvania, successor.

46,597. LEATHER BOOTS AND SHOES. Registered September 26, 1905. LEWIS A. CROSSETT. Renewed September 26, 1925, to Lewis A. Crossett Co., North Abington, Mass., a Corporation of Massachusetts, assignee.

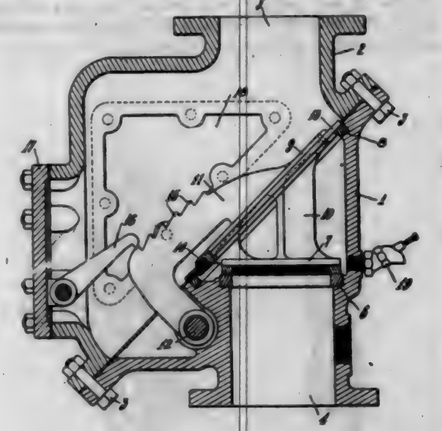
46,629. ROASTED AND GROUND COFFEE. Registered September 26, 1905. NEW ORLEANS COFFEE CO. LTD., New Orleans, La., a Corporation of Louisiana. Renewed September 26, 1925.

46,646. A REMEDY FOR CHILDREN'S DISEASES. Registered September 29, 1905. THE ANGLO AMERICAN DRUG CO. Renewed September 29, 1925, to Anglo American Drug Company, New York, N. Y., a Corporation of New York, assignee.

46,647. PETTICOATS. Registered September 26, 1905. THE DIELHENN MANUFACTURING COMPANY, Massillon, Ohio, a Corporation of Ohio. Renewed September 26, 1925.

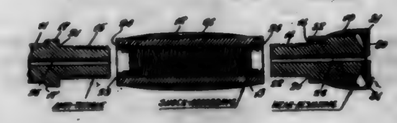
46,712. HORSE BLANKETS. Registered October 3, 1905. NEWICHAWANICK COMPANY, South Berwick, Me., a Corporation of Maine. Renewed October 3, 1925.

REISSUES



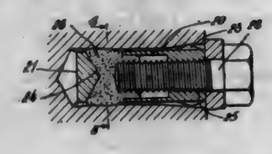
MAY 5, 1925.

16,059. TOY BOAT. RAYMOND E. HUNT, Cleveland, Ohio. Filed Feb. 2, 1925. Serial No. 6,483. Original No. 1,521,185, dated Dec. 30, 1924, Serial No. 432,020, filed Dec. 24, 1920. 4 Claims. (Cl. 46—57.)



1. In a combined toy land and water boat, a combination of a buoyant hull of dry wood of even density and thus of substantially uniform specific gravity throughout, a superstructure mounted centrally on said hull of limited lateral extent as compared with said hull, movable elements of irregular configuration comprised in said superstructure counterbalanced so as to at all times present equal amounts of weight along the median line of said hull, and rollers symmetrically disposed with respect to said median line so that said boat will be of relatively stable equilibrium whether used as an aquatic or as a land toy.

16,060. DRY-PIPE VALVE. ALBERT J. LOEPSINGER, Cranston, R. I., assignor to General Fire Extinguisher Company, New York, N. Y., a Corporation of New York. Filed July 15, 1918. Serial No. 245,110 Original No. 1,196,874, dated Sept. 5, 1916, Serial No. 592,810, filed Nov. 17, 1910. 13 Claims. (Cl. 169—22.)

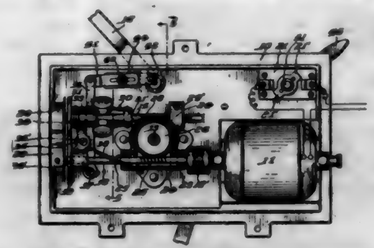


1. A dry pipe valve comprising an air valve and a water valve arranged to close the waterway at each valve and transmit pressure from one to the other when seated and valve-carrying means mounted outside of the waterway to swing about a center with respect to which the air valve has greater leverage than the water valve.

16,061. DRILL. FRED W. THURSTON, New York, N. Y. Filed Mar. 30, 1925. Serial No. 19,536. Original No. 1,477,855, dated Dec. 18, 1923, Serial No. 534,858, filed Apr. 18, 1922. 14 Claims. (Cl. 255—64.)

1. A drill adapted to be percussively driven into rock and the like, comprising a separable bit and drill rod, including an intermediate member; said bit being formed and tempered to have wear-resisting properties as its dominant characteristic, said drill rod being formed and tempered to have anti-fatigue properties as its dominant characteristic, said intermediate member being formed and tempered to have shock absorbing properties as its dominant characteristic.

16,062. BOLT ANCHOR. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to John Edward Ogden, Mountainville, N. Y. Filed Oct. 17, 1924. Serial No. 744,293. Original No. 1,487,290, dated Mar. 18, 1924, Serial No. 491,833, filed Aug. 11, 1921. 27 Claims. (Cl. 72—105.)



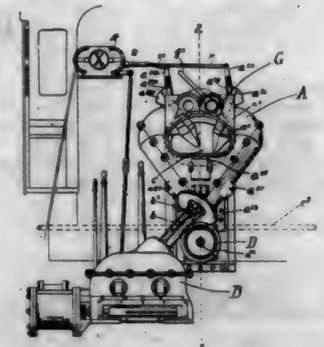
1. An anchor comprising a one piece expansion shield of relatively hard metal and having expansible elements and an expanding element consisting of a mass of relatively soft metal positioned within said shield, and substantially filling the space between said expansible elements.

16,063. MOTOR DRIVE FOR TALKING MACHINES. LOUIS P. VALIQUET, Chicago, Ill., assignor, by mesne assignments, to Victor Talking Machine Company, Camden, N. J., a Corporation of New Jersey. Filed July 24, 1924. Serial No. 728,046. Original No. 1,465,772, dated Aug. 21, 1923, Serial No. 449,404, filed Mar. 3, 1921. 16 Claims. (Cl. 188—187.)

5. In a drive of the character described, the combination of an electric motor, a shaft directly driven thereby bearing a brake-member rotatable therewith, a table shaft, worm gearing having machine threads between the drive shaft and the table shaft, a governor shaft having an undercut worm, geared to the main shaft, said shaft carrying a governor having a movable brake-receptice surface, a rocker lever having pads for respective coaction with said two brake surfaces of the governor and the drive shaft, a main governor lever pivotally carrying said rocker lever, a spring interposed

between said two levers tending to rock said rocker lever to effect brake contact with the drive shaft brake surface and out of contact with the governor brake

surface, and means for moving the main governor lever, comprising a handle and quick-adjustment link-connection between the handle and the main governor lever.



16,064. CHAIR BASE. THOMAS W. FOOTE, Cleveland, Ohio. Filed May 26, 1921. Serial No. 472,892. Original No. 1,303,646, dated May 13, 1919, Serial No. 267,888, filed Dec. 23, 1918. 11 Claims. (Cl. 11—33.)

1. A chair base, comprising legs having a plurality of oppositely disposed tenons on their inner ends and adapted to interengage over portions of the areas of said tenons, and a series of blocks formed with similarly disposed tenons, adapted to interengage with the tenons on said legs to form a solid joint.

16,065. AUTOMATIC STOKER. WILLIAM T. HANNA, Cincinnati, Ohio. Filed Mar. 13, 1925. Serial No. 15,384. Original No. 1,497,014, dated June 10, 1924, Serial No. 430,020, filed Dec. 11, 1920. 18 Claims. (Cl. 110—101.)

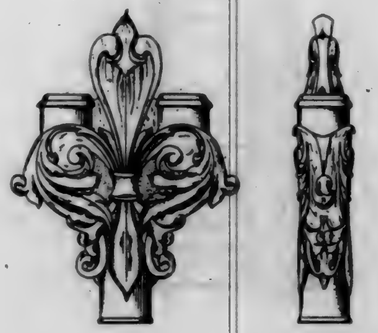
18. In combination, with a furnace having a fuel feed opening in a wall thereof, a housing mounted externally on the wall and embracing the fuel feed opening, means adapted to supply fuel to the side of the housing and of the fuel feed opening, distributors mounted in the

housing and adapted to receive the fuel at the sides of the housing and to direct it to the fuel feed opening, and means for actuating the distributors.

16,066. TUBE AND HINGE FOR TRANSFER BINDERS. GEORGE W. NEWMAN, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company, a Corporation of Massachusetts. Filed Dec. 6, 1924. Serial No. 754,440. Original No. 1,509,307, dated Sept. 23, 1924, Serial No. 706,398, filed Apr. 14, 1924. 8 Claims. (Cl. 129—12.)

6. A clamping member for loose leaf binders, comprising a flattened tubular member, and hinge bearings having oppositely extending attaching flanges welded to the exterior of said member, said bearing members projecting in line with the major axis of the tubular member.

DESIGNS

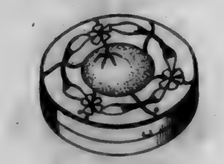


MAY 5, 1925.

67,181. SPINDLE FOR LIGHTING FIXTURES. WILLIAM ABRAMS, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,916. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures as shown.

67,182. SPINDLE FOR LIGHTING FIXTURES. WILLIAM ABRAMS, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,922. Term of patent 3½ years.

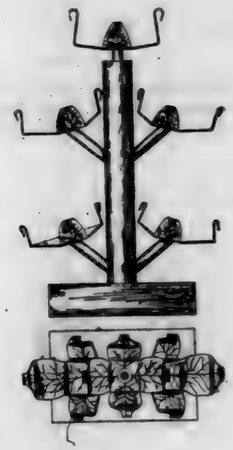


The ornamental design for a spindle for lighting fixtures as shown.

67,183. LAMP STAND. ARTHUR P. ALBRIGHT, Detroit, Mich. Filed Mar. 23, 1923. Serial No. 5,573. Term of patent 3½ years.

The ornamental design for a lamp stand, as shown.

67,184. VANITY CASE. JACOB AVIDAN, Freeport, N. Y., assignor to Lippmann, Spier & Hahn, New York, N. Y. Filed Feb. 7, 1925. Serial No. 12,308. Term of patent 7 years.



The ornamental design for a vanity case, as shown.

67,185. BOTTLE. DAVID BRAND, Houston, Tex., assignor to Brand Bottling Works, Houston, Tex., a Firm. Filed Feb. 7, 1925. Serial No. 12,298. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

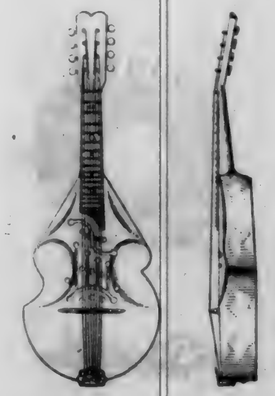
67,186. DISPLAY RACK. EDWARD Y. CROSSMORE, Toledo, Ohio. Filed Jan. 30, 1925. Serial No. 12,200. Term of patent 14 years.

The ornamental design for a display rack as shown.

67,187. BRACKET LANTERN FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,222. Term of patent 7 years.

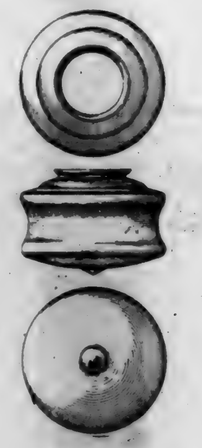
The ornamental design for a bracket lantern for lighting fixtures, as shown.

67,188. BOTTLE. JEROME P. CURRAN, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 8, 1924. Serial No. 11,616. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,189. BOTTLE. JEROME P. CURRAN, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 8, 1924. Serial No. 11,617. Term of patent 14 years.

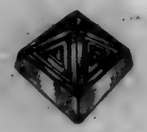


The ornamental design for a bottle, substantially as shown.

67,190. MANDOLIN. LUIGI DI MILLO, Buffalo, N. Y. Filed Sept. 4, 1924. Serial No. 10,677. Term of patent 7 years.

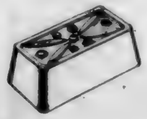
The ornamental design for a mandolin, as shown.

67,191. LAMP BOWL. EDWARD T. DOWNS, Chicago, Ill. Filed July 23, 1924. Serial No. 10,227. Term of patent 3½ years.



The ornamental design for a lamp bowl, as shown.

67,192. CANDY UNIT. SAMUEL I. EPSTEIN, Brooklyn, N. Y. Filed Mar. 7, 1925. Serial No. 12,626. Term of patent 7 years.

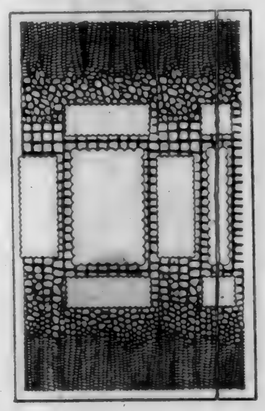


The ornamental design for a candy unit as shown.

67,193. CANDY UNIT. SAMUEL I. EPSTEIN, Brooklyn, N. Y. Filed Mar. 7, 1925. Serial No. 12,627. Term of patent 7 years.

The ornamental design for a candy unit as shown.

67,194. CANDY UNIT. SAMUEL I. EPSTEIN, Brooklyn, N. Y. Filed Mar. 7, 1925. Serial No. 12,620. Term of patent 7 years.

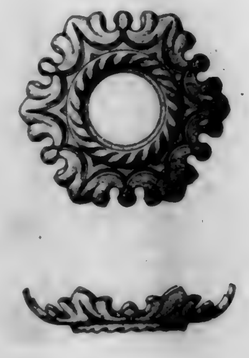


The ornamental design for a candy unit as shown.

67,195. HOSIERY. JOHN E. FITZGIBBON, Milwaukee, Wis., assignor to Phoenix Hosiery Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 11, 1922. Serial No. 4,264. Term of patent 7 years.

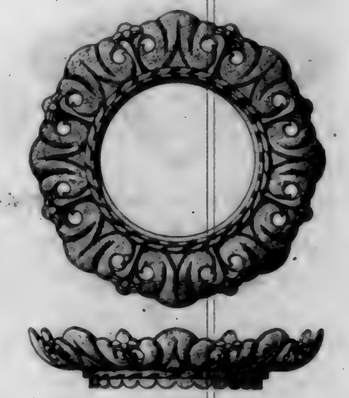
The ornamental design for hosiery, as shown.

67,196. SHEET OF WRAPPING PAPER. EMILE FRISCH, Chicago, Ill. Filed Feb. 11, 1924. Serial No. 8,611. Term of patent 3½ years.



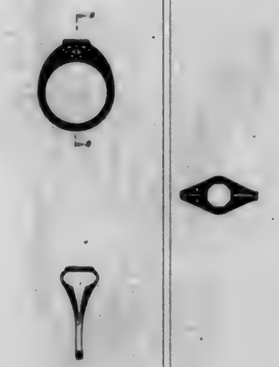
The ornamental design for a sheet of wrapping paper substantially as shown.

67,197. FOUNTAIN FOR DISPENSING BEVERAGE. HENRY GEHRING, Cleveland, Ohio. Filed Feb. 4, 1925. Serial No. 12,264. Term of patent 3½ years.



The ornamental design for a fountain for dispensing beverage, as shown.

67,198. BOBECHE OR ADAPTER FOR LIGHTING FIXTURES. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Jan. 31, 1925. Serial No. 12,211. Term of patent 7 years.



The ornamental design for a bobeche or adapter for lighting fixtures, substantially as shown.

67,199. LIGHTING-FIXTURE RING. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Jan. 31, 1925. Serial No. 12,212. Term of patent 7 years.

The ornamental design for a lighting fixture ring substantially as shown.

67,200. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 10, 1925. Serial No. 11,099. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

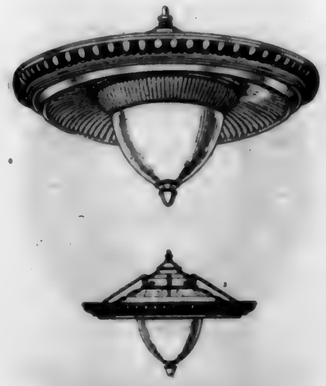
67,201. TEXTILE FABRIC. MELVILLE A. GUNST, New York, N. Y., assignor to Melville A. Gunst Costume Co., a Corporation of New York. Filed Mar. 3, 1925. Serial No. 12,566. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

67,202. TEXTILE FABRIC. MELVILLE A. GUNST, New York, N. Y., assignor to Melville A. Gunst Costume Co., a Corporation of New York. Filed Mar. 3, 1925. Serial No. 12,567. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

67,203. TEXTILE FABRIC. MELVILLE A. GUNST, New York, N. Y., assignor to Melville A. Gunst Costume Co., a Corporation of New York. Filed Mar. 3, 1925. Serial No. 12,568. Term of patent 3½ years.

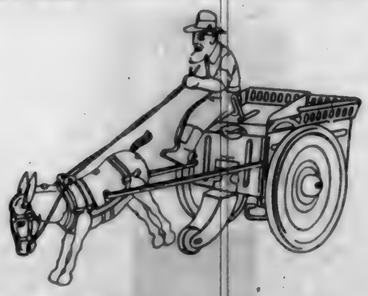


The ornamental design for a textile fabric, as shown.

67,204. TEXTILE FABRIC. MELVILLE A. GUNST, New York, N. Y., assignor to Melville A. Gunst Costume Co., a Corporation of New York. Filed Mar. 3, 1925. Serial No. 12,569. Term of patent 3½ years.

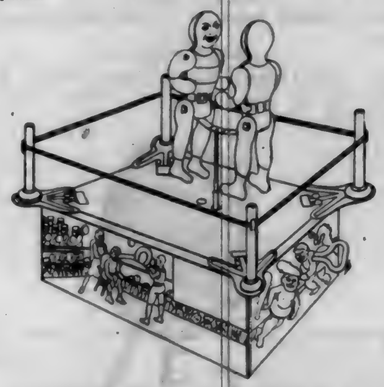
The ornamental design for a textile fabric, as shown.

67,205. ELECTRIC-LIGHT FIXTURE. JOHN W. HANCOCK, Denver, Colo. Filed Mar. 23, 1923. Serial No. 5,575. Term of patent 3½ years.



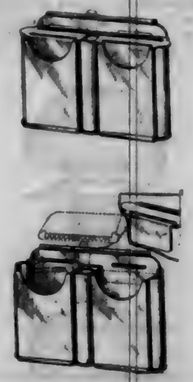
The ornamental design for an electric light fixture, as shown.

67,206. RADIATOR CAP. ROBERT H. HUMMERT, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 22, 1924. Serial No. 11,444. Term of patent 7 years.



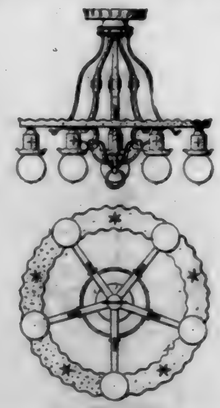
The ornamental design for a radiator cap, as shown.

67,207. TOY. LOUIS JAY KARN, New York, N. Y., assignor to Ferdinand Strauss, New York, N. Y. Filed Jan. 10, 1925. Serial No. 11,983. Term of patent 7 years.



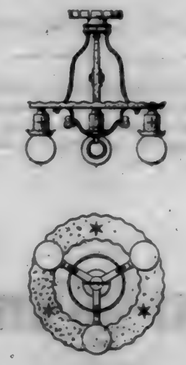
The ornamental design for a toy as shown.

67,208. TOY. LOUIS JAY KARN, New York, N. Y., assignor to Ferdinand Strauss, New York, N. Y. Filed Jan. 10, 1925. Serial No. 11,985. Term of patent 7 years.



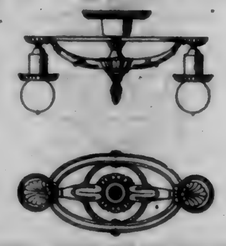
The ornamental design for a toy as shown.

67,209. RAZOR CONTAINER. JOSEPH KAUFMAN, Bronxville, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 29, 1925. Serial No. 12,182. Term of patent 14 years.



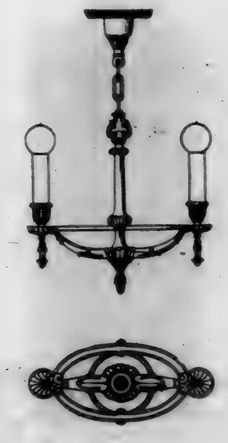
The ornamental design for a razor container as shown.

67,210. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,605. Term of patent 3½ years.



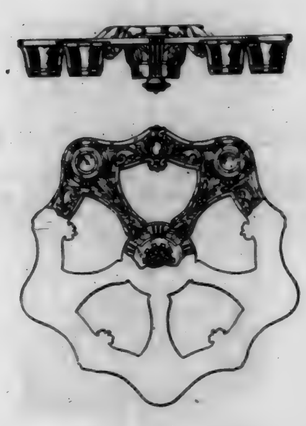
The ornamental design for a lighting fixture, as shown.

67,211. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,608. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

67,212. CEILING LIGHT. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,651. Term of patent 3½ years.



The ornamental design for a ceiling light, as shown.

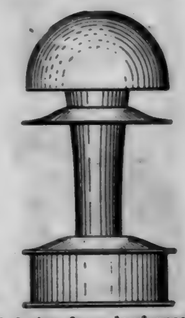
67,213. CHANDELIER. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,652. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

67,214. PLATE FOR LIGHTING FIXTURES. CHARLES ALBERT KUSTER, Elmhurst, N. Y., assignor to Tonoh-Metal Producing Company, New York, N. Y., a Co-partnership composed of Rudolph Kleinman, Jules Bloom, and Isidor Bloom. Filed Jan. 26, 1925. Serial No. 12,140. Term of patent 3½ years.

The ornamental design for a plate for lighting fixtures, as shown.

67,215. BOTTLE. JOHN MUHL LENTS, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,542. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown,

67,216. CONTAINER. SAMUEL LEVEY, Detroit, Mich. Filed May 16, 1921. Serial No. 470,004. Term of patent 3½ years.

The ornamental design for a container, as shown.

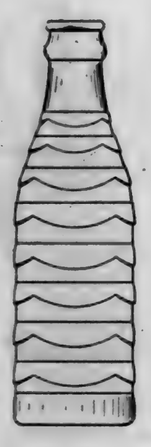
67,217. LOUD SPEAKER. HUGO MANOVILL, New York, N. Y., assignor to Piroxloid Products Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 13, 1925. Serial No. 12,040. Term of patent 7 years.

The ornamental design for a loud speaker, as shown.

67,218. HEATER. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 10,749. Term of patent 7 years.

The ornamental design for a heater, as shown.

67,219. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,531. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

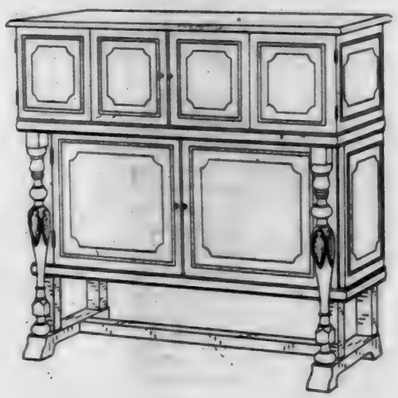
67,220. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,534. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

67,221. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,536. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

67,222. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,538. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,223. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,539. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

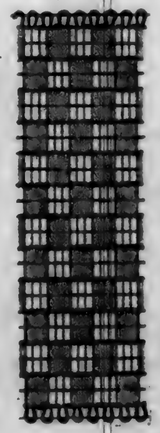
67,224. RADIOCABINET. PAUL F. NELSON, Milwaukee, Wis. Filed Jan. 14, 1924. Serial No. 8,308. Term of patent 3½ years.

The ornamental design for a radio cabinet as shown.

67,225. AUTOMOBILE BUMPER. NORBERT L. OBRECHT and FRANK E. PRICE, Pontiac, Mich. Filed Jan. 30, 1925. Serial No. 12,206. Term of patent 3½ years.

An ornamental design for an automobile bumper as shown.

67,226. FRINGE. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1924. Serial No. 8,876. Term of patent 14 years.

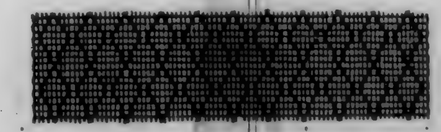


The ornamental design for fringe, as shown.

67,227. FRINGE. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1924. Serial No. 8,877. Term of patent 14 years.

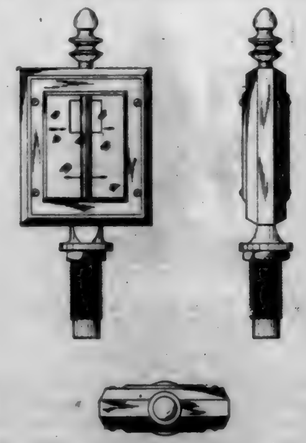
The ornamental design for fringe, as shown.

67,228. KNITTED FABRIC. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1924. Serial No. 8,879. Term of patent 7 years.



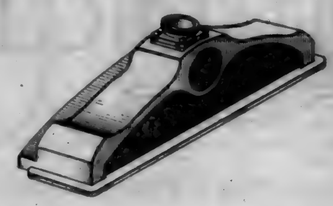
The design for a knitted fabric substantially as shown and described.

67,229. KNITTED FABRIC. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1924. Serial No. 8,880. Term of patent 7 years.



The design for a knitted fabric substantially as shown and described.

67,230. KNITTED FABRIC. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1924. Serial No. 8,881. Term of patent 7 years.

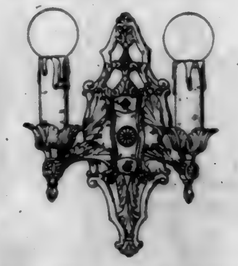


The design for a knitted fabric substantially as shown and described.

67,231. TEMPERATURE INDICATING DEVICE. ABE PEPPERBERG, New York, N. Y. Filed Jan. 25, 1924. Serial No. 8,419. Term of patent 7 years.

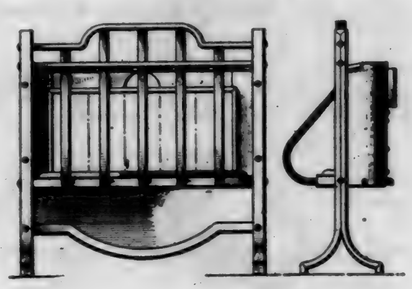
The ornamental design for a temperature indicating device, as shown.

67,232. AUTOMOBILE RADIATOR TOP. EDWARD A. REHBERGER, Newark, N. J. Filed Jan. 18, 1924. Serial No. 8,350. Term of patent 14 years.



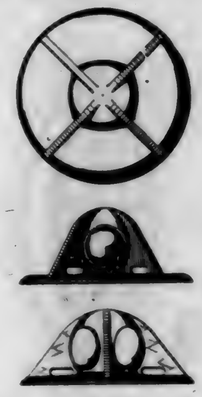
The ornamental design for an automobile radiator top as shown.

67,233. ELECTRIC LIGHT BRACKET. CEPHAS B. ROGERS, Danbury, Conn. Filed July 24, 1922. Serial No. 3,183. Term of patent 3½ years.



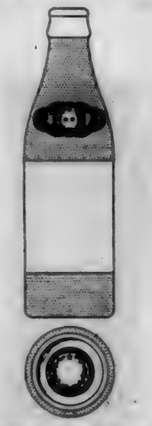
The ornamental design for an electric light bracket, as shown.

67,234. LIGHTING-FIXTURE BRACKET OR AN ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 12, 1925. Serial No. 12,354. Term of patent 3½ years.



The ornamental design for a lighting-fixture bracket, or an article of similar nature, as shown.

67,235. HEATER FRAME. JOSEPH ROY, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed May 29, 1924. Serial No. 9,744. Term of patent 14 years.



An ornamental design for a heater frame, as shown.

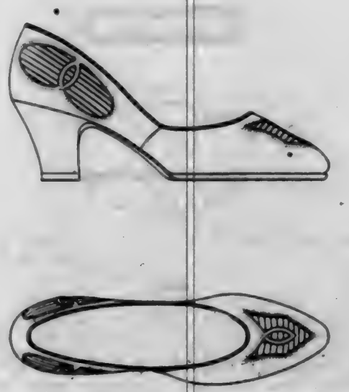
67,236. TRAFFIC SIGNAL-HEAD. PAUL H. SCHULS and CHRISTIAN JESSEN, Milwaukee, Wis. Filed May 16, 1922. Serial No. 2,271. Term of patent 14 years.

The ornamental design for a traffic signal-head, as shown.

67,237. BOTTLE. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Feb. 5, 1925. Serial No. 12,267. Term of patent 3½ years.

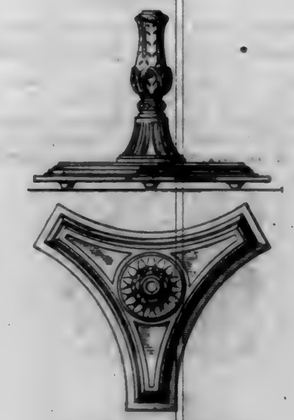
The ornamental design for a bottle, as shown.

67,238. BOTTLE. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Feb. 11, 1925. Serial No. 12,337. Term of patent 3½ years.



The ornamental design for a bottle, as shown.

67,239. MEGAPHONE. EUGENE W. SKINNER, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Dec. 8, 1924. Serial No. 11,624. Term of patent 3½ years.

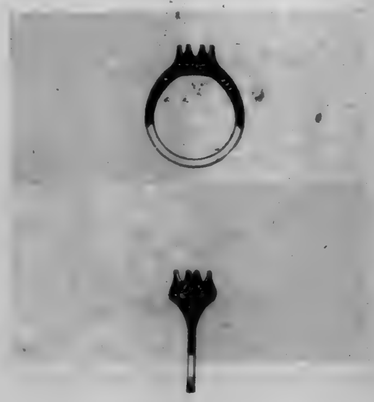


The ornamental design for a megaphone, substantially as shown.

67,240. SHOE. HARRY SMOLEN, Brooklyn, N. Y. Filed Jan. 20, 1925. Serial No. 12,099. Term of patent 3½ years.

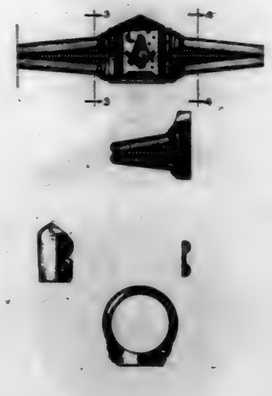
The ornamental design for a shoe substantially as shown.

67,241. PEDESTAL FOR LAMPS OR SIMILAR ARTICLES. SAMUEL SOBEL, Brooklyn, N. Y. Filed Feb. 21, 1925. Serial No. 12,445. Term of patent 3½ years.



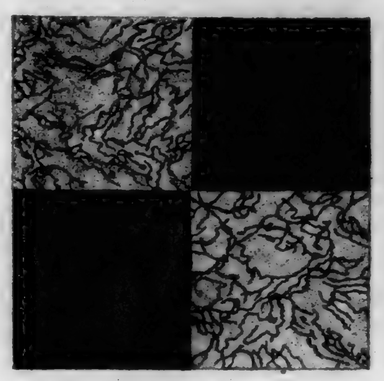
The ornamental design for a pedestal for lamps or similar articles, as shown.

67,242. PEDESTAL FOR LAMPS OR SIMILAR ARTICLES. SAMUEL SOBEL, Brooklyn, N. Y. Filed Feb. 21, 1925. Serial No. 12,446. Term of patent 3½ years.



The ornamental design for a pedestal for lamps or similar articles, as shown.

67,243. FINGER RING. MICHAEL B. SOMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 10, 1925. Serial No. 11,994. Term of patent 3½ years.



The ornamental design for a finger ring, as shown.

67,244. FINGER RING. ENRIQUE TROYA, New York, N. Y. Filed Mar. 18, 1925. Serial No. 12,757. Term of patent 14 years.

The ornamental design for a finger ring, as shown.

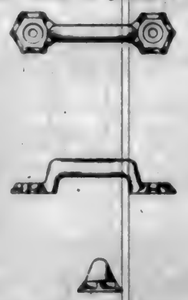
67,245. CARPET OR SIMILAR ARTICLE. HARRY ULMER, Philadelphia, Pa., assignor to Hardwick & Magee Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 8, 1923. Serial No. 7,980. Term of patent 3½ years.

The ornamental design for a carpet or similar article, substantially as shown and described.

67,246. GUIDE PLATE FOR A WINDOW STRAP, DOOR LOCK LEVER, OR SIMILAR ARTICLE OF MANUFACTURE. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,447. Term of patent 7 years.

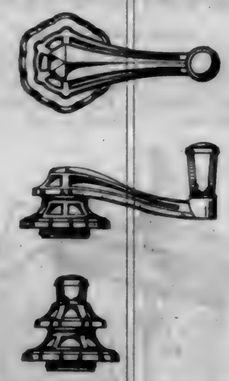
The ornamental design for a guide plate for a window strap, door lock lever, or similar article of manufacture, substantially as shown.

67,247. PAWL STUD. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,448. Term of patent 7 years.



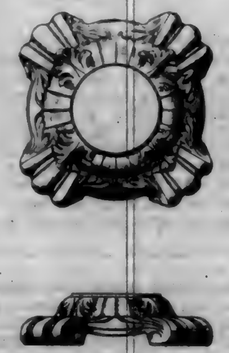
The ornamental design for a pawl stud, substantially as shown.

67,248. HANDLE. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,450. Term of patent 7 years.



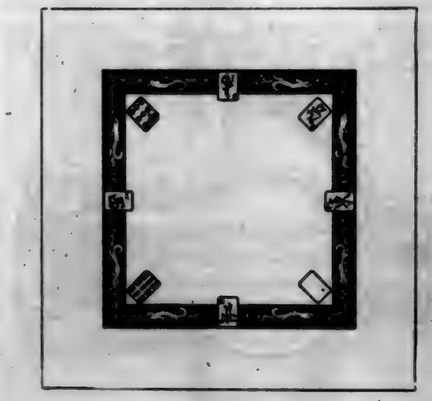
The ornamental design for a handle, substantially as shown.

67,249. FOOTMAN LOOP. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,451. Term of patent 7 years.



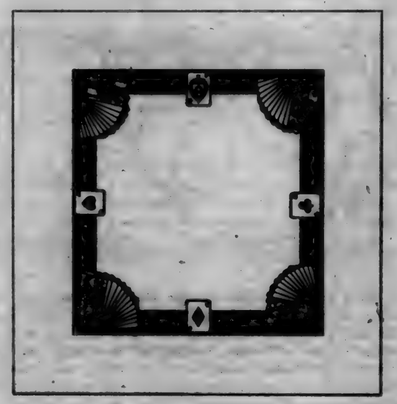
The ornamental design for a footman loop, substantially as shown.

67,250. WINDOW REGULATOR HANDLE. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,452. Term of patent 7 years.



The ornamental design for a window regulator handle substantially as shown.

67,251. BASE FOR LAMP STANDS. FRANK YOKEL, Avalon, Pa., assignor to Wm. B. Young Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1923. Serial No. 5,598. Term of patent 3½ years.

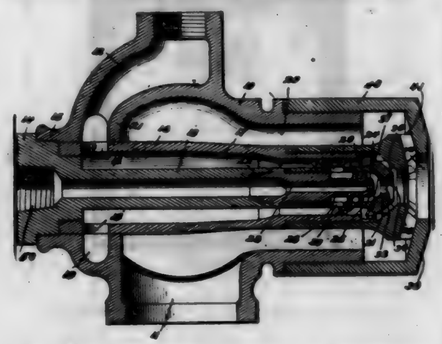


The ornamental design for a base for lamp stands, as shown.

67,252. TABLE COVER OR THE LIKE. JAMES HERBERT YOUNG, Brooklyn, N. Y., assignor to Thomas Young, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1924. Serial No. 10,805. Term of patent 3½ years.

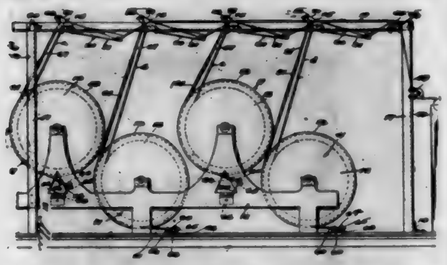
The ornamental design for a table cover or the like as shown.

67,253. TABLE COVER OR THE LIKE. JAMES HERBERT YOUNG, Brooklyn, N. Y., assignor to Thomas Young, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1924. Serial No. 10,806. Term of patent 14 years.



The ornamental design for a table cover or the like as shown.

PATENTS



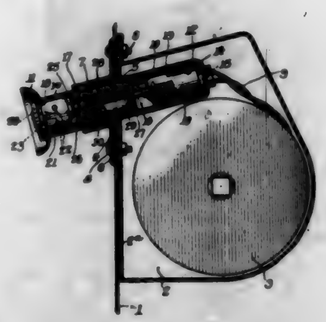
GRANTED MAY 5, 1925.

1,536,046. OIL BURNER. ALFRED R. ANTHONY, Fort Pierce, Fla. Filed Aug. 7, 1920, Serial No. 401,872. Renewed Mar. 2, 1925. 6 Claims. (Cl. 158—76.)

1. A liquid fuel burner, including in combination a hollow body having an air inlet and a fuel tube mounted in the body having an orifice at its forward end, said tube at its forward end being formed with an annular groove and a helical groove leading from said annular groove to the end of the tube, a cap mounted on the fuel tube enclosing said grooves and having openings affording communication between the interior of the body and said annular groove and having a discharge aperture in axial alignment with said fuel tube.

1,536,047. TENSION REGULATOR FOR SECTION BEAMS ON SLASHER AND BEAMER CREELS. WILLIAM WYLIE ARNOLD, Jr., Manchester, Ga. Filed Apr. 12, 1924. Serial No. 706,162. 6 Claims. (Cl. 28—35.)

1. In a tension regulator for slasher or beamer creels having section beams, braking devices for each section beam and a tension regulator for each braking device including a pair of levers, means for mounting the levers for movement independent of each other, each lever being connected to its braking device, and means for floating the levers on the yarn.

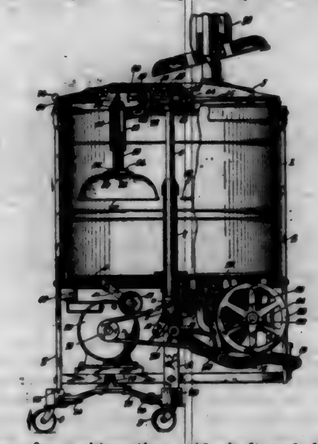


1,536,048. HAND BAR FOR PHYSICAL TRAINING. WILJO U. ALASTALO, New York, N. Y. Filed Sept. 17, 1923. Serial No. 663,165. 1 Claim. (Cl. 272—84.)

A hand bar composed of separable units, each unit being formed at one end with a threaded bolt and resilient means on said bolt, and at the opposite end with a bore having a mouth opening, an intermediate wider portion and a threaded portion to receive the

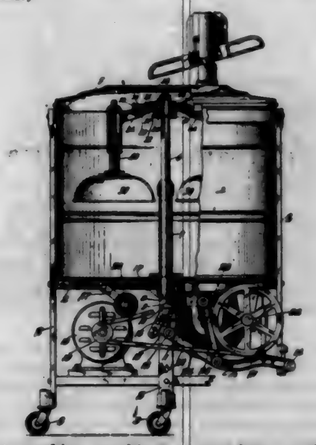
bolt, said resilient means being adapted when two units are drawn together to become lodged in said intermediate portion and thereby lock the units together.

1,536,049. ELECTRIC CIGAR LIGHTER. EDGAR C. ALLEN, Rockford, Ill., assignor of one-half to Roger L. Knutsson, Rockford, Ill. Filed Jan. 4, 1924. Serial No. 684,288. 11 Claims. (Cl. 219—32.)



1. The combination of an inclined tubular support formed of insulating material, an elongated metallic casing adapted to be inserted into said tubular support and be supported thereby in an inclined position, an electric resistance element carried by said casing at the end which is lowermost when the casing is in place in said tubular support, means connected to the other end of the casing to conduct current thereto, and a mercury switch in said casing to close a circuit through said resistance element when the first-mentioned end of the casing is uppermost and to break said circuit when said end is lowermost.

1,536,050. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Dec. 12, 1923. Serial No. 680,168. 20 Claims. (Cl. 259—144.)

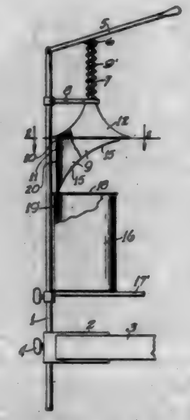


1. In a washing machine, a container, a shaft disposed vertically through the bottom of the container,

washing elements supported from the upper end of said shaft and arranged to be impositively rotated thereby,

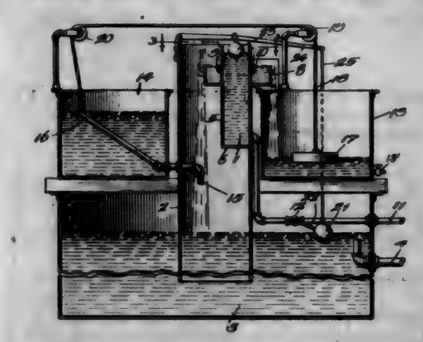
and means for reciprocating said shaft and for simultaneously rocking said shaft alternately in opposite directions.

1,536,051. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Dec. 12, 1923. Serial No. 680,166. 18 Claims. (Cl. 259—144.)



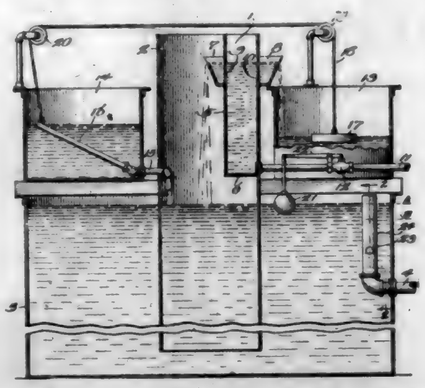
1. In a washing machine, a container, a shaft disposed vertically through the bottom of the container, a friction clutch on the upper end of the shaft including a member carried loosely on the shaft, washing elements connected to be rotated freely around said member, and means for reciprocating said shaft and for simultaneously rocking said shaft alternately in opposite directions.

1,536,052. MANUFACTURE OF COMPOSITIONS OR PREPARATIONS WITH CELLULOSE DERIVATIVES. WALTER BADER and WILLIAM ALEXANDER DICKIE, Spondon, near Derby, England, assignors to American Cellulose and Chemical Manufacturing Company Limited, a Corporation of Delaware. Filed Feb. 14, 1923. Serial No. 619,013. 2 Claims. (Cl. 134—79.)



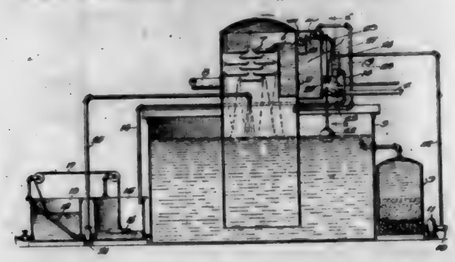
2. Compositions comprising cellulose acetate and 1.1.1.trichloro.2.methyl propanol (2) as a solvent or plasticising agent.

1,536,053. CAN OPENER. VERNON E. BAKER, Elyria, Ohio. Filed Feb. 2, 1922, Serial No. 533,571. Renewed Sept. 12, 1924. 4 Claims. (Cl. 30—3.)



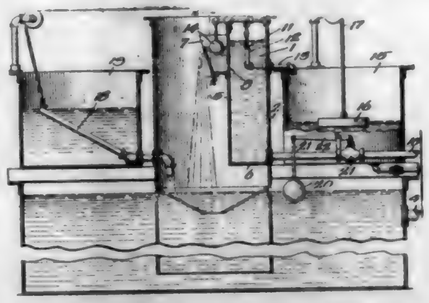
1. A can opener comprising a body portion having a spherical-shaped concave under surface and a circular-shaped knife secured at its mid-point to the under surface of said body portion said concave surface aiding in swinging the sides of said knife into a circle the same diameter as the diameter of the can to be cut.

1,536,054. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed Dec. 11, 1922. Serial No. 606,178. 7 Claims. (Cl. 210—18.)



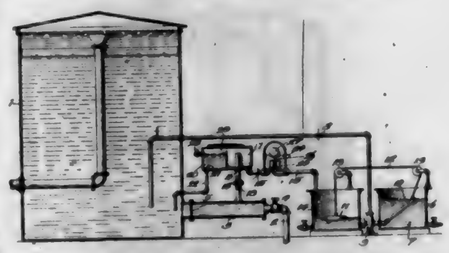
1. Liquid treating apparatus including an incoming receptacle having two outlet openings of different size; a container communicating with each outlet which is below the limiting level of the container to which it is individual; a supply pipe for conveying liquid to be treated and discharging into the incoming receptacle; a treatment tank into which the container having the larger opening individual thereto discharges; a chemical tank discharging into the treatment tank; a float tank into which the container having the smaller opening individual thereto discharges; a float in the float tank; mechanism for varying the flow of chemical from the chemical tank and assembled with the float to be operable thereby and so related to the float as to increase the chemical flow as the float rises; a valve in the supply pipe; a float in the treatment tank and assembled with said valve and so related thereto as to decrease the flow of liquid through the supply pipe as this float rises; and a float in the incoming receptacle and also assembled with the valve and so related thereto as to decrease the flow of liquid through the supply pipe when this float rises.

1,536,055. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed Jan. 30, 1923. Serial No. 615,835. 2 Claims. (Cl. 210—18.)



1. Liquid treating apparatus including a treatment tank; a source of chemical; piping for conveying liquid to be treated to the tank; mechanism governed by liquid passing through said piping operating to maintain the proportioning of liquid and chemical substantially constant; mechanism governed by the liquid in the treatment tank for cutting off and establishing flow of liquid to the treatment tank; an upright discharge pipe having a liquid receiving opening through its side and between its ends and positioned to receive treated liquid from the treatment tank and located below the lower limiting level of the liquid in the tank and having an opening at the upper limiting level of the liquid in the tank to have its contents subject to atmospheric pressure; and an outlet pipe below and communicating with the lower end of said discharge pipe.

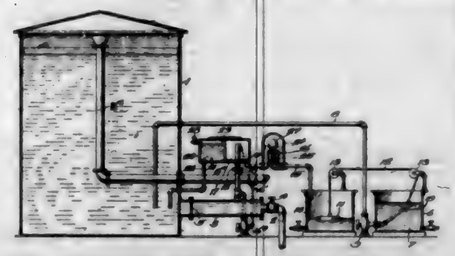
1,536,056. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed Feb. 11, 1924. Serial No. 691,864. 8 Claims. (Cl. 210—21.)



1. Liquid treating apparatus including a treatment chamber; a source of chemical discharging into the treatment chamber; valve mechanism for controlling the flow of chemical to the treatment chamber; a float tank containing a float in controlling relation to said valve mechanism; a control tank receiving treated liquid from said apparatus and discharging into said float tank; valve mechanism in the control tank controlling the flow of liquid therefrom; a riser receiving the liquid that is to be treated; a float in said riser in controlling relation to the latter valve mechanism; a stilling chamber into which the riser discharges and discharging into the settling chamber; and a float governed by the level of the liquid in the stilling chamber and also in controlling relation to the valve mechanism in the control tank and serving partially to reduce the adjusting action of the float in the riser.

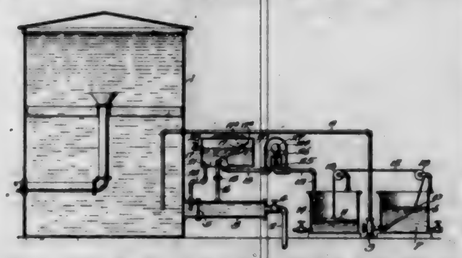
1,536,057. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed Feb. 11, 1924. Serial No. 691,865. 3 Claims. (Cl. 210—21.)

1. Liquid treating apparatus including a riser having outlets of different size; a container into which the larger outlet discharges and open at its upper portion to overflow, the larger outlet being below the limiting level of said container and the smaller outlet being at the discharge level of the container; a supply pipe for conveying liquid to be treated and discharging into the riser and through both of the aforesaid outlets by way of the riser; a treatment tank into which said container discharges; a chemical tank discharging into the treatment tank; and mechanism for regulating the discharge of chemical from the chemical tank and governed by the liquid flowing from the smaller outlet of the riser.



1,536,058. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed May 26, 1924. Serial No. 715,993. 8 Claims. (Cl. 210—18.)

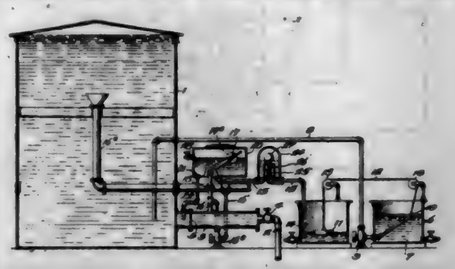
1. In a liquid treating apparatus, the combination with a tank for receiving liquid to be treated; piping for supplying liquid to be treated and having a constricted outlet discharging into the tank below its limiting level; a source of chemical in communication with said tank; liquid controlled mechanism for regulating the flow of chemical from said source to said tank, said piping discharging controlling raw liquid from it to said mechanism through an orifice small in comparison with the aforesaid outlet of the piping; and means enabling the back pressure of the liquid in the tank impressed at said outlet to produce a like pressure impressed at said orifice and inclusive of a gaseous medium interposed between said orifice and the liquid within the tank and through which orifice this liquid exerts its pressure.



1,536,059. LIQUID-TREATING APPARATUS KENT W. BARTLETT, Hammond, Ind. Filed May 26, 1924. Serial No. 715,994. 10 Claims. (Cl. 210—18.)

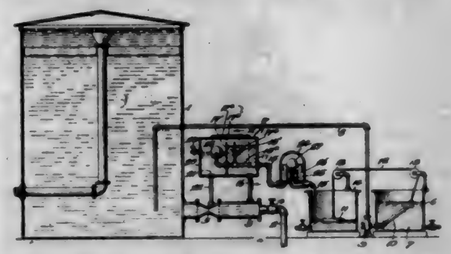
1. In a liquid treating apparatus, the combination with a tank for receiving liquid to be treated; piping for supplying liquid to be treated and having a constricted outlet discharging into the tank below its limiting level; a source of chemical in communication with said tank; liquid controlled mechanism for regulating the flow of chemical from said source to said tank, said tank discharging controlling treated liquid from it to said mechanism through an orifice small in comparison with the aforesaid outlet of the piping; and

means enabling the back pressure of the liquid in the tank impressed at said outlet to produce a like pressure impressed at said orifice and inclusive of a gaseous medium interposed between said orifice and the liquid within the tank and through which orifice this liquid exerts its pressure.



1,536,060. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed May 26, 1924. Serial No. 715,995. 6 Claims. (Cl. 210—18.)

1. In a liquid treating apparatus, the combination with a tank for receiving liquid to be treated; piping for supplying liquid to be treated and having a constricted outlet discharging into the tank below its limiting level; a source of chemical in communication with said tank; liquid controlled mechanism for regulating the flow of chemical from said source to said tank; a liquid conveying member having an inlet communicating with the tank upon the discharge side of said outlet; a liquid conveying member mounted to rise and fall and communicating with the first member through a passage that is above said inlet; there being sealed gas holding space in each member placed in communication with the gas holding space in the other by said passage, there also being an orifice, small in comparison to said outlet, through which controlling liquid is discharged from said piping into the second member; means controlled by the liquid in the first member and connected with the second member substantially fixed with respect to the liquid level in the first member; and a trap receiving liquid from the second member and discharging the liquid to the liquid controlled mechanism to control the same.

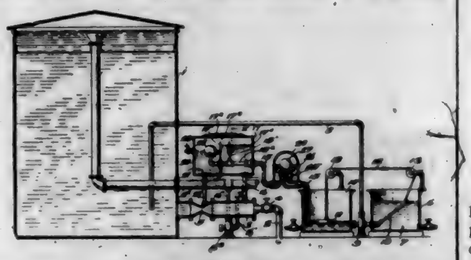


1,536,061. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed May 26, 1924. Serial No. 715,996. 8 Claims. (Cl. 210—18.)

1. In a liquid treating apparatus, the combination with a tank for receiving liquid to be treated; piping for supplying liquid to be treated and having a constricted outlet discharging into the tank below its limiting level; a source of chemical in communication with said tank; liquid controlled mechanism for regulating the flow of chemical from said source to said tank; a liquid receiving member having an inlet communicating with the tank upon the discharge side of said outlet; a liquid conveying member mounted to rise and fall and communicating with the first member through a passage that is above said inlet, there being sealed gas holding space in each member placed in communication with the gas

holding space in the other by said passage, there also being an orifice, small in comparison to said outlet, through which controlling treated liquid is discharged from said tank into the second member; means controlled by the liquid in the first member and operatively connected with the second member; and a trap receiving liquid from the second member and discharging the liquid to the liquid controlled mechanism to control the same.

1,536,062. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed May 26, 1924. Serial No. 715,997. 4 Claims. (Cl. 210—17.)

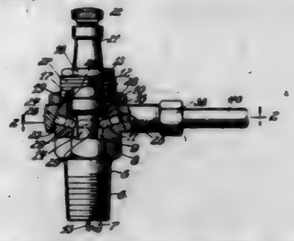


1. In a liquid treating apparatus, the combination with a tank for receiving liquid to be treated; of piping for supplying liquid to be treated and having a constricted outlet discharging into the tank below its limiting level; a source of chemical in communication with said tank; mechanism, governed by raw liquid passed through an orifice small in comparison to said outlet, for regulating the flow of chemical from said source to said tank; and means for controlling the flow of the controlling raw liquid inclusive of a gaseous medium subject to the pressure of the raw liquid at the entering side of said outlet and the greater pressure of the raw liquid exerted at a remoter point in said piping.

1,536,063. LIQUID-TREATING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed May 26, 1924. Serial No. 715,998. 7 Claims. (Cl. 210—18.

1. In a liquid treating apparatus, the combination with a tank for receiving liquid to be treated; of piping for supplying liquid to be treated and having a constricted outlet discharging into the tank below its limiting level; a source of chemical in communication with said tank; mechanism, governed by treated liquid passed through an orifice small in comparison to said

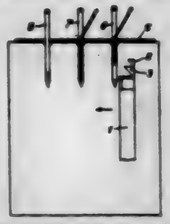
outlet, for regulating the flow of chemical from said source to said tank; and means for controlling the flow of the controlling treated liquid inclusive of a gaseous



medium subject to the pressure of the raw liquid at the entering side of said outlet and the greater pressure of the raw liquid at the remoter point in said piping.

1,536,064. PROCESS OF MAKING STORAGE-BATTERY PLATES. RAYMOND C. BENNER, Bayside, and JOHN H. FINK, Brooklyn, N. Y., assignors to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed June 6, 1922. Serial No. 566,406. 5 Claims. (Cl. 136—29.)

1. Process of making storage battery plates that comprises pressing dry active material and a binder, at a heavy pressure and without addition of moisture, onto a suitable support.



1,536,065. SPARK PLUG. HERBERT E. BILLINGS, Woodstock, Ill., assignor to "Heb" Manufacturing Company, Woodstock, Ill., a Corporation of Illinois. Filed July 28, 1921. Serial No. 488,109. 1 Claim. (Cl. 123—169.)

A spark plug of the character described, comprising a shell having a body portion provided with a longitudinal bore having an unrestricted opening in one end thereof, an electrode carried thereby, an insulating member mounted in said bore and spaced on all sides from said body portion, an electrode mounted therein, said electrodes extending outwardly beyond the end of said shell, whereby firing of said plug occurs outside the shell thereof, said shell having an annular passage therein and openings leading from said passage into said bore near the inner end thereof, said openings being inclined at an oblique angle to the axis of said plug, and a suction connection leading into said annular passage.

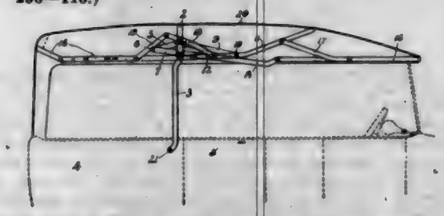
1,536,066. THREAD-STITCHING MACHINE HAVING A THREAD LAYER WITH TWO POINTS. ULRICH BISCHOF, Horgen, Switzerland, assignor to Gebr. Stäubli & Co., Horgen, Zurich, Switzerland. Filed July 21, 1924. Serial No. 727,377. 1 Claim. (Cl. 112—21.)

In a thread stitching machine, the combination with eyed sewing needles and a hooked needle, of a thread layer with two points one of which lies above the other, the eye of one of the sewing needles being adapted to form the tying off loop and being lower than the eye of the other needle, and one of the points of the thread

layer being adapted to catch the tying off loop and to pass under the eye of the first needle, when the loop of the stitch is formed.

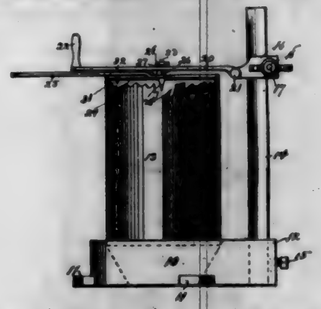
1,536,067. INDICATING DEVICE FOR BOTTLES AND THE LIKE. JOSEPH S. BLINN, New Haven, Conn. Filed Feb. 15, 1924. Serial No. 692,996. 2 Claims. (Cl. 215—9.

1. An indicator of the class described composed of an indicator member having a serrated or indicating edge and retaining means for securing the device to the closure means of a bottle or container, said retaining means comprising projections or prongs extending inwardly from the edge of a hole in said indicator member, and said retaining means engaging the sides of said closure means.



1,536,068. SWITCHBOARD PLUG. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1921. Serial No. 438,841. 5 Claims. (Cl. 173—361.)

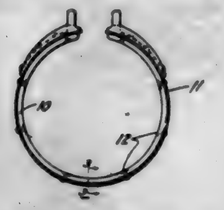
1. A switchboard plug of the character described including a cylindrical conducting element having the walls of its one end formed to engage each other which



end is provided with a suitably tapped orifice for receiving a terminal screw, and having its other end open and adapted to receive a conducting element, and an insulation member for insulating said conducting element from said cylindrical conducting element.

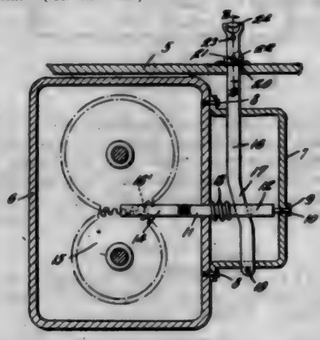
1,536,069. FOLDING HOOD FOR MOTOR VEHICLES. WILLIAM HENRY INNES BRADLEY, Birmingham, England, assignor to The Calso Hood Company Limited, Coventry, England, a Company of Great Britain. Filed June 12, 1924. Serial No. 719,683. 3 Claims. (Cl. 296—116.)

1. A folding hood for motor vehicles comprising, a standard pivotally mounted at each side of the vehicle, a cantrail pivoted adjacent the upper end thereof, a front bow member pivoted to the forward end of said cantrail an intermediate bow member pivoted in said cantrail, a rear bow member pivoted to the rear end of said intermediate bow member, a main bow member pivotally supported from said cantrail and intermediate bow member independently of said standard and a flexible cover carried by said bow members.



1,536,070. CAN OPENER. GEORGE W. BRIGHT, Denver, Colo. Filed Apr. 21, 1924. Serial No. 707,925. 2 Claims. (Cl. 30—3.)

1. A can opener comprising a base adapted to be secured to a support and formed with a frustum shaped central opening, having a serrated wall adapted to receive a container, a post rising from said base, a bracket adjustably mounted on said post, a holding lever hinged to said bracket, a center pin mounted in the central portion of said holding lever and adapted to penetrate the head of said can or container, a cutting lever pivoted at one end on said center pin and extended to an orbit beyond that of the free end of the holding lever, and a knife slidingly mounted on said cutting lever and adapted to penetrate and cut an arcuate slot in the head of the container under arcuate movement of said cutting lever.

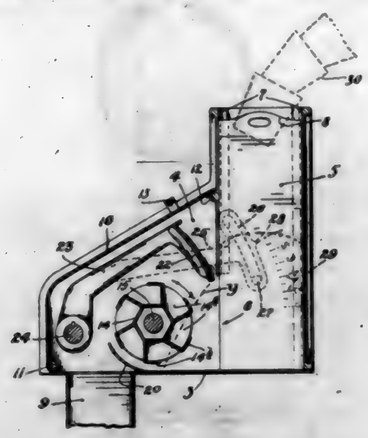


1,536,071. AUTOMOBILE BRAKE LINING. ELMER A. BROWN, Denver, Colo. Filed Oct. 6, 1921. Serial No. 505,885. 2 Claims. (Cl. 188—259.)

1. The process of manufacturing a wooden lining for brake and transmission bands comprising; cutting the wood in strips lengthwise of the grain, said strips being equal in width to the brake or transmission band upon which the lining is to be used; softening the strips by steaming; bending the strips in an open circle on a

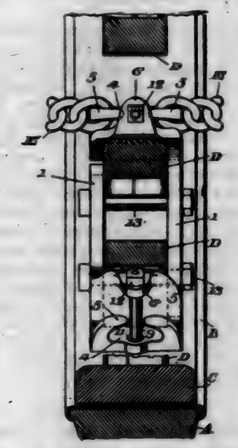
mold of slightly larger diameter than the drum upon which the band is to be used; drying the strips in said mold and soaking the strips in a lubricating oil.

1,536,072. AUTO LOCK. EUGENE A. BRYANT, Minneapolis, Minn. Filed Apr. 10, 1922. Serial No. 551,203. 1 Claim. (Cl. 70—90.)



A locking device for transmission gears including a housing, an auxiliary housing secured to the gear housing, a guide rod extending inwardly from the auxiliary housing, a locking arm slidably mounted within the housings, one end of said locking arm being formed with an opening to accommodate the guide rod, the opposite end of said locking arm including a pair of spaced arms, and a tapered portion between the arms, the end of the tapered portion terminating in spaced relation with the ends of the saced arms, an enlarged portion forming a part of the arm and operating in the auxiliary housing, said enlarged portion having an opening formed therein, an operating arm having an offset portion adapatd to operate through the opening to move the locking arm within the housing, a coiled spring on the locking arm to normally urge the locking arm to its inactive position, and said spaced arms adapted to move on opposite sides of gears to guide the tapered portion of the locking arm to the teeth of the gears locked thereby.

1,536,073. PERCENTAGE FEEDER. CLARENCE W. CARTER, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 29, 1921. Serial No. 488,377. 1 Claim. (Cl. 83—44.)

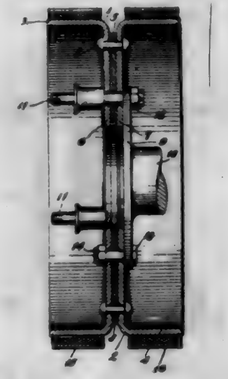


A percentage feeder comprising a long substantially horisontal feed roller having circumferentially spaced compartments extending approximately from end to end thereof, a supply compartment approximately co-extensive with said feed roller and having a discharge passage located entirely at one side of said roller but so closely adjacent thereto that said roller will intersect the angle of repose of material flowing from said feed passage, said supply compartment having partitions

for proportionately dividing the same into sub-compartments, all of which deliver through the said feed passage and against one side of said roller, said roller being rotated in a direction to pick up and carry over the stock delivered thereto and to discharge the ma-

terials from the several sub-compartments in a common stream, and a common gate working between said supply compartment and feed roller, said gate being approximately co-extensive with said roller and operating simultaneously to vary the flow to said feed roller from the several sub-compartments from said supply compartment.

1,536,074. ANTISKIDDING DEVICE. WARREN D. CHASE, Hartford, Conn. Filed Feb. 25, 1919. Serial No. 279,036. 1 Claim. (Cl. 152—2.)

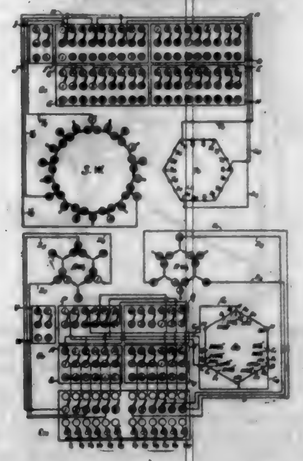


A device to secure a traction element to a wheel comprising plates adapted to be applied to the spokes thereof and means for securing such plates in such position, one of said plates being provided with an arm engaging one of said spokes on its transverse face farthest from said securing means, said arm having anchoring means for the terminal portions of the traction element, said anchoring means receiving pull from the traction element in substantially opposite directions transversely of the wheel, the device having no part extending beyond planes passing through the side edges of an outer peripheral part of the wheel.

1,536,075. HEATER. JAMES J. CONNORS, Juneau, Territory of Alaska. Filed Mar. 10, 1923. Serial No. 624,212. 1 Claim. (Cl. 219—38.)

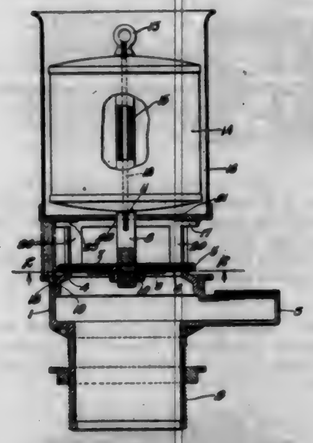
A gasoline heater and vaporizer for intake manifolds comprising a shell having a smooth portion and a threaded portion, and adapted to be threaded into an opening in said manifold, a core of insulating material arranged within the shell and spaced therefrom, an annular shoulder arranged centrally of the core, and an electrode passed longitudinally through the core, a heating wire having one end looped about the core and reposing upon said shoulder, said heating element being wound about the core beneath said shoulder, and having its other end secured to said electrode, a bushing threaded into said shell and impinging the looped end of said heating element against said shoulder, and said smooth portion of the shell being provided with perforations for the purpose specified.

1,536,076. BRAKE MECHANISM. HENRY M. CRANE, New York, N. Y. Filed June 2, 1922. Serial No. 565,289. 10 Claims. (Cl. 188—218.)



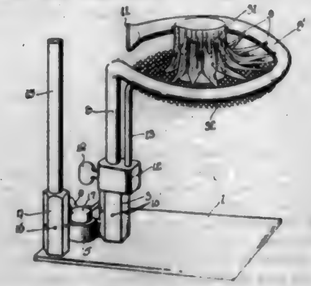
9. Brake mechanism comprising a brake drum composed of two metal discs with flanged rims secured together back to back.

1,536,077. DYNAMO-ELECTRIC MACHINE. FREDERICK CREEDY, Ilkley, England. Filed July 30, 1921. Serial No. 488,687. 12 Claims. (Cl. 172—274.)



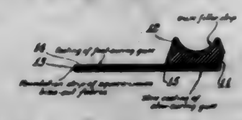
1. In an alternating current dynamo electric machine comprising a stator member and rotor member, a winding on one of said members to be energized from a polyphase supply and so disposed as to generate E. M. F.'s of a number of phases greater than the number of phases in the supply and in which the phase relationship between the current and the E. M. F. in each section is the same, and means to connect said winding in a plurality of ways to operate with a plurality of fields of different numbers of poles without changes in the connections of the sections of the winding among themselves.

12. In a variable pole alternating current dynamo electric machine comprising a stator member and rotor member, a winding on one of said members in which alternate sections are connected in mesh and the remaining sec-



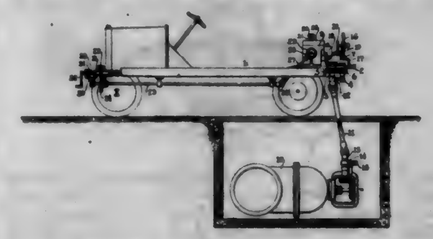
tions in star to the angles of the mesh, said winding being arranged to act as a secondary upon a plurality of pole numbers and means whereby resistance may be inserted in the circuit thereof for control on one pole number.

1,536,078. FLUSHING VALVE FOR WATER-CLOSETS. ANDREW F. CURTIN, Medford, Mass. Filed Oct. 31, 1922. Serial No. 598,122. 1 Claim. (Cl. 4—57.)



A flushing valve for water closets having, in combination, a hollow body portion having an inlet and an outlet, a float chamber located above the inlet having a hole in its bottom; the under side of the bottom of the float chamber being provided with narrow lugs which serve to space the valve away from the bottom of the float chamber, said float chamber being supported from the body portion by spaced bars affording openings between them for the passage of water to the inlet, a valve for closing the outlet having an integral stem extending through the hole in the bottom of the float chamber, and a float supported on the valve stem in the float chamber.

1,536,079. DENTAL BURNER. ERNEST E. DALTON, Chicago, Ill. Filed Feb. 23, 1923. Serial No. 620,601. 14 Claims. (Cl. 158—111.)

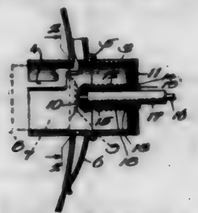


1. In a device of the class described the combination of a support for an article to be heated and an open burner ring for surrounding the article, said burner ring having a plurality of orifices discharging radially in the direction of the plane of the ring, the flames from said orifices striking that part of the article lying in the plane of the ring irrespective of the dimension of the article in the direction of said plane.

1,536,080. TIRE BEAD AND METHOD OF MAKING TIRES. ELIAS E. DAVIDSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,323. 6 Claims. (Cl. 18—53.)

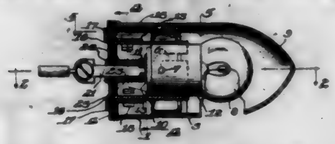
1. The method of making pneumatic-tire casings which comprises providing a fabric cover with an external coating of slow-curing rubber, enclosing a core-ring and a filler of fast-curing rubber with said cover, semi-curing the resulting bead core to a degree which partially vulcanizes the filler and leaves the external coating soft and tacky, incorporating the bead core in the edge of the tire casing, and vulcanizing said casing.

1,536,081. PORTABLE VALVE-OPERATING APPARATUS. PETER P. DEAN, Sound Beach, Conn. Filed Jan. 2, 1920. Serial No. 349,126. 9 Claims. (Cl. 180—53.)



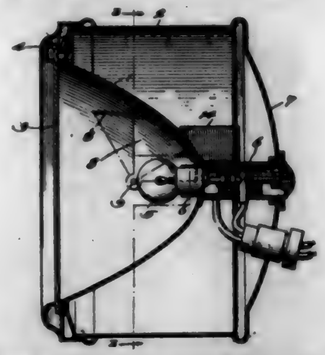
1. In a portable valve operating apparatus, in combination a pair of oppositely rotating valve operating members, an internal combustion engine, driving connections between said engine and said members and control means for said engine operable unidirectionally by a part driven by said engine irrespective of the direction of valve operation, said control means including an adjustable element to be set to effect stopping of said engine upon completion of a predetermined number of revolutions of either of said valve operating members.

1,536,082. CIRCUIT-CONTINUING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Filed Mar. 13, 1919. Serial No. 282,450. 2 Claims. (Cl. 173—328.)



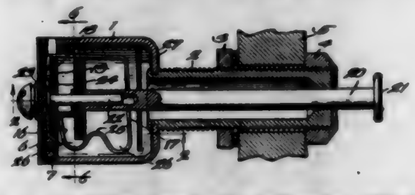
1. In a circuit connector, a pin adapted to be received in an opening in a plug, and a spring for projecting said pin into a position to be engageable with a passage in a shell adapted to receive the plug whereby the plug and shell may be maintained in assembly, said spring having direct frictional securance to the pin to provide a single unit for assembly and disassembly with and from the plug and having direction frictional securance to the plug when in the opening to prevent its accidental disassembly therefrom.

1,536,083. CIRCUIT-CONTINUING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Filed Jan. 27, 1921. Serial No. 440,482. 2 Claims. (Cl. 173—328.)



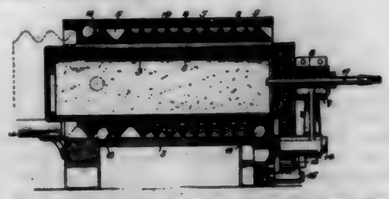
1. The combination with a shell; of a body of insulation fixed within and to the shell; a sleeve formed with an external circumferential groove in which the body of insulation is held in fixed relation to the sleeve; a tubular contact member within and movable longitudinally of the sleeve and carrying an electrical contact upon its inner end; a coiled spring surrounding and having abutting engagement with said sleeve and engaging the tubular contact member and exerting inwardly thrusting pressure thereon; and a current conducting wire assembled with the tubular contact member and in electrical connection with said electrical contact.

1,536,084. COWL LAMP. HARRY A. DOUGLAS, Bronson, Mich. Original application filed Jan. 27, 1921, Serial No. 440,486. Divided and this application filed Apr. 17, 1922. Serial No. 554,270. 1 Claim. (Cl. 240—7.)



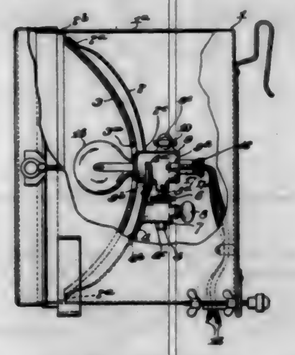
In a lamp structure, the combination with a metallic sleeve; of a metallic shell assembled with said sleeve, this shell being formed with a flange; an insulating body uniting the rear ends of said shell and sleeve and constituting a contact carrier, there being rivets passing through said flange and insulating body; a forwardly spring pressed contact upon said insulating body and projecting into said shell; an incandescent lamp whose base is separably coupled with the forward end of said shell and carries a contact that is complemental to the aforesaid spring pressed contact; and a cowl supported upon the forward end of said sleeve, which sleeve end is reduced to form a shoulder for engaging the base of the cowl.

1,536,085. HEADLAMP. HARRY A. DOUGLAS, Bronson, Mich. Filed May 4, 1923. Serial No. 636,609. 6 Claims. (Cl. 240—45.)



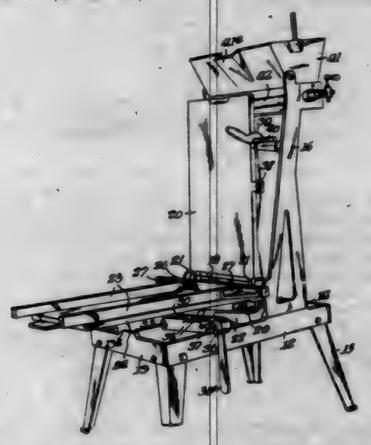
1. A lamp including a concave reflector; a light transmitting closure for the reflector; a supplemental reflector within the space confined by the main reflector and its closure and covering but a portion of the reflecting surface of the main reflector; electro-magnetic mechanism in adjusting relation to the supplemental reflector; switching means adjustable by the electro-magnetic mechanism when effecting an adjustment of the supplemental reflector to prepare the electro-magnetic mechanism to restore the supplemental reflector to the position from which it was last adjusted; and a manual switch co-operating with said switching mechanism in controlling the electro-magnetic mechanism.

1,536,086. ELECTRIC SWITCH. HARRY A. DOUGLAS, Bronson, Mich. Filed July 23, 1924. Serial No. 727,725. 4 Claims. (Cl. 200—153.)



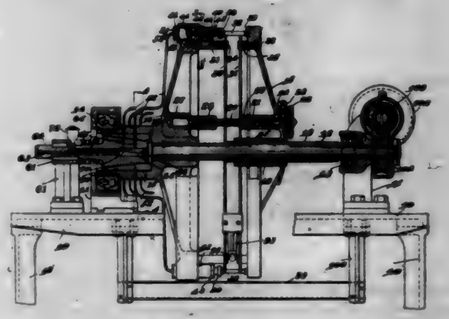
1. In an electric switch, the combination with two contacts; of a contact member common to said contacts and engageable with both of them at the same time; a carrier for said contact member having a sinuous portion; and a reciprocable rod engageable with a bump of said sinuous portion to actuate the carrier.

1,536,087. PROCESS AND APPARATUS FOR VULCANIZING ARTICLES. JOHN L. G. DIKES, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,764. 29 Claims. (Cl. 18—6.)



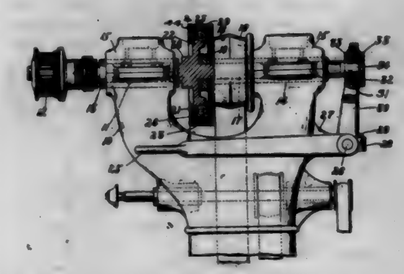
29. In apparatus for forming materials into the desired shape, the combination of instrumentalities to form a spiral path of travel for the materials to be treated, devices for causing the materials to have movement along said path of travel at the desired rate of speed for treatment thereof, and means for operating said devices during treatment of the materials, whereby the process is continuous and the materials are fed in and treated at one point and fed out in formed and treated condition at another point, while the materials between these two points are moving along said path to receive the desired treatment.

1,536,088. HEADLIGHT. AXEL H. ENGLUND, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 22, 1922. Serial No. 576,653. 7 Claims. (Cl. 240—44.)



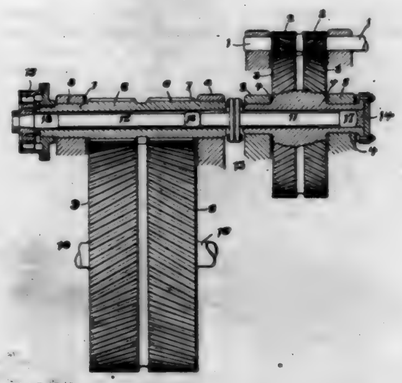
1. In a headlight, the combination with a support, of an upright post movable longitudinally and axially in said support, a threaded member engaging said post for effecting longitudinal adjustment thereof, means for clamping said post in adjusted position, a lamp holder carried by said post above said threaded member, and a lamp carrier movable in said holder transversely to said post.

1,536,089. STEREOTYPER'S CASTING MACHINE. MILAN H. FISHER, Chicago, Ill., assignor to H. L. Fisher Mfg. Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1922. Serial No. 597,886. 13 Claims. (Cl. 22—2.)



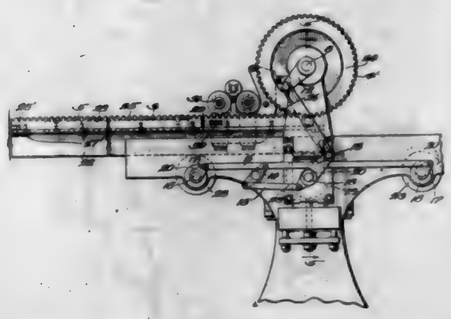
1. A stereotyper's casting machine comprising a supporting frame, a pair of platens, one of said platens being pivotally connected to said frame, a pair of links pivotally connected at one end to said frame so as to swing about the axis of the pivotal connection first named, the other of said platens being pivotally connected to the other end of said links, and means for locking said platens together.

1,536,090. METHOD AND APPARATUS FOR TESTING TUBES AND OTHER HOLLOW ARTICLES. GEORGE A. FOISY, Lowell, Mass., assignor to United States Cartridge Company, Lowell, Mass., a Corporation of Massachusetts. Filed June 25, 1921. Serial No. 480,432. 30 Claims. (Cl. 73—56.)



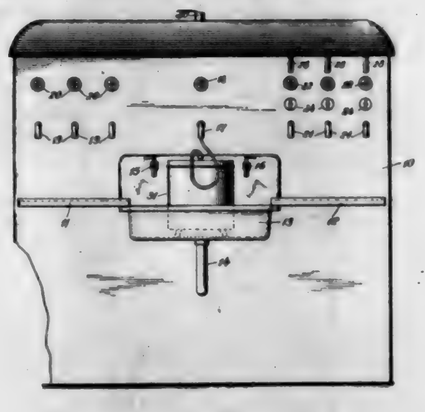
1. The method of testing hollow articles having openings therein which comprises subjecting the articles to internal fluid pressure, supporting the articles on a moving carrier by the application of pressure thereto supplied by a fluid communicating with that within the article, trapping the fluid within the articles for a predetermined period, and then relieving the pressure at a predetermined point in the travel of the carrier to release the articles, the pressure within the articles being relieved through the articles during said period if the articles leak, whereby the leaky articles are released before reaching said point.

1,536,091. ROTARY TRANSMISSION MEANS. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 19, 1920. Serial No. 359,877. 15 Claims. (Cl. 192—110.)



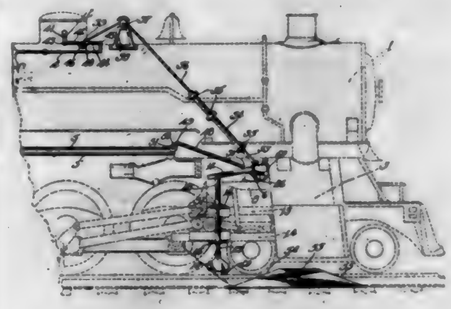
3. The combination with a receiving pulley and a tool-shaft extending therethrough, of means arranged to sustain them independently of each other, and means arranged to transmit rotation from said pulley to said shaft and dissipate vibration affecting the pulley, said shaft being in balance to rotate without producing vibration.

1,536,092. POWER-TRANSMISSION GEARING. HENRY L. GUY, Manchester, and PERCY L. JONES, Ashton-on-Mersey, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1921. Serial No. 469,002. 5 Claims. (Cl. 74—7.)



1. In a double reduction gear, the combination of an intermediate gear carried by a hollow shaft or hub portion, an intermediate pinion carried by a hollow shaft or hub portion, a loosely fitting and torsionally flexible shaft construction extending through the shaft or hub portions, couplings for connecting the outer ends of the flexible shaft construction to the outside ends of the hollow shaft or hub portions, one of the latter couplings being of the extensible type, and a bearing collar disposed adjacent to each coupling and a third bearing collar disposed substantially intermediate of said couplings for supporting the flexible shaft construction with respect to the hollow shaft or hub portion.

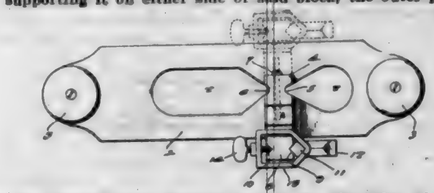
1,536,093. PRINTING PRESS. HORACE W. HACKER, Chicago, Ill., assignor to Hacker Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1924. Serial No. 686,071. 20 Claims. (Cl. 101—286.)



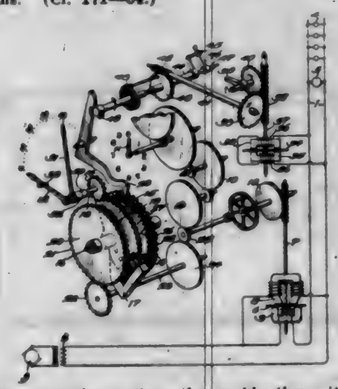
20. In a printing press, the combination with two complemental printing members thereof; of bearers upon said press members, one serving to operate the other and the printing press member coupled with it, in the printing operation; a gear element coupled with one member; and a complemental gear element coupled with the other member and in mesh with the aforesaid gear element during the printing stroke and movable while in mesh.

1,536,094. VAPOR ELECTRIC HEATING EQUIPMENT. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed June 27, 1917, Serial No. 177,168. Renewed Sept. 21, 1922. Serial No. 589,684. 15 Claims. (Cl. 219—39.)

1. A kitchen equipment comprising a sink, a heating panel associated therewith, a vapor discharge outlet, a vapor supply pipe adapted to be connected to said outlet, and means controllable from the panel for boosting the temperature of the vapor at the discharge outlet.



1,536,095. TRAIN-STOPPING DEVICE. CLAUDE I. HAINES and JOHN STANLEY BOWER, Aledo, Ill. Filed Oct. 5, 1922. Serial No. 592,636. 1 Claim. (Cl. 246—186.)



The combination with a steam locomotive having a throttle valve and a throttle rod for operating said throttle valve, of a break joint disposed between said throttle rod and said throttle valve, and at a point exterior of the cab of said locomotive, a cable connected with said break joint, and means associated with said locomotive and with the track upon which said locomotive is disposed for operating said break joint through said cable to open the joint, thereby operatively disconnecting said throttle rod from said throttle valve.

1,536,096. RABBETING PLANE. BENJIMIN F. HALEY, West Palm Beach, Fla. Filed Jan. 10, 1925. Serial No. 1,670. 3 Claims. (Cl. 145—5.)

1. A rabbeting plane comprising in combination, a bed plate, a block secured thereon and spaced from the side edges thereof, a tool post, means for detachably supporting it on either side of said block, the outer portion thereof being disposed beyond the side edge of the bed plate, and a clamp for detachably and adjustably securing a tool thereon.

1,536,097. MAXIMUM-DEMAND METER. JESSE HARRIS, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a Corporation of Illinois. Filed Oct. 23, 1922. Serial No. 596,218. 7 Claims. (Cl. 171—34.)

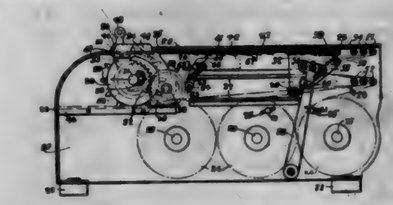
1. In a metering system, the combination with a consumption circuit; of a constant speed electric motor supplied from said circuit; a second electric motor having current and pressure windings supplied from said circuit and operating proportionally to the wattage; and a resetting device including a pointer, a holder serving to maintain the pointer in the position to which it is moved, a pusher in pushing relation to the pointer when the pusher is moved in one direction and free of the pointer when the pusher is moved in the reverse direction, a pinion in connection with the pusher for turning it, a loosely mounted gear element in mesh with the pinion, a second pinion carried by said gear element, a driving gear in mesh with the second pinion, a second loosely mounted gear element also in mesh with the second pinion, a releasable holding dog for holding the second loosely mounted gear element, a cam in periodic releasing engagement with said dog and driven by said constant speed motor, and gearing coupling the second pinion with the second motor.

7. The combination with two normally engaged rotatable arms; of a motor in driving relation with one arm; a spring normally holding the other arm in engagement with the first; and a third arm, also driven by said motor, that is periodically engageable with the arm that is controlled by the spring.

1,536,098. PROCESS OF PREPARING PLASTIC COMPOSITION SUITABLE FOR FIBER FLOORING. HENRY G. JAEGER, Rose Hill, Calif., assignor of one-fourth to Everett R. Lambertson and one-fourth to George P. Clements, both of Eagle Rock City, Calif., and one-fourth to Julius Schneider, Los Angeles, Calif. Filed Oct. 4, 1922. Serial No. 592,418. 1 Claim. (Cl. 18—60.)

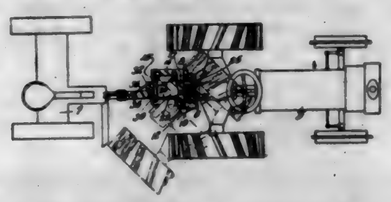
In the production of a surface, preparing a fibrous material by saturating it with a solution of magnesium chloride, allowing the material to drain, separately mixing powdered silica and powdered calcined magnesite, mixing this powdery mixture with the fiber prepared as above, adding sufficient of a solution of magnesium chloride to form a plastic mass, spreading the composition so prepared upon a material such as glass, adding a relatively porous backing composition thereto, then permitting the product to dry, then stripping the product from the surface of the glass, and finally applying a protecting coat to the surface which had been in contact with the glass.

1,536,099. PROCESS OF PREPARING A DECORATIVE FACING. HENRY G. JAEGER, Rose Hill, Calif., assignor of one-fourth to Everett R. Lambertson and one-fourth to George P. Clements, both of Eagle Rock City, Calif., and one-fourth to Julius Schneider, Los Angeles, Calif. Filed Oct. 4, 1922. Serial No. 592,419. 3 Claims. (Cl. 91—68.)



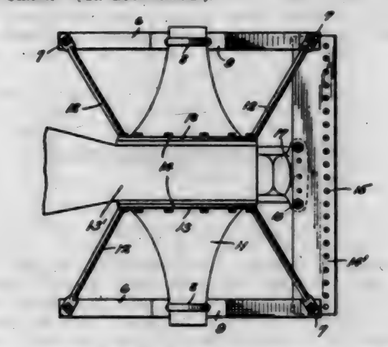
1. A process of producing decorative surfaces which comprises preparing a liquid mixture of turpentine, japan drier, varnish, and linseed oil, separately preparing a powdery mixture of silica, short fiber asbestos, and dry white lead, associating the mentioned mixtures in such proportions as to produce a plastic mass, applying said mass to a surface to be coated, permitting a surface hardening to take place, dusting an inert powdery material thereon, and then producing desired irregularities in the surface so prepared.

1,536,100. BOOK AND METHOD OF BINDING THE SAME. ERNEST JOHN, Ardmore, Pa. Filed Dec. 28, 1922. Serial No. 609,502. 15 Claims. (Cl. 129—1.)



1. The method of binding a plurality of loose leaves so that any one may be removed and so that the page portions thereof will lie flat without bending or wrinkling or recoiling or springing back when opened, including the provision of a back or cover having pockets, folding each leaf so that it will have a page part and a back part, arranging the leaves in groups with the folded portions of the leaves opposed and with their back parts positioned within the pockets of the cover, and loosely connecting the groups together in a hinged relation.

1,536,101. AUTOGRAPHIC REGISTER. ARTHUR A. JOHNSON, New York, N. Y., assignor to The Egry Register Company, Dayton, Ohio. Filed Nov. 16, 1922. Serial No. 601,204. 30 Claims. (Cl. 282—21.)

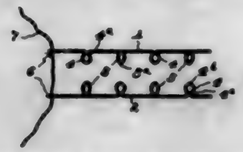


1. In an autographic register, the combination of a frame having a defined writing zone; a platen for supporting webs during writing operations; pin wheel feeding means to engage perforated portions of the webs; and means for advancing the webs relative to said writing zone by a forward, bodily movement of the pin-wheel feeding means.

1,536,102. TRACTOR HITCH. DANIEL JORDAN, Harrison, Nebr. Filed May 11, 1923. Serial No. 638,305. 1 Claim. (Cl. 280—33.5.)

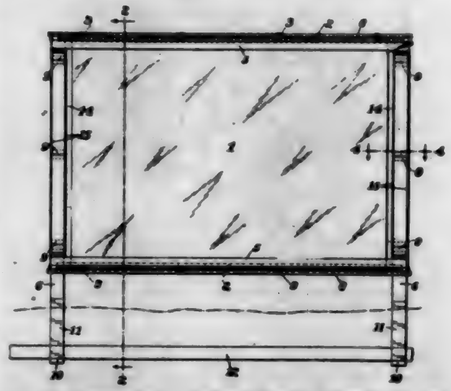
A tractor hitch including a forward section and a rear section, a rod pivotally supported by the rear sections and having its ends disposed laterally of the rear section, a pair of hitching bars forming a part of the forward section, said hitching bars having rearwardly extending portions formed with ears, means for pivotally connecting the rod and ears of the rearwardly extended portions, a rod pivotally supported on the first mentioned rod and having a right angled end, said hitching bars having openings, and said right angled portion adapted to be postioned in the opening to restrict movement of the sections with respect to each other.

1,536,103. TRACTOR HITCH. DANIEL JORDAN, Harrison, Nebr. Filed May 15, 1924. Serial No. 713,556. 1 Claim. (Cl. 280—33.12.)



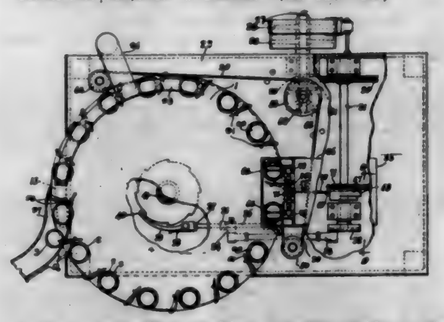
In a tractor hitch, a frame including side members, supporting arms having their free ends connected to the frame, a curved section for connecting the arms, said curved section adapted to be secured adjacent to the differential housing, and a bar connected with the side members of the frame and having a plurality of spaced openings formed therein.

1,536,104. SHOE-SHINING ATTACHMENT. HARRY C. KAHLO, Indianapolis, Ind. Filed Jan. 28, 1924. Serial No. 689,113. 4 Claims. (Cl. 15—265.)



1. A shoe shining attachment comprising a member adapted to stand transversely of a bowl and rest on opposite edges thereon, open spring clips secured to the under side of said member and adapted to releasably engage over the respective edges of said bowl, and accessory holding means carried by said member, said member also having a foot supporting portion, substantially as set forth.

1,536,105. BAG CLOSURE. JOHN A. KAYE, Sault Ste. Marie, Ontario, Canada. Filed Apr. 2, 1924. Serial No. 703,655. 6 Claims. (Cl. 150—3.)



1. A fastening device of the character described, including longitudinal bars arranged in an opposed relation and provided at intervals with headed projections and expansible loops, said expansible loops on each bar being arranged opposite to the headed projections on the opposite bar so as to snap over the heads and contract into engagement with the stems thereof.

1,536,106. BILLBOARD. WARREN KELLEY, Baltimore, Md. Filed Oct. 4, 1924. Serial No. 741,740. 3 Claims. (Cl. 40—135.)

1. In combination, a billboard and a frame for supporting the same, comprising a pair of beams at the top of the board and a pair of beams at the bottom of the board, the members of each pair being spaced apart for air circulation and having the edge of the board located between them and spaced apart from them, and cross members for supporting the board from said beams.

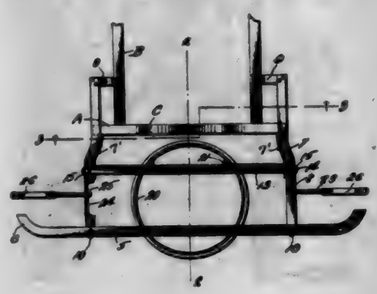
1,536,107. CAN-MAKING MACHINERY. JOHN R. KLIN, Dayton, Ohio, assignor, by mesne assignments, to Menasha Printing and Carton Co., Menasha, Wis., a Corporation of Wisconsin. Filed May 31, 1923. Serial No. 642,608. 9 Claims. (Cl. 113—86.)

1. In a can-sealing machine, a rotary table, a plurality of supports mounted on the periphery thereof, a tank containing the sealing medium, spouts on said tank having their mouths adjacent the top of the supports on the rotary table, said tops being adapted to hold in position can bodies to be sealed, a supporting table for supporting the rotary table, the sealing medium tank, and the operating mechanism, means connected to each of said supports to rotate it, means connected to each of said supports to eject the can body therefrom, means to move said rotary table step by step, means to permit of the delivery of the sealing medium on the rotary table as at rest, and to cut off the sealing medium before the rotary table moves to a new position.

1,536,108. TENNIS RACKET. HARRY C. LEE, New York, N. Y. Filed Mar. 8, 1924. Serial No. 697,688. 1 Claim. (Cl. 273—73.)

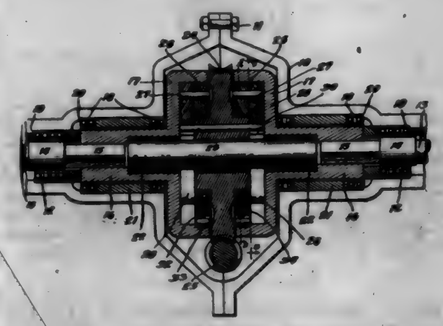
A tennis racket having a head, a handle, and a throat intermediate of said handle and said head, said throat having a tapered slot substantially throughout its length in the plane of the head and with this slot widest at the handle end, whereby the racket, near the slot, will have material in nearly uniform cross section which will be in a position to best resist twisting stresses when the racket is in use.

1,536,109. HEARING DEVICE FOR PARTLY-DEAF PERSONS. HENRY L. LESSARD, Nashua, N. H. Filed Oct. 21, 1921. Serial No. 509,307. 4 Claims. (Cl. 181—24.)



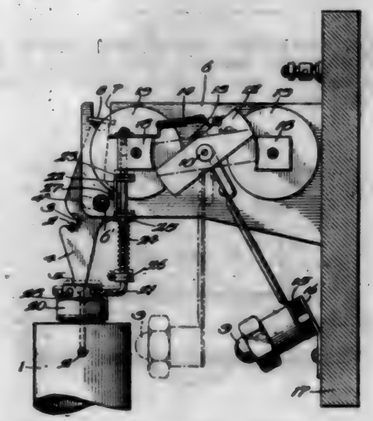
1. In a hearing device for partly deaf violin players, the combination of an ear-piece comprising an ear guard, an ear nipple of a size and form to enter the ear which projects from one side thereof and a nipple tube which extends from the ear nipple through the ear guard having threads at the end, with a holder cup through which said nipple tube passes, a curved spring holder carried by said holder cup and shaped to pass back of the head, and a bent coupling tube threaded on to said nipple tube outside said cup.

1,536,110. DOORLATCH. GOODRICH Q. LEWIS, Wheaton, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 9, 1923. Serial No. 650,335. 4 Claims. (Cl. 292—238.)



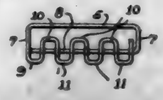
1. In a latch for a swinging door, two plates, one of which is adapted to be secured to the door and the other to the fixed member on which the door is mounted, one of said plates having a rigid shouldered projection, the other plate having a co-operable shouldered dog pivotally mounted thereon, the free end of the dog adapted to engage said plate having the rigid shouldered projection to positively limit the swinging movement of the door in an opening direction.

1,536,111. COMBINED CARRIER AND BUMPER FOR AUTOMOBILES. ROBERT P. LEE, Mitchell, S. Dak. Filed Sept. 23, 1924. Serial No. 739,417. 8 Claims. (Cl. 293—55.)



8. A device of the class described for attachment to a vehicle chassis embodying a pair of spaced side rails connected by an end cross rail, comprising a pair of bracket bars adapted to rest intermediate their ends on the cross rail having lateral inner arms adapted to engage the under sides of said side rails, and means rigidly connecting said bars.

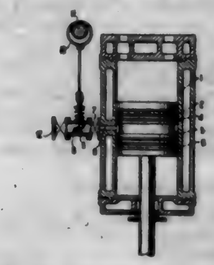
1,536,112. DIFFERENTIAL-GEAR DRIVE FOR AUTOMOBILES, ETC. WALDEMAR L. LINDGREN, Chicago, Ill., assignor, by direct and mesne assignments, to Alfred A. Norton, trustee, Chicago, Ill. Filed May 17, 1924. Serial No. 713,919. 6 Claims. (Cl. 74—7.)



1. In a differential, the combination with a central driving disk and means for rotating the same, of a pair of cup-shaped driven disks facing each other on opposite sides of the driving disk, a pair of rings in the cup portions of the driven disks adjacent the driving disk both peripheries proper of each of said rings being out of engagement with their respective disks, a clutch dog pivoted on each of said rings co-operating with the inner periphery of the cups, and connections between the driving disk and the clutch dogs to rock the same as the driving disk is rotated relative to the driven disks.

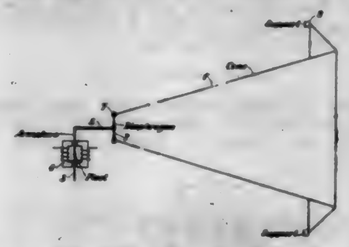
1,536,113. SOUND-PRODUCING MECHANISM. FREDERICK B. LITTLE, Chicago, Ill., assignor to J. C. Deagan, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1920. Serial No. 370,834. 2 Claims. (Cl. 248—30.)

2. A hanger including two upright plates each having a hook forming notch and each provided with a laterally extending external ear; in combination with a support upon which said plates are mounted to swing; a load supporting bail received in said notches to embrace portions of said plates and positioned by engagement with said ears; and means for holding the plates in positions to which they are adjusted.



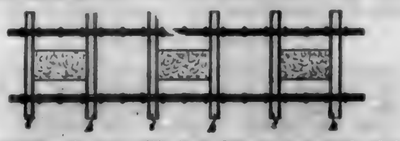
1,536,114. BUCKLE. LOUIS B. LOVEJOY, Bridgeport, Conn., assignor to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 21, 1924. Serial No. 733,751. 2 Claims. (Cl. 24—144.)

1. A buckle comprising a back and a clamping lever pivoted thereon, said back being made of a single piece of wire bent to provide at the top a bar upon which the clamping lever is pivoted, one end of said wire extending straight across the bottom and the other end thereof extending across the bottom in a sinuous path to provide alternately upwardly and downwardly projecting teeth adapted to be bent toward each other and to cooperate with said first end for clamping a piece of webbing.



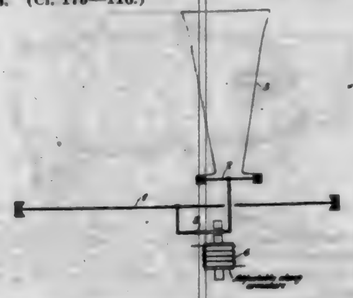
1,536,115. MEANS FOR ASCERTAINING LEAKAGE OF PISTONS OF DOUBLE-ACTING INTERNAL-COMBUSTION ENGINES. GERARD JOHAN LUDT, Amsterdam, Netherlands, assignor to Nederlandsche Fabriek van Werktuigen en Spoorwegmaterieel, Genaamd "Werkspoor," Amsterdam, Netherlands, a Company of the Netherlands. Filed May 7, 1923. Serial No. 637,069. 2 Claims. (Cl. 123—198.)

1. In double acting internal combustion engines, the combination with the closed cylinder provided with an opening in its wall intermediate its ends and a passage leading therefrom, of a piston having an annular recess intermediate its ends adapted to register with the said opening during the movements of the piston, a closing member situated in the said passage and adapted to govern the escape of gases from the said annular recess through the said opening, and means operated by the



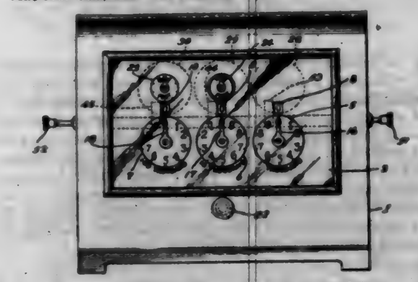
engine shaft for automatically controlling the said closing member in tune with the cycle in the said cylinder.

1,536,116. SOUND REPRODUCER. WILLIAM H. MARTIN, Chappaqua, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 1, 1924. Serial No. 703,510. 6 Claims. (Cl. 179—116.)



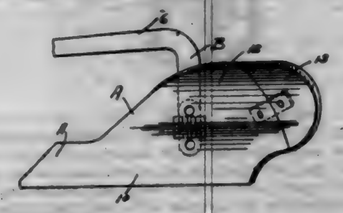
1. In a sound reproducer, a diaphragm having a high natural period, a diaphragm having a low natural period, said last mentioned diaphragm being substantially cone shaped and being so related to said first mentioned diaphragm as to constitute a horn therefor, and means to apply a driving force to said diaphragms, said means being so related to the diaphragms that when a low frequency driving force is applied to the system the diaphragm having a high period will offer a large mechanical impedance to the driving force so that the driving force will be most effective upon the diaphragm of low frequency.

1,536,117. METALLIC-RAIL-SUPPORT CONSTRUCTION. MAX MATTHAEI, Cassel-Wilhelmshohe, Germany. Filed July 31, 1924. Serial No. 729,402. 1 Claim. (Cl. 238—26.)



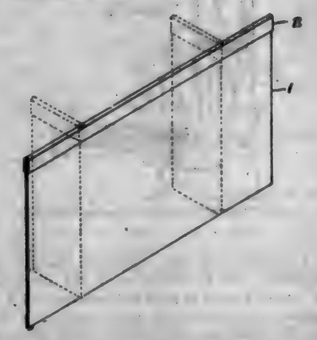
A permanent way with iron frames composed of U-shaped longitudinal and cross sleepers, the cross sleepers being inserted from below in incisions of the longitudinal sleepers, comprising in combination U-shaped longitudinal iron sleepers having incisions in the flanges which extend up to the web, flaps formed by the edges of the incisions of the flanges of each longitudinal sleeper being bent up from said flanges, U-shaped iron cross sleepers inserted in said incisions of the longitudinal sleepers so that the web part of each incision rests upon the upper surface of a cross sleeper and the corresponding flaps of the longitudinal sleeper are in close contact with the flanges of the corresponding cross sleeper, and screws for fixing said flaps on said cross sleepers.

1,536,118. SOUND REPRODUCER. BRUNSON S. MCCUTCHEN, North Plainfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 1, 1924. Serial No. 703,509. 9 Claims. (Cl. 179—116.)



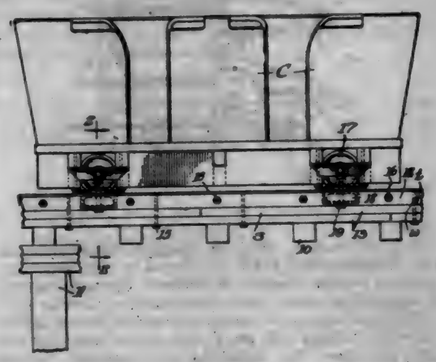
1. In a sound reproducer, a diaphragm having a high natural period, a diaphragm having a low natural period, and means to apply a driving force to said diaphragms, said means being so related to the diaphragms that when a low frequency driving force is applied to the system the diaphragm having a high period will offer a large mechanical impedance to the driving force so that the driving force will be most effective upon the diaphragm of low frequency.

1,536,119. DEMONSTRATING INDEX DEVICE. DONALD MCDONALD, New York, N. Y., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed June 14, 1923. Serial No. 645,243. 10 Claims. (Cl. 35—16.)



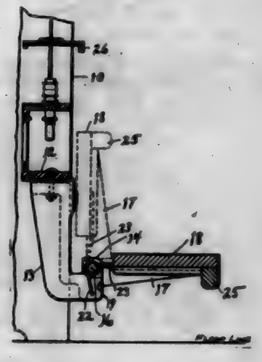
1. A demonstrating index device comprising a face plate having a series of groups of unit markings, each group having a different unit value, a pointer for each group, a train of driving gears cooperating with said pointerrs, and means cooperating with said train to expose a number marking corresponding to the number of units indicated by the pointer in each group.

1,536,120. CULTIVATOR SHOVEL. JOHN C. MECKLENBURG, Hancock, Minn. Filed Oct. 20, 1923. Serial No. 669,838. 1 Claim. (Cl. 97—198.)



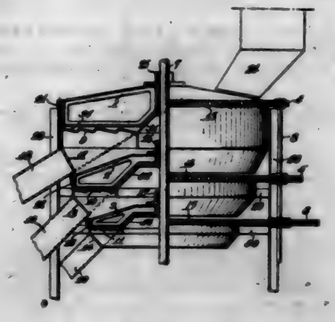
The combination with a cultivator standard, of a cultivator foot and a clamp for connecting the foot to the standard including an attaching body plate secured to the shovel having a pair of spaced slots therein, a pair of companion clamping jaws including arcuate body portions for embracing the standard, curved hook portions formed on the inner ends of the body portions for engaging through said slots in the attaching body plate, and spaced outwardly extending ears formed on the opposite terminals of the body portions, and means for adjustably connecting the ears together.

1,536,121. METHOD OF MAKING HAND BAGS AND PRODUCT THEREOF. JACOB S. MEYER, Pittsburgh, Pa. Filed July 23, 1924. Serial No. 727,723. 2 Claims. (Cl. 190—54.)



1. The method herein described of making the U-shaped member, of a hand bag with the bag material secured thereto, which consists in assembling a web of bag material between the opposite webs of a straight strip of metal channel-shaped in cross section, bending the strip when assembled upon the bag material transversely to U-shape between dies, and in so doing effecting at the bend constriction of the outer web upon the inner and a finished union between the web of bag material and the frame.

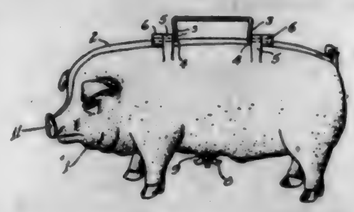
1,536,122. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Dec. 11, 1924. Serial No. 755,183. 11 Claims. (Cl. 104—246.)



1. In track construction for pleasure railway structures, the combination of supporting stringers, rails in the form of commercial T-bars, and means securing said rails with their webs vertical and against the inner side of said stringers and with the outer sections of their tops against the top of the stringers, said tops forming rail surface for vehicle wheels, the inner faces of the webs and the under sides of the inner sections of the tops being clear to form abutment surfaces.

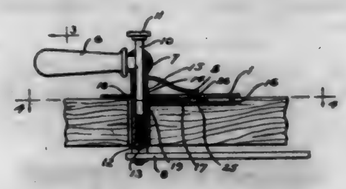
1,536,123. SPINNING, TWISTING, AND LIKE MACHINE. JOHN A. MINSHULL, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1925. Serial No. 2,562. 5 Claims. (Cl. 118—1.)

1. In a machine of the character specified having a rail connecting the end frames of the machine, a plurality of hangers in a stationary relation with said rail, a swingable arm pivoted to each hanger, a board supported by the arms, an abutment on each arm cooperating with the end of its supporting hanger, and means to automatically swing the board from its operative position to its inoperative position against the side of the machine.



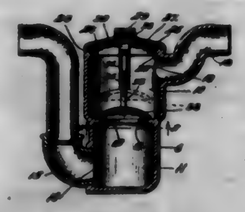
1,536,124. SIFTING OR SEPARATING MACHINE. FRANK S. MOORE, Chester, and OTTO R. VAN BOEHM, Scottdale, Pa. Filed Nov. 19, 1924. Serial No. 750,947. 4 Claims. (Cl. 83—56.)

1. In an upright screening machine, the combination with a central fixed shaft, of a series of perforated platforms or screens, paddles or scrapers rotatably mounted on said central shaft above each platform, circular gears rigidly connected to the outer extremities of the paddles, means for driving said gears, and chutes connected with said platforms for delivering the material retained thereon.



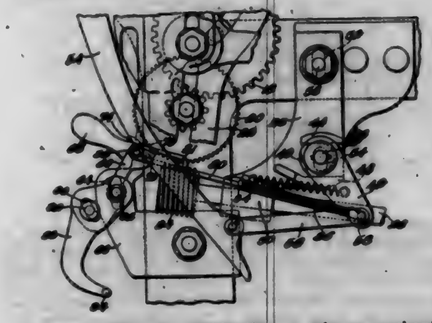
1,536,125. ANATOMICAL DISPLAY CASE. CHARLES AARON MOORMAN, Chicago, Ill. Filed Dec. 15, 1924. Serial No. 756,165. 4 Claims. (Cl. 35—12.)

1. An anatomical display case of the character described comprising a pair of hingedly connected cooperating members having the outward appearance, when in registration with one another, of one of a species of domestic stock, one of said cooperating members having its interior walls formed to designate the internal physiological members of the species, and being further provided



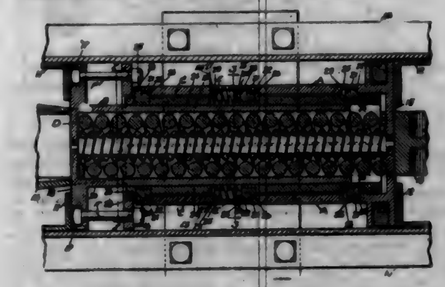
with compartments, each of said compartments having a transparent cover and being filled with ingredients beneficial to that portion of the animal in the vicinity of the container.

1,536,126. SELECTOR-HANDLE LOCK. GEORGE J. NETH, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 6, 1922. Serial No. 592,710. 5 Claims. (Cl. 235—130.)



4. In combination a selector handle, a plunger traveling vertically therein, yielding means to maintain said plunger in its inoperative position, an unlocking lug on said plunger, a locking plate adapted to engage with said selector handle at a pre-determined point, whereby when said handle is so locked the depression of the plunger will result in the unlocking of the handle therefrom, and yielding means to maintain said locking member in engagement with the said handle when locked, and in the path thereof when unlocked, and means for limiting the movement of said locking member.

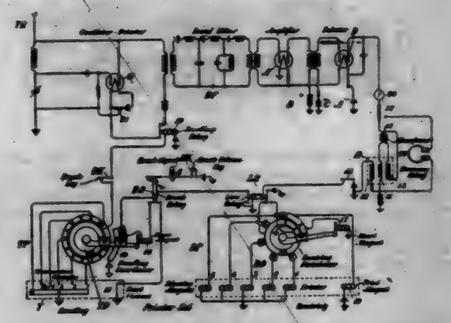
1,536,127. WASTE TRAP. ALBERT S. NEWTON, Providence, R. I. Filed Jan. 21, 1924. Serial No. 687,434. 4 Claims. (Cl. 182—14.)



1. In a waste trap, a body having upper and lower chambers, the latter constituting the seal chamber, said chambers being provided with outlet and inlet respectively, a seat intermediate said inlet and outlet, and a baffle interposed between said inlet and outlet and movably mounted for cooperation with said seat, said baffle constructed to retard the inflow of the water to maintain maximum water in the seal chamber, and to automatically prevent back pressure and siphonage.

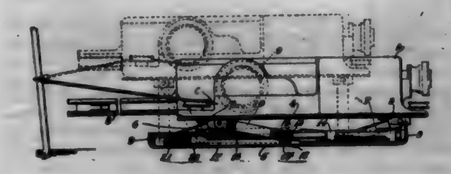
1,536,128. TAKE-UP MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1923. Serial No. 615,516. 1 Claim. (Cl. 139—313.)

A loom having, in combination, a take-up mechanism, means for driving the take-up mechanism, a change lever, connections between the change lever and the driving means to disengage the driving means from the take-up mechanism, a let-back device normally maintained out of engagement with the take-up mechanism, and a hunter mounted upon the let-back device and adapted to move the change lever upon manual movement of the let-back device.



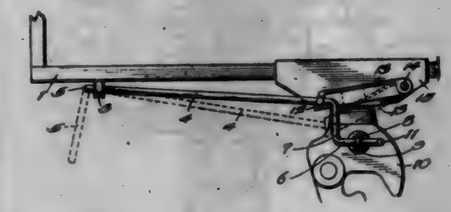
1,536,129. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 19, 1922, Serial No. 575,963. Renewed Oct. 4, 1924. 9 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with elongated telescoped inner and outer members, one of said members having friction surfaces and the other oppositely disposed wedge surfaces; of elongated friction shoes interposed between said telescoped members, each shoe having a friction surface on one side and wedge surfaces on the other side; a main spring resistance operative between said two members to yieldingly resist relative approach thereof; and additional spring means, associated with said shoes and said member having the wedge surfaces, tending to force said shoes and said wedge surfaced member in opposite directions, said additional spring means being located within openings provided in said wedge surfaced member and shoes.



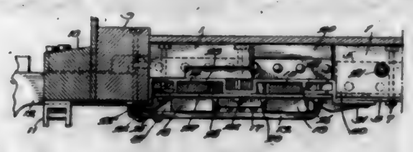
1,536,130. OPERATION OF PRINTING APPARATUS BY RADIO. DONALD B. PRAY, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 29, 1924. Serial No. 702,877. 10 Claims. (Cl. 250—8.)

1. In a radio signaling system, a plurality of intercommunicating stations, each station emitting waves of a different frequency, means at each station for producing a beat frequency from the two waves, means at each station for superposing telegraph signals on the wave emitted by that station whereby similar signals are superposed upon the beat frequency produced at each station, means whereby the wave which is emitted from the sta-



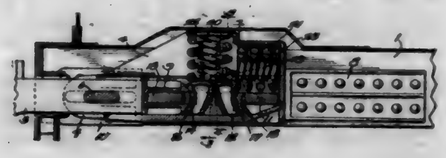
tion which is receiving may be interrupted when the receiving operator desires to break in, thereby causing the beat frequency to cease, and means at the station which is sending responsive to the interruption of the beat frequency to operate a break signal at said station.

1,536,131. MINING MACHINE. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 4, 1921. Serial No. 489,763. 16 Claims. (Cl. 262—8.)



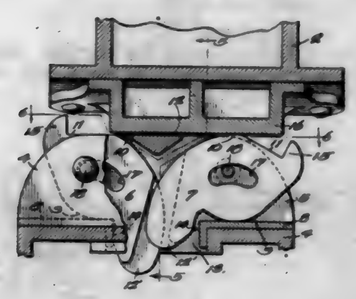
1. In combination with a kerf-cutting element having power actuated flexible draft mechanism mounted on and movable therewith, a support for said element, and means on said support adapted to coact with said draft mechanism for elevating said element.

1,536,132. CAR-UNCOUPLING MECHANISM. HERMAN C. PRIESE, Blue Island, Ill. Filed Mar. 9, 1921. Serial No. 451,010. 1 Claim. (Cl. 213—168.)



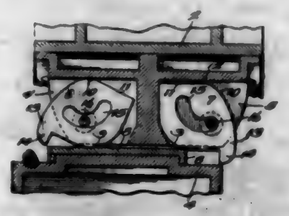
The combination with the lock of a car coupler; of a lever in the form of a rod journaled at its outer end and bent at its inner end to form a crank which has withdrawing engagement with said lock; and a horizontally swinging arm upon which the inner portion of said lever is journaled at a substantially fixed point with reference to the arm and serving to permit shifting of the lever as it is operated to withdraw the lock.

1,536,133. DRAFT GEAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed Apr. 17, 1922. Serial No. 554,248. 2 Claims. (Cl. 213—52.)



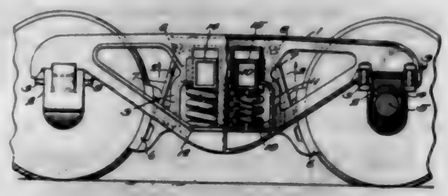
1. In a car structure, the combination with two draft sills; of a draft gear having keys as component parts thereof; and two draft gear carriers assembled with said sills and having openings receiving the ends of said keys and including applied bottom plates whereby the draft gear may be assembled with the balance of the car structure from beneath the draft sills.

1,536,134. DRAFT GEAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed July 17, 1923. Serial No. 652,131. 7 Claims. (Cl. 213—28.)



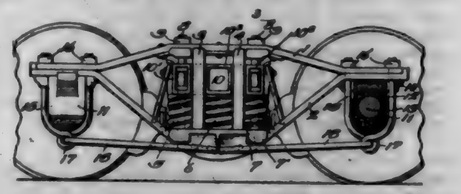
1. Shock absorbing mechanism for draft gears including two motion resisting devices and rocker mechanism including two coacting rockers in the line of draft and positioned to transmit draft strains to both of said motion resisting devices, said rocked mechanism including two portions operating in relatively angular directions and respectively individual to said motion resisting devices and transmitting draft strains thereto.

1,536,135. RAILROAD CAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed Dec. 19, 1923. Serial No. 681,609. 11 Claims. (Cl. 64—65.)



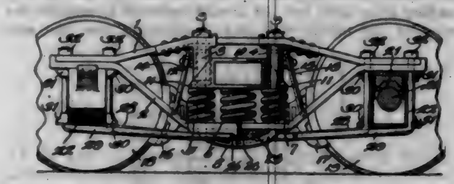
1. The combination with a car truck bolster; of a car body bolster; and oscillating rollers interposed between the bolsters and each formed to support the body bolster, when turned to one position and to be free of this supporting relation when turned to an alternative position and each having a lug engageable with a bolster to be turned thereby to functioning position when the bolsters are angular and each being self-restoring to non-functioning position when the bolsters are parallel.

1,536,136. RAILROAD CAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed Dec. 19, 1923. Serial No. 681,610. 6 Claims. (Cl. 64—65.)



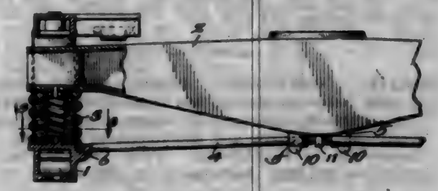
1. The combination with a car truck bolster; of a car body bolster; and oscillating rollers interposed between the bolsters and each formed to support the body bolster, when turned to one position and to be free of this supporting relation when turned to an alternative position and each having a lug engageable with the truck bolster to be turned thereby to functioning position when the bolsters are angular and each being self-restoring to non-functioning position when the bolsters are parallel.

1,536,137. RAILROAD-CAR TRUCK. HERMAN C. PRIEBE, Blue Island, Ill. Filed Feb. 12, 1924. Serial No. 692,367. 5 Claims. (Cl. 105—197.)



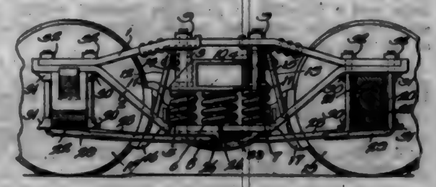
1. A car truck including the side frames thereof, each having three upright bars spaced apart longitudinally of the truck; a truck bolster extending between said frames and forked into two branches at each end, the middle bars being between the fork branches of the bolster ends adjacent thereto and said fork branches being between the adjacent middle bars and the bars upon the sides of the middle bars; and springs carried by said side frames and in supporting relation to the bolster.

1,536,138. RAILROAD-CAR TRUCK. HERMAN C. PRIEBE, Blue Island, Ill. Filed Feb. 12, 1924. Serial No. 692,368. 16 Claims. (Cl. 105—204.)



1. A car truck including the side frame thereof; a journal box; a U bolt assembled with the side frame and defining therewith a space in which the journal box is received; and a link connecting the U bolt with a remote portion of the truck.

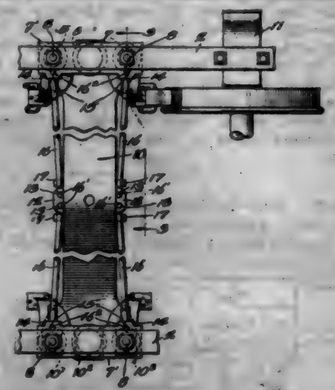
1,536,139. RAILROAD-CAR TRUCK. HERMAN C. PRIEBE, Blue Island, Ill. Filed Feb. 12, 1924. Serial No. 692,369. 16 Claims. (Cl. 105—197.



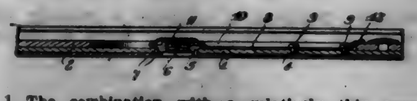
1. A car truck including the side frames thereof, each having two upright bolster guide bars; a truck bolster extending between said frames and forked into three branches at each end, said guide bars being received between the branches of the bolster.

1,536,140. RAILROAD-CAR TRUCK. HERMAN C. PRIEBE, Blue Island, Ill. Filed Feb. 12, 1924. Serial No. 692,370. 19 Claims. (Cl. 105—197.)

2. A car truck including the side frames thereof; a truck bolster extending between the side frames; bolster supporting springs carried by the side frames; and linkage connecting the side frames with intermediate portions of the bolster, the side frames having upwardly facing hooks receiving the linkage at the side frames and closely underlying said springs that hold the linkage and said frames in assembly.



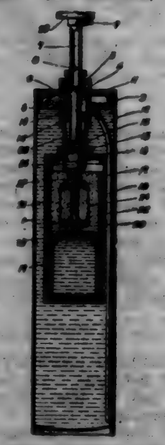
1,536,141. RAILROAD-CAR TRUCK. HERMAN C. PRIEBE, Blue Island, Ill. Filed Feb. 12, 1924. Serial No. 692,372. 18 Claims. (Cl. 105—197.)



1. A side frame for car trucks including a frame member in the form of a U bolt whose sides are disposed and shaped to form two lower longitudinal and two end portions of the frame.

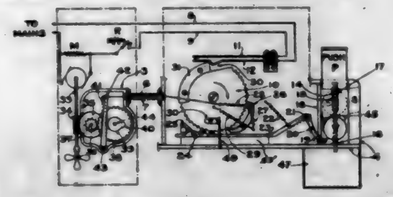
1,536,142. RAILROAD-CAR TRUCK. HERMAN C. PRIEBE, Blue Island, Ill. Filed Feb. 12, 1924. Serial No. 692,373. 10 Claims. (Cl. 105—197.)

7. A car truck including the side frames thereof; a truck bolster extending between the side frames; bolster supporting springs carried by the side frames; and two links, one individual to each side frame, each link connecting the side frame to which it is individual with an intermediate and side portion of the bolster, the bolster having upright sockets and the links having down turned inner ends received in said sockets, said springs holding the links and side frames in assembly.



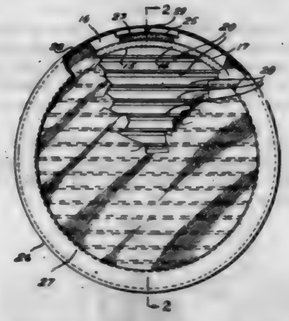
1,536,143. TRIPOD CONNECTION FOR CAMERAS. JOHN A. ROBERTSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 16, 1922. Serial No. 582,119. 2 Claims. (Cl. 248—46.)

1. The combination with a relatively thin support having a nut rigidly held therein provided with a threaded aperture extending from side to side of the support, of a yielding closure for the upper side of the nut adapted to be displaced by a screw extending therethrough.



1,536,144. FIRE EXTINGUISHER. LUTHER ROBINSON, Eldorado, Kans. Filed Oct. 10, 1923. Serial No. 667,642. 5 Claims. (Cl. 169—32.)

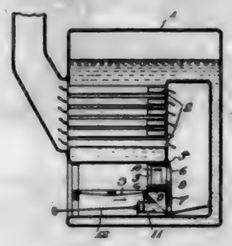
1. A fire extinguisher comprising a casing having a removable cover with a depending collar, a nipple on the end of the collar, a gas chamber casing connected



to the nipple, a plunger stem projecting through the cover and having a head projecting through an opening in the gas chamber casing, the head being of greater diameter than the stem, the stem having a hollow portion provided with an inlet and an outlet, the inlet communicating with a chamber formed by the collar carried by the cover, the outlet in the stem being on the outside of the casing, and a pipe communicating with the chamber and with the interior of the casing, the gas chamber casing being adapted to contain chemicals rendered active by longitudinal movement of the plunger.

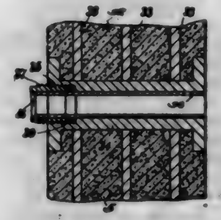
1,536,145. COIN-CONTROLLED MECHANISM. ROSCOE ROYAL, Chicago, Ill. Filed Dec. 30, 1920. Serial No. 434,032. 4 Claims. (Cl. 192—142.)

1. The combination with a motor; of a worm wheel upon the motor shaft; a gear train operated by the worm wheel and including a follower member; a lever escapement and ratchet member; and a flexible connection in controlling relation to said escapement and controlled by said follower member.



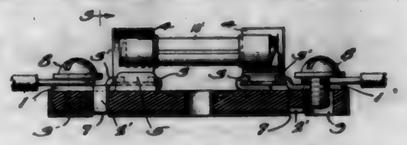
1,536,146. HEADLIGHT. ARMAND P. SAFFERT, Cliffside, N. J. Filed Mar. 9, 1923. Serial No. 623,969. 4 Claims. (Cl. 240—48.)

1. In a headlight, a casing having a lens receiving opening therein, a ring-shaped member disposed at the edge of the said opening, a plurality of horizontally disposed translucent slats mounted within the opening of the member and arranged in vertically spaced and forwardly declined relation one with respect to the other, means carried by said member for cushioning the engaged ends of said slats, a lens adapted to cover the opening of said member at the outer side thereof, and means for detachably securing said member and lens in position.



1,536,147. COMPLETE-COMBUSTION APPARATUS FOR MARINE BOILERS. TOKUSABURO SATO, Osaka, Japan. Filed Jan. 6, 1922. Serial No. 527,512. 1 Claim. (Cl. 110—73.)

In a furnace, a fire box, an ash pit, a bridge wall in rear of the ash pit and fire box and having an opening extending rearwardly from the fire box, and a combustion chamber into which said opening discharges, the said bridge wall having on its rear side a flange which depends therefrom and also presents a frusto-conical inner side forming a contraction of the rear end of said opening, the said bridge wall also having a hot air intake opening leading from the ash pit and a duct leading from said hot air intake opening formed in the mass of the bridge wall and discharging into one side



of the first named opening therein and a frame supporting said bridge wall and against the rear side of which the said depending flange of the fire wall bears, said frame and flange also having an opening to establish direct communication between the ash pit and the combustion chamber, and means to control the passage of air through said opening and also through said hot air intake opening and said duct.

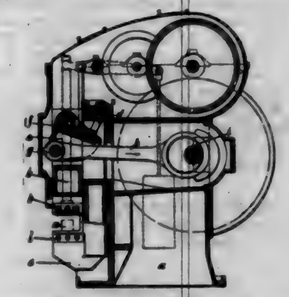
1,536,148. CONDENSER. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, and OTHO ROBERT VERITY, Hale, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 25, 1918. Serial No. 264,029. 5 Claims. (Cl. 257—24.)

1. In a surface condenser, having the shell and hotwell made of cementitious material, a water box comprising a tube plate constructed of cementitious material and a plurality of parallelly disposed metallic reenforcing plates embedded in the cementitious material of the tube plate.

1,536,149. CLIP STRUCTURE. WILLIAM SCHMID, Coldwater, Mich., assignor to Caskey-Dupree Manufacturing Company, Coldwater, Mich., a Corporation of Ohio. Filed Mar. 25, 1924. Serial No. 701,873. 3 Claims. (Cl. 200—134.)

2. A clip structure including a U shaped gripping member made of spring metal; and a base member formed of softer metal and having a prong formation integrally formed therewith and in clinching engagement with the bight of the gripping member.

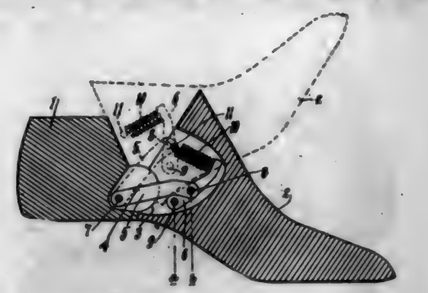
1,536,150. PNEUMATIC ACTION FOR MUSICAL INSTRUMENTS. CHARLES G. SCHNELL, North Tonawanda, N. Y., assignor to Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a Corporation of New York. Filed May 24, 1922. Serial No. 563,183. 2 Claims. (Cl. 84—55.)



1. A unit valve-block for pneumatic musical instruments, comprising a valve chamber having exhaust and flushing ports, valves controlling said ports, a pouch chamber containing a pouch for actuating said valves, an atmospheric chamber underneath the pouch and a passage located near one side of the block and leading to said atmospheric chamber, said block having a screw-opening extending rearwardly from its face, and located near the same side thereof as said passage, and an elbow-shaped nipple connected to said passage and having its shank portion extending diagonally from the block with its inner side at an acute angle to the face of the block, whereby the projecting portion of the nipple is offset relative to said screw-opening.

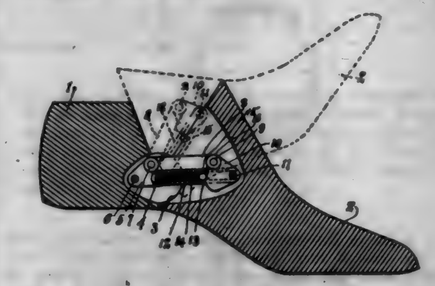
1,536,151. PROCESS FOR DYEING TEXTILE FABRIC, PAPER, AND LIKE MATERIALS. MARIA SCHOLL, Leichlingen, Germany. Filed June 25, 1923. Serial No. 647,759. 9 Claims. (Cl. 8—5.)

2. The described step in the art of dyeing textile and other porous material, which consists in passing the dyed material through a quick-acting hot oil bath.



1,536,152. SHEARS WITH TWO MOVABLE BLADES. CARL SCHORN, Dusseldorf-Rath, Germany. Filed Sept. 3, 1924. Serial No. 735,689. 3 Claims. (Cl. 164—47.)

1. A shearing machine having a pair of blades, a linkage device interconnecting the blades, and an operating member connected intermediate the linkage device for moving said blades toward and from each other, said linkage device being adapted to initially yield at either end whereby when one of said blades engages the work ahead of the engagement of the other blade, the first blade may be maintained at rest during the closing movement of the other blade and said blades may then be uniformly engaged with the work.

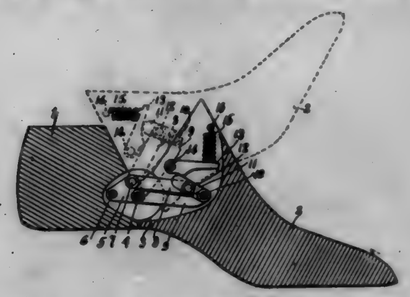


1,536,153. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,758. 2 Claims. (Cl. 12—136.)

1. In a last of the divided type and comprising a toe part and a heel part, a link pivoted to the heel part and extending into the toe part, a second link pivoted to the toe part, said first link being pivotally attached to

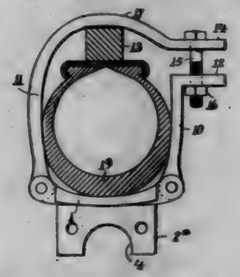
the second link intermediate the ends of the latter, and means for applying power to the end of the second link remote from its point of attachment to the toe part.

1,536,154. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,761. 2 Claims. (Cl. 12—136.)



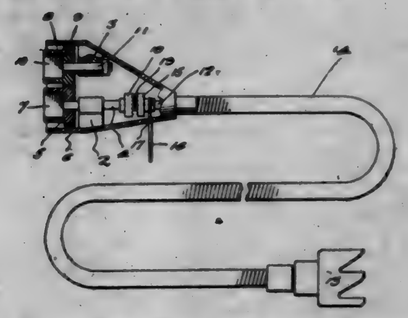
1. In a last of the divided type and comprising a heel part and a toe part, and bearing pin for said last parts, a triangular shaped plate having one extremity secured on said bearing pin, another extremity secured to said heel part, a bearing pin in the toe part, a tube within the heel part and toe part and mounted on said bearing pins, a substantially triangular shaped plate pivoted about said bearing pin in the toe part, a link having one end pivotally connected to said plate in the heel part and its other end pivotally connected to the plate in the toe part, and a spring within said tube for rotating the plate within the toe part about the bearing pin in said toe part to thereby maintain the heel part and toe part in extended position and in collapsed position under tension.

1,536,155. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,763. 1 Claim. (Cl. 12—136.)



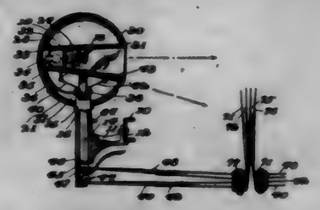
In a last of the divided type, the combination of a heel part and a toe part, a bearing pin for said last parts, a plate mounted in the heel part and secured on said bearing pin, a second pin for attaching said plate to the heel part, a link extending from said bearing pin into the toe part of the last, a lever in the toe part of the last, a bearing pin passing through the end of said lever and said link to pivotally connect said link and lever to

the toe part of the last, a link extending from the plate in the heel part to a point intermediate the ends of the lever in the toe part, and a spring-actuated lever for



applying power to the first mentioned lever in the toe part of the last to maintain the last parts in extended position and in collapsed position under tension.

1,536,156. TRACTION DEVICE. RAYMON A. SHIMAY, Boston, Mass. Filed Feb. 9, 1924. Serial No. 691,571. 2 Claims. (Cl. 152—14.)

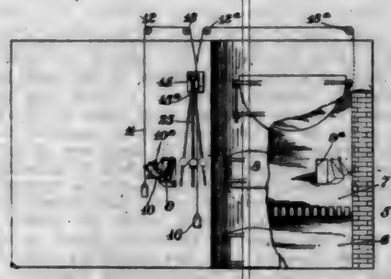


1. A traction device comprising a plate having a calk on its exposed face, and locking members loosely connected with said plate, one locking member having an elbow substantially parallel with the axis of the wheel, and the other locking member passing over the rim of the wheel and having its terminal portion substantially parallel with said elbow, and a bolt penetrating said terminal portion and elbow and forcing them toward each other.

1,536,157. POWER-DRIVEN WRENCH. JAMES W. SLACK, East Enterprise, Ind. Filed Mar. 13, 1924. Serial No. 698,906. 3 Claims. (Cl. 81—54.)

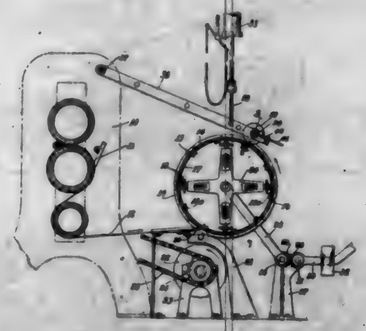
1. A device of the class described comprising a casing open at its respective ends, a driven shaft journaled in said casing adjacent the outer end thereof, a socket member mounted on the outer end of said driven shaft, an additional socket member supported in said casing and adapted to be actuated by the first mentioned socket member, a flexible drive shaft extending through the opposite end of said casing, the outer end thereof adapted for connection to a source of power, the inner end of said flexible drive shaft being adapted for connection with said driven shaft whereby the latter may be actuated thereby, and clutch means for moving the drive shaft into and out of engagement with the driven shaft.

1,536,158. DIRIGIBLE HEADLIGHT. CHARLES E. SPARHAWK, Drumheller, Alberta, Canada, assignor to himself, Charles W. Perry, and Hilliard C. McConkay, trustees, all of Drumheller, Canada. Filed Mar. 28, 1923. Serial No. 628,369. 2 Claims. (Cl. 240—61.)



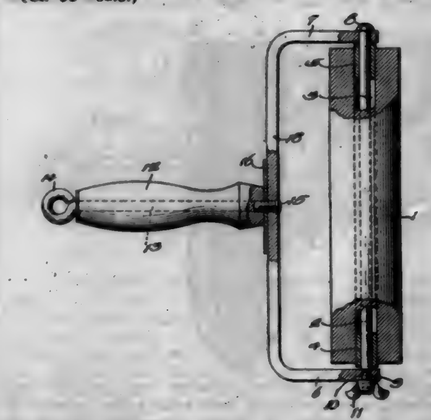
1. In an apparatus of the character described, a steering wheel having rotatable hand gripe, a pair of headlights, each including a globular casing provided with a front opening and with a lower elongated slot, a tapering barrel fixed diametrically within the casing and having its larger end interfitting the front opening of the casing, a light bulb and lens within said barrel adjacent to its inner smaller end, an upright hollow spindle having its upper end projecting into the casing through said slot and provided with upwardly and outwardly curved arms pivotally connected to the inner surface of the casing at diametrically opposed points in a line at right angles to the axis of the barrel, means carried by the upper portion of the spindle to cover the casing slot, a support in which the spindle is journaled, and flexible control members actuated by the steering wheel and by the said hand gripe, the former operatively associated with the lower end of the spindle and the latter extending upwardly through the spindle and connected to the forward and rear portions of the barrel within the casing.

1,536,159. SELF-WINDING CLOCK. MARK A. STANDOW, Hartford, Conn. Filed June 11, 1923. Serial No. 644,784. 1 Claim. (Cl. 58—41.)



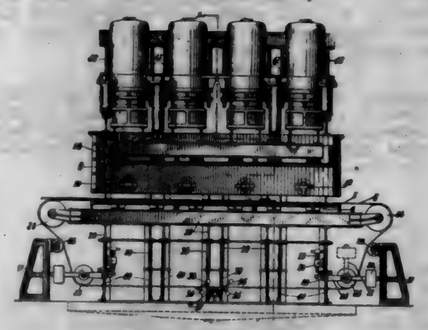
A self winding time mechanism with a time movement having a main spring and a main spring arbor, a ratchet wheel mounted on said arbor, a lever pivoted to the frame of the time movement, twin magnets for attracting the lever, a fixed contact member having certain connections with the magnets, a second lever carrying a movable contact to engage the first contact and provided with a rounded projecting arm, a third lever provided with a locking frame adapted to engage the rounded arm of the second lever, pivotally supported to drop below said rounded projecting arm, means carried by the first lever for forcing the third lever into locking position to hold said movement contacts separated from said fixed contact, an arm carried by the first lever, a spring connected with said arm and a pawl carried by said last arm for engaging the ratchet wheel, and the main spring being of sufficient power to maintain the time movement active for a fraction of an hour period and the second spring combining with said main spring to maintain normal tension upon the time movement.

1,536,160. MEANS FOR AUTOMATICALLY CLOSING FURNACE DOORS. ROBERT W. STEWART, Findlay, Ohio. Filed Feb. 21, 1922. Serial No. 538,361. 4 Claims. (Cl. 118—55.)



1. In combination with a combustion chamber having an air inlet, a gravity actuated door to close the same, a flexible member connected at one end to said door, a weight on the other end of said flexible member of less weight than the weight of the door, a drum around which the flexible member is coiled between said weights in slipping frictional engagement with the drum to drive the latter by the weight of the closing door, an escapement mechanism including an escapement wheel driven by said drum and a pendulum having a crutch engaging the escapement wheel for gradually closing the door, substantially as described.

1,536,161. APPARATUS FOR MAKING CUSHION TIRES. JOHN M. STRAUB, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,332. 10 Claims. (Cl. 154—0.)

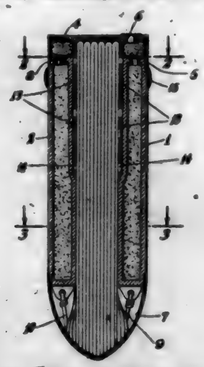


2. Apparatus for making cushion tire-bodies comprising a tire-base, a core-structure extending from the outer periphery thereof, a pair of presser rollers straddling said core-structure, and yielding means for pressing said rollers toward each other against said core-structure.

1,536,162. ROLLER. THOMAS W. SUDDARD, Two Rivers, Wis., assignor to The Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Jan. 30, 1923. Serial No. 615,810. 2 Claims. (Cl. 91—62.5.)

2. A roller including a revoluble member; a bail between the sides of which said revoluble member is mounted to turn; and a handle that is inclusive of a bolt threaded into the mid portion of the bail, the inner end of this bolt being of rivet formation to secure the assembly of the bolt and bail.

1,536,163. APPARATUS FOR MAKING SHEETS OF PULP AND SIMILAR ARTICLES. DANIEL MANSON SUTHERLAND, JR., Trenton, N. J., assignor to The Agasote Millboard Co., Ewing Township, N. J., a Corporation of New Jersey. Filed Oct. 7, 1919. Serial No. 329,122. 12 Claims. (Cl. 92—61.)

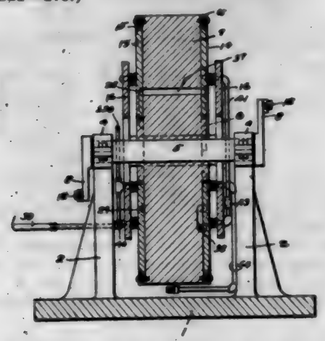


1. An apparatus of the character described, having in combination a mold bed and a mold top, one movable relatively to the other, a conveyor located between said mold top and said mold bed, said conveyor being in contact with said mold bed and movable laterally thereof, and a deckle surrounding said mold top and of such height as to always engage said mold top in all the operative relative positions of said deckle and mold top.

1,536,164. PROJECTILE. UBLYN CLIFTON TAINTON, Johannesburg, Transvaal, South Africa. Filed Oct. 30, 1917, Serial No. 199,243. Renewed Sept. 22, 1924. 4 Claims. (Cl. 102—20.)

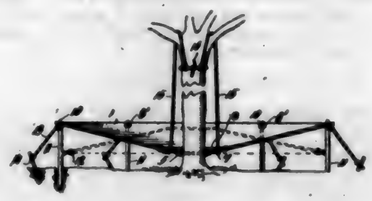
1. A projectile comprising a plurality of explosive segments of substantially equal weight, provided with a suitable rifling band and adapted to be projected from

a gun as a unitary projectile, a member binding said segments rigidly together and containing an explosive, means ignited by the propelling charge for dislodging the binding member to permit the segments to separate from each other by centrifugal force, a flexible connector



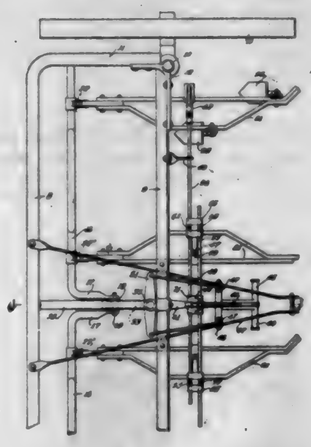
connected to the several segments and provided with anchoring means near the ends holding the segments to cause the projectile to become entangled with or anchored to a target such as an aeroplane, said segments constructed with time fuses.

1,536,165. METHOD FOR PRODUCING HYDRAULIC, PARTICULARLY CEMENTLIKE, MORTAR-FORMING AGENTS. OSCAR TEITENS, Oerlinghausen, Germany, assignor to the Firm Record Cement-Industrie G. m. b. H., Oerlinghausen, Germany. Filed Jan. 26, 1924. Serial No. 688,831. 5 Claims. (Cl. 106—25.)



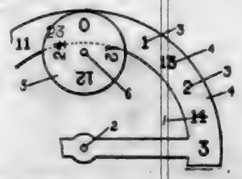
1. Process for the manufacture of hydraulic and cement-like mortar forming material, comprising mixing a calcareous material and a silicate, one of which is of a bituminous nature, burning the mixture with the recovery of oil, then slaking the lime formed and converting the shale residue into mortar-forming material with a substance imparting setting qualities to the material.

1,536,166. FLUID-PRESSURE-ENGINE STRUCTURE. JOHN B. THOMAS, Nashville, Tenn., assignor to Sam Goldberg Manufacturing Company, Nashville, Tenn. Filed May 16, 1922. Serial No. 561,388. 7 Claims. (Cl. 121—179.)



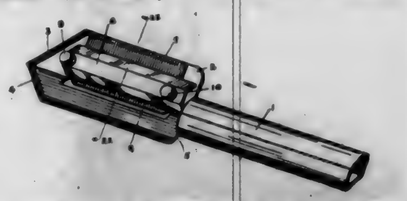
1. In an engine, the combination of a driven power-delivering wheel, engine units of the reciprocating type, crank-and-pitman connections between said wheel and said engine units, and valve plates fitting against the sides of the wheel, there being cooperating ducts in the wheel and said plates to control the flow of motor fluid to and from the engine units.

1,536,167. FRUIT GATHERER. WILLIAM G. L. TOTTEN, Buckhannon, W. Va. Filed May 13, 1921. Serial No. 469,252. 1 Claim. (Cl. 56—329.)



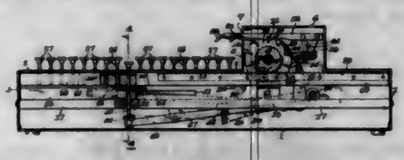
A fruit gatherer of the class described, comprising a flexible apron having an axial opening for receiving the trunk of a tree, the terminals of the apron being disposed in overlapping relation, a lower tree trunk engaging loop, the inner and outer edges of the apron each having an annular row of eyelets associated therewith, tying ropes connecting the inner row of eyelets to the lower tree trunk engaging loop, a plurality of supporting stakes having their upper ends reduced for receiving the outer row of eyelets, said reduced terminals forming shoulders upon which the eyelets are adapted to rest, means for bracing the stakes, an upper tree trunk engaging loop, and supporting ropes connecting the upper tree trunk engaging loop with said tying ropes.

1,536,168. TWO-ROW CULTIVATOR. HARRY R. TRAPHAGEN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed July 9, 1923. Serial No. 650,311. 15 Claims. (Cl. 97—155.)



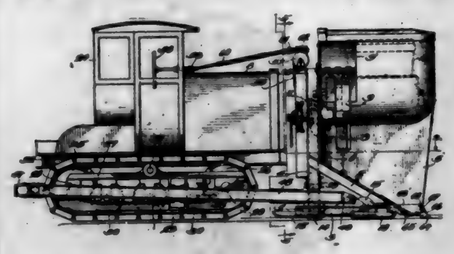
1. In a two-row cultivator, the combination of a frame supported by dirigible wheels, a pair of laterally shiftable arches connecting the wheels, a crank member connected to the arches for shifting them, two pairs of cultivator beams, means for optionally connecting together either each inner beam of one pair with the outer beam of the other pair or both beams of each pair and for relatively adjusting such connected pairs of beams laterally with respect to the frame, a pair of foot levers, and connections between each foot lever and said crank member and said beam-connecting means for simultaneously oscillating said member and shifting said means.

1,536,169. CLOCK. ANTONIO VALLI, Santa Fe, Argentina. Filed May 28, 1924. Serial No. 716,438. 11 Claims. (Cl. 58—128.)



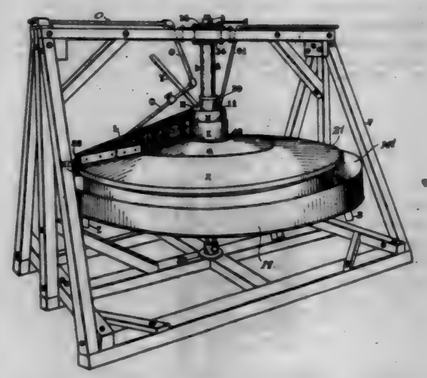
1. A device of the character described comprising a disc having a series of numbers thereon; a supplementary disc rotatably mounted having a plurality of numbers thereon adapted to cooperate with the series of numbers; a rotary control disc for said supplementary disc; and means for actuating said control disc which in turn actuates the first-named disc by means of said supplementary disc.

1,536,170. PARING KNIFE. GEORGE A. VROOMEYT, Rochester, N. Y., assignor to Christian Schlicker, Rochester, N. Y. Filed Aug. 8, 1923. Serial No. 656,422. 1 Claim. (Cl. 30—20.)



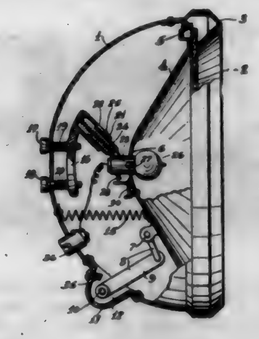
In a paring knife the combination of a hollow handle having an angularly shaped holder plate projecting from one end thereof and formed integrally therewith, said angularly shaped holder plate having a slot provided in one side thereof, a razor blade carried on top of said holder plate on the other side thereof and projecting thru the slot provided in the adjacent side, a clamping bar comprising an inverted channel located over said razor blade and means for clamping said clamping bar on top of said razor blade to yieldingly lock said razor blade in place on said holder plate.

1,536,171. COMPUTING MACHINE. THOMAS J. WAVRUNEK, Shawano, Wis. Filed Sept. 18, 1920. Serial No. 411,256. 7 Claims. (Cl. 235—60.)



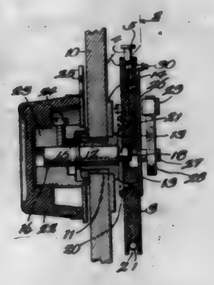
1. In a computing machine the combination of a series of number wheels, longitudinally and independently movable parallel key bars each provided with a series of independently depressible keys and with a fixed projection, a fixed stop arranged to engage depressed keys and arrest the movement of the bars in one direction, a manually operated transverse shifting bar adapted by engagement with depressed keys to carry them with their bars in one direction against said stop and by engagement with said fixed projections to return the bars to their normal positions, and means for converting longitudinal movements of the key bars in one direction into corresponding rotary movements of the associated number wheels.

1,536,172. ROAD PLOW. ARTHUR B. WEBB, Watertown, Wis., assignor to Monarch Tractors, Incorporated, Watertown, Wis., a Corporation of Delaware. Filed Dec. 8, 1924. Serial No. 753,710. 9 Claims. (Cl. 37—43.)



1. A road plow including a main shovel; rollers at the sides of the shovel and another between the sides of the plow, these rollers being in supporting relation to the shovel; runners upon the sides of the shovel downwardly through which the first aforesaid rollers project; and supplemental shovels ahead of and tracking with said runners and the rollers projecting therethrough and adjustable to shift their cutting edges downwardly and below the cutting edge of the main shovel.

1,536,173. CONCENTRATING MACHINE. EDWARD J. WEBB, Chisholm, Minn. Filed Mar. 27, 1924. Serial No. 702,321. 11 Claims. (Cl. 83—87.)

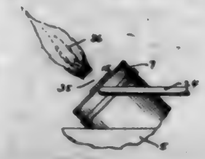


1. In an ore concentrating machine, the combination with a suitable support, of a bearing mounted upon said support a rotatable shaft erected in said bearing, a circular inverted dish-shaped table keyed to said shaft and adapted to rotate therewith, a stationary sleeve depending from an overhead portion of said support and encircling the upper end of said shaft, a vertically adjustable sleeve encircling said stationary sleeve, an inverted dish-shaped distributor head-board mounted on said adjustable sleeve and adapted to extend partly over said table, a reservoir positioned on the upper face of said distributor head-board and encircling said adjustable sleeve, said reservoir being divided by a vertical division wall into compartments for pulp and water respectively, a baffle plate extending from said reservoir and over said distributor head-board over said table, said reservoir compartments having discharge ports formed in the lower edges of their outer walls adapted to discharge upon said distributor head-board, and a vertically adjustable gate encircling said reservoir for controlling said discharge ports.

1,536,174. MOTOR LAMP. ARTHUR CHARLES WOOD, Mansfield, Ohio. Filed Sept. 2, 1921. Serial No. 497,861. 13 Claims. (Cl. 240—41.)

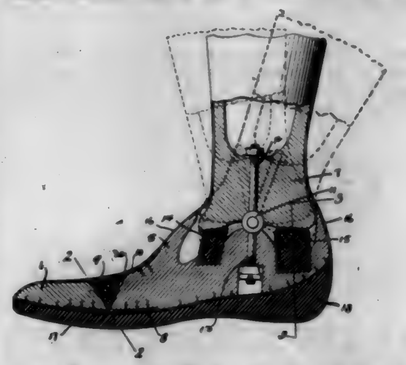
1. A method of controlling the light rays of a reflector lamp, consisting in changing the focal relation of the light source and reflector while changing the direction of the light rays, then fixing the focal relation of the light source and reflector to prevent further change in such focal relation during further change in the direction of the light rays.

1,536,175. RHEOSTAT. ERNEST E. YARLEY, Chicago, Ill., assignor of one-half to Yarley Manufacturing Company, Chicago, Ill., a Corporation of Illinois, and one-half to Carter Radio Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1922. Serial No. 594,710. 2 Claims. (Cl. 201—55.)



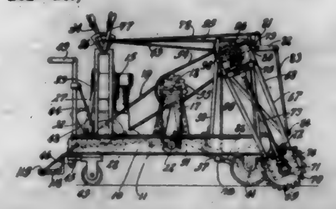
1. In a rheostat, the combination with a resistance; of a contact engaging the resistance, said contact and resistance being relatively movable to change the included resistance; and a stop for engaging the contact at the connected end of the resistance and overhanging a portion thereof to prevent total exclusion of the resistance from circuit.

1,536,176. METHOD OF PREVENTING THE CRUSTY FORMATION OF SOLIDIFIED OXIDES. CHARLES H. ALDRICH, Keene, N. H., assignor to Paul J. Kruesi, trustee, Chattanooga, Tenn. Filed Dec. 5, 1921. Serial No. 520,000. 7 Claims. (Cl. 23—148.)



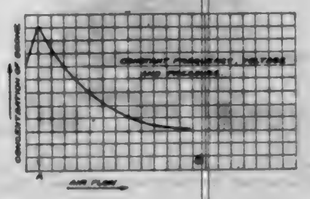
1. A method of preventing the crusty formation of solidified oxides at or in the delivery mouth of a volatilizing retort, which consists in surrounding the issuing jet of metallic vapor with a relatively thin envelop of flowing inert gas.

5. A method of temporarily preventing the contact of oxygen with a flowing jet of volatilized metal in its traverse of a gap between the mouth of a volatilising



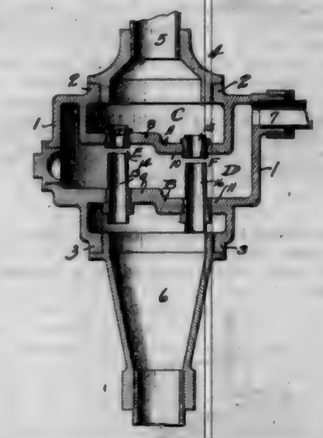
furnace and an oxidizing chamber, which consists in interposing a barrier of flowing inert oxygen-excluding gas between the atmospheric air and the gas.

1,536,177. ARTIFICIAL FOOT. JAMES BECK, Buffalo, and CHARLES E. STEELE, Olean, N. Y. Filed June 12, 1922. Serial No. 567,862. 2 Claims. (Cl. 3—7.)



1. An artificial foot comprising a body part, an ankle part pivotally secured to the body part, resilient means disposed between the body part and the ankle part and arranged on each side of the pivotal connection of the ankle part, a rigid toe part flexibly secured to the body part, resilient means disposed between the toe part and the body part, a leather sheath inclosing the body, toe, and ankle parts, and a combined rubber sole and heel secured to the body part and on top of the leather sheath.

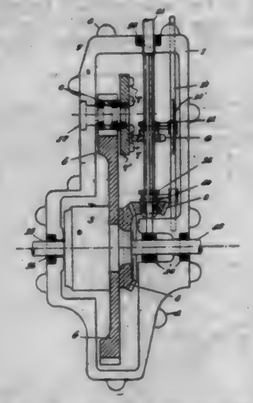
1,536,178. ASPHALT-PAVEMENT-CUTTING MACHINE. WILLIAM J. HACKETT, Jamestown, N. Y. Filed Oct. 20, 1920. Serial No. 418,169. 6 Claims. (Cl. 262—20.)



1. In a machine for cutting asphalt pavements, traction elements for propelling the machine over said pavements, inclined cutters operating upon the pavement, separate frames for said cutters pivotally mounted on said machine laterally beyond said traction elements, means for raising said frames independently, a prime mover mounted upon said machine, a drive shaft rotated by said prime mover in a predetermined direction and gearing connecting said drive shaft with said traction elements and said cutters.

1,536,179. MEANS FOR GENERATING OZONE. FRANK E. HARTMAN, Scottdale, Pa., assignor to Electric Water Steriliser and Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1923. Serial No. 616,825. 3 Claims. (Cl. 204—82.)

1. An improvement in the art of producing gaseous ozone which consists in supplying air under pressure substantially in excess of one atmosphere to the ozone generating unit.

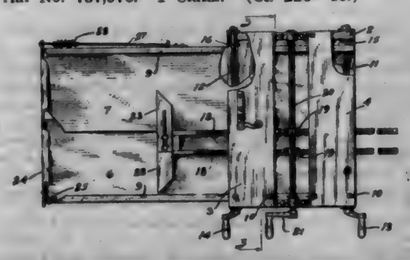


1,536,180. EDUCTOR. HARRY BUXTON HARTMAN and FRANK EDWARD HARTMAN, Scottdale, Pa., assignors to Electric Water Steriliser & Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1922. Serial No. 609,349. 4 Claims. (Cl. 230—13.)

1. An eductor for mixing a liquid and a gas including a casing having a stepped bottom wall and a stepped partition wall forming within the casing a liquid chamber and a gas chamber, a delivery member carried by the casing, and nozzle units respectively carried by correspondingly stepped portions of the bottom and partition walls and arranged in spaced registering relation.

1,536,181. CHANGEABLE-SPEED-GEAR TRANSMISSION. ANDRÉ IDE, Antwerp, Belgium. Filed May 23, 1924. Serial No. 715,424. 2 Claims. (Cl. 74—75.)

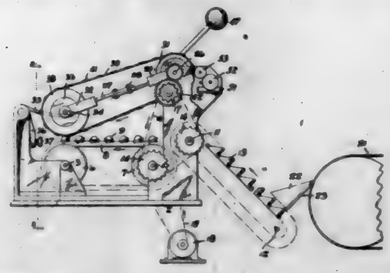
1. A changeable speed gear transmission for motor-cars and the like, comprising a casing, in which are mounted the ends of the rear wheel-axle shafts, a differential gear box housed within said casing and mounted on the ends of said wheel-axle shafts, a spur-gear wheel integral with said box, a bevel gear-wheel made integral with said spur-gear-wheel, a drive-shaft of angular cross section journaled within said casing, a journal of circular cross section at the end of said shaft located within the casing, a bevel pinion loosely mounted on said journal and meshing with the bevel-gear wheel made integral with the spur gear wheel, a suitable friction clutch slidably mounted on the drive-shaft and serving to connect said loose bevel pinion with said drive-shaft, a suitable shifter for said clutch, a spur pinion rotatably mounted on a stud shaft secured to the casing and meshing with said spur gear wheel, a power transmission disc fixed with relation to said spur pinion and



carrying a series of concentric gear wheels on its free face, a spur-pinion slidable on said drive shaft and capable of meshing with any one of said concentric gear wheels or with neither of them, a suitable shifter for moving said spur-pinion along the drive-shaft, substantially as set forth.

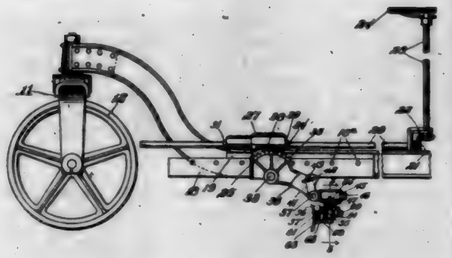
1,536,182. FLOOR BOARD. JAMES MADISON JACKSON, Parkersburg, W. Va. Filed Nov. 20, 1924. Serial No. 751,116. 5 Claims. (Cl. 296—1.)

1. A binding strip for automobile floor boards comprising an inverted U-shaped channel member having a wall adapted to be fixed to an edge of the floor board, the other wall having less height than the fixed wall, the upper edge of the fixed wall having an extension bent to form a cover for the channel member and a felt strip in the channel member saturated with oil.



1,536,183. UPHOLSTERING MACHINE. GEORGE N. ABBEY, Boulder, Colo., assignor of one-half to M. F. Moreland, Denver, Colo. Filed Sept. 16, 1924. Serial No. 737,976. 1 Claim. (Cl. 226—46.)

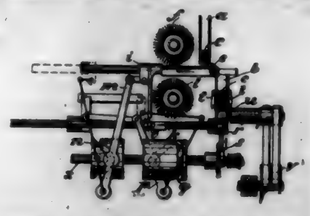
In an upholstering machine, in combination, a frame, a supporting member comprising two parts, each of which has a bottom portion and a side portion, the bottom portions being overlapping, the side portions hav-



ing their upper edges bent towards each other so as to form overhanging flanges, one of said parts having one end secured to said frame, means for moving said parts towards and away from each other, a plunger slidably connected to said frame, means for reciprocating said plunger, and a top for said supporting member, said top consisting of two separate plates adapted to overlap each other, one edge of each of said plates being adapted to project under said overhanging flanges.

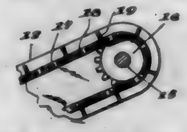
1,536,184. MARKING MACHINE. FRANK AHLBURG, Los Angeles, Calif., assignor to Electric Fruit Marking Co., Los Angeles, Calif., a Corporation of California. Filed Nov. 14, 1921. Serial No. 514,958. 9 Claims. (Cl. 101—37.)

1. In a marking machine, a conveyor for the articles to be marked, a flexible belt gravitally engaging said articles, flexible dies on said belt, a pulley of resilient material for supporting said belt while engaged with said articles, and means for moving the belt in time with the conveyor.



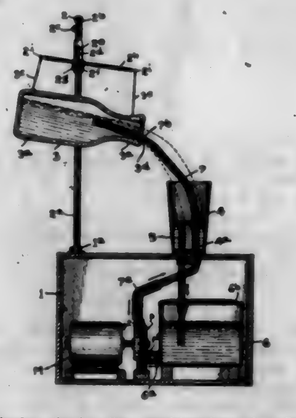
1,536,185. TRACTOR PLANER. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Aug. 5, 1924. Serial No. 730,273. 29 Claims. (Cl. 37—155.)

1. The combination with a supporting vehicle having an operator's station and including a longitudinally extending frame, of a ground-working tool carrier including a member mounted on the frame for longitudinal adjustment therealong and pivoted for movement, means for shifting the carrier around its pivot including a coacting gear element, and a fixed actuating means therefor located at the operating station, the gear element being shiftable with the carrier and being at all times in operative engagement with the actuating means.



1,536,186. MACHINE FOR CLEANSING MATRICES. JEAN BAPTISTE ARNOLD, Milan, Italy. Filed Dec. 27, 1923. Serial No. 682,807. 3 Claims. (Cl. 15—77.)

2. In a machine for cleaning matrices, a plurality of brushes for cleaning the faces of said matrices, a storage channel formed in said machine, means to store the matrices in said channel after being cleaned



by said brushes, and means for cleaning the edges of said matrices as they are being stored in said channel.

1,536,187. BEET ELEVATOR. PORTER C. BAKER and JOHN H. GIBSON, Morrill, Nebr. Filed May 17, 1921. Serial No. 470,230. 1 Claim. (Cl. 198—195.)

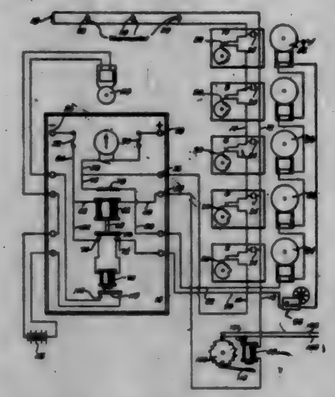
A conveyor belt comprising a pair of parallel chains each including links, transverse rods extending between and connected to the centers of the inner vertical faces of certain alternate links of the chains, and angle bars extending between and secured to the centers of the inner vertical faces of the other alternate opposite links of the chains, one wing of each of the angle bars extending longitudinally and centrally of the links, the other wing of each angle bar extending at an angle outwardly from between the said opposite links.

1,536,188. CONTINUOUSLY-FLOWING DISPLAY DEVICE. EARL A. BROWN, Washington, D. C. Filed Jan. 5, 1925. Serial No. 731. 3 Claims. (Cl. 40—126.)

1. In a display device the combination of a fluid containing vessel in dispensing position, a fluid receiving vessel, a tube passing through said fluid receiving vessel upward into the fluid containing vessel, means for forcing fluid through said tube into the fluid containing vessel, said tube being bent so as to conform to the trajectory of liquid flowing from the fluid containing vessel and being completely hidden therein, and the said tube having a flattened portion at the point where it enters the mouth of the fluid containing vessel.

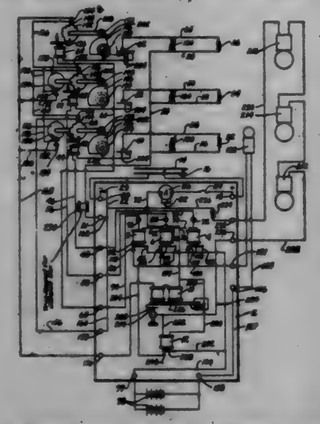
1,536,189. COMBINATION JEWELRY. JOSEPH COHMAN, New York, N. Y. Filed July 17, 1922. Serial No. 575,495. 5 Claims. (Cl. 63—29.)

1. In a jewelry device, in combination, a split ring having a plurality of recesses therein, slidable means the movement of which will space the ends of the ring and maintain them in fixed position with respect to each other, a plate, a plurality of extensions carried by the plate and inserted within the ring recesses, and means engaging the extensions within the recesses.



1,536,190. FOLDING BED. MADISON H. CONRAD, Lexington, N. C. Filed Aug. 12, 1921. Serial No. 491,742. 3 Claims. (Cl. 5—46.)

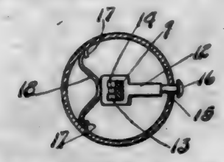
2. A bed comprising a main frame; a bed frame including an inner member, an outer member, and an intermediate member located between the inner and outer members and hinged thereto, the intermediate member being carried and supported by the inner and outer members, a foot piece pivoted to the outer member; a prop pivoted to the outer member; means for connecting the prop operatively with the foot piece; a head piece pivoted to the inner member; and radius arms pivoted to the main frame and to the inner member, the inner member being movable into retracted position on the radius arms, the intermediate member being foldable to lie above the inner member, and the outer member being foldable into a position approximately at right angles to the intermediate member, the head piece being foldable to lie between the inner and intermediate members, and the foot piece being foldable into a depending position behind the outer member, the main frame constituting a support for the outer member, the main frame, the outer member and the intermediate members cooperating to form a couch.



3. A bed comprising a main frame including sides and a back; a bed frame including an inner member; radius arms pivoted to the main frame and to the inner member and constituting means whereby the inner member may be moved rearwardly; a cross bar depending from the inner member and adapted to be received between the sides of the main frame when the inner member is retracted, and to be located adjacent to the forward edges of the sides, the cross bar being so constructed as to occupy the space below the forward edge of the inner member and to give a finished appearance to the bed when the inner member is moved rearwardly; an intermediate member hinged to the inner member and adapted to be folded backwardly to overlie the inner member; a cleat carried by the intermediate member adjacent to the outer end thereof; an outer member hinged to the intermediate member and adapted to be disposed in upstanding relation to the intermediate member when the intermediate member is folded backwardly and rearwardly; and a cleat carried by the outer member, the cleats coacting to define an angle between the outer and intermediate members when the outer member is disposed in upstanding relation to the intermediate member.

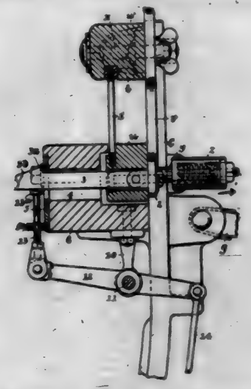
1,536,191. ELECTRIC-SIGNAL WIRING SYSTEM. JOHN H. DERBY, New York, N. Y., and JOSEPH E. BOWDEN, Newark, N. J., assignors to American Fire Prevention Bureau, New York, N. Y., a Corporation of New York. Filed June 3, 1919. Serial No. 301,512. 8 Claims. (Cl. 177—369.)

3. In an electric signaling system, a local signal including electromagnetic operating means, a local code transmitter box having normally closed contacts, a normally closed local circuit including said transmitter and said operating means, a central station circuit, a central station code transmitter comprising contacts in said central station circuit and also comprising means for releasing said transmitter including an electromagnet in said local circuit, and means including a portion of said local circuit for operatively energizing said magnet from said local circuit transmitter.



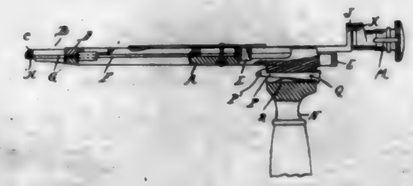
1,536,192. SELF-SUPERVISED ELECTRIC SYSTEM. JOHN H. DERBY, New York, N. Y., assignor to American Fire Prevention Bureau, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1921. Serial No. 451,689. 7 Claims. (Cl. 177—358.)

1. In a self-supervised electric signaling system comprising a control board, make-and-break code signal transmitters, a normally closed circuit in which said transmitters are arranged in series, said circuit being closed through the make-and-break contacts of said transmitters, a relay in the transmitter circuit, a normally closed branch circuit associated with each transmitter and having therein means for actuating the transmitter, a re-



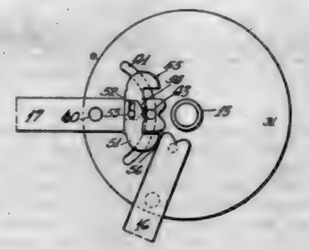
sistance maintaining the normal current in said branch circuit below operating level for said actuating means, each of said aforementioned circuits having upon the control board a relay operable upon a break in the circuit to transmit a trouble alarm, means for short circuiting the resistance in any one of said branch circuits to effect the actuation of the associated transmitter, a normally open trouble circuit controlled by said relays and having therein a continuously operable signal, and a single stroke signal and a circuit therefor controlled from the relay in said transmitter circuit.

1,536,193. CUFF BUTTON. ROY E. DRUSCHER, Bay City, Mich. Filed Nov. 5, 1923. Serial No. 672,780. 4 Claims. (Cl. 24—110.)



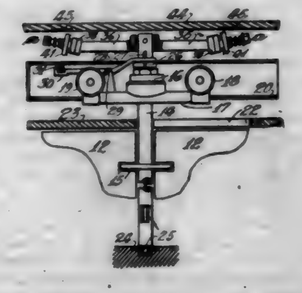
1. A locking cuff button comprising two individual members, each formed with a base and head portion, a locking member slidably mounted in the head of one of the members and provided with an opening therein, a stud on the opposite members adapted to be introduced into said opening, a beveled tongue on the locking member for positively engaging said stud, and resilient means for holding said locking member in locked position.

1,536,194. TERRY LOOM. WILLIAM DOHERTY and CHESTER MACARTHUR, Paterson, N. J. Filed Feb. 17, 1923. Serial No. 619,585. 1 Claim. (Cl. 139—27.)



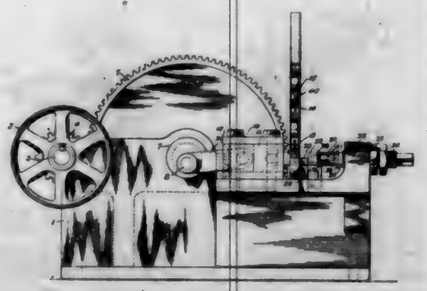
A loom including a frame, a reciprocating batten-including structure, a reed-structure backwardly yieldable in the first structure, a gravity depressed latch movable upwardly in said first structure into latching engagement with and thereupon adapted to hold the reed-structure against backward yielding, an up-and-down-movable lever fulcrumed in the batten-including structure between its ends and having at one end means to engage and elevate the latch, a lever fulcrumed in the frame below the first structure, a rod connecting the latter lever with the other end of the first-named lever, the second-named lever being normally depressed and thereby acting through the rod and the other lever to elevate the latch, a pattern-controlled mechanism arranged in the frame above the second lever and including means to exert a pull at intervals and an elastic extensible pull-transmitting connection connecting said means and the second lever and adapted to lift the latter.

1,536,195. SURGICAL INSTRUMENT. LEON A. DOUGLAS, Windsor, Ontario, Canada. Filed Feb. 28, 1921. Serial No. 448,532. 6 Claims. (Cl. 128—309.)



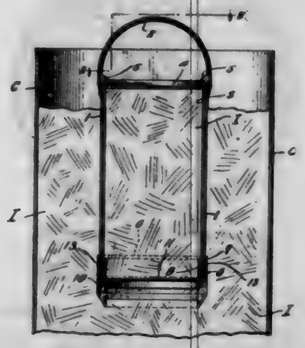
3. A surgical instrument having a member with a wedge-shaped lug depending therefrom, a removable handle having sliding engagement with said lug, and pivoted spring influence means for retaining said handle in position upon the lug.

1,536,196. REVOLVING DOOR. HARRY W. DYER, New York, N. Y. Filed Mar. 28, 1924. Serial No. 702,501. 13 Claims. (Cl. 20—18.)



3. In a revolving door of the class described, the combination of a centre shaft supporting a revolvable hinge plate, a door leaf pivoted at a fixed point to said hinge plate, means for automatically locking said leaf to said hinge plate and means on each side of said leaf for releasing said lock.

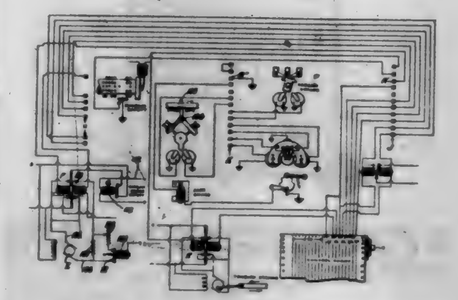
1,536,197. SPEED GOVERNOR FOR REVOLVING DOORS. HARRY W. DYER, New York, N. Y. Filed May 5, 1924. Serial No. 711,284. 6 Claims. (Cl. 20—18.)



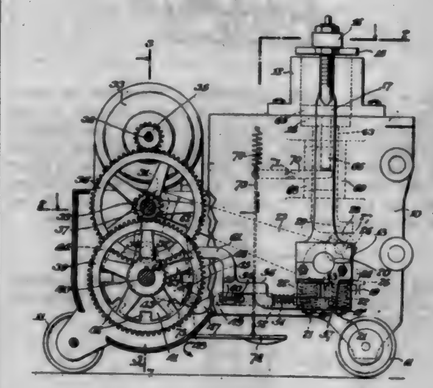
3. A braking device for a revolving door, revolving in a fixed frame, comprising an arm secured to and revolving with said door, a friction wheel on said arm and centrifugal means for bringing said friction wheel into engagement with said frame when said door exceeds a predetermined speed.

1,536,198. LOCK-NUT-PINCHING MACHINE. I. C. EMERY, Baltimore, Md., assignor to Chapman Self Locking Nut Company, Baltimore, Md., trustees of Common Law Estate. Filed Jan. 30, 1923. Serial No. 615,904. 15 Claims. (Cl. 10—72.)

2. In a machine for compressing portions of slotted nuts, the combination of means capable of movement in horizontal and vertical directions adapted to receive pressure from said nuts; and means to compress said nuts against said first named means.



1,536,199. ICE-CREAM-DISHING DEVICE. RAY DILCE EMMONS, Ashland, Ohio. Filed May 15, 1924. Serial No. 713,577. 2 Claims. (Cl. 226—19.)

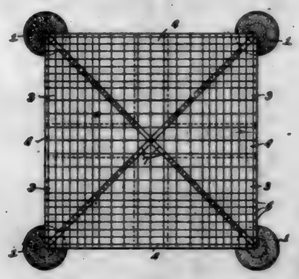


1. In an ice cream dishing device, the combination of an open ended cylinder having a bail handle affixed at diametrically opposite points on the cylinder, said bail having inwardly extending projections to limit the movement of a carton in the cylinder, whereby to permit the facilitation of the ejection of the filled carton.

1,536,200. PATTERN-CONTROL MECHANISM FOR KNITTING MACHINES. WILLIAM FELS, Elberta, Ala., assignor to Max Nydegger, Elizabeth, N. J. Original application filed July 8, 1920, Serial No. 394,678. Divided and this application filed Sept. 3, 1921. Serial No. 498,310. 10 Claims. (Cl. 66—28.)

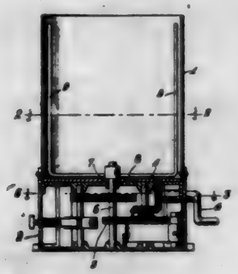
1. In a knitting machine, the combination of stitch forming means, means for moving the stitch size and relative position determining portions of said stitch forming means, and electrically actuated means for selectively operating said moving means for the stitch size and relative position determining means, including magnets operatively arranged in relation to said moving means and in circuit with a plurality of contacts and a common contact, circuit breaking means movable between said plurality of contacts and the common contact and means cooperating with said circuit breaking means for closing said circuits in predetermined sequence.

1,536,201. PRESS. BERNARD M. FINE, Philadelphia, Pa. Filed Mar. 2, 1923. Serial No. 622,269. 38 Claims. (Cl. 25—83.)



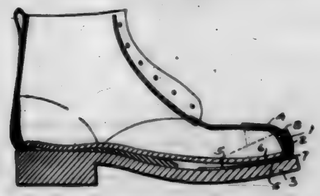
1. A press of the kind described comprising a mold chamber adapted to receive the material to be pressed, means for exerting a pressure upon the material in said mold chamber, driving mechanism for actuating said means, means for opening and closing the mold chamber, and means for automatically disconnecting said driving mechanism when the mold chamber is opened.

1,536,202. CONCRETE CONSTRUCTION. CHARLES B. FOSTER, Indianapolis, Ind. Filed Sept. 25, 1920. Serial No. 412,723. 10 Claims. (Cl. 72—15.)



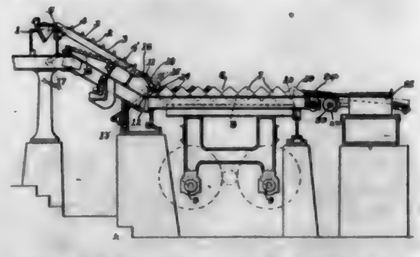
1. In a concrete construction, a column, a slab integral therewith, and having a collar at the junction of said

column and slab, said collar tapering downwardly and inwardly toward the column to form a reinforcement for



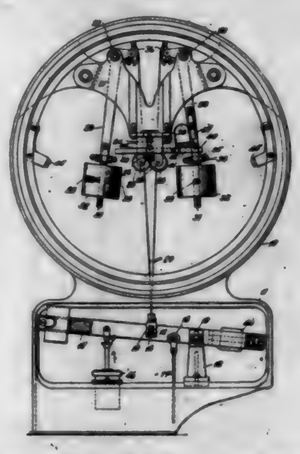
the junction, said slab tapering laterally from the column so as to have a decreasing thickness in all directions from the column.

1,536,203. PAINT MIXER. NIEMAN A. FRYDENLUND, Sun Prairie, Wis. Filed Jan. 14, 1924. Serial No. 686,211. 1 Claim. (Cl. 91—57.)



In a paint mixing apparatus, a receptacle in which paint to be mixed is placed, a casing secured on the bottom of the receptacle and providing a rest therefor, a motor in the casing, a shaft operated thereby extending through a packing box into the receptacle, a spider on said shaft, and upwardly directed angularly arranged arms on the ends of the spider disposed close to but out of contact with the inner wall of the receptacle.

1,536,204. SHOE-CAP PROTECTOR. JOSEPH GAWRONSKI, Seattle, Wash. Filed Feb. 14, 1923. Serial No. 619,001. 1 Claim. (Cl. 36—77.)

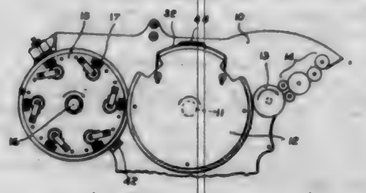


A shoe cap protector comprising a strip of leather adapted to be bent in front of, under and around the sides of a shoe toe and secured thereto, the upper edge of said protector, as thus bent, being shorter in length than the central part thereof, whereby the bending of the protector to pass the same under the shoe toe places the upper edge of the protector under tension, thus causing said protector to be held in contact with the shoe toe and preventing the same from sagging in front thereof.

1,536,205. METHOD OF AND APPARATUS FOR COOLING AND ANNEALING METAL BARS. JEROME R. GEORGE, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1920. Serial No. 372,218. 45 Claims. (Cl. 80—42.)

1. The improvement in the art of handling hot metal bars, which consists in moving the bars, individually, across a cooling bed, whereby to obtain a preliminary cooling, and then assembling said bars in stacked formation, in piles or packs for further cooling.

1,536,206. PENDULUM SCALE. WILLIAM NATHAN GILBERT, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed July 13, 1920. Serial No. 395,900. 13 Claims. (Cl. 265—62.)



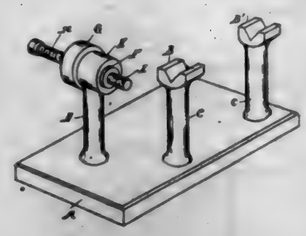
1. In a weighing scale, in combination, a pivotal indicator, an arbor therefor, a pinion carried thereby, a pendulum load counterbalancing means, means for displacing the pivotal indicator in accordance with the displacement of the pendulum load counterbalancing means, said means comprising a spring coupled to the pendulum means, and a horizontally-extending rack coupled to said spring and engaging the aforesaid pinion, said spring serving as a shock-absorber when sudden loads are applied to the scale.

1,536,207. PRINTING MACHINE. WILLIAM R. GORDON, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 27, 1922. Serial No. 603,584. 4 Claims. (Cl. 101—38.)

1. The combination, with an offset printing-machine comprising a continuously rotary transfer-cylinder and an intermittently rotary carrier with a series of freely-

rotatable work-spindles thereon adapted to cooperate successively with the transfer-cylinder, of a gear mounted on each spindle; a segmental rack carried by the transfer-cylinder in position to cooperate with the gear on the

spindle which is in operative relation with the cylinder; a spring for reversely rotating the spindle after the passage of the rack; and a stop for limiting the spring-produced return-rotation of the spindle.



1,536,208. EXPANSIBLE BORING TOOL. AMOS GOSPER, Camperdown, near Sydney, New South Wales, Australia, assignor to George Hugh Foster, Marrickville, near Sydney, New South Wales, Australia. Filed Jan. 14, 1925. Serial No. 2,450. 2 Claims. (Cl. 145—124.)

1. An expansible boring tool comprising, a casing, an upper and a lower ball-bearing in said casing, a spindle longitudinally movable in said ball-bearings, a slotway formed in said spindle, a tongue pivoted at its lower end in said slotway, an outwardly inclined member at the upper end of said tongue, and projecting exteriorly of said slotway, a thrust collar fast on said spindle, a coil spring around said spindle seated between said thrust collar and the lower ball-bearing, a tool-holder at the lower end of said tongue and a cutting tool in said tool holder, the inclined projecting member on said tongue being adapted to contact with the lower ball-bearing when a hole of uniform width of required depth has been bored and thus de-align said cutting tool to undercut the hole and complete the boring operation.

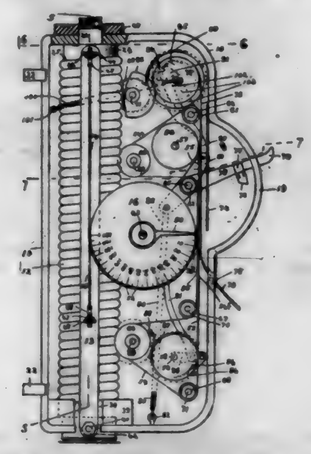
1,536,209. TRUING DEVICE FOR GRINDER WHEELS. JOHN D. GREEN, Ypsilanti, Mich., assignor of one-half to William E. Maurer, Ypsilanti, Mich. Filed Oct. 10, 1921. Serial No. 506,937. 1 Claim. Cl. 125—11.)

A truing device for dental grinder wheels comprising a base, a pair of standards rigging from said base, aligned V-shaped bearings at the upper ends of said standards for receiving the hand tool of a dental engine and exactly positioning the axis of the spindle thereof, a third standard rising from said base laterally off-set with respect to the axis of said spindle, a bearing at the upper end of

said third standard having its axis perpendicular to the axis of said spindle, a sleeve inside the third bearing, an abrasive stick adjustably engaging said sleeve and an adjusting screw for said stick.

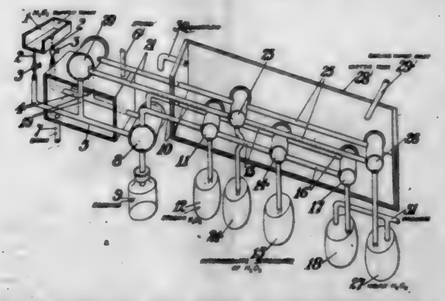
1,536,210. CUFF HOLDER. ROBERT CRAIG GREENE, Washington, D. C. Filed June 29, 1922. Serial No. 571,684. 5 Claims. (Cl. 24—102.)

1. The combination with apparel portions to be connected, of companion snap fastener parts secured to said portions, respectively, and a chain having at one end a snap fastener member adapted to engage one of said parts and at the opposite end a companion snap fastener member adapted to engage the other of said parts.



1,536,211. ADJUSTABLE SLING FOR HANDLE GRIPS. OSCAR T. GREGORY, Chicago, Ill., assignor of one-half to Albert Pettit, Pittsburgh, Pa. Filed Jan. 25, 1923. Serial No. 614,764. 3 Claims. (Cl. 273—81.)

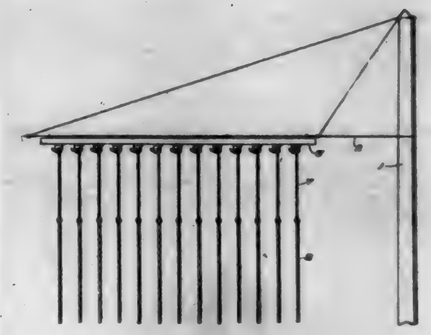
1. An attachment for handle grips comprising a sling, in combination with a clamp having a plurality of transversely disposed slots formed therein and having another slot inclined with respect to said transverse slots, said



sling having a part laced through said transverse slots for retaining said clamp in fixed position on the handle and extending out through said inclined slot to form a loop adapted to be disposed longitudinally of the handle, and a prong on said clamp projecting into said inclined slot for engagement with said sling.

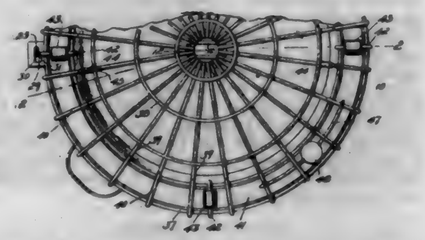
1,536,212. WEIGHING SCALE. JOHN K. GUNN and CHARLES A. SCHMIDT, Utica, N. Y. Filed June 6, 1923. Serial No. 643,673. 12 Claims. (Cl. 265—8.)

1. In a scale the combination of a casing, a movable weighting member, a guide bar arranged parallel thereto and to move therewith, a wheel revolubly mounted in said casing, flexible inelastic bands extending from the opposite ends of said bar to the same side of said wheel at its periphery and thence part way about the periphery of said wheel in opposite directions whereby the periphery of said wheel is rotated to an extent equalling the movement of said weighting member and weight indicating characters on said wheel adjacent its periphery.



1,536,213. PROCESS AND APPARATUS FOR MANUFACTURING HYDROGEN PEROXIDE. ARTHUR LUDWICK HALVORSEN, Perth Amboy, N. J., assignor to Roessler & Hasslacher Chemical Company, Perth Amboy, N. J., a Corporation of New York. Filed July 9, 1921. Serial No. 483,424. 10 Claims. (Cl. 23—207.)

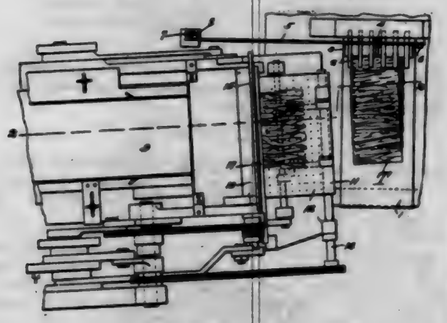
1. The method of distilling a solution containing a hydrogen peroxide which consists in vaporizing and condensing the solution in passages lined with tin.



10. The method which comprises distilling a hydrogen peroxide solution in such manner as to simultaneously obtain separately usable condensates having varying percentages of hydrogen peroxide, said process being conducted in vessels lined with a material having a stabilizing effect upon the hydrogen peroxide capable of enabling certain of said condensates to be obtained richer in hydrogen peroxide than the original.

1,536,214. HOLDER FOR RAILROAD-BRIDGE WARNINGS. BENJAMIN J. HASTINGS, Taunton, Mass., assignor to Hastings Signal & Equipment Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 6, 1924. Serial No. 736,303. 2 Claims. (Cl. 246—486.)

1. A holder for a bridge warning hanger having a body formed with a slot to receive the eye of a hanger, a latch lever pivoted to said body and having one arm which normally extends crosswise of said slot, said latch being movable on its pivot to swing said arm up out of the slot to admit the eye of the hanger therein and a spring which is put under tension by turning the latch arm upward and which pulls the said latch arm back through the eye when the upward pressure is released and holds said latch lever transversely of the slot to support the hanger.



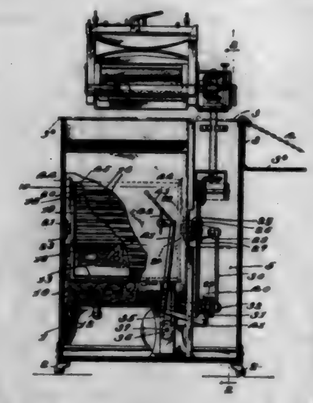
1,536,215. WASHING APPARATUS. WILLIAM H. HENDRICKS, New Haven, Conn. Filed July 27, 1921. Serial No. 487,967. 1 Claim. (Cl. 141—9.)

In a washing apparatus, a pan having a horizontal rim adjacent its top, a wire basket in the pan having a top portion which overhangs the pan rim and which includes spaced inner and outer rings, horizontal crossrods extending across the space between said rings and

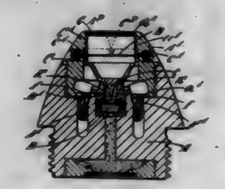
engaged by the latter, and anti-friction rollers rotatable on the central portions of the cross-rods and having their axial movement restricted by engagement of the roller ends with the respective rings.

1,536,216. METHOD OF AND APPARATUS FOR FEEDING TOBACCO TO CIGAR MACHINES. ALBERT A. HEYMAN, Baltimore, Md., assignor to The Universal Cigar Machinery Co., Inc., Baltimore, Md. Filed Aug. 9, 1922. Serial No. 580,671. 12 Claims. (Cl. 131—39.)

1. The herein described step in the method of forming cigar bunches which consists in arranging in a stack, flat superposed layers of uniform area, each consisting of a plurality of leaves said layers being stepped longitudinally and transversely relative to each other.



1,536,217. TRACTOR DRAFT RIGGING. ARTHUR O. HIGINBOTHAM, Worcester, Mass., assignor to The G. F. H. Corporation, Denver, Colo., a Corporation of Massachusetts. Filed Jan. 13, 1921. Serial No. 436,983. 5 Claims. (Cl. 280—33.44.)

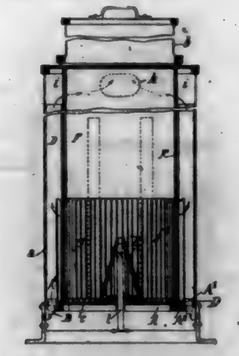


1. The combination with a tractor draft member, of an attached socket member to receive the pole of the drawn implement, trailer or other vehicle, said socket member being pivotally connected to said draft member for movement in a vertical plane and being constrained to move with said draft member in a horizontal plane, the said socket member being also free to turn about the longitudinal axis of said pole.

1,536,218. LAUNDRY APPARATUS. LINDSAY R. HURST, Louisville, Ky. Filed July 21, 1920. Serial No. 397,907. 3 Claims. (Cl. 68—21.)

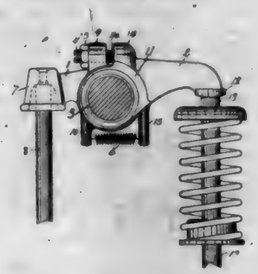
1. Laundry apparatus including a housing, a washing machine within said housing comprising a water receptacle, a clothes container, a saddle mounted for swinging action within said receptacle, said saddle supporting said clothes container, spring clips carried by said saddle for fastening the container thereto and simultaneously binding the cover to said container, a gear set for swinging said saddle and clothes container, and motive power connections for actuating said gear set.

1,536,219. SHELL FUSE. FREDERICK GEOFFREY LEES JOHNSON, Westminster, London, England, assignor to Vickers Limited, London, England, a British Company. Filed Nov. 7, 1924. Serial No. 748,383. 9 Claims. (Cl. 102—39.)



1. In a shell fuse of the sensitive percussion type, the combination with the firing needle carrier, the detonator, the centrifugal retaining device and the inertia member normally holding said device in the retaining position, of a light shearing wire passing through the holes in the needle carrier of larger size than the wires so that said wire normally lies out of contact with the front ends of said holes.

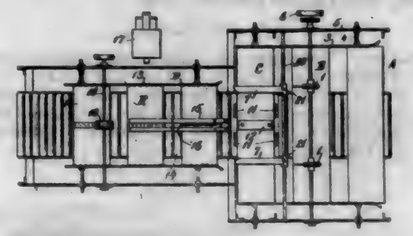
1,536,220. STOVE FOR BURNING SAWDUST AND LIKE RESIDUES. JULES JOUCLARD, Versailles, France. Filed Apr. 25, 1923. Serial No. 634,516. 3 Claims. (Cl. 110—7.)



1. A stove for burning sawdust and like residues, comprising a cylindrical main body, a horizontal grate disposed at the lower part thereof, vertical grates surrounding the cylindrical central portion forming the furnace, a cylindrical partition extending from the top of the cylindrical main body to the top of the said vertical grates and providing for the continuous downward feed of the fuel, an annular space between the said vertical grates and the external cylindrical main body form-

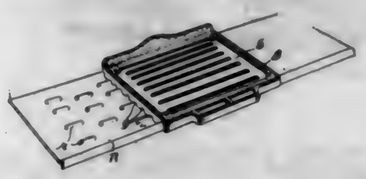
ing a collector for the burnt gas, an inclined grate disposed upon the said horizontal grate in order to augment the surface of the burning fuel, and means for circulat-

ing cold air from the bottom of the stove to the top of the inclined grate thereby supplying air for combustion and cooling the inclined grate.



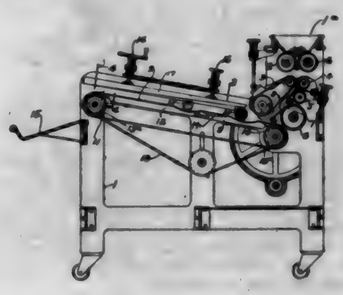
1,536,221. VALVE ROCKER ARM. VICTOR H. KELLEY, Madison, Wis. Filed Nov. 15, 1924. Serial No. 750,222. 1 Claim. (Cl. 123—90.)

In a divided rocker arm, for valve in the head motors, the push rod end annular at its inner end and adapted to be a drive fit upon a bronze sleeve, a threaded boss upon its upper surface, with an adjusting screw threaded to the boss and carrying a jamb nut, the valve stem end also annular at its inner end and provided with a boss in longitudinal alignment with the threaded boss and adapted to engage the adjusting screw when the valve is being pushed downward, depending members upon both portions of the rocker below the pivotal center and connected by a tension spring, whereby the assembled rocker arm is always in contact with the push rod and valve stem, in combination with a bronze sleeve rigidly secured in one member and upon which the other member oscillates.



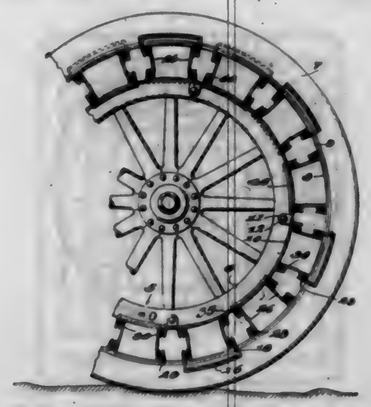
1,536,222. CARTON-MAKING MACHINE. WALLACE D. KIMBALL and ARTHUR E. RIDEOUT, New York, N. Y., assignors to Standard Sealing Equipment Corporation, New York, N. Y., a Corporation of New York. Filed July 7, 1922. Serial No. 573,259. 9 Claims. (Cl. 93—49.)

1. Apparatus of the class described comprising means for scoring the material to be folded, a member for fixing the fold line in the material along the scored portion, means for positively folding over accurately along said line the entire portion to be folded, whereby a straight



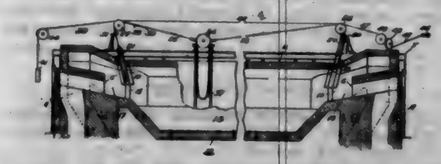
line at a predetermined position within the scored portion is obtained, and guides for directing the movement subsequent of the folded portion.

1,536,223. ATTACHMENT FOR AUTOMOBILE RUNNING BOARDS. CHARLES W. KOEHLER, Cleveland, Ohio. Filed Dec. 20, 1923. Serial No. 681,885. 2 Claims. (Cl. 280—169.)



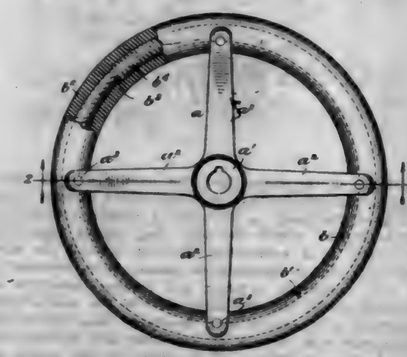
1. An attachment for running boards of the character described, comprising a mat having a set of longitudinal parallel channels in its lower face to accommodate raised portions of the running board, an open frame taking over the edges of the mat to retain the same upon the board, and said frame being provided with notches alined with said channels to receive certain of raised portions on the running board as and for the purpose set forth.

1,536,224. PROCESS OF TREATING DOUGH. FRANK X. LAUTERBUR and EDWARD J. LAUTERBUR, Sidney, Ohio. Filed Jan. 15, 1923. Serial No. 612,671. 6 Claims. (Cl. 107—54.)



1. A mechanical process for treating a mass of dough to form a loaf or roll shape, which consists substantially in mechanically rolling the mass, and simultaneously applying an intermittent undulatory pressure, this pressure being first directed mainly at the center of the mass and its effective area gradually extended at both sides from the center until the entire mass is subjected thereto, for the purpose described.

1,536,225. TIRE. FRIED APOLUS LEA, Ponca City, Okla. Filed Oct. 4, 1923. Serial No. 666,556. 2 Claims. (Cl. 152—29.)

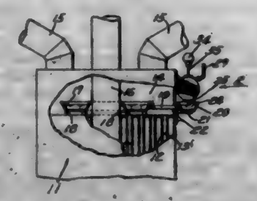


1. In a vehicle wheel, the combination with an outer annular rim member and an inner annular rim member, of a plurality of spacing spring members disposed between said annular rim members, and holding them in spaced concentric relation, each of said spring members being endless and being formed to provide parallel pairs of parallel contact arms, respectively disposed flatly against the inner periphery of the outer annular rim member and against the outer periphery of the inner rim member, an outer substantially U-shaped securing member having the arms thereof merged into the outer contact arms at the outer ends of the latter, the arms of the securing member extending substantially at right angles to the outer contact arms and the outer securing member engaging a lateral wall of the outer rim member, a pair of elongated sustaining members, each extending obliquely between opposite ends of corresponding inner and outer contact arms, convolutions merging the sustaining members at their outer ends into the inner ends of the outer contact arms, other convolutions merging the inner ends of the sustaining members into the outer ends of the inner contact arms, a substantially U-shaped inner securing member, and bend members merging the inner ends of the inner contact arms into the arms of the inner securing member, said bends being adapted to embrace a lateral edge portion of the inner rim member and said inner U-shaped securing member being adapted to rest flatwise against the inner periphery of the inner rim member.

1,536,226. DEVICE FOR OPERATING OPEN-HEARTH-FURNACE DAMPERS. CHARLES E. LEHR, Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Oct. 21, 1922. Serial No. 596,020. 10 Claims. (Cl. 262—15.)

1. Mechanism of the class described including in combination, a reversible furnace having a combustion chamber and a conduit at each end for the passage of incoming fuel or outgoing products of combustion, a device associated with each conduit for decreasing its gas carrying capacity when used as an inlet conduit for fuel and increasing its gas carrying capacity when used as an outlet conduit for products of combustion, and means connecting said devices for simultaneous operation, said means permiting adjustment of one of said devices without adjustment of the other.

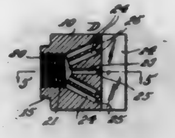
1,536,227. STEERING WHEEL. AUGUST H. LEIPERT, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1923. Serial No. 679,287. 4 Claims. (Cl. 74—33.)



1. In a rim for steering wheels, an annular flexible core formed of a length of helically wound metallic hose and a mass of vulcanized rubber in which said core is embedded.

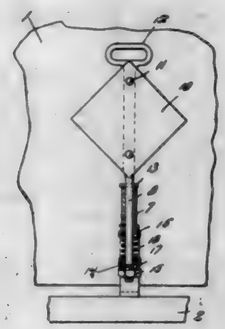
1,536,228. BALE TIE. JOHN W. LESLIE, Evanston, Ill., assignor to Signode System, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 18, 1922. Serial No. 543,155. 2 Claims. (Cl. 24—27.)

2. The combination with a package, of a tie wire encircling said package, one end of said wire having a loop formed with abrupt angle bends therein, and a loop on the other end of said wire interengaging with said first loop, said second loop being formed by passing the end of said wire through said first mentioned loop and then twisting said wire back upon itself, the abrupt angle bends in said first loop indicating by their angle the tension of said tie wire.



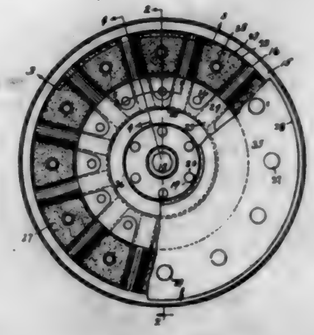
1,536,229. HUMIDIFYING ATTACHMENT FOR FURNACES. JESSE A. MARTIN, Los Angeles, Calif. Filed Oct. 13, 1924. Serial No. 743,257. 10 Claims. (Cl. 126—113.)

1. In a humidifying attachment for a furnace provided with an inner evaporation receptacle having an external extension, the combination of: a water supply pipe ter-



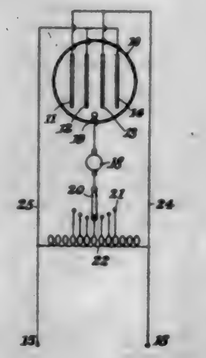
minating in proximity to said furnace; and a uniform level device connected with said pipe and comprising a replenishing fountain pivotally supported and provided with means for automatically moving the same to a filling position when substantially empty.

1,536,230. NOZZLE FOR SMOKE ABATORS. THOMAS W. MCCUE, Akron, Ohio. Filed Oct. 6, 1923. Serial No. 667,064. 1 Claim. (Cl. 299—121.)



A nozzle of the class described having a body comprising a comparatively large main cavity leading from one side of the body, a plurality of smaller cylindrical cavities entirely within the body and leading from the main cavity in a separating direction toward the discharge side, and a plurality of minute bores concentric with said cylindrical cavities, and leading therefrom a short distance to the discharge side of the nozzle and terminating in a row at such discharge side, and a lip overhanging such minute passageways and having the flat under face inclined at an angle to the plane of such discharge passageways, the plane of such lip face joining the discharge face of the nozzle adjacent the upper edge of the passageways.

1,536,231. PLACARD HOLDER AND SUPPORT THEREFOR. LEO MCFADDEN, Bristow, Okla. Filed Apr. 25, 1924. Serial No. 708,966. 2 Claims. (Cl. 40—125.)

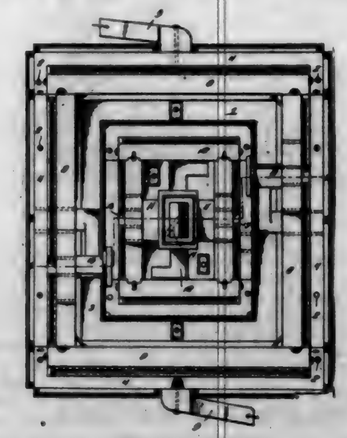


1. A device of the class described comprising a supporting bracket, a sleeve carried by said bracket, the upper edge of said sleeve having notches provided therein at diametrically opposite points, an elongated rod extending longitudinally through said sleeve, a placard holder supported on the upper portion of said rod, a handle on the upper end of the rod, a transversely extending pin carried by the upper portion of the rod below the placard holder and adapted to seat in said notches, and means associated with the rod for preventing the accidental displacement of the pin from said notches.

1,536,232. AUTOMOBILE WHEEL. LINDSAY MCKEE and CHARLES A. ROACH, Portland, Oreg. Filed Mar. 31, 1924. Serial No. 703,044. 5 Claims. (Cl. 152—28.)

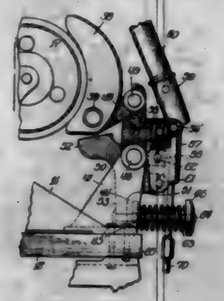
1. An artillery wheel having the inner ends of its spokes cut away outside of the diameter of the hub flanges in combination with a spoke-holding ring separated from the hub of said wheel; a plurality of rubber blocks filling the opening between said spokes; a pair of disks on opposite sides of said wheel; and means for attaching said disks to said rubber blocks and to the wheel hub.

1,536,233. BALANCING MEANS FOR ELECTROLYTIC APPARATUS. RALPH D. MERSHON, New York, N. Y. Filed Oct. 4, 1919. Serial No. 328,467. 5 Claims. (Cl. 175—315.)



2. In combination, an electrolytic condenser having leads for connection with an external circuit, a balance coil connected across said leads, a source of unidirectional current having a terminal connected with the condenser electrolyte, and means for connecting another terminal of said source to any of a plurality of points on the balance coil.

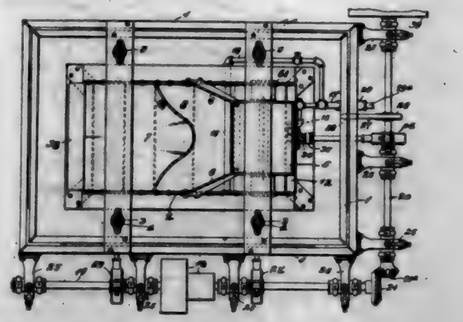
1,536,234. BABY-CHICK FEEDER. BROWN W. MILLER, Pittsburgh, Pa. Filed Dec. 1, 1924. Serial No. 753,216. 3 Claims. (Cl. 119—51.)



3. A chick feeder comprising upper and lower spaced floors, the upper floor being open at its center, feeding troughs located upon the floors, a deck located in the opening of the second floor, a partition disposed across the deck, runways leading from the first floor through

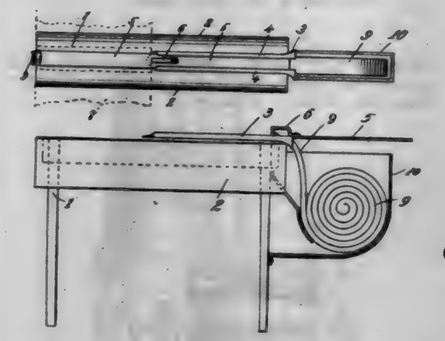
the deck at the opposite sides of the partition, the second floor having passageways communicating with the deck at the opposite sides of the said partition and

runways leading from the exterior of the feeder over the first floor and having their inner ends disposed upon the intermediate portion of the lower floor.



1,536,235. IRONING MACHINE. RALPH J. MILLER, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Mar. 3, 1923. Serial No. 622,466. 5 Claims. (Cl. 68—9.)

1. In an ironing machine, the combination of, a frame, an ironing roll journaled at both ends in and lengthwise of said frame, a shoe behind and co-operating with said roll, a single rigid link pivotally supported at its lower end on said frame and pivotally jointed at its upper end to and mid-length of the back of said shoe, spring actuated means for pressing said shoe into contact with said roll, and a hand lever connected to said link and extending above said roll and shoe for swinging said link rearwardly and thereby drawing said shoe away from said roll.

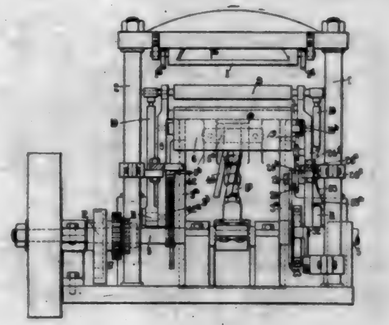


1,536,236. CONCENTRATOR AND FLOTATION SEPARATOR. WILLIAM ROY MORRIS, Boise, Idaho, assignor, by mesne assignments, to Mineral Development Company, Boise, Idaho, a Corporation of Idaho. Filed Feb. 28, 1922. Serial No. 538,723. 13 Claims. (Cl. 83—88.)

1. A method of separating or classifying particles of different characteristics from a mass of finely divided material which consists in charging a container with said material mixed with a quantity of liquid sufficient to provide for suspension of the particles therein and imparting vibratory movements to said container by

forces acting substantially horizontally at right angles to each other, so that one end of said container may have a greater amplitude of movement at one of its ends than at its other end.

1,536,237. UPHOLSTERING MACHINE. TRUMAN G. PADDACK, Wyoming, Ohio, assignor to The Stearns and Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed Oct. 10, 1923. Serial No. 669,626. 5 Claims. (Cl. 226—44.)



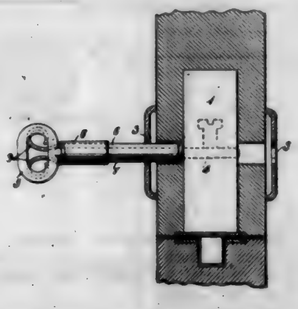
1. In a device of the character specified, a fixedly held funnel open at both ends for the reception and delivery of the material for packing the pockets of upholstery goods, said funnel having at least one longitudinal section, slidable on the fixedly held portion to enter the pocket with the packing material and to be withdrawn therefrom separately.

5. A machine for stuffing upholstery which comprises a funnel shaped to receive an upholstery pocket, said funnel having a separate longitudinal section held against lateral displacement but slidable upon the funnel, said slidable section being provided with a handle.

1,536,238. PRINTING MACHINE. HERBERT HARDING PARMENTER, London, England. Filed Oct. 14, 1924. Serial No. 743,617. 3 Claims. (Cl. 101—295.)

1. In a printing machine, a frame, a platen supported thereby, a bed, a crank shaft mounted in the frame and connected to the bed for moving the bed vertically of the frame toward and away from the platen, frame

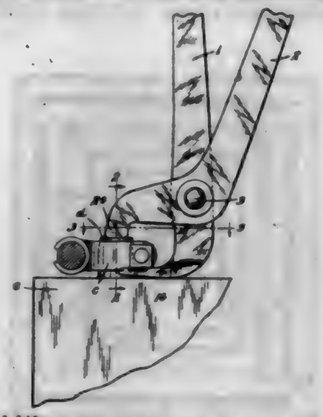
plates movable with the bed, inking rollers mounted for pivotal movement on the frame plates, a disc mounted on the crank shaft, and means operated in the move-



ment of said disc for moving the inking rollers across the bed during the movements of the bed relative to the platen.

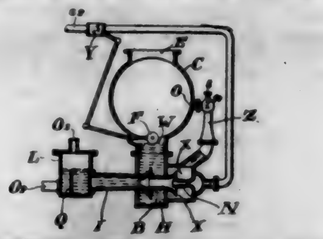
1,536,239. FLUXING MATERIAL. THOMAS H. REICHARD, Tarentum, Pa., assignor of one-third to John Tasick, Tarentum, Pa. Filed Sept. 21, 1921. Serial No. 502,122. 5 Claims. (Cl. 148—27.)

1. A process of producing a hardening product which consists in melting copper, in adding thereto a hardening product produced from furnace slag, in mixing with the said materials a quantity of aluminum, and in burning the aluminum in the mixed mass.



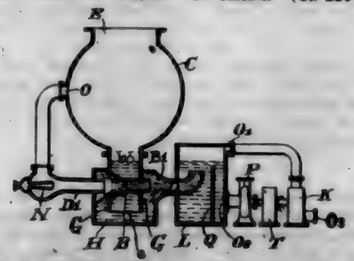
1,536,240. KEY LOCK. EDVARD SODERQUIST, Newhalem Camp, Rockport, Wash. Filed Jan. 20, 1923. Serial No. 613,914. 4 Claims. (Cl. 70—65.)

1. A locking device of the character described, comprising a housing adapted to surround the shank of a key, a locking element slidably supported by said housing and movable relative thereto, said locking element when in an offset position being adapted to prevent a turning movement of a key, but when forced inwardly, permitting said key to be turned.



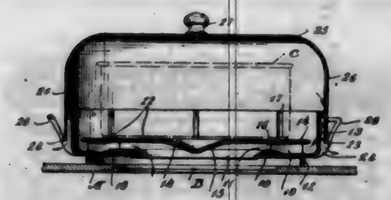
1,536,241. STORAGE-BATTERY-LUG REMOVER. WALTER SROKA, Minneapolis, Minn., assignor of one-half to James P. Williamson, Minneapolis, Minn. Filed July 22, 1921. Serial No. 486,877. 8 Claims. (Cl. 29—34.)

1. A storage battery lug removing implement comprising a pair of pliers, one having a bifurcated head disposed in a plane at right angles to its handle portion and the other having a flat ended head centrally alined



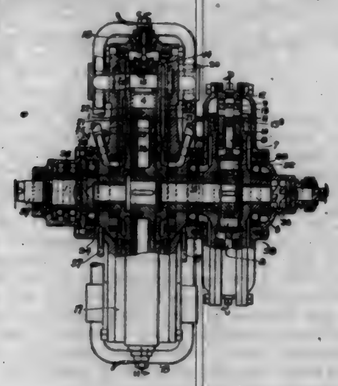
with said bifurcation and adapted to swing in a plane substantially normal to said bifurcated head.

1,536,242. AUXILIARY APPARATUS FOR CONDENSERS. ROBERT SUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 554,513. 37 Claims. (Cl. 230—13.)



1. The combination with a receptacle for liquid, of an ejector submerged in the liquid in said receptacle and comprising nozzle structure for removing the liquid from said receptacle, a second ejector delivering motive fluid to said nozzle structure, and nozzle structure delivering motive fluid to said first named nozzle structure.

1,536,243. AUXILIARY APPARATUS FOR CONDENSERS. ROBERT SUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 554,514. 29 Claims. (Cl. 230—13.)

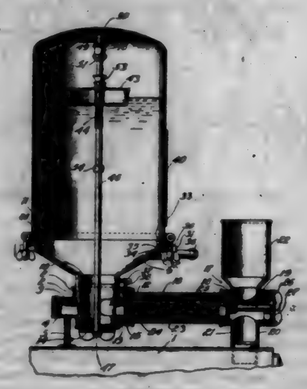


1. In combination with a receptacle containing liquid, wall structure disposed in said receptacle and the liquid therein, a combining tube extending through said wall structure and submerged in said liquid, and nozzle structure delivering motive fluid to said combining tube.

1,536,244. COOKING UTENSIL. LEON SUSSMAN, Bayonne, N. J. Filed Aug. 23, 1923. Serial No. 658,851. 9 Claims. (Cl. 126—275.)

1. A device of the class described, comprising an outer member having a bottom plate with a central opening and an annular flange projecting downwardly from said plate and adapted for contact with the top of a stove or the like, and an upward flange at the outer periphery of said bottom plate, an inner member having a bottom plate spaced from that of the outer member and formed with a deflector projecting toward the opening in the bottom plate of the outer member, the upper surface of the bottom plate of said member having lugs adapted to support a cooking pot or the like out of close contact with said inner member, and a cover having a top and a depending peripheral flange supported on the outer member and surrounding the flange thereof for the downward passage of hot gases.

1,536,245. ROTARY PISTON ENGINE. OSCAR A. THELIN, Horten, Norway. Filed Sept. 2, 1920. Serial No. 407,788. 11 Claims. (Cl. 123—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

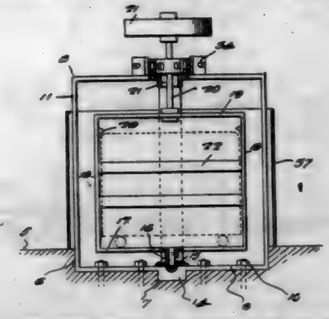


5. In an engine, the combination of a rotor having an even number of not less than four equidistant blocks which sweep an annular space and which blocks divide said space into working chambers, another rotor having pistons projecting into said working chambers, one piston between each two successive blocks, said rotors being adapted to revolve around a common axis, shafts rigidly secured to said rotors, not less than two sets of mechanisms, each set consisting of connecting rod, crank and pinion, which sets of mechanisms interconnect said shafts, a stationary gear engaging said pinions, said mechanisms and gear causing said pistons of the one rotor to oscillate between said blocks of the other rotor when the engine is in operation, the cross section of said annular space having a curved surface, and U-shaped springs to provide for tightness between the rubbing surfaces of said working chambers and said pistons due to tension of said springs and due to centrifugal forces acting on said springs when the engine is in operation.

1,536,246. ASSEMBLY FOR CURLING IRONS. LE ROY TRONC, Chicago, Ill., assignor to Maggie May Slaughter, Chicago, Ill. Filed Mar. 7, 1924. Serial No. 697,513. 4 Claims. (Cl. 219—24.)

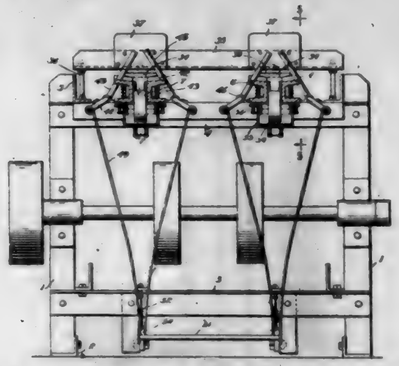
1. A curling iron comprising a heated member, a heating element therein, a movable jaw, a handle, and means for connecting said heating element with a source of electrical energy and contained in said handle, said connecting means comprising a threaded stem adapted to be attached by rotative movement to said heating element at the center thereof to provide one connection therewith, and a bridge member detachably secured to the periphery of said heating element to provide a second connection therewith and to prevent accidental rotative movement between said heating element and said connectig means.

1,536,247. ICE-CREAM FREEZERS. THEODORE L. VALERIUS, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1921. Serial No. 513,992. 4 Claims. (Cl. 221—116.)



1. In a device of the class described, the combination of a valve casing, a tubular valve removably mounted therein and extending through said casing, a receptacle attached to one end of said tubular valve, and a closure removably secured to the other end of said valve, said closure being adapted to pass through said casing with said valve in the removal of the latter.

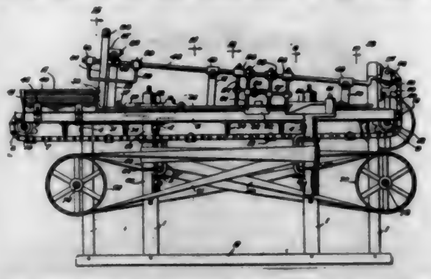
1,536,248. CENTRIFUGAL EXTRACTOR. EARL W. WAGNER, Butte, Mont. Filed May 20, 1924. Serial No. 714,681. 3 Claims. (Cl. 210—63.)



1. In a centrifugal drier of the character described, a vertically positioned rigid frame anchored at one end to a base, a second frame disposed within said rigid frame for rapid rotation, said second frame including

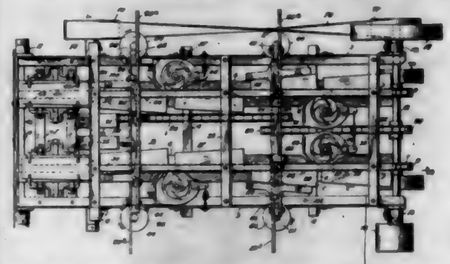
a material basket supporting platform, means upon one side of said second frame for limiting the movement of the material basket in one direction, means at the other

side of said second frame for securing the basket upon the platform, and means whereby said second frame may be rapidly rotated.



1,536,249. FEEDING MECHANISM FOR STAVE-JOINTING MACHINES. AXEL M. WALSTROM, Minneapolis, Minn., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 17, 1924, Serial No. 699,620. Divided and this application filed Feb. 14, 1925. Serial No. 9,085. 4 Claims. (Cl. 144—245.)

1. In apparatus of the class described having a carrier comprising pivotally connected pairs of spaced links, the combination of a stave abutting element secured to said links and projecting upwardly from the surface of said carrier, an oversize extra link positioned forwardly of said element and having oversize apertures receiving an adjacent pair of pivot connections in said carrier for the loose support of said extra link, said extra link normally extending below said carrier and having upper projections normally retracted below the upper surface of said carrier, and a cam adapted to engage the lower portion of said extra link and raise said upper projections above the surface of said carrier.



1,536,250. MACHINE FOR MAKING TUBS AND THE LIKE. AXEL M. WALSTROM, Minneapolis, Minn., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 3, 1923. Serial No. 666,280. 25 Claims. (Cl. 147—25.)

1. Apparatus of the class described comprising, in combination, conveying means adapted to receive and forward a succession of staves of variable width, means for shifting the staves on said conveying means to a predetermined position for cutting one lateral edge, means for reversely shifting the staves into position for cutting the opposite lateral edge in variable angular relation to the first lateral edge proportionate to the width of

the respective staves, releasable means for securing said staves in the respective positions on said conveying means, and means for cutting the edges of the respectively positioned staves.

1,536,251. MACHINE FOR MAKING TUBS AND THE LIKE. AXEL M. WALSTROM, Minneapolis, Minn., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 17, 1924. Serial No. 699,620. 13 Claims. (Cl. 147—25.)

1. In apparatus of the class described, a carrier for moving a regularly spaced series of staves, a pair of oppositely reciprocatory bars positioned transversely of the path of said staves, operating connections between said carrier and said bars causing a cycle of movements of said bars coincidently with the passage of each stave, a stave positioning member supported on one of said bars, and another stave positioning member supported on the other of said bars, said members being positioned on opposite sides of the path of said staves and adapted to simultaneously engage the lateral edges of said staves, one of said members having a fixed support on its said bar and thereby operable to move a passing stave to a predetermined lateral position, and the other of said members being supported for resisted longitudinal movement along its said bar.

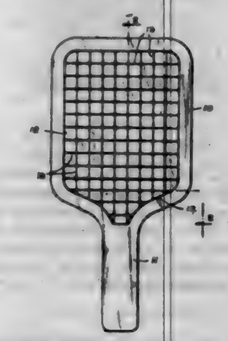
1,536,252. FEEDING MECHANISM FOR STAVE-JOINTING MACHINES. AXEL M. WALSTROM, Minneapolis, Minn., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 3, 1923, Serial No. 666,280. Divided and this application filed Sept. 22, 1924. Serial No. 739,079. 5 Claims. (Cl. 144—242.)

1. In apparatus of the class described, the combination of an endless travelling carrier, a magazine positioned over said carrier adapted to receive a stack of staves, a plurality of spaced projecting elements mounted on said carrier, each of said elements having a forward shoulder adapted to engage and remove successively the

undermost stave from said magazine and propel the same on said carrier, each of said elements also having a rearward shoulder forming an abutment for the forward end of the next succeeding stave, a member pivotally mounted adjacent each of said elements normally in recession

rearwardly of the forward shoulder of its associated element and operable forwardly to engage and lock the stave positioned therebefore in abutment with the rearward shoulder of the preceding element, and means for successively operating said members into stave engaging position.

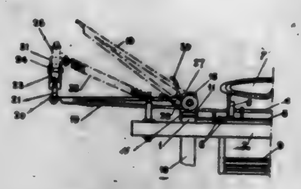
1,536,253. PREMATURELY-CURED PLASTIC MATERIAL AND PROCESS OF MAKING SAME. HARRY M. WEBER, Montclair, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed Apr. 8, 1924. Serial No. 705,124. 4 Claims. (Cl. 18—55.)



1. The process of making a plastic article capable of setting in a hot mold which comprises advancing the reaction in preparing the resin to make material which in the powdered form under heat and pressure is prematurely-cured prior to coalescence and pre-shaping such prematurely-curing material in the cold to form an article roughly resembling the desired finished product and then hot pressing such pre-shaped article.

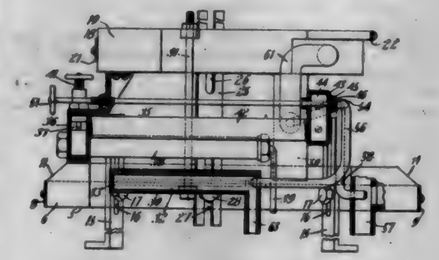
1,536,254. WATER-REPELLENT TEXTILE MATERIAL AND METHOD OF PRODUCING THE SAME. CLARENCE B. WHITE, Montclair, N. J., assignor to Fred S. Bennett, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 9, 1922. Serial No. 605,984. 8 Claims. (Cl. 91—68.)

1. Water-repellant textile material impregnated with a fatty acid compound of a rare earth metal.



5. A process of rendering textile material water-repellant, comprising impregnating the material with a fatty acid compound of a rare earth metal.

1,536,255. RACKET. FRANK PERR BEAL, New York, N. Y. Filed Oct. 23, 1922. Serial No. 596,459. 2 Claims. (Cl. 273—761.)

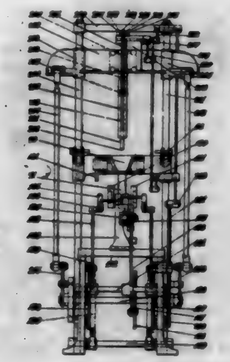


1. A solid racket having a batting portion and an integral handle portion, the batting portion being provided with a marginal scored line and series of crossed scored lines bounded by the marginal scored line, said scored line being cut into the surface of the racket.

1,536,256. GYMNASTIC APPARATUS. VERALDO CALZETTI, Parma, Italy. Filed Apr. 9, 1924. Serial No. 705,390. 1 Claim. (Cl. 272—72.)

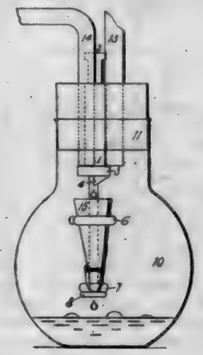
A gymnastic apparatus comprising in combination a frame with longitudinal and transverse girders, longitudinal guides for a rolling seat, pivotally adjustable frames on the longitudinal girders of said frame, standards pivotally mounted on the outer sides of said frames, levers pivotally connected to said standards orthogonally to the rotation-axis of said standards, spring connections between a point of said levers and a point of the main-frame.

1,536,257. HEATING APPARATUS. GEORGE E. CUSTER, Providence, R. I. Filed June 1, 1923. Serial No. 642,782. 6 Claims. (Cl. 158—62.)



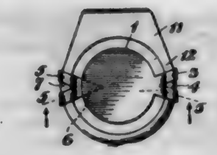
6. A heating apparatus comprising, in combination, a main burner embodying therein a pair of oppositely disposed semi-annular members, each of said members having a sloping outer wall provided with a plurality of flame openings therein, a plurality of legs adjustably secured to said main burner, a plurality of supports adjustably mounted upon said main burner, an auxiliary burner adjustably mounted upon said supports and embodying therein a pair of oppositely disposed semi-annular members, each of said members having a plurality of flame openings therein, a generator burner adjustably depending from said auxiliary burner, a generator mounted upon said auxiliary burner and heated by said generator burner, means to conduct gas from said generator to each of said burners, valves to control the amount of said gas delivered to said burners and means to supply air to each of said burners.

1,536,258. MACHINE FOR MAKING AND FILLING PACKETS. ALBERT DAY, London, England. Filed Jan. 18, 1923. Serial No. 613,448. 17 Claims. (Cl. 93—2.)



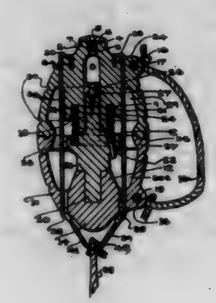
1. A machine for the purposes set forth, comprising in combination a stationary charging funnel having a vertical hollow stem, consecutively acting folding devices

to complete a bag on said stem, means for filling said bag in the position in which it is made, the last folding device having alternate horizontal and vertical move-



ments, and a mould vertically slotted to give passage to said folding device, said mould being always vertically under said stem throughout the action of the machine.

1,536,259. FRAME, TO MAKE POSSIBLE IN THE SAME APPARATUS SOLVENT RECOVERY BY DISTILLATION, AFTER EXTRACTION OF A SUBSTANCE HAS BEEN MADE BY THAT SOLVENT. SIDNEY AUGUSTUS DE LACY, Acton, England. Filed May 17, 1923. Serial No. 639,578. 5 Claims. (Cl. 23—272.)

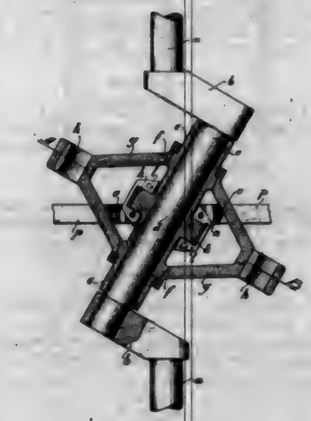


1. A frame comprising a circular body having near its upper end means provided for the reception of a key by which the frame is operated and at its lower end a platform with a drip member attached to its under surface separate from an upright connecting to that surface a support to hold a container of a substance to be extracted so that the apex of the drip member lies over the upper end of the container.

1,536,260. TAG FOR FINGER RINGS. JULIUS DINHOFER, New York, N. Y. Filed Feb. 12, 1925. Serial No. 8,647. 7 Claims. (Cl. 40—21.)

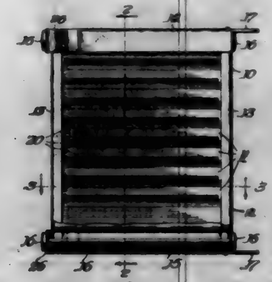
2. An article of the class described having a pair of enlargements adapted to be secured together and lie within the shank of a finger ring, said enlargements being connected by an integral strip which forms a loop over the finger ring shank, and another strip forming a continuation of one of said enlargements, said strip extending over the shank of the ring and having its end secured between the enlargements.

1,536,261. TOY HAND GRENADE. KENNETH R. EAMES, Worcester, Mass. Filed Apr. 15, 1921. Serial No. 461,650. 10 Claims. (Cl. 46—46.)



1. A device as described consisting of a pair of similarly sized and shaped rubber members, one of said members having an internal air cylinder, a piston and rod carried by the other member and working in said air cylinder, said air cylinder having a vent port, said members being formed with spring sockets, a coiled spring projecting into both sockets, means for holding said members into contact so as to compress said spring, and a trigger for releasing said spring and causing said members to be forcibly separated.

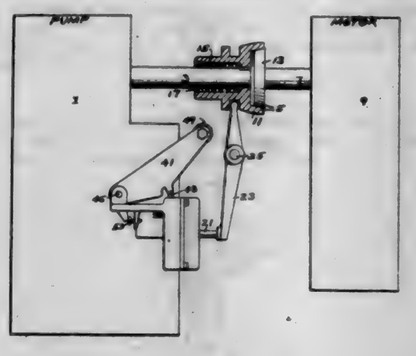
1,536,262. PISTON ENGINE. HERMAN CONRAAD OLIVIER, The Hague, Netherlands. Filed May 28, 1921. Serial No. 473,440. 1 Claim. (Cl. 74—14.)



A device of the class described, including in combination a frame, a shaft adapted to gyrate about a fixed point, a sleeve mounted for rotation on said shaft, a

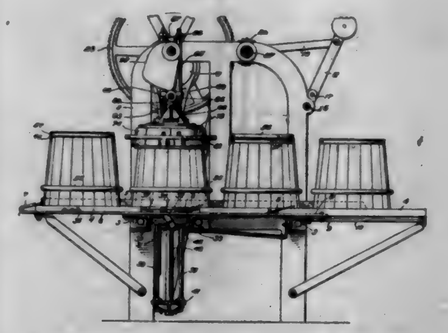
wobbler secured to said sleeve and provided with slots for the passage of said frame, axially aligned trunnions extending laterally from said sleeve, and a gimbal piece

within said wobbler, pivotally secured to said frame and having recesses to receive said trunnions.



1,536,263. CARD RACK. STANLEY ORZECHOWSKI, De Kalb, Ill., assignor to Kohler Die and Specialty Co., De Kalb, Ill., a Corporation of Illinois. Filed May 18, 1922. Serial No. 561,557. 15 Claims. (Cl. 40—124.)

8. In a card-holding rack, a frame, a plurality of superposed members of substantially V-shaped cross-section removably arranged therein in interfitting relation to form pockets on both sides of the frame, and means carried by each of the members for forming the support of the member located next thereabove.

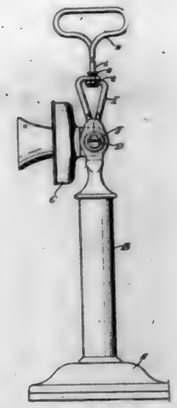


1,536,264. PUMP REGULATOR. HARVEY S. PARDEE, Chicago, Ill. Filed May 26, 1920. Serial No. 384,497. Renewed Aug. 21, 1922. Serial No. 583,355. 11 Claims. (Cl. 103—23.)

1. In apparatus of the class described, in combination, fluid-pressure-operated means for opening and closing a clutch at predetermined pressure standards, and fluid-pressure-operated means for opening and closing a con-

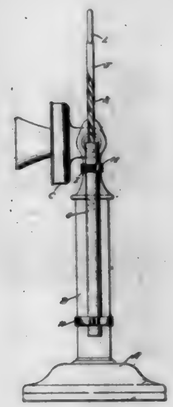
tact at predetermined pressure standards, the net actuating force for the moving parts of both means increasing progressively during their stroke.

1,536,265. MACHINE FOR MAKING TUBS AND THE LIKE. WALTER M. PAULSON and AXEL M. WALSTROM, Minneapolis, Minn., assignors to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1922. Serial No. 605,796. 25 Claims. (Cl. 147—6.)



1. Apparatus of the class described comprising, in combination, means for supporting in sliding movement thereon a container drum and a bottom loosely positioned therein, means positioned adjacent the path of said drum for seating said loose bottom therein, and means for applying a hoop upon the bottom end of said drum.

1,536,266. UNTWISTING DEVICE. WILLIAM E. PUTNAM, Weston, Mass. Filed June 2, 1922. Serial No. 565,413. 4 Claims. (Cl. 179—154.)



1. In combination, a portable telephone instrument having a mouth piece at one end and a cord attached to

the other end, a member removably attached to said instrument by means of the bolt for said mouth piece,

and a handle having a swivel connection to said member whereby said instrument may be held suspended by said handle and rotated thereon to untwist said cord.

1,536,267. UNTWISTING DEVICE. WILLIAM E. PUTNAM, Weston, Mass. Filed June 2, 1922. Serial No. 565,414. 12 Claims. (Cl. 179—154.)

1. In combination, a portable electrical instrument having a cord making the electrical connections thereto, and means causing said instrument to rotate automatically when lifted vertically thereby.

1,536,268. TRUNK LOCK. MARTIN RASMUSSEN, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed July 7, 1923. Serial No. 650,185. 7 Claims. (Cl. 292—25.)

1. In a trunk lock, a keeper member; a longitudinally slidable and pivoted locking member adapted to be engaged and moved about its pivot by said keeper member when the parts are in their partially open positions; means normally urging said locking member to keeper

engaging position; and manually operable means for sliding said locking member to clampingly draw said keeper member to its fully closed position.

1,536,269. BUMPER. ANDREW PHILLIP RIEDELE, Los Angeles, Calif., assignor to United States Bumper Company, Inc., Los Angeles, Calif., a Corporation of California. Filed Dec. 6, 1924. Serial No. 754,259. 8 Claims. (Cl. 293—55.)

1. A bumper comprising a plurality of spaced impact bars, a rear supporting bar, an intermediate bar secured to the rear bar at its ends in a manner to allow longitudinal movement of the ends of said intermediate bar.

1,536,270. DEVICE FOR SECURING BUTTONS OR THE LIKE TO FABRICS OR ANY OTHER KIND OF MATERIAL. VINZENZ SABADELLO, St. Polten, Austria, assignor to Franz Benedikt, St. Polten, Austria. Filed Nov. 5, 1923. Serial No. 672,883. 2 Claims. (Cl. 24—80.)

1. A device for securing buttons or the like to fabrics or any other kind of material comprising in combination, a bracket furnished with a slot at one of its arms, a clamping spring disposed within the said bracket, a double armed lever the arms of which are disposed at an obtuse angle pivoted to the said bracket in such a manner that in the operative position of the lever one of its arms rests within the said slot and the other arm thereof projects into the interior of the bracket and takes up an inclined position with respect to the slotted arm of the said bracket and cooperates with and forces inwardly one arm of the said clamping spring, and a button secured to the lever-arm first mentioned.

1,536,271. IRONING BOARD. MATTHEW JOSEPH SCHACKMANN, Chicago, Ill. Filed May 26, 1923. Serial No. 641,654. 2 Claims. (Cl. 68—10.)

1. In combination, an ironing board, a plate arranged at one extremity of the board and underlying a side marginal portion thereof, said plate being spaced from the board, means for securing the outer side marginal portions of said plate to the adjacent side marginal portion of the board, said plate being adapted to underlie a marginal portion of a support, and clamping means carried by the board in advance of the plate and adapted to engage a second marginal portion of the support.

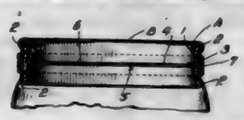
1,536,272. COVER FOR HIGH-PRESSURE VESSELS. GEORG SCHEIB, Berlin, Germany, assignor to D. H. J. van Mens, The Hague, Netherlands, and J. G. Schurmann, Rotterdam, Netherlands. Filed Aug. 29, 1921, Serial No. 496,786. Renewed Mar. 6, 1925. 3 Claims. (Cl. 220—25.)

1. A quick-obturator for receptacles having a large aperture and high internal pressure, comprising, in combination: an oval cover adapted to be pressed against the inner rim of said aperture by the internal pressure and being composed of two slightly vaulted members of equal thickness riveted together at their rims and enclosing a hollow space; a tensioning ring arranged on the outer rim of the receptacle, threaded bolts arranged in slots of the tensioning ring; nuts upon said bolts; eyes and bolts connecting said first-mentioned bolts with the cover at the outer surface thereof; said threaded bolts connecting the cover with the tensioning ring and pressing the cover against the inner receptacle rim; a stay bolt arranged in the middle of the cover and traversing said cover space and connecting the two cover members with each other; a spacing tube upon said bolt; means for attaching the said cover to, and detaching it from the receptacle; a threaded pivot forming an elongation of said stay bolt on the outer surface of the cover; a toothed segment supported in a fork provided with a ball-bearing and an ear and provided with a lever firmly connected with the said stay bolt of the cover; a cog-wheel meshing with said toothed sector and being supported in said fork and adapted to readjust the sector and the cover; a bevel-wheel on the shaft of said cog-wheel, this shaft being arranged on one side of the fork; two bevel-wheels thereon; a worm-wheel and a self-checking worm meshing with the worm; a bevel-wheel on the shaft of the worm-wheel, one of the bevel wheels of the first mentioned shaft meshing with the bevel-wheel of the cog-wheel shaft and the other meshing with the bevel-wheel of the worm-wheel shaft; a crank on the bevel-wheel supported in the fork; a lever secured to the bevel-wheel shaft and being adapted to be actuated by the same; a compensating weight so arranged as to be adapted to be readjusted by this lever and to balance the cover in its various positions; and guide arms secured to the two legs of the fork and intended for said weight, as set forth.

1,536,273. THERAPEUTIC DEVICE. WOLDEMAR SCHNEE, New York, N. Y. Filed Mar. 20, 1924. Serial No. 700,456. 2 Claims. (Cl. 174—177.)

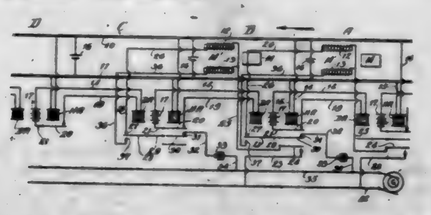
1. In a combination with an electric source, a foot plate attached to one lead wire, a rheostat attached to an opposite lead wire, a pair of gloves coupled to the last-named lead wire and in series with the rheostat on separate wires, said gloves comprising an outer layer of roughened fabric, an intermediate layer of current conducting wire netting and an interior layer of insulating rubber, said gloves being worn on the hands as a unit, the operator when standing on the foot plate and the gloves being moistened rubbed over the body, said gloves being adapted to perform an electric and dynamic massage simultaneously.

1,536,274. HOOK FOR MENDING RUNS. OTTO C. SEMONSEN, Brooklyn, N. Y. Filed June 27, 1923. Serial No. 648,107. 9 Claims. (Cl. 66—3.)



1. The method of restoring a run in knitted fabric, which comprises taking a needle, having an undercut hook at the lower end and a shoulder above said hook for temporarily holding the loop, inserting said needle in the free loop at the lower end of the run, temporarily holding said loop upon said shoulder, while picking up the thread of the adjacent dropped loop by means of said hook, then drawing said hook outward and simultaneously turning it to release the loop from said shoulder, said loop sliding off over said hook, then drawing the thread on said hook through said loop, thereby forming a new loop, then temporarily holding said new loop on said shoulder and repeating the operation.

1,536,275. HOLDER FOR KNITTED FABRICS. OTTO C. SEMONSEN, Brooklyn, N. Y. Filed June 27, 1923. Serial No. 648,108. 3 Claims. (Cl. 66—3.)



1. A holder for holding knitted fabric in position to be operated upon by a special needle for restoring runs

in the fabric, which comprises a frame over which the fabric is stretched, means for securing and holding the

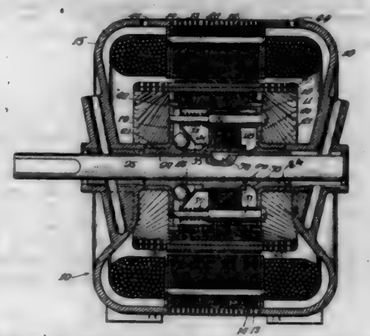
fabric in stretched relation over said frame, and a diaphragm of contrasting colors spaced from and located below the plane of the fabric stretched over said frame.

1,536,276. ROADSIDE APPARATUS FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. ARCHIBALD G. SHAVER, Chicago, Ill., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed May 8, 1923. Serial No. 637,515. 3 Claims. (Cl. 246—63.)

1. In combination with track rails subdivided into insulated blocks or sections, of a roadside apparatus for impressing roadside conditions on moving vehicles comprising a plurality of magnetic devices associated with one of the track sections, one of said devices comprising a tripping element and the other a resetting inductor, a circuit for the inductor including a source of energy, a home relay connected to the section associated with the circuit and operative for normally opening said circuit in the absence of a train in such section and for closing such circuit in the presence of a train therein, and home and distant relays associated with the next succeeding track section for controlling said circuit in response to traffic conditions.

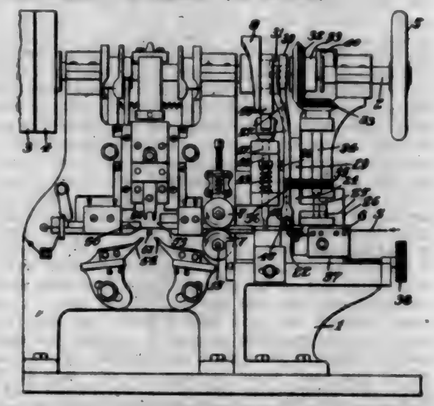
1,536,277. COMPOSITE HEAD FOR TACKS OR THE LIKE. HENRY B. TILTON, Portsmouth, N. H., assignor to Morley Button Manufacturing Company, Boston, Mass., a Corporation. Filed Aug. 30, 1922. Serial No. 585,280. 1 Claim. (Cl. 85—53.)

An article of the class described, comprising an absorbent core, a fastening member projected through said core, a shell of moldable fibrous material formed about said core and projecting under the lower face of the same, said core and shell being impregnated with a liquid penetrant dried therein.



1,536,278. BELT CLAMP. JOHN E. URSCHEL, Mexia, Tex. Filed Feb. 2, 1925. Serial No. 6,202. 3 Claims. (Cl. 24—37.)

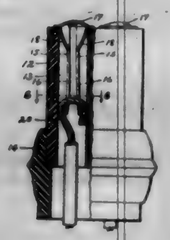
1. Belt clamps comprising two clamping members for engaging the ends of a belt, made of rigid material and having portions thereof curved to conform to the arc of the pulleys over which the belt is traveling and having



the extreme ends of the clamps curved away from the surface of the belt, and bolts and nuts for securing the clamps on the ends of the belt.

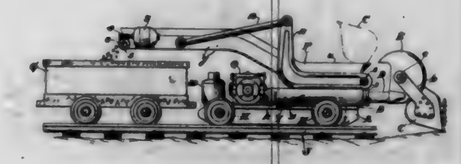
1,536,279. DYNAMO-ELECTRIC MACHINE. VINCENT G. APPLE, Dayton, Ohio. Filed May 27, 1920. Serial No. 384,574. 1 Claim. (Cl. 172—36.)

A device of the character described comprising a rotatable shaft; a pair of spaced disks rotatable thereon; a ring connected near the periphery of the disks to provide a substantially closed housing to prevent entrance of foreign matter therein; a pair of pins passing thru the disks and substantially parallel with the shaft; a series of axially movable flat rings supported on the pins; a series of axially movable flat rings rotatable with the shaft and alternating in position with the flat rings on the pins and centrifugally operable means within the closed housing to press said flat rings together to rotatably connect the housing and the shaft.



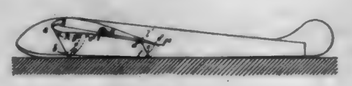
1,536,280. RING-TRAVELER MACHINE. JAMES H. AVERY, Franklin, Mass., assignor to Philip C. Wentworth, Providence, R. I. Filed Feb. 5, 1924. Serial No. 690,877. 13 Claims. (Cl. 29—34.)

1. In combination, an intermittent stock feed mechanism, a pair of oppositely disposed spaced milling cutters between which the stock is adapted to feed, and



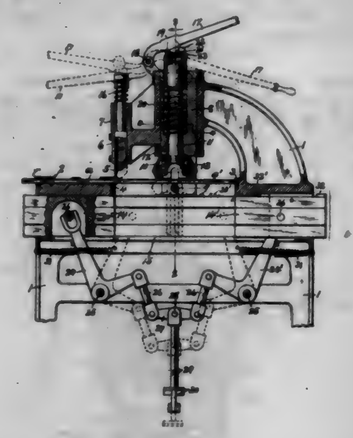
means operating in timed relation to the stock feed mechanism effective to initially open said cutters during the feeding phase of the stock feed mechanism to permit the stock to feed therebetween and effective to subsequently close said cutters to permit them to mill equal opposite portions from the longitudinal edges of the stock included therebetween during the non-feeding phase of the stock feed mechanism.

1,536,281. TERMINAL CONNECTER. HUGH W. BATCHELLER, Worcester, Mass., assignor to Winooski Electric Manufacturing Company Inc., Burlington, Vt., a Corporation of Vermont. Filed Feb. 19, 1924. Serial No. 693,888. 2 Claims. (Cl. 173—361.)



1. A terminal connecter comprising an insulating body having a bore, and a stop face at one end of the bore, and a fixed conductor having a stop shoulder, adapted to bear on said stop face, said conductor including an exposed contact portion, and flexible arms projecting from the contact portion and formed to enter the bore, said arms being arranged side by side and provided with longitudinally extending slots, having relatively wide inner end portions, adapted to receive a terminal portion of a flexible conductor, and narrower outer end portions, the edges whereof form gripping jaws adapted to grasp said terminal portion, when the latter is moved lengthwise of the slots.

1,536,282. SHOVELING AND LOADING MACHINE. JOHN C. BRACKETT, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1924. Serial No. 714,559. 11 Claims. (Cl. 214—90.)

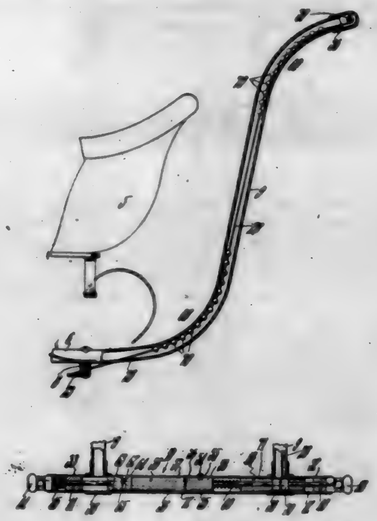


1. A shoveling and loading machine, comprising the combination of a base, a shovel, means for thrusting said shovel forwardly and back, means including a cylindrical pressure chamber, and a pivotally supported flat piston swinging in said pressure chamber for raising and dumping said shovel.

1,536,283. METHOD AND APPARATUS FOR FACILITATING THE STARTING AND THE LANDING OF AEROPLANES. LOUIS BREGUET, Paris, France, assignor to Société Anonyme des Ateliers d'Aviation Louis Breguet, Paris, France. Filed Aug. 23, 1922. Serial No. 583,811. 5 Claims. (Cl. 244—2.)

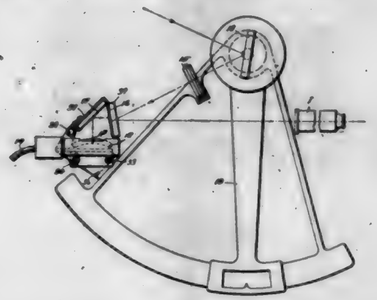
4. A device for the starting and landing of aeroplanes when in immediate vicinity to the landing surface, comprising two flaps hinged to the lateral edges of the plane, means for controlling said flaps, two flaps hinged to the front and rear edges of the plane, a rod connecting these two flaps, an air compressor under the control of said rod and adapted to pivot the rear longitudinal flap when the speed of the avion becomes reduced, and bands of flexible material disposed along the lower edge of said flaps and insuring the tight working between the pneumatic receptacle formed by the said flaps and the surface upon which the avion effects the landing.

1,536,284. METHOD OF AND APPARATUS FOR MAKING COTTER PINS. WILLIAM M. BRITTON, Syracuse, N. Y. Filed Dec. 10, 1923. Serial No. 679,602. 7 Claims. (Cl. 29—5.)



1. A method of forming split cotter pins, consisting in bending a strip of wire around a suitable support to form a head and opposite legs, then pressing the legs together to form the shank, and then turning the support about the axis of the shank to twist the head relatively to said shank.

1,536,285. BRAKE MECHANISM FOR BABY CARRIAGES. GEORGE W. CLARK, Westfield, Mass., assignor to Westfield Manufacturing Company, a Corporation of Massachusetts. Filed Apr. 19, 1922. Serial No. 555,588. 13 Claims. (Cl. 188—20.)



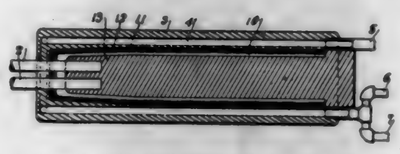
1. In a baby carriage the combination of a frame for supporting the carriage body, a brake and actuating mechanism therefor, a handle-bar, a tubular handle-bar

supporting member, a cable connected at one end to the brake-actuating mechanism and extending through said tubular member, means associated with the handle-bar

for pulling said cable to actuate the brake, and friction reducing devices carried by said cable to protect the latter from wear.

1,536,286. ATTACHMENT FOR SEXTANTS. LUIS DE FLORES, Short Hills, N. J. Filed Mar. 21, 1919. Serial No. 284,025. 2 Claims. (Cl. 88—2.7.)

1. An attachment for a sextant including a detachable bracket adapted to engage a sextant frame and having an upwardly extending level supporting flange and a downwardly extending mirror supporting flange lying in the same plane, a downwardly extending and offset leg carrying an attaching flange lying in a different plane from the other two flanges.



1,536,287. RAILWAY CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 10, 1924. Serial No. 685,297. 10 Claims. (Cl. 20—52.)

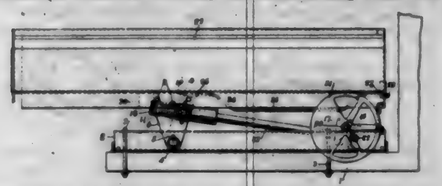
1. In a railway car, a vestibule having an opening and a sash adapted to close and open the same, an actuating support to carry said sash and move it from closed to open position, and vice versa, and a guide-way

to guide said sash in its movements from closed to open position, and vice versa.

1,536,288. METHOD OF MANUFACTURE OF RUBBER COMPOUND. ABRAHAM L. FREEDLANDER and WILLIAM G. GOODWIN, Dayton, Ohio, assignors to The Rubber Development Company, Dayton, Ohio, a Trust Estate. Original application filed Dec. 26, 1922, Serial No. 608,978. Divided and this application filed Oct. 27, 1923. Serial No. 671,256. 5 Claims. (Cl. 18—53.)

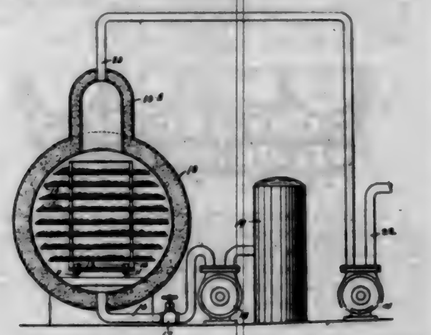
5. In a method of producing the herein described rubber compound with a coating of resilient rubber, mixing smoke sheets, rosin oil, sulphur, and lime at approximately 130° to 180° Fahrenheit, adding ethyl-idene-aniline previously brought to about 212° Fahrenheit, adding ammonium bicarbonate and cooling the mass to approximately 70°; lining an interior of a mold with rubber sheets which are cemented therein, placing the mass on said sheets and heating the mold under approximately eighty pounds pressure a predetermined period raising the heat gradually during the first third of the period.

1,536,289. VALVE. JOHN B. GATE, Chicago, Ill., assignor to Aaron M. Seales, Chicago, Ill. Filed Dec. 20, 1922. Serial No. 607,955. 3 Claims. (Cl. 123—188.)



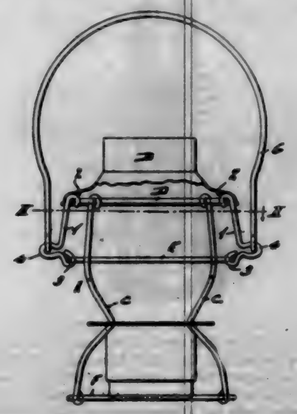
1. A valve structure comprising a valve having a plurality of dished disks; a stem extending from the concave side of the valve and a valve seat curved on longer radii than the valve in its open position to receive the circumferential concave edge of the valve.

1,536,290. POWER DUMP BODY. JOHN C. GAY, RALPH E. SMITH, and HARRY J. QUIRK, Galion, Ohio, assignors to The Galion Metallic Vault Company, Galion, Ohio, a Corporation of Ohio. Filed Jan. 10, 1924. Serial No. 685,332. 7 Claims. (Cl. 298—19.)



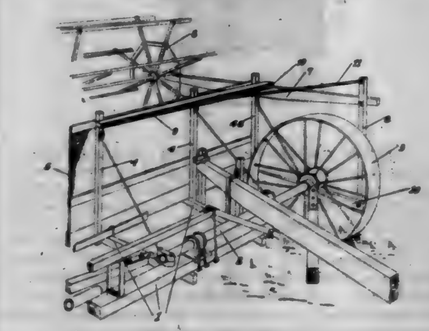
1. In a dump body construction, a body, means to pivotally support said body on a frame, a frame and a

lever extending upwardly from said pivotal support and connected thereto, actuating means extending from said



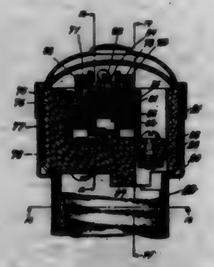
lever to a remote point, and means for controlling said actuating means.

1,536,291. METHOD OF DEHYDRATING. CHARLES E. GLESSNER, Portland, Oreg. Filed July 21, 1923. Serial No. 652,918. 1 Claim. (Cl. 99—5.)



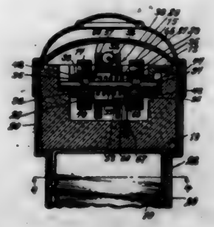
In the art of dehydration, a method of supplying heat to food in a partial vacuum consisting of placing same in a partial vacuum, then surrounding the food with carbon dioxide gas also maintained at a reduced pressure and then exposing said rarefied gas to the action of heat in a manner that said heat may be carried by said gas, to all of the surface of said food to evaporate its moisture.

1,536,292. LANTERN FRAME. ALEXANDER H. HANDLAN, St. Louis, Mo. Filed July 5, 1922. Serial No. 572,700. 2 Claims. (Cl. 240—52.)



1. A lantern frame provided with a plurality of vertical guard wires and a plurality of horizontal guard wires, a bail having looped ends, and means comprising sections of wire, the end portions of which embrace a pair of horizontal guard wires intermediate of pairs of vertical guard wires for securing said bail to said lantern frame, said sections of wire being located entirely above that portion of the lantern frame wherein the burner of the lantern is arranged and each of said sections of wire being provided with an eye which receives a looped end of said bail.

1,536,293. BRACE CONSTRUCTION FOR HEADERS. GEORGE H. HARRIS, Stockton, Calif. Filed June 16, 1923. Serial No. 645,741. 4 Claims. (Cl. 56—219.)



1. A brace structure for headers comprising the combination with a header-reel beam and an upright support therefor, of a horizontal inflexible brace supported independently of said upright, and projecting to a point adjacent the same and at right angles to the beam, and means connecting the free end of said brace to the upright to permit relative fore and aft adjustment therebetween.

1,536,294. ELECTRIC SWITCH. CHARLES L. HOPKINS, River Forest, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1919. Serial No. 324,971. 2 Claims. (Cl. 173—354.)

1. A switch mechanism comprising an insulating contact carrier constructed in two separable mating parts, each having a portion of reduced diameter and a portion of greater diameter, the portions of reduced diameter facing each other; a torsion spring surrounding said reduced portions; a driving member supported upon said reduced portions; a flexible operating member winding on said driving member; a curved contact arranged on the larger portion of each of said mating parts; each of said parts having a flange extending beyond its contact to form a barrier between the same and the driving and flexible operating members; conducting bearings for said contact carrier electrically connected to said curved contacts; and stationary contacts engaging said curved contacts and arranged to snap off the same simultaneously.

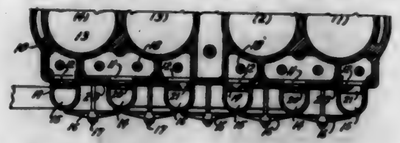
1,536,295. ELECTRICAL SWITCH. CHARLES L. HOPKINS, River Forest, and WALTER F. HINKLE, Chicago, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1919. Serial No. 325,447. 5 Claims. (Cl. 173—354.)

1. A switch mechanism comprising two spaced contact carriers of insulating material, mounted to rotate about a common axis in different parallel planes, two contacts, one carried by each carrier, a pair of stationary contacts, one for each rotatable contact with respect to which said rotatable contacts make and break connection in the rotation of said carriers, means for actuating said carriers comprising a drum oscillatable about the same axis as said carriers, a pull member mounted on said drum, and a coil torsion spring coaxial with said carriers and located inside said drum for returning said drum.

1,536,296. JACK FOR WIRELESS TELEPHONY OR THE LIKE. JOSEPH W. JONES, New York, N. Y. Filed Aug. 11, 1922. Serial No. 581,135. 11 Claims. (Cl. 179—96.)

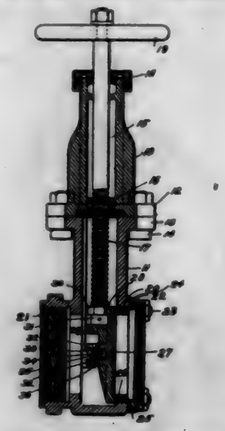
6. A jack comprising a base-plate of metal having a screw-threaded hole, a sheet of insulation secured on the rear face thereof and having a hole registering with the first-named hole, a headed and externally-threaded hollow bushing engaging said screw-threaded hole in the base-plate for clamping the latter upon a panel, two complementary jack-terminals, at least one of them mounted upon the rear face of said insulation-sheet, and a rearwardly-projecting contact-spring electrically connected at the rear face of said insulation-sheet to the last-mentioned terminal.

1,536,297. HOUSING FOR EXHAUST-PIPE RADIATORS. FRANK J. KLINKA, Milwaukee, Wis., assignor, by mesne assignments, to Masco Specialty Manufacturing Company, Milwaukee, Wis. Filed Dec. 1, 1922. Serial No. 604,139. 11 Claims. (Cl. 257—136.)



2. A housing for heat radiators for automobiles, said housing having one of its walls provided with apertures adjacent its bottom, flanges upon the other of its walls, a gate for said apertures provided with a flange adapted to register with said first mentioned flanges, and a tube adapted to be connected with an air hose, whereby said housing may be cleaned.

1,536,298. AUTOMATIC START AND STOP DEVICE. SAMUEL KOHN, New York, N. Y. Filed Apr. 25, 1923. Serial No. 634,494. 30 Claims. (Cl. 192—124.)



1. The combination with automatic non-set phonograph stops of means for rendering the stopping mechanism inoperative during any rearward movement of the phonograph tone arm.

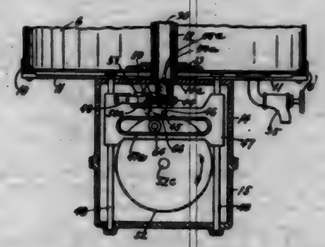
1,536,299. GASOLINE-VAPORIZING GLAND. ERNEST W. KUMMER, Edgewater, Colo., assignor of one-half to George C. Keech, Denver, Colo. Filed Sept. 14, 1923. Serial No. 662,673. 4 Claims. (Cl. 123—122.)

1. A hydro-carbon vaporizing device for internal combustion engines comprising the combination of a series of glands adapted to be placed between the manifolds and the cylinders of said engines, and tubes interconnecting and holding said glands in spaced relation, said tubes communicating between the exterior glands of said series and passing completely through the interior glands thereof.

1,536,300. GATE VALVE. ROBERT V. LONGTINE, Los Angeles, Calif., assignor to Longtine Valve Company, a Corporation of California. Filed Feb. 27, 1922. Serial No. 539,448. 3 Claims. (Cl. 251—56.)

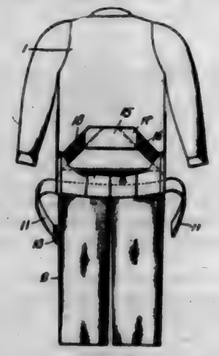
1. A gate valve construction comprising a housing having oppositely disposed inlet and outlet ports, a gate valve mounted in said housing, the non-seating face of said valve being convex in form, means to reciprocate said valve, a pair of cam tracks mounted in said housing, one on either side of one of said ports, and a cylindrical rod loosely carried by said gate valve, the ends of said rod engaging the cam tracks and exerting pressure at a single point on the convexed face of said gate on a seating operation.

1,536,301. PROPHYLACTIC DETERGENT. OTTO LOWY, Newark, N. J., assignor, by mesne assignments, to Technical Products Corporation, a Corporation of New Jersey. Filed Aug. 30, 1920. Serial No. 407,027. 3 Claims. (Cl. 167—3.)



2. A prophylactic detergent comprising an intimate mixture of a soap and an arsenphenamine bearing serum.

1,536,302. EXPANDING BRUSH. GEORGE JOHN MEYER and EDWARD ALBERT TISCHER, Milwaukee, Wis., assignors to George J. Meyer Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 25, 1921. Serial No. 464,420. 8 Claims. (Cl. 15—165.)

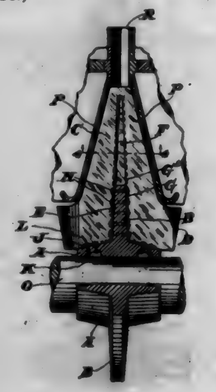


2. In an expanding brush, the combination of a rotatable brush holder having separable recessed sections, and a pair of complementary brush backs having bristle-holding portions and shank portions provided with pivots axially spaced removably seated in the recessed portions of said sections in a plane normal to the axis of the brush holder and permitting the bristle-holding portions to swing outwardly, said backs with their pivots being directly removable from said holder when the sections are separated.

1,536,303. WASHING MACHINE. ANDREW B. MILLER, Baldwin, Wis., assignor to Twin-Washer Manufacturing Company, St. Paul, Minn. Filed Nov. 30, 1923. Serial No. 677,640. 2 Claims. (Cl. 74—14.)

1. In a clothes washing machine and mounted in suitable framework, a vertically disposed pounder shaft, a horizontally disposed drive shaft having at one end a disc with a crank pin in it; a vertically guided yoke having a horizontal slot engaged by the crank pin; said yoke being swivel-jointed to the lower end of the pounder shaft, a worm gear fixed on the lower end of the pounder shaft, a horizontal worm-screw carried by the crosshead and constantly in mesh with the worm gear; a star fixed on one end of the worm-screw, and a tooth carried by the crank pin and arranged to impart a partial rotation of the star each time the crank pin raises the pounder shaft to its highest position.

1,536,304. OVERALL UNION GARMENT. JAMES MORRISON, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,313. 1 Claim. (Cl. 2—73.)



A one-piece union overall garment including a shirt part and a trousers part, said shirt part having secured permanently to its back portion, a pair of individual suspender members spaced apart on the shirt part and disposed divergently and downwardly and secured at their lower ends to the sides of the trousers part respectively below the belt line.

1,536,305. DENTIFRICE MATERIAL. FERDINAND W. NITARDY, Brooklyn, N. Y., assignor to E. R. Squibb & Sons, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1923. Serial No. 674,484. 5 Claims. (Cl. 167—6.)

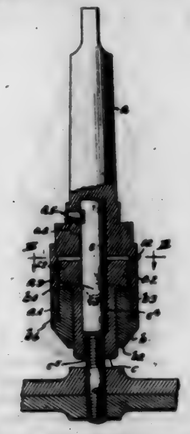
2. A dentifrice material comprising magnesium hydroxide substantially free from water and suspended in glycerine.

1,536,306. RADIAL IMPELLER. MELACH J. NUSIM, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 6, 1924. Serial No. 690,891. 1 Claim. (Cl. 230—11.)

A runner for a centrifugal blower including a hub having a base and a central flange extending radially therefrom and a double flow impeller blade formed

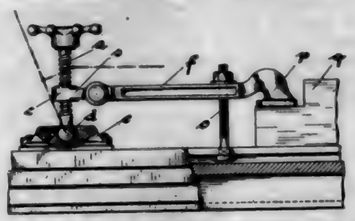
integrally and extending on opposite sides of the flange of the hub and having a rib pressed out on its back face beyond the hub flange to reinforce the blade, said rib terminating in flanges for attachment to the hub.

1,536,307. PRINTER'S CALIPER. FERDINAND A. PFEIFER, Springfield, Ohio, assignor to The Eagle Engineering Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 16, 1921. Serial No. 522,740. 4 Claims. (Cl. 33—193.)



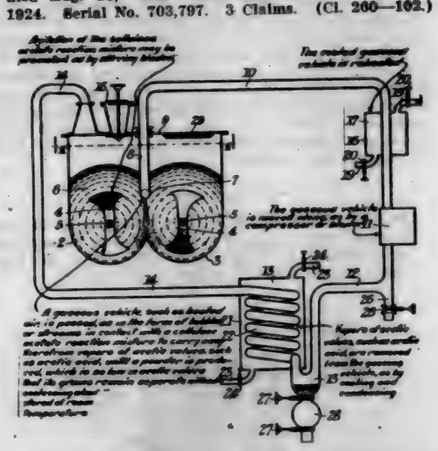
1. In a printer's caliper, a rule having a scale on each face thereof and having at one end type engaging projections extending beyond the respective edges thereof, and a slide reversibly mounted on said rule, having type engaging projections at each side thereof and having a measuring edge adjacent to each of said projections.

1,536,308. PROCESS FOR THE PREPARATION OF MEAT POWDERS. WILLIAM FREDERICK REMUS, Rangataua, New Zealand, assignor of one-sixth to Alexander Edmund Macredie, one-sixth to Charles Frederick Cork, three-twelfths to Alan MacKenzie McNeil, and three-twelfths to William John Abbott, all of Auckland, New Zealand. Filed Nov. 17, 1921. Serial No. 515,786. 2 Claims. (Cl. 99—5.)



2. The process of making meat powder which comprises reducing the meat to small particles, subjecting the meat to successive heating, squeezing and mincing operations, each heating operation being conducted at a temperature below 140° F., and each heating operation being followed by the squeezing operation to express the juices and by the mincing operation to loosen the pressed meat, subjecting the expressed juices to sufficient temperature to sterilize and concentrate them, reincorporating the treated juices with the meat, subjecting the meat to a final heating operation below 140° F. to dry the same, and then grinding the dry meat.

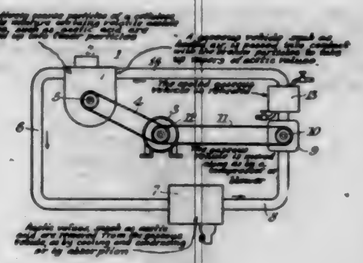
1,536,309. INTERCHANGEABLE STUD DRIVER. WILLIAM F. REULMAN, Detroit, Mich. Filed Aug. 24, 1922. Serial No. 583,985. 6 Claims. (Cl. 81—53.)



2. In a stud driver, a shank member having a cavity capable of receiving stud holders of different size, a stud holder receivable within said cavity, means removably supporting said stud holder within said cavity, co-acting cam surfaces on said means and on said stud holder to releasably lock the stud holder to the shank member upon rotation of the shank member in a given direction.

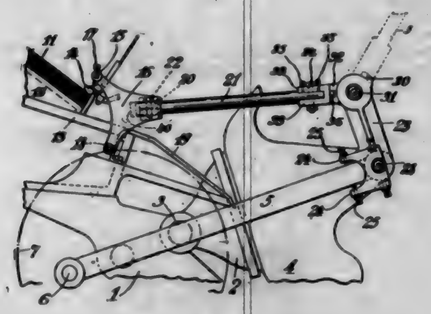
1,536,310. CLAMPING DEVICE. HERMANN RÖTHLISBERGER, Zurich, Switzerland. Filed Aug. 11, 1924. Serial No. 731,534. 3 Claims. (Cl. 144—200.)

1. In a device for adjustable clamping, the combination with a supporting spindle, of a ball-joint, a spherical seat supporting said spindle in a manner to turn on said ball in any direction, a clamping arm connected to said spindle by a nut turning round a thread of said spindle, and a joint interposed in said clamping arm for adapting itself and the said clamping arm to the flexible motion of the said spindle.



1,536,311. INTERMEDIATE PRODUCT IN THE MANUFACTURE OF CELLULOSE ACETATE. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Continuation of application Serial No. 658,109, filed Aug. 18, 1923. This application filed Apr. 2, 1924. Serial No. 703,797. 3 Claims. (Cl. 260—102.)

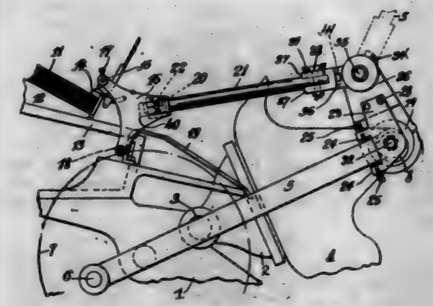
1. As an intermediate product in the manufacture of cellulose acetate, a powder, the substantially separate grains of which comprise cellulose acetate mixed with acetic values and remain separate without coalescing when stored at room temperature and pressure.



1,536,312. PROCESS OF RECOVERING ACETIC VALUES FROM A CELLULOSE-ACETATE MIXTURE. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,796. 5 Claims. (Cl. 260—107.)

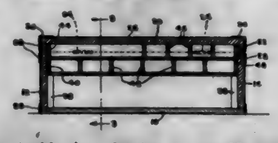
1. In the process of making cellulose acetate which includes recovering acetic values from a cellulose acetate mixture which is in the form of relatively coarse particles containing insufficient of said values to cause said particles to coalesce, at room temperature and pressure, the steps of breaking up said particles into powder

of relatively finer particles, passing a fluid vehicle into contact with said broken up particles to absorb acetic values, removing said vehicle from said particles and separating acetic values from said vehicle.



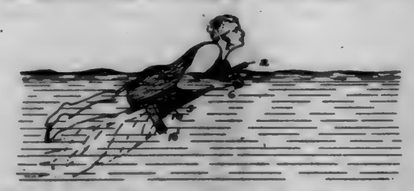
1,536,313. SUCTION-NOZZLE SUPPORTING MEANS FOR PRINTING PRESSES. PERCY L. SIBOLE, Newark, N. J., assignor to Klymax Feeder Company, a Corporation of New Jersey. Filed Mar. 18, 1924. Serial No. 699,992. 5 Claims. (Cl. 101—287.)

1. In a printing machine the combination with a paper separating device, supporting means therefor comprising a support secured to the said machine, a nozzle arm pivoted to said support, means for adjusting the support on the machine, means for adjusting the nozzle arm with respect to the said support, a nozzle head for supporting said separating device and means permitting adjustment of said nozzle head circumferentially and lengthwise of the said nozzle arm.



1,536,314. SUCTION-NOZZLE SUPPORTING MEANS FOR PRINTING PRESSES. PERCY L. SIBOLE, Newark, N. J., assignor to Klymax Feeder Company, a Corporation of New Jersey. Filed Mar. 18, 1924. Serial No. 699,993. 3 Claims. (Cl. 101—287.)

1. In a platen press the combination with a form member connecting rod pivoted on the eccentric portion of the form member shaft, of a supporting member, means for securing the same in concentric relationship on said eccentric portion of the form member shaft, means for clamping said supporting member to the said connecting rod, a second supporting member having a hub secured to said shaft in concentric relationship to said eccentric shaft portion, means for securing the

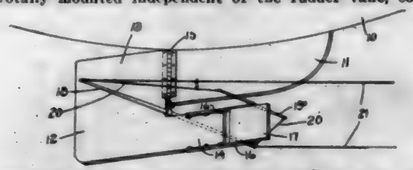


said two supporting members together and suction nozzle supporting means secured to said second supporting member.

1,536,315. FISHING-TACKLE BOX. GUST SWANSON, Minneapolis, Minn. Filed Feb. 9, 1924. Serial No. 691,661. 1 Claim. (Cl. 43—55.)

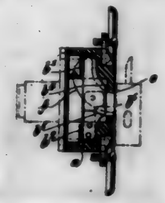
A fishing tackle box having a specific gravity less than that of water, a plurality of fishing tackle compartments therein, a closure for the box consisting of a flat top member provided with a marginal flange which makes a water-tight joint with the body of the box when closed, a coating of varnish on the outside of the box, a layer of artificial leather outside of said varnish, metal strips passing horizontally around the box for holding said artificial leather in place, and reinforcing angular pieces secured to the corners of said closure.

1,536,316. MECHANICAL SWIMMING DEVICE. ZOLTAN TAMASSY, Cleveland, Ohio. Filed June 6, 1924. Serial No. 718,224. 1 Claim. (Cl. 9—18.)



A mechanical swimming device, comprising a flat board having a hollow sub-structure secured to its bottom, said board tapering to a narrower width at the rear end of said board, and said sub-structure having a greater depth at the rear end of said sub-structure than at its front end, and crank-operated propeller mechanism mounted beneath said board.

1,536,317. STEERING MECHANISM. RALPH H. UPSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 1, 1919. Serial No. 294,071. 8 Claims. (Cl. 244—29.)

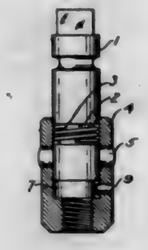


5. A rudder system for fluid-navigating craft comprising, a relatively fixed fin, a rudder vane pivoted to

the fin, a control vane pivoted to the rudder vane, a spar rigidly secured to the control vane, a second spar pivotally mounted independent of the rudder vane, con-

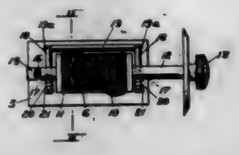
necting means extending from the first spar to the second spar and means for manually controlling the rudder vane by changing the position of the second spar.

1,536,318. RECEPTACLE FOR ELECTRICAL CONNECTING AND SUPPORTING DEVICES. ERNEST CANTELO WHITE, New York, N. Y., assignor to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1921. Serial No. 455,915. 4 Claims. (Cl. 173—330.)



2. A receptacle for an electrical connecting and supporting device formed with common entrance openings for conducting and supporting members of a wall plug and a ceiling plug, and provided with terminals having means to be engaged by conducting and supporting members of a wall plug respectively which are deflected generally in the same direction and conducting and supporting members of a ceiling plug which extend generally in divergent directions.

1,536,319. PLASTER FORK. HENRY W. YOST, Dayton, Ohio, assignor to The Grether Fire Equipment Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 24, 1923. Serial No. 676,823. 7 Claims. (Cl. 7—1.)

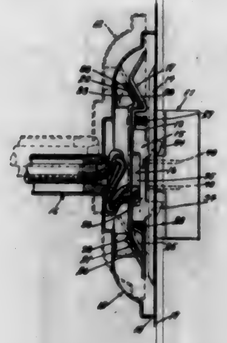


1. In a device of the type described, the combination with a pointed member, of a pair of knives fulcrumed therein behind its pointed end and adapted to be moved outwardly at an angle thereto, a spring adapted to normally hold said knives in a distended position, and means connected to said knives for operation in opposition to said spring to force them into a closed position.

1,536,320. AUTOMATIC STUD DRIVER AND RELEASING MECHANISM. WILLIAM M. ZIEGLER, Dayton, Ohio, assignor to The Apex Machine Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 2, 1924. Serial No. 741,189. 4 Claims. (Cl. 81—53.)

1. In a stud driver, a driving member, a locking sleeve mounted thereon adapted to have limited rotation thereabout, the lower end of said sleeve having a threaded aperture for engaging with the stud, a yielding member engaging with said driver and with said sleeve to rotate one relative to the other, a cam slot in said sleeve, a transverse member carried by said driver engaging in said slot, a locking plate loosely mounted within said sleeve between the end thereof and the end of the driver adapted to engage the end of the stud during the driving operation and adapted to be moved upwardly by the locking sleeve during the retreating operation.

1,536,321. VARIABLE-CONTACT DEVICE. WALTER O. AMSLER, Pittsburgh, Pa. Filed Apr. 12, 1923. Serial No. 631,535. 5 Claims. (Cl. 201—56.)



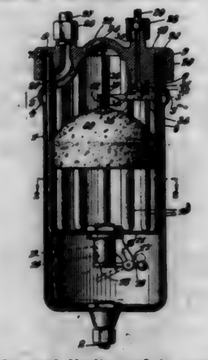
1. A variable contact device having two principal parts, one part including a coil having an exposed spiral contacting surface, the other part including a rolling contact member extending co-axially with the axis of the coil and arranged to bear against a portion of the exposed spiral surface of the coil, one of said parts being movable relatively to the other whereby the point of contact between the coil and contact member may be varied.

1,536,322. ELECTRICAL-FIXTURE-SUPPORTING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1921. Serial No. 481,735. 7 Claims. (Cl. 173—330.)

2. The combination with a fixture, and a canopy, of means for mechanically connecting said fixture with respect to a receptacle, comprising a bracket, said bracket and canopy being provided with interengaging means whereby said canopy may be guided in a definite path into

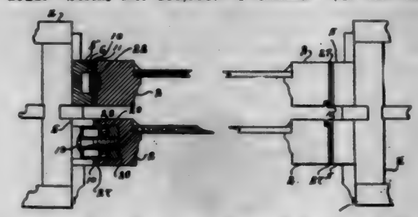
engagement with a supporting surface by an oblique movement inwardly and downwardly, whereby the edge of said canopy will firmly engage the supporting sur-

face without scraping over it, said interengaging means comprising a jaw on said bracket, a spring pressed jaw in cooperation with said first jaw, and a member held between said jaws.



1,536,323. SPRING MATTRESS. BENNETT BOND, Lesterville, Mo. Filed Feb. 6, 1922. Serial No. 534,297. 1 Claim. (Cl. 5—8.)

A spring mattress comprising a main spring having a pair of spaced apart parallel side rails, an end rail extending from side rail to side rail located adjacent the ends of said side rails, said end rails having their upper faces above the upper faces of the side rails, and being provided with longitudinally extending and spaced apart slots formed vertically therethrough, parallel rails having their upper faces flush with the upper faces of the end rails located between the side rails and secured to the end rails, a pair of rectangular sections located slidably to and from each other on said end rails, said sections provided near their adjacent edges with fastening means extending through the slots in the end rails for adjustably securing the same thereto, the intermediate rails serving as a support for one edge of the rectangular sections when the same are in extended position, and folding legs for supporting the opposite edges of said sections when the same are in extended position.



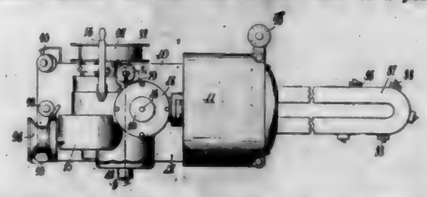
1,536,324. VACUUM FEED. ENEA BOSSI, New York, N. Y., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation, a Corporation of Virginia. Filed Sept. 15, 1921. Serial No. 500,808. 24 Claims. (Cl. 103—236.)

1. In a vacuum fuel feed system, the combination of a vacuum tank, a suction conduit leading to said vacuum tank, a valve seat on the end of said conduit, a disc valve adapted to be held against said seat by atmospheric pressure when a partial vacuum exists in said conduit, a lever for operating said valve, and a light weight float having a free movement within predetermined limits and being adapted to operate said lever to rock said disc on the valve seat when the float

lowers beyond the said limits and to cause said disc to drop away from the valve seat to open the suction conduit.

1,536,325. RUNNER DEVICE. HARRY E. BRADNER, Fremont, Ohio, assignor, by mesne assignments, to The Twin-Plex Reversible Window Company, Inc., Buffalo, N. Y., a Corporation of Delaware. Filed Aug. 5, 1921. Serial No. 489,993. 6 Claims. (Cl. 20—49.)

1. A sash, a runner associated therewith, said runner being provided with a longitudinally extending seat, a plate having an opening over said seat and mounted upon the runner, a friction member retained with the runner by said plate and yieldably held to protrude through said seat away from the runner, a plate on said sash providing a seat for engagement with the friction member when the runner and sash are aligned, and means pivotally connecting said sash and runner plate.



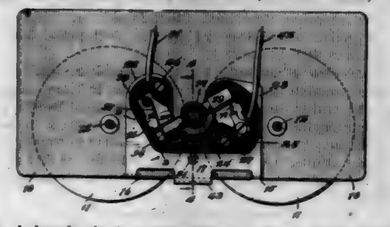
1,536,326. PROCESS FOR THE MANUFACTURE OF DILUTE SOLUTIONS OF MAGNESIUM SULPHATE. HARRY E. BROOKBY, Evanston, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 525,158. 1 Claim. (Cl. 23—128.)

The process of manufacturing magnesium sulphate in solution, consisting in hydrating dolomitic lime, suspending it in water, adding thereto a saturated solution of gypsum carrying an excess of gypsum crystals to maintain solution, passing gaseous carbon dioxide through the mixed solutions, sedimenting the calcium carbonate in a sludge, and decanting the clear solution of magnesium sulphate.

1,536,327. MINING MACHINE. FRANK CARTLIDGE, Cincinnati, Ohio, assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed June 12, 1915, Serial No. 487,724. Divided and this application filed June 25, 1924. Serial No. 722,873. 108 Claims. (Cl. 262—30.)

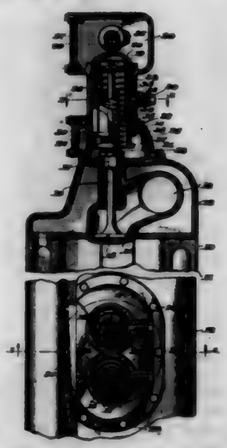
1. A room and pillar mining machine comprising a machine frame slidable on its bottom over a mine bottom,

cutting mechanism including a cutter bar projecting longitudinally therefrom, a motor for actuating said cutting mechanism, and means for feeding said frame to sump said bar under the coal and thereafter to move said frame and bar laterally across a face during cutting including a pair of parallel transversely extending shafts, a feed operating member rotating on a transverse axis, a flexible feeding member cooperating therewith and adapted to extend during transverse cutting from a point adjacent the front end of said frame to a point



in advance of said frame, a gear member concentric with and fixed during driving of said feed operating member as to angular movement with respect thereto, a pinion mounted on one of said transverse shafts and meshing with said gear, a second gear on said shaft, a pinion on the other of said first mentioned shafts meshing with said last mentioned gear, friction mechanism for connecting said last mentioned pinion to said shaft, and means for driving said last mentioned shaft from said motor.

1,536,328. COMMUTATOR. LOUIS CARUSO, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1923. Serial No. 628,973. 13 Claims. (Cl. 171—320.)

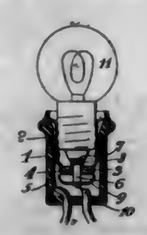


1. A commutator comprising a flat insulating disk having radial fins on one face and an aperture between each of the fins, commutator segments, and rivets passing through the segments and apertures to fasten the segments against the face of the disk with their ends engaging the fins, the fins preventing the twisting of the commutator segments on the rivets.

1,536,329. BRUSH RIGGING. LOUIS CARUSO, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a Corporation of New York. Filed June 9, 1923. Serial No. 644,374. 15 Claims. (Cl. 171—324.)

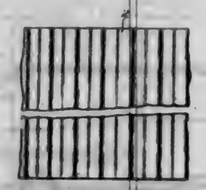
1. A brush rigging comprising a sheet metal plate, a sheet of insulation fastened to the plate, and a pair of independent brush holders fastened to the insulation, said sheet and plate having an open slot between the brush holders whereby the sheet and plate may be withdrawn as a unit, the brush holders being so disposed that brushes mounted therein may bear on opposite parts of a commutator which is carried in the slot.

1,536,330. HYDROCARBON MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 22, 1918. Serial No. 223,949. 8 Claims. (Cl. 123—90.)



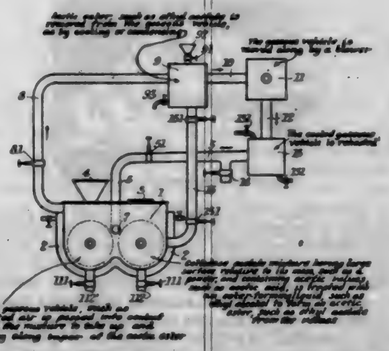
5. In a hydrocarbon motor, the combination with a valve, and a cam shaft for operating the valve, of a pair of telescoped sleeves surrounding the valve stem and adjustably connected together, the inner of said sleeves having a closed end in contact with the end of the valve stem and the outer of said sleeves having a closed end in contact with the cam shaft.

1,536,331. LOADING MACHINE. WALLACE B. CONANT, Concord, Mass. Filed Oct. 21, 1922. Serial No. 596,171. 2 Claims. (Cl. 198—174.)



1. In a machine of the class described, the combination of an inclined conveying trough, a corrugated bottom for said trough having the corrugations extending lengthwise thereof, and a plurality of notched bars extending transversely of the trough and movable longitudinally of the corrugated bottom.

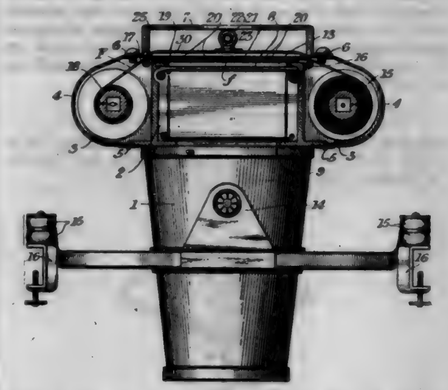
1,536,332. LAMP SOCKET FOR CHRISTMAS-TREE LIGHTING. HENRY M. ROSENDAL DAM, Astoria, N. Y., assignor to Monowatt Electric Import Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 22, 1924. Serial No. 751,456. 3 Claims. (Cl. 173—358.)



1. A lamp socket of the character described comprising a shell for receiving an electric lamp, a movable central contact member, a short circuiting member carried by the movable contact member, and means for causing said short circuiting member to contact with the said shell when the socket is empty, said short circuiting member having a resistance equal to that of the lamp to be received in the said shell.

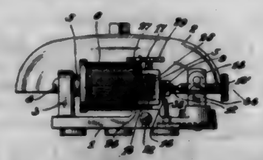
1,536,333. TYMPAN SHEET FOR PRINTING PRESSES. SAMUEL E. DITTMAN, Chicago, Ill. Filed May 10, 1923. Serial No. 638,070. 14 Claims. (Cl. 154—54.5.)

4. A tympan sheet comprising a displacement space providing pattern of resilient material interposed between two sheets of tough fibrous paper impregnated with a moisture proofing material and conforming with and adhered to respective faces of the material.



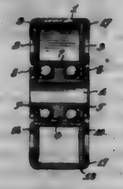
1,536,334. PROCESS OF RECOVERING ACETIC VALUES FROM A CELLULOSE-ACETATE MIXTURE. EDWARD S. FARROW, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 10, 1924. Serial No. 707,775. 8 Claims. (Cl. 260—107.)

1. In that process of making cellulose acetate which includes the recovery of acetic values from a cellulose acetate mixture in a form having great surface relative to its mass, the steps of treating said mixture with an ester-forming liquid, which is a non-solvent of cellulose acetate and chemically inert with respect thereto, until an acetic ester is formed from said acetic values and said liquid, and recovering said ester from said mixture.



1,536,335. AIR-PRESSURE FILM HOLDER FOR AVIATION CAMERAS. WILLIAM F. FOLMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 9, 1922. Serial No. 605,991. 9 Claims. (Cl. 95—12.5.)

1. In an aerial camera, the combination with a film exposing chamber, of a plate against which a film may lie with the sensitive side in the focal plane, means for holding the film against the plate by air pressure and



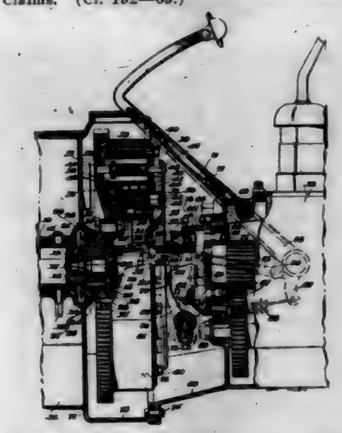
means associated with the first mentioned means for automatically controlling the force of the air pressure which holds the film flat.

1,536,336. CIRCUIT INTERRUPTER. GEORGE FUSSNER, Menominee, Mich., assignor to Signal Electric Mfg. Co., a Corporation of Michigan. Filed June 18, 1920. Serial No. 389,816. 14 Claims. (Cl. 175—345.)

1. In electromagnetic apparatus, in combination a base, a pivot pin carried thereby and at right angles thereto, an armature in a plane parallel to said pin, said armature having a pair of integral ears extending from opposite sides and near one end thereof, and at an angle to said armature, said pin extending through an opening in each said ear, and a coil spring encircling said pin and having one end fixed with respect to said pin and the other in the path of movement in one direction of said armature.

1,536,337. BALL-BEARING WHEEL. PERCY O. GIBSON, Kokomo, Ind., assignor to Kokomo Stamped Metal Co., Kokomo, Ind., a Corporation of Indiana. Filed May 19, 1924. Serial No. 714,371. 4 Claims. (Cl. 208—181.)

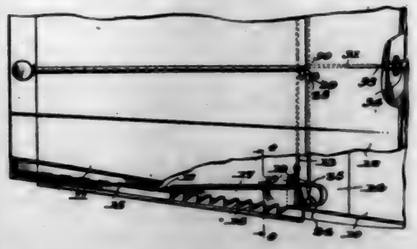
1. A wheel formed of sheet metal stampings with one of said stampings providing a wheel rim and a wheel web extending inwardly from one edge of the rim, a separate member forming one of the stampings and engaged with the rim adjacent the free edge of the rim, a third metal stamping in the form of a cylinder to



surround a hub of the wheel and extending across and secured to the web members of the wheel at a distance outwardly from the inner edges of the web members and concentric with the axis of the wheel, a hub member within the cylinder, and anti-friction members interposed between said cylinder and hub member and confined by the portions of the web members extending inwardly of said cylinder adjacent the ends thereof.

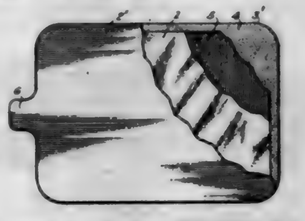
1,536,338. WIRE CONNECTER. PAUL GLAMZO, New York, N. Y. Filed July 24, 1924. Serial No. 727,887. 4 Claims. (Cl. 173—269.)

1. A wire connecter of the class described, formed of a yielding flat blank having an apertured circular portion and an extension therefrom in a plane with the circular portion, said extension having a pair of spaced raised portions, each of said raised portions having an inwardly directed lug for engaging a wire inserted between the raised portions and retaining it against the extension on which the raised portions are formed.



1,536,339. POWER-TRANSMISSION MECHANISM. EARL G. GUNN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 8, 1920. Serial No. 394,673. 17 Claims. (Cl. 192—69.)

8. In combination, a transmission case, a transmission shaft having a bearing therein, a clutch member secured to said shaft, clutch shifting mechanism including a thrust bearing, means for conducting lubricant from said case to said shaft bearing and from said shaft bearing to said thrust bearing, and means secured to said transmission case and surrounding said thrust bearing for confining the lubricant thereto.

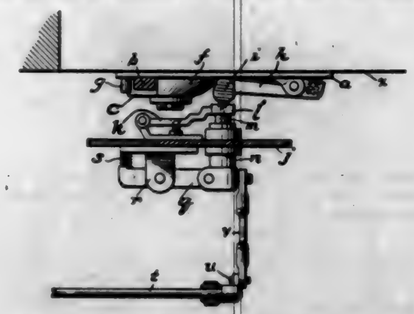


14. In a clutch mechanism, the combination of a two-part driving member one of which parts has clutch ring teeth, means detachably connecting the parts of said driving member rigidly together, a driven member having clutch ring teeth, clutch rings disposed between said clutch members for transmitting motion from one to the other and having sliding engagement with the teeth of said members, and mechanical means independent of the driven member, for operating said clutch rings.

1,536,340. MOTOR VEHICLE. JACOB HAMMERL, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 25, 1919. Serial No. 326,157. 7 Claims. (Cl. 98—22.)

1. In a motor vehicle, a pivoted hood having forwardly opening side louvers, a dash having an opening therein and a conduit for conducting the air admitted through said louvers to the opening in said dash.

1,536,341. DENTAL X-RAY-FILM PACKAGE. MILLARD B. HODGSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 14, 1920. Serial No. 396,188. 12 Claims. (Cl. 250—34.)

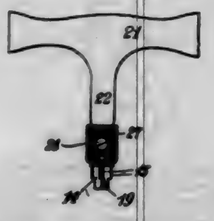


1. In a dental X-ray package, a sheet of sensitized material, a flexible protective sheet of larger dimensions than said sensitized sheet upon one side thereof, a flexible cover sheet of material on the opposite side of the sensitized sheet and having at its margins a coating of adhesive material and also of larger dimensions than said sensitized sheet, the margins of said protective and cover sheets extending beyond the edges of the sensitized sheet and there joined by such adhesive continuously around and outside of the entire periphery of the sensitized sheet and constituting the only means for holding the package closed and light light.

1,536,342. INTERLOCKING DEVICE FOR ELEVATORS. FRANK C. HOLBERG, Jr., Philadelphia, Pa.; Elizabeth Holberg executrix of said Frank C. Holberg, jr., deceased. Filed Feb. 26, 1923. Serial No. 621,198. 5 Claims. (Cl. 187—49.)

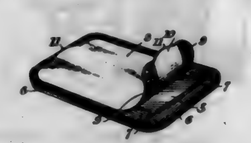
3. Elevator interlocking mechanism comprising, in combination with an elevator shaft, including a landing and a gate therefor, and a car, a shoe carried by the shaft by and adapted to be advanced on the opening of the landing gate, a shoe carried by the car and adapted to be retracted by the shaft shoe when the car is opposite a landing, a controller on the car, a locking bar, a keeper on the controller adapted to receive an end of the

locking bar, when the controller is in neutral position, to lock the controller, means forming a connection between said car shoe and said locking bar whereby, when said car shoe is retracted by said shaft shoe, said locking



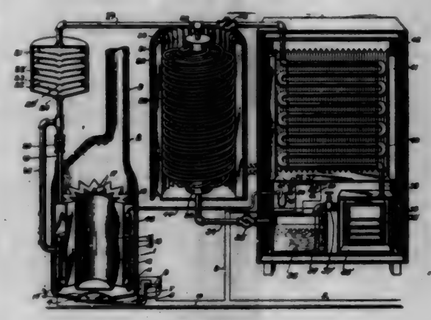
bar will be actuated to lock said controller, and means forming a connection between said controller and said locking bar whereby when said controller is moved to running position said car shoe will be retracted independently of said shaft shoe.

1,536,343. INTERLOCKING DEVICE FOR ELEVATORS. FRANK C. HOLBERG, Jr., Philadelphia, Pa.; Elizabeth Holberg executrix of said Frank C. Holberg, jr., deceased. Filed Aug. 27, 1923. Serial No. 659,466. 4 Claims. (Cl. 181—31.)



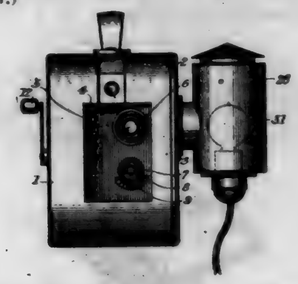
3. In an interlocking device for automatically controlled electric elevators in combination with a shaft, provided with a landing and a gate therefor, and an elevator car, a shoe at the landing adapted to be advanced on the opening of the door, a shoe on the car adapted to align with the landing shoe, when the car is on a level with the landing, and be retracted by the landing shoe when the gate is opened, a cut-off switch on the car, a solenoid, and a toggle affording connection between said car shoe, said cut-off switch and said solenoid, said solenoid being so connected as to receive current when the car is operated and effect a retraction of said car shoe and to be cut off when the car is stopped, permitting the car shoe to advance to a position for retraction by said landing shoe, on opening of the gate, to actuate said cut-off switch to cut off current from the car.

1,536,344. PRINTER'S QUOIN KEY. EDWARD P. HULSE, Westfield, N. J., assignor to American Type Founders Company, a Corporation of New Jersey. Filed Sept. 23, 1924. Serial No. 739,240. 7 Claims. (Cl. 254—40.)



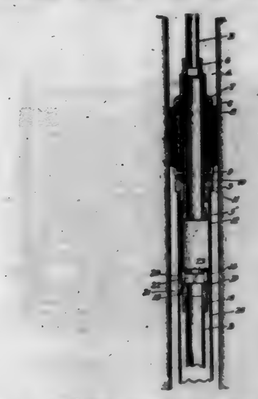
5. As a new article of manufacture, a printer's quoin key comprising a stem, a handle for operating the key, a key peg having a pinion portion and a square portion integral therewith, either of which portions is adapted to be used as a key for operating printers' quoins, jaws formed in the said stem for clamping the key peg therein, means in said stem for placing the peg therein in a predetermined position irrespective of which portion of the key peg is to be used as a key and a nut for clamping said jaws around the said key peg.

1,536,345. DENTAL X-RAY-FILM PACKAGE. JOHN G. JONES and HAYWOOD G. DEWEY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 29, 1921. Serial No. 504,179. 4 Claims. (Cl. 250—34.)



1. An X-ray film package comprising a sheet of sensitized material, a light proof wrapper therefor, and a flexible sealing sheet for said wrapper, said sealing sheet along two opposite margins only having strips of adhesive by which it is attached to the wrapper and holds the latter closed, and having between said strips a central area free from adhesive extending from end to end of said sheet and the non-adherent end edges thereof constituting means by which the sheet may be manipulated.

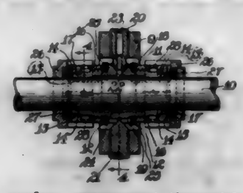
1,536,346. REFRIGERATING SYSTEM. CECIL G. KERTON, Jackson, Mo. Filed July 30, 1921. Serial No. 488,553. 3 Claims. (Cl. 62—5.)



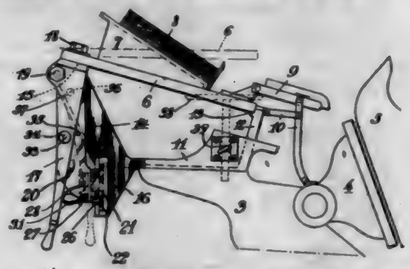
1. A refrigerating system comprising a thermal generator consisting of a liquid container having corrugated walls to provide the maximum radiating surface, a valved pipe leading from the chamber, a by-pass pipe connected to the valved pipe beyond the valve and communicating with the liquid container, a moisture separator connected to the valved pipe beyond the valve, a condenser, a conduit connecting the condenser and moisture separator, a receiver, a valved pipe connecting the condenser with the receiver, an evaporator coil connected to the receiver at one end and communicating at the other end with the pipe which connects the moisture separator to the condenser, a check valve in the evaporator coil opening in the direction of the moisture separator, a heater for the chamber, and means operable in response to changes in temperature within the chamber for causing the heater to become effective and ineffective and for causing air to cool the chamber when the heater is ineffective.

1,536,347. APPARATUS FOR TAKING AND PROJECTING MOTION PICTURES. FRANK W. LOVEJOY, Rochester, N. J., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 26, 1922. Serial No. 609,094. 8 Claims. (Cl. 88—17.)

1. In an apparatus for taking and projecting motion pictures, an exposure gate and a projection gate, a movable shutter having a position in front of said projection gate to exclude light therefrom, means whereby the projection gate may be illuminated, said illuminating means and said shutter having cooperative means whereby the shutter is moved from its normal position when the illuminating means is rendered operative.



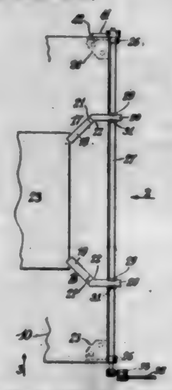
1,536,348. GAS-ESCAPE VALVE FOR OIL WELLS. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1921. Serial No. 523,620. 2 Claims. (Cl. 103—202.)



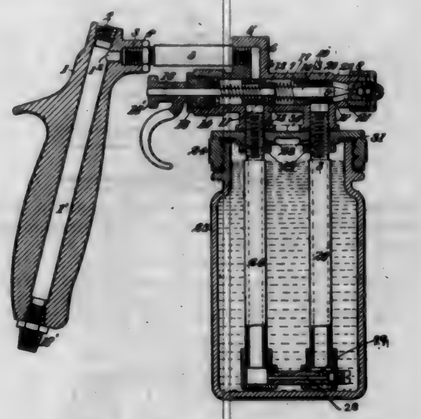
1. A gas-escape valve for wells comprising a body having a central opening therethrough and having a reduced upper portion which is threaded exteriorly, a downwardly extending reduced portion threaded for connection with tubing, a conical shoulder between the reduced lower extension and the body, a gas passage from the shoulder to the central opening, and an inwardly opening check valve in the passageway.

1,536,349. SHAFT BEARING. HARRY A. MIKKELSEN, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1922. Serial No. 530,352. 5 Claims. (Cl. 64—55.)

1. A shaft bearing including a bored gearing member having a solid bore portion and an adjoining end bore portion provided with a plurality of longitudinally extending radial slots spaced about the bearing axis and forming a plurality of bearing segments, and a second bored member surrounding said end portion and having a screwthreaded engagement therewith at the inner portion thereof and an axially extending outwardly reducing taper surface engagement therewith at the outer portion thereof for radially adjusting and maintaining the segments.

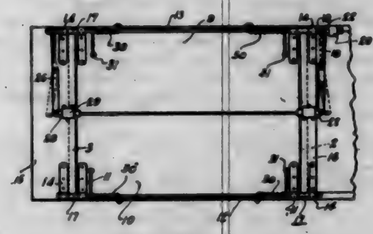


1,536,350. PRINTING MACHINE. LEWIS E. MORRISON, Newark, N. J., assignor to Klymax Feeder Company, a Corporation of New Jersey. Filed Dec. 18, 1923. Serial No. 681,318. 6 Claims. (Cl. 101—287.)



1. The combination with a printing press, of a paper feeding mechanism therefor, a member secured in sliding relationship to said press, means for mounting said mechanism on the said member and means for sliding the latter to one side of the press to remove said mechanism from operative relationship to the press.

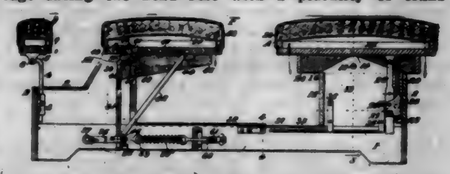
1,536,351. SHEET-HOLDING DEVICE FOR PRINTING PRESSES. LEWIS E. MORRISON, Newark, N. J., assignor to Klymax Feeder Company, a Corporation of New Jersey. Filed June 5, 1924. Serial No. 717,957. 6 Claims. (Cl. 101—408.)



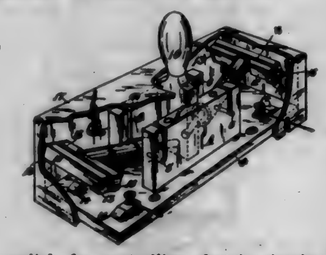
1. The combination with a press including a platen having a cycle of movement from a sheet receiving position to a printing position, of sheet holding resilient fingers pivoted on said platen for momentarily holding the delivery edge of the printed sheet against the platen while the latter is in its sheet receiving position and means for operating said fingers.

1,536,352. SPRAYING APPARATUS. JOHN D. MURRAY, San Francisco, Calif. Filed Apr. 22, 1924. Serial No. 708,189. 4 Claims. (Cl. 91—45.)

1. An air brush including a container for the material to be applied, an air pipe leading to the bottom thereof, an open ended material discharge pipe extending to the bottom of the container, and into the lower open end of which the air pipe discharges, a body to which the container is detachably secured, the body provided with a discharge orifice and further provided with a mixing chamber within which the material discharge pipe connects, a valve for controlling the discharge orifice, an air supply, and a secondary valve carried by the main valve for controlling the admission of air directly into the mixing chamber and into the air pipe.



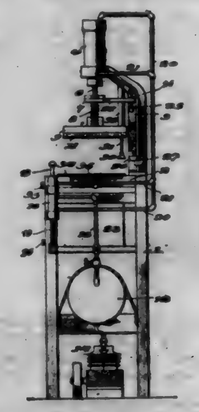
1,536,353. TOY DUMP WAGON. ORLAND F. PARKS, Birmingham, Ala. Filed Oct. 18, 1923. Serial No. 669,332. 3 Claims. (Cl. 298—35.)



1. A dump wagon comprising a body having hinged downwardly opening bottom doors which abut when closed, latch means at the middle of each end of the body to hold the doors in closed position, and mechanism to simultaneously operate said latch means, comprising spring-pressed levers extending to one side of the body and an axially movable side rod associated with means to simultaneously move the levers in opposite directions.

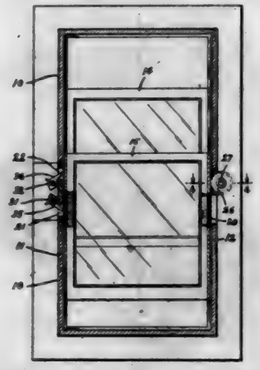
1,536,354. CHIROPRACTIC TABLE. CHARLES A. PHILLIPS, San Francisco, Calif. Filed Jan. 23, 1923. Serial No. 614,361. 2 Claims. (Cl. 128—72.)

1. A chiropractic table including a base, a legs support at one end thereof, a head rest at the other end thereof, a chest support positioned between the head rest and legs support, the latter including a frame pivotally mounted to swing on a horizontal axis, the frame including a cushioned bottom board provided at its edge facing the head rest with a plurality of transversely disposed sections, and means for hingedly connecting the sections to swing downwardly on a horizontal axis.



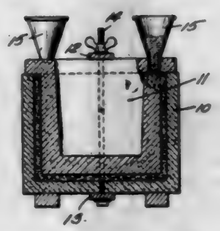
1,536,355. SWITCH FOR CONTROLLING ELECTRIC CIRCUITS. WILLIAM JACOB PRITCHETT, Sydney, New South Wales, Australia. Filed Sept. 3, 1921. Serial No. 498,458. 2 Claims. (Cl. 200—114.)

1. A switch for controlling electric circuits comprising a base of non-conducting material, parallel brackets on said base, a pair of obliquely positioned spring cushioned telescopic lever contact arms pivoted and movable between said brackets and having cross members with separate contacts, fuse wires bridging said contacts, contacts and terminals on said base and an intermediate operating handle for oscillating the contact arms into and out of engagement with the contacts.



1,536,356. PHOTOGRAPHIC PRINTER. JULIAN A. RAMSEY, Washington, Pa., assignor, by direct and mesne assignments, to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 28, 1921. Serial No. 481,071. 10 Claims. (Cl. 95—73.)

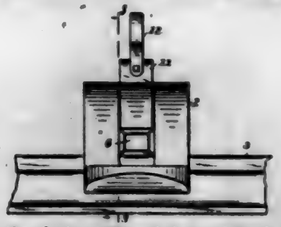
8. A photographic printer, comprising a printing panel, a platen movable into printing position on said panel and from said panel to clearance position, means, including a source of power, for moving said platen to printing



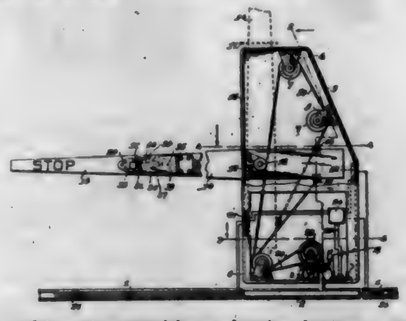
position, holding it in said position, and removing it to clearance position, and control means, which is connected to said first named means, and the actuations of which are governed by the operator, said control means upon successive actuations by the operator governing said first named means to move the platen to said printing position, retain it during the will of the operator in said position, and remove it to clearance position.

1,536,357. WINDOW CONSTRUCTION. SAMUEL SIMONOVITZ, New York, N. Y. Filed Mar. 11, 1924. Serial No. 698,427. 8 Claims. (Cl. 20—52.)

1. A window construction of the class described comprising a sash frame, sashes mounted to move vertically in said frame, strips for retaining said sashes in predetermined position and for guiding the same in their movement and whereby the removal of a predetermined number of said strips will permit of the removal of said sashes, means involving gear and rack constructions for retaining the sashes in predetermined positions of adjustment, manually operated means for locking the separate sashes in predetermined positions, said last named means comprising the racks on said sashes, and pawls pivotally mounted in the frame and cooperating directly with said racks.



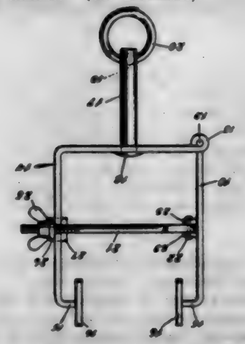
1,536,358. PROCESS OF CASTING POTTERY. ALFRED E. STACEY, Jr., Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Mar. 24, 1924. Serial No. 701,410. 7 Claims. (Cl. 25—156.)



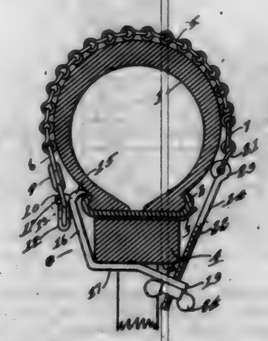
1. The hereindescribed process of casting pottery which consists in using a fluid slip which is heated to a temperature higher than natural temperatures, and casting the heated slip into the desired shape.

1,536,359. RAIL OR TRACK CLAMP. JOHN H. STEVENS, Sandusky, Ohio. Filed Apr. 17, 1922. Serial No. 553,317. 2 Claims. (Cl. 294—116.)

1. In a device of the above described character, a pair of substantially U-shaped jaws, one of said jaws provided with an extension on its upper end, a second jaw member provided with a vertical opening, said extension on the first mentioned jaw adapted to extend therethrough, and means for causing the jaws to firmly grasp the web of a rail.



1,536,360. AUTOMATIC RAILROAD GATE. WILLIAM C. STEWART, Kenosha, Wis. Filed July 24, 1922. Serial No. 577,086. 1 Claim. (Cl. 39—7.)



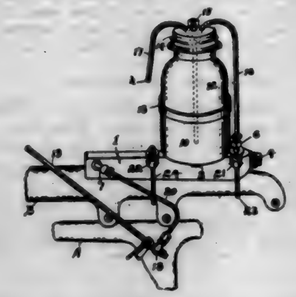
A safety gate comprising a housing having a gate opening extending from a point intermediate the ends of a side wall and terminating at a point intermediate the sides of the top wall, a drum arranged within said housing, sheaves connected with the other side wall, said top wall and the bottom of the housing and further arranged within the latter, a cable trained over said sheaves and winding on and off said drum, and a gate member pivotally connected intermediate its ends to that side wall provided with the opening, and means for operating said drum to raise and lower said gate member through said opening, said cable having its ends connected to said gate member in proximity to the inner end of the latter.

1,536,361. SUSPENSION CLAMP. IVAN R. TOMES, Mason City, Iowa. Filed Apr. 21, 1923. Serial No. 633,725. 6 Claims. (Cl. 248—64.)

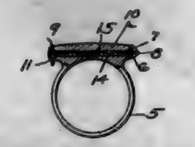
8. A suspension clamp comprising a pair of pivotally connected members, suspension means depending from one member, an adjusting screw pivoted on one member, the other member having a notch in one edge thereof receiving said screw, and a hook mounted on the screw and engageable with the opposite edge.

1,536,362. EMERGENCY ANTISKID DEVICE. BENJAMIN F. TRANER and HARRY A. KNOX, College Place, Wash.; said Knox assignor to said Traner. Filed Apr. 16, 1923. Serial No. 632,264. 4 Claims. (Cl. 152—14.)

1. An emergency anti-skid device comprising equi spaced transverse chains, longitudinally disposed bars attached to each end of said chains, and forming with said chains a unit, a hook plate attached to said unit and engageable with the rim and felly of a wheel, and a bolt attached to said unit and engageable with said hook plate.



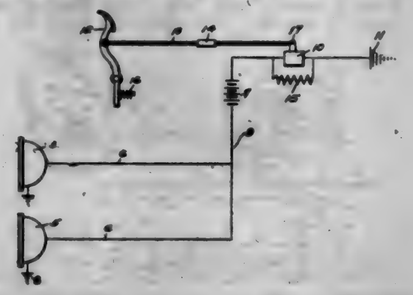
1,536,363. SCREEN OR RIDDLE CLEANER. CHARLES W. WARE, Rosendale, Mo. Filed Sept. 6, 1923. Serial No. 661,218. 3 Claims. (Cl. 130—15.)



1. Apparatus of the character described, comprising a reciprocating screen, an endless conveyor device traveling parallel with said screen, a brush carried by said conveyor device in engagement with the screen, and means actuated by the movement of the screen for producing intermittent travel of said conveyor device.

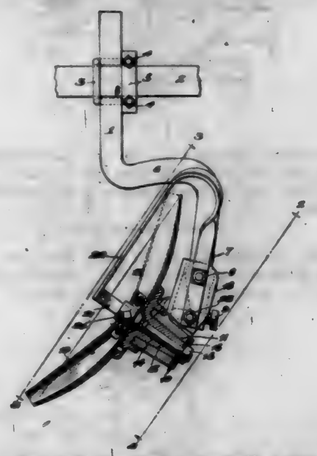
1,536,364. MOTOR HUMIDIFIER. CHARLES M. WILCOX, Cedarville, Ohio. Filed Apr. 6, 1922. Serial No. 550,248. 1 Claim. (Cl. 123—25.)

In combination with the intake manifold and the exhaust manifold of an explosive engine, an elongated body member fitted around the upper portion of the exhaust manifold and extending parallel therewith and having a chamber therein, means for detachably securing said body member to the exhaust manifold, a water container secured on top of said body member, a removable closure for the top of said container, a pipe leading from the closure and communicating with the upper part of the interior of the container and extending to the interior of said chamber in the body, a second pipe leading from the atmosphere through said closure and terminating near the bottom of the container, a pipe leading from said chamber in the body into the interior of the intake manifold, a throttle for controlling the flow through the last mentioned pipe, and a safety valve in said closure and communicating with the interior of the container.



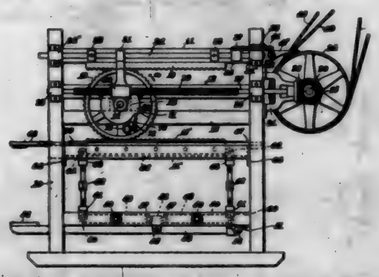
1,536,365. COMBINED RING AND READING GLASS. CARL M. WISEMAN, Louisville, Ky. Filed Dec. 30, 1922. Serial No. 609,880. 1 Claim. (Cl. 63—1.)

In combination a ring, a plate carried thereby forming an enlargement at one side of the ring, a backing surface made in imitation of a cut stone secured to said plate, a reading glass comprising a lens hinged to said plate to be folded down thereover so that the surface in imitation of a cut stone may be viewed through the lens of the reading glass and said lens being of such a nature as to magnify when the user looks from that side of the lens which is toward the plate when the reading glass is in closed position said lens being of such area as to permit of its use as a reading glass.



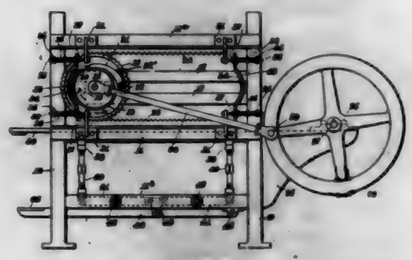
1,536,366. AUTOMATIC HEADLIGHT-DIMMING ATTACHMENT FOR AUTOMOBILES. CARL M. WISEMAN, Louisville, Ky. Filed Jan. 11, 1924. Serial No. 685,608. 3 Claims. (Cl. 171—97.)

1. The combination with an automobile, its headlights and an operating pedal of the same having an electric circuit in which said lights are included, a switch in said circuit and through which said circuit is completed when the switch is in closed position, a dimmer coil op-



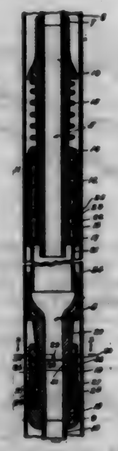
erative when said switch is in open position and a connection between said pedal and said switch, the switch comprising two circuit completing positions one of which is operative when pressure upon the pedal is released and the other of which is operative when pressure is vigorously applied to said pedal, said switch occupying an open position between these two points.

1,536,367. ATTACHMENT FOR CULTIVATORS. FERDINAND WULFF, Erwin, S. Dak. Filed Apr. 26, 1923. Serial No. 634,686. 3 Claims. (Cl. 97—53.)



1. In a plow disk mounting, a supporting arm, a foot, an extension on the foot having spaced side walls open at their front and top portions and having a connecting back wall, said arm extending downwardly through the open top of the extension and in the space between the side walls thereof and having a rear edge inclined downwardly and outwardly relative to and engageable with the back of the extension, a bolt pivotally connecting the arm to the extension and disposed adjacent to the upper end of the extension, a screw arranged below the bolt and threaded through the lower end of the arm and having its inner end bearing against the lower end of the said back wall of the extension and its outer end projecting outwardly beyond the front edges of the side walls, and a disk carried by the foot.

1,536,368. LEATHER-GRAINING MACHINE. JOHN WILLIAM AULSON, Lynn, Mass. Filed May 18, 1923. Serial No. 639,829. 12 Claims. (Cl. 149—17.)

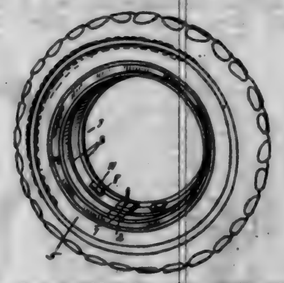


1. In a machine of the class described, a hide support consisting of a rigid table supported at opposite ends and fixed as to end movement; guides above and parallel to said support; blocks reciprocable lengthwise of and between said guides; a shaft mounted in bearings in said blocks; screw mechanism for reciprocating said blocks; a drum secured to said shaft and adapted to coact with material on said support; and positive means for rotating said drum during its reciprocation with said blocks.

1,536,369. LEATHER-GRAINING MACHINE. JOHN W. AULSON, Lynn, Mass. Filed Dec. 27, 1923. Serial No. 682,916. 8 Claims. (Cl. 149—17.)

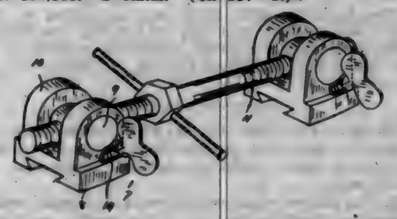
1. In a machine of the class described; a hide support; guides parallel with said support; a drum reciprocable on said guides; means for imparting a half revolution of said drum during its movement in one direction and completing the rotation during its movement in the opposite direction; and brake mechanism for stopping the rotation of the drum at a predetermined point at the end of its movement in either direction.

1,536,370. OIL-WELL PACKER. HARRY E. BECKER, Brea, Calif., assignor to Regan Forge and Engineering Company, Inc., San Pedro, Calif., a Corporation of California. Filed Mar. 7, 1923. Serial No. 623,554. 3 Claims. (Cl. 166—11.)



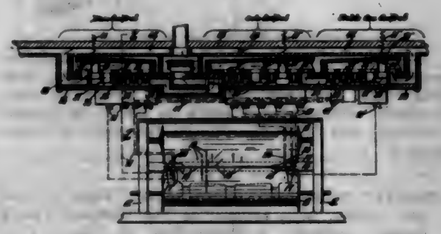
1. A well packer, comprising a tubular member having a clutch mechanism mounted thereon, a conical shaped tubular member telescoped within said first mentioned tubular member, a resilient packing gasket surrounding the conical shaped tubular member and resting upon said first mentioned tubular member, and a coiled spring mounted on the conical member and bearing against the packing gasket to return the same to an unexpanded condition after a packing operation.

1,536,371. ART PRODUCT AND METHOD OF FORMING THE SAME. EILEEN P. BLOCK, Plymouth, Mich. Filed Apr. 10, 1923. Serial No. 632,381. 9 Claims. (Cl. 41—24.)



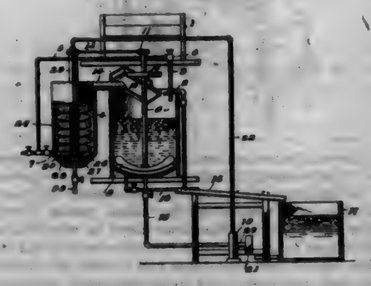
1. The method of forming art products which consists in carving a bar or cake of soap to form undercut portions standing in relief, and in coating portions of the surface with pigments to render the same more opaque.

1,536,372. DEMOUNTABLE RIM. WILLIAM N. BOOTH, Detroit, Mich. Filed Aug. 27, 1921. Serial No. 495,930. 2 Claims. (Cl. 301—31.)



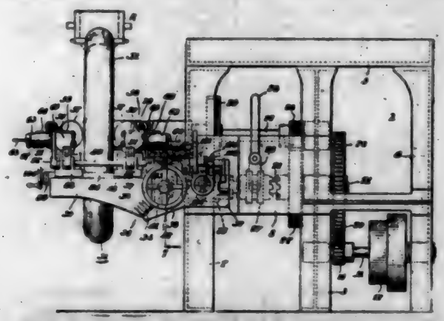
1. In a demountable rim, the combination with a transversely split main section having its ends adapted to be moved away from or toward each other, and plates secured to said ends having undercut sides for detachable engagement with an expanding and contracting tool, of a filler section insertable between said ends, the outer periphery of said filler section corresponding substantially to that of said main section, and the end bearing surfaces of said filler section and main section slightly diverging outwardly from lines passing through said end bearing surfaces and extending parallel to the radius of said rim passing through the peripheral center of said filler section.

1,536,373. DEVICE FOR EXPANDING AND CONTRACTING DEMOUNTABLE RIMS. WILLIAM N. BOOTH, Detroit, Mich. Filed Sept. 3, 1921. Serial No. 498,318. 1 Claim. (Cl. 157—1.)



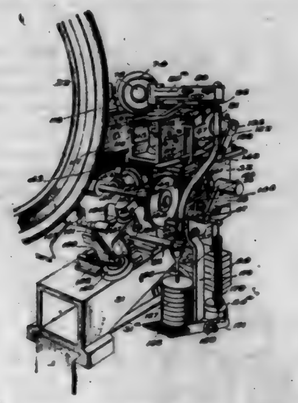
In a rim expanding and contracting tool, the combination with a pair of anchors detachably engageable with members having undercut side edges and recesses, said members being secured to a transversely split rim section near its ends, said anchors having their lower faces of substantially the same radius of curvature as the rim section and having dove-tailed channels for detachable engagement with said members, means upon said anchors for holding the same in fixed peripheral adjustment upon said members, said means including threaded members upon said anchors engageable in the recesses of said members, transversely extending pivots journaled in said anchors, and a rod secured to one of said pivots and threadedly engaging the other for moving the anchors away from or toward each other.

1,536,374. VALVE MECHANISM FOR EXPRESSION-CONTROLLING DEVICES OF MUSICAL INSTRUMENTS. THEODORE P. BROWN, Worcester, Mass., assignor to Simplex Player Action Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1922. Serial No. 600,858. 13 Claims. (Cl. 84—39.)



1. A valve mechanism for expression-controlling devices for musical instruments having wind chests provided with conduits extending into them, said conduits being of different sizes and capacities and presenting valve seats at their inner ends, and diaphragm pneumatics of correspondingly different sizes and capacities, positioned upon the opposite wall of said wind chests and constituting valves cooperating with said valve seats.

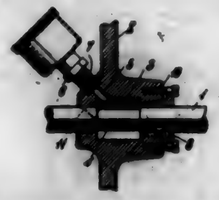
1,536,375. APPARATUS FOR AMALGAMATION. MAY KRUMP CODDING, San Francisco, Calif. Filed Apr. 1, 1920. Serial No. 370,434. 3 Claims. (Cl. 83—67.)



1. Apparatus for treating ore comprising a mixing tank for pulping ore with aqueous liquids and amalgamator in connection with the tank, said amalgamator comprising a main receptacle, pulp feeding means near the bottom thereof, means for maintaining a column of pulped material in said main receptacle and surrounding said pulp feeding means, a bath of mercury covering the lower end of the said column maintaining means, and means for removing pulp immediately after its passage through the mercury.

1,536,376. TIRE-MAKING MACHINE. JOHN J. CONVERY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, a Corporation of Ohio. Filed July 27, 1914. Serial No. 853,386. 314 Claims. (Cl. 154—10.)

1. A tire-making machine including a support, a fabric-manipulating device carried thereby and having both longitudinal and angular movements, means for automatically actuating said device to effect its angular movement, and means for restoring the device to normal position.

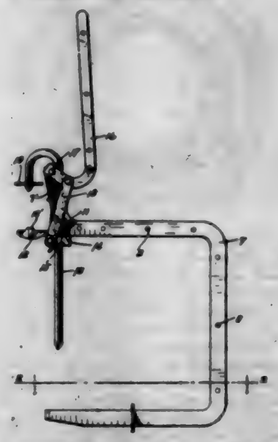


1,536,377. TIRE-MAKING MACHINE. JOHN J. CONVERY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, a Corporation of Ohio. Filed Aug. 10, 1914. Serial No. 856,020. Renewed Aug. 13, 1923. 212 Claims. (Cl. 154—10.)

1. A tire-making machine including a tire-core structure, a fabric-manipulating structure, power-operated means for effecting an advancing movement of one of the structures in relation to the other, power-operated means for effecting a receding movement of the advanced structure away from the other, fabric-pressing members carried by one of said structures and having an engaging relation with the other, and power-operated means for actuating said pressing-members both toward and away from the core structure.

1,536,378. LUBRICATING STUFFING BOX. FRANCIS S. CRAVEN, Washington, D. C., assignor to The Government of the United States. Filed Aug. 17, 1920. Serial No. 404,277. 2 Claims. (Cl. 286—8.)

1. A stuffing box of the above character comprising a casing wall having a recessed part, a shaft passing therethrough having a recessed part coincident with the first mentioned part thereby to form a chamber, means for conducting a lubricant to said chamber, and removable means closing one end of said chamber, said wall of the



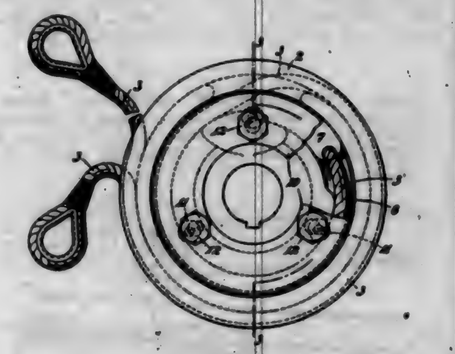
casing being provided with a leak-off groove extending along the shaft on the exterior side of the wall to indicate visually that the chamber is filled with lubricant.

1,536,379. CHEMICAL PRODUCT. CHARLES DICKENS, Oakland, Calif. Filed Feb. 19, 1924. Serial No. 693,902. 4 Claims. (Cl. 167—6.)

1. A chemical product comprising a barium-sulphoselenide.

1,536,380. SPRING COMPRESSOR. ROY D. DOUGLASS, Minneapolis, Minn. Filed Feb. 20, 1924. Serial No. 694,022. 1 Claim. (Cl. 29—80.3.)

A spring compressor comprising a three-sided yoke formed at its lower portion with spring prongs provided with spring-engaging flanges, the upper portion of said yoke being extended upward, a lever pivoted to the upper extensions of said yoke, a guide block rigidly secured to the upper portion of said yoke, a rod slidable through said guide block, a spring-engaging arm projecting from said guide block, said rod having an offset end overlying said arm and cooperating therewith to compress a spring, a collar adjustably secured to said rod, and a link connection between said collar and said lever.

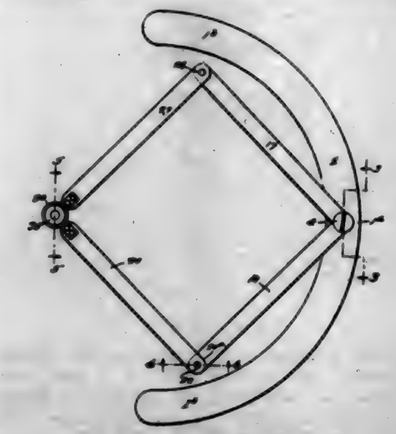


1,536,381. PROCESS OF MAKING IRON AND CEMENT. EDWIN C. ECKEL, Washington, D. C. Filed Jan. 24, 1924. Serial No. 688,349. 3 Claims. (Cl. 75—14.)

1. The process of producing iron and alumina cement, comprising fusing a mixture of iron bearing ore low in silica and calcareous materials in such proportions that the resulting slag will contain a relatively high proportion of alumina and less than 15% of silica, separating the reduced metallic iron and the slag, and cooling and grinding the latter.

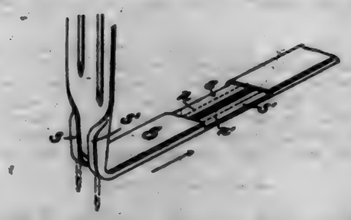
1,536,382. PROCESS OF MAKING IRON AND CEMENT. EDWIN C. ECKEL, Washington, D. C. Filed Mar. 1, 1924. Serial No. 696,395. 2 Claims. (Cl. 75—14.)

1. The method of making cement and iron, comprising charging into a furnace calcareous, aluminous and ferruginous materials in such proportions as to constitute a charge containing after loss of its volatile constituents, not less than 25 nor more than 55% of lime, or of lime and magnesia together, not less than 25 nor more than 50% of alumina, nor more than 10% of silicia, and not less than 10% of iron oxide, fusing such a charge to the point of complete melting of all its constituent raw materials, in a blast or electric furnace, allowing sufficient time for separation of the reduced metallic iron and the lighter cement-forming compounds, tapping off the iron and the cement-melt separately, and grinding the latter to powder.



1,536,383. MEANS FOR ATTACHING ROPES OR CABLES TO WINDING DRUMS. ARTHUR GORDON FRENCH, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a Company of Great Britain. Filed Dec. 30, 1921. Serial No. 525,929. 7 Claims. (Cl. 254—150.)

1. The combination with a winding drum and a single cable adapted intermediate its ends to be coiled around it, of a substantially annular groove formed directly in each side face of the drum, openings in the periphery of the drum giving access to the cable from said periphery to the grooves, two rings adapted to partially enclose the grooves, and means securing one ring positively to each said side face one for tightly clamping and the other for loosely retaining parts of the cable intermediate its ends in the respective groove.



1,536,384. APPARATUS FOR CUTTING METALS. JOHN HARRIS, Lakewood, Ohio, assignor to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1921. Serial No. 525,617. 2 Claims. (Cl. 266—23.)

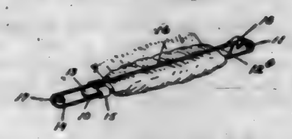
1. In an apparatus of the character described, the combination of a base, a vertical stud carried by said base and having an anti-friction bearing, an arm mounted upon said bearing, a second anti-friction bearing on said stud above the first mentioned arm, an anti-friction bearing interposed between the portions of the arms mounted on said stud, a stud extending through the outer end of each of the first mentioned arms, a second pair of arms having their inner ends mounted upon the studs provided at the outer ends of the first mentioned pair of arms, respectively, anti-friction devices interposed between the outer ends of the first mentioned arms and the inner ends of the second mentioned arms, a hollow stud or sleeve extending through and connecting the outer ends of the second pair of arms, anti-friction

devices interposed between such connected ends, a head on said hollow stud or sleeve, and anti-friction devices interposed between said head and the upper surface of the end of the arm therebeneath.

1,536,385. SEWING MACHINE FOR FORMING CONCEALED STITCHES. JESSE J. HEAP, New York, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1919. Serial No. 325,827. 1 Claim. (Cl. 112—147.)

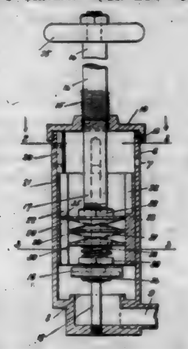
The combination of a work support, stitch forming mechanism including a plurality of needles, and devices cooperating therewith for forming connected lines of stitching, a feeding mechanism including a feed dog disposed and operated so as to feed the material being stitched toward the front of the machine, a presser foot cooperating with the feeding mechanism, and guiding means carried by the presser foot and adapted to receive short strips of fabric inserted in the guiding means in front of the needles, for folding rearwardly the side edge portions of said strip and for directing said side edge portions of the strip to the rear of the needles whereby the strip is fed forwardly from underneath the presser foot, and the stitch forming mechanism operates to connect the side portions by connected lines of stitching.

1,536,386. OPERATING AND RETAINING MEANS FOR PIVOTALLY-MOUNTED BODIES. GEORGE N. HENN, San Francisco, Calif. Filed Oct. 8, 1923. Serial No. 667,183. 5 Claims. (Cl. 296—84.)



1. In combination with an open frame, a closure therefor pivotally mounted therein, means for operating the closure, including a segmental part fixed to the closure edge to extend transversely thereof, an operating

gear carried by the frame, and a recessed element carried by the segment with its ends projecting beyond opposite faces of the closure for engagement with the

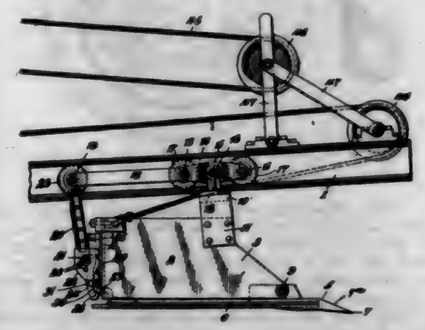


operating gear, whereby on the operation of said gear said closure is adapted for swinging on its fulcrum through the frame opening to either side.

1,536,387. HAIR CURLER. MARY L. HENRY, Jacksonville, Ill. Filed Apr. 21, 1924. Serial No. 708,026. 2 Claims. (Cl. 132—41.)

2. A device of the character described comprising a clamping member including a body member and a tongue connected by a loop portion, a keeper movably mounted on the body member and engageable with the tongue, the free end of the body member having a hole therein, and an arm having one end coiled and engaged within said hole and detachably connected with said loop portion.

1,536,388. LOCK FOR AIR VALVES. HORTON H. HOBBS, Alachua, Fla. Filed Sept. 16, 1924. Serial No. 738,042. 6 Claims. (Cl. 251—6.)

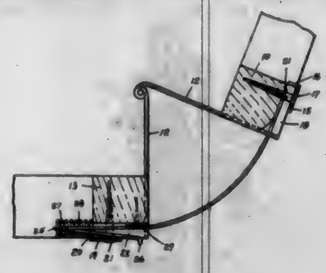


1. The combination, with a casing having a valve seat at one end, of a revoluble valve stem provided with a valve for closing the valve seat and having also means for moving it longitudinally in the casing, and a locking mechanism inclosed in the said casing and carried by it and the valve stem and operating to prevent the unauthorized use of the valve.

1,536,389. WIRE STRETCHER. NATHAN LEE HOWARD, Spokane, Wash. Filed Mar. 7, 1924. Serial No. 697,499. 2 Claims. (Cl. 254—163.)

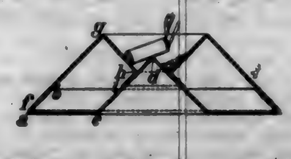
1. A wire stretcher comprising a shank, a winding means at one end of the shank, a cable connected with the winding means, a bend in the shank intermediate the ends thereof, a plate extending from the end of the shank carrying the winding means along the shank to the bend therein and then curved outwardly in a direction opposite the bend in the shank and terminating in a sharp point for a penetrating contact with a post and a plate secured transversely to the shank and to the first named plate at a point on the shank near the bend therein, such plate having means for gripping a wire.

1,536,390. SKIMMER-SCOOP ASSEMBLY. ROBERT REX DOWNIN, Beaver Falls, Pa., assignor to Keystone Driller Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed June 27, 1921. Serial No. 480,717. 21 Claims. (Cl. 214—102.)



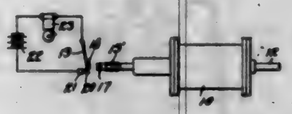
1. In an excavating machine, a boom, a scoop, and carrying means for the scoop adapted to move along the boom and comprising a plurality of connected carrying rollers, additional rollers spaced from and connected to the first named rollers and associated with the boom, all of said rollers being arranged in two rows, with the rollers of each row in the same longitudinal alinement and engaging respectively opposite sides of the boom, and a pivotal connection between the forward part of the scoop and the connected carrying rollers.

1,536,391. DOORCHECK. FLOYD K. EASTMAN, Kokomo, Ind., assignor to Concealed Door Check Company, Kokomo, Ind., a Corporation. Filed May 16, 1924. Serial No. 713,445. 4 Claims. (Cl. 16—86.)



1. The combination with a body pillar and a door pillar hinged thereto, of a door check comprising a resilient wire member slidably mounted on the outside thereof, plates secured to the exterior surface of said pillars for supporting said wire member in slidable relation thereto,

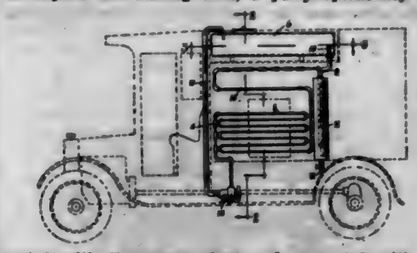
and a resilient cushion member, said wire being bent intermediate its ends to provide a stop loop for limiting its relative movement with respect to one of said plates,



and bent at its free ends for receiving and maintaining the said cushion member in position against the other plate for absorbing the shock occasioned by the movement of the door pillar to its extreme position.

1,536,392. ASH TRAY. ANDRÉ JULES ACHILLE GIRAUD, Neuilly-sur-Seine, France. Filed Dec. 1, 1923. Serial No. 678,019. 1 Claim. (Cl. 131—51.)

In an ash tray, a vessel having a central projection and a side ledge, and a cover which encloses the said ledge and has a central crater terminated by an opening the edges of which fit on the projection of the vessel.

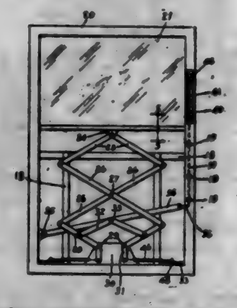


1,536,393. AUTOMATIC BRAKE. LUI F. HELLMANN and WILLIAM W. BAXTER, Indianapolis, Ind. Filed June 27, 1921. Serial No. 480,746. 2 Claims. (Cl. 303—1.)

1. In a fluid pressure brake system, a cylinder, a piston therein, said cylinder having an opening in its wall beyond the normal path of the piston, and means forming communication between said opening and a signalling device whereby an audible signal is given to the operator on over-travel of said piston, substantially as set forth.

1,536,394. REFRIGERATING APPARATUS. JAMES E. JOHNSTON, Detroit, Mich., assignor to Detroit Creamery Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 22, 1922. Serial No. 583,752. 2 Claims. (Cl. 62—101.)

2. A portable refrigerating apparatus comprising the combination with a vehicle having a power plant and a storage compartment having heat insulated walls, of a second compartment thereabove having heat insulated walls and separated from the first compartment, the said second compartment being provided with means to hold a supply of ice and brine, a settling tank in the storage compartment into which brine may flow by gravity from the brine tank of the second compartment, a series of coils in the storage compartment connected with the top of the settling tank, a pump operatively con-

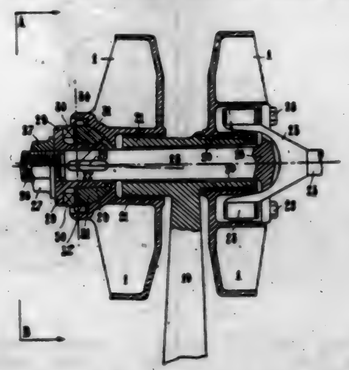


nected with the power plant and connected with the coils tending on operation to withdraw brine therefrom, and a discharge conduit for the pump discharging brine into the supply receptacle.

1,536,395. FREIGHT-CAR ROOF. GEORGE R. JOUGHINS, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,457. 5 Claims. (Cl. 105—54.)

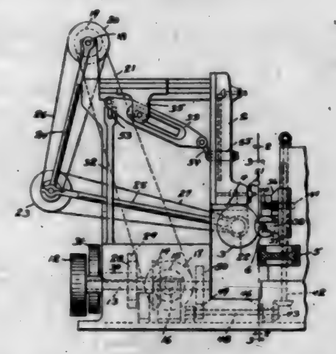
1. In a freight car roof in which metal roof sheets form the only sheathing elements, the combination with the carline, of metal roof sheets forming therewith a flexible water-tight metal roof, each roof sheet passing across and beyond a carline and having a portion engaging under the further side of the carline.

1,536,396. WINDOW LIFTER. SOREN N. JUUL, Indianapolis, Ind. Filed Aug. 1, 1921. Serial No. 488,896. 2 Claims. (Cl. 268—4.)



1. In a window construction the combination with a supporting frame including a channeled pillar, a window closure slidably supported by said frame, a lazy-tongs construction for elevating and lowering the window closure, of a pivotally supported lever connected to said lazy-tongs construction for actuating the same, a rod slidably supported within said pillar channel and connected to the lever for moving the same, and exposedly positioned manually operable means slidably supported on said frame pillar and connected to said rod therein whereby sliding movement of said manually operable means will actuate said lever.

1,536,397. DRIVEN AND DRIVING PULLEY. ADOLPHE KEGRESSE, Paris, France. Filed June 20, 1921. Serial No. 479,019. 3 Claims. (Cl. 74—21.)

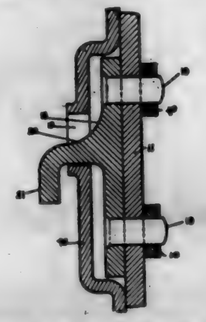


1. A pulley for belts of trapezoidal section, comprising two independent half-pulleys mounted for rotation about intersecting, inclined axes, said half-pulleys being

maintained in spaced relation to each other throughout their entire extent but inclined toward each other to grip the sides of the belt between them; mechanical means, other than the belt itself, for directly driving

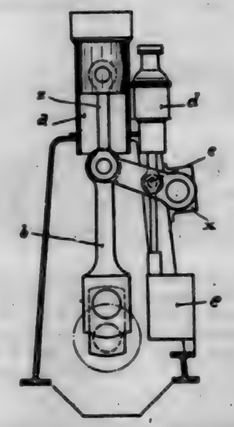
one half-pulley from a motor; and a driving connection between said half-pulley and the other half-pulley embodying a spindle provided with a head having a set of inclined teeth thereon, and a set of inclined teeth on said other half-pulley coacting with the first set.

1,536,398. PROCESS OF DRESSING OR RE-FORMING GRINDING SURFACES. JAMES P. KEMP, Baltimore, Md. Filed Apr. 21, 1921. Serial No. 463,286. 6 Claims. (Cl. 125—11.)



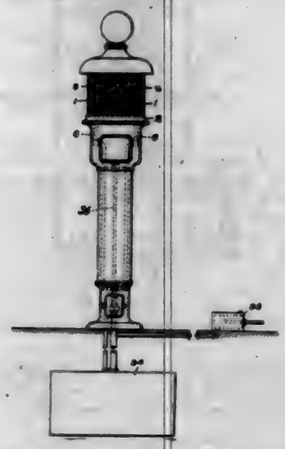
1. The process of dressing a grinding wheel to be used in accurate formation of irregular surfaces consisting of contacting with said grinding wheel while operating at its grinding speed a circular dressing medium positively operated at substantially the same mean speed of the overlapping surfaces.

1,536,399. PROCESS OF MAKING FELTED, FIBROUS, WATERPROOF SHEETS. LESTER KIRSCHBRAUN, Evanston, Ill. Filed July 18, 1918. Serial No. 245,470. 22 Claims. (Cl. 92—21.)



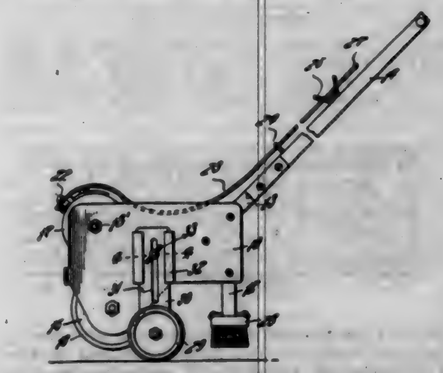
1. The process of making a felted water resistant sheet consisting in so treating a normally adhesive bituminous water proof binding medium as to render it non-adhesive, mixing it with a fibrous pulp in an aqueous vehicle, passing the mixture over a paper forming machine and felting the fibres, and drying the sheet to cause the binding medium to resume its adhesive condition.

1,536,400. ANNEALING BOX. EMANUEL LAVAGNINO, Elyria, Ohio, assignor to The Electro-Alloys Company, Elyria, Ohio, a Corporation of Ohio. Filed Feb. 8, 1923. Serial No. 617,709. 5 Claims. (Cl. 263—49.)



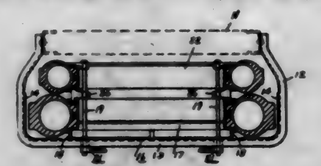
1. A fabricated cover for annealing boxes comprising a shell formed of heat resisting sheet alloy, brackets bolted to said shell, supporting members having a flanged end formed with said brackets, and a plurality of reinforcing and supporting frames formed in sections secured together around the outer wall of said shell, said frames having openings through which the flanged ends of said supporting members project when the supporting members are in engagement with one of the walls formed thereby.

1,536,401. AIR AND AUXILIARY PUMP ARRANGEMENT FOR MARINE DIESEL MOTORS. PROSPER L'ORANGE, Mannheim-Feudenheim, Germany, assignor to the Firm Motoren-Werke Mannheim, A. G., vorm. Benz Abt. Stationärer Motorenbau, Mannheim, Germany. Filed May 21, 1924. Serial No. 714,964. 1 Claim. (Cl. 123—197.)



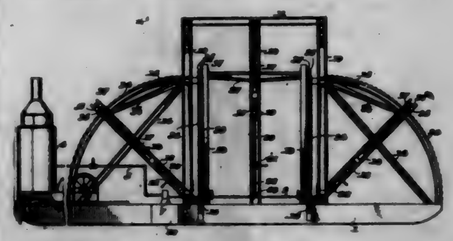
In an air and auxiliary pump arrangement for marine Diesel motors: the combination with two adjacent engine cylinders and an engine connection rod; of a common radius link by which said connection rod is adapted to be driven from said cylinders, and an air pump and a cooling and bilge pump respectively located vertically above and below a point on said radius link between its fulcrum and its point of connection with said engine connection rod and adapted to be directly driven from said radius link in upward and downward direction respectively, substantially as and for the purpose set forth.

1,536,402. LIQUID-DISPENSING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa., assignor to Springfield Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Feb. 16, 1922. Serial No. 536,892. 5 Claims. (Cl. 221—100.)



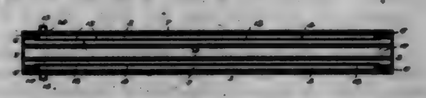
1. In liquid-dispensing apparatus the combination of a liquid reservoir, a measuring chamber, a conduit through which communication is had from liquid reservoirs to measuring chamber, a check valve in said conduit, an air-exhausting mechanism, a conduit through which communication is had from the measuring chamber to the air-exhausting mechanism and from the open air to the measuring chamber, a valve controlling alternate communication from said measuring chamber to the air-exhausting mechanism and from the open air to said measuring chamber and normally maintaining communication from the open air to the measuring chamber, a discharge orifice in the bottom of said measuring chamber, a spring-backed valve normally closing said orifice, and oscillatory means for shifting in alternation the valve controlling alternate communication as aforesaid and the valve in the discharge orifice of the measuring chamber.

1,536,403. OILING MACHINE. JOHN D. MCMILLAN, Bishop, Calif. Filed Aug. 25, 1924. Serial No. 734,104. 6 Claims. (Cl. 91—27.)



1. An oiling machine comprising a frame, an oiling roller supporting one end of the frame, a brush spaced from the roller and supporting the opposite end of the frame, a tank for supplying oil to the roller, means whereby the supply of oil may be regulated, a handle for the frame, wheels secured to the opposite sides of the frame and means whereby the wheels may be adjusted to support the machine independent of the roller and brush.

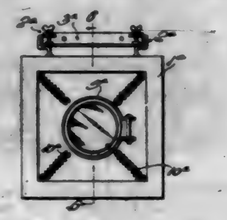
1,536,404. DOUBLE UNDERSLUNG TIRE CARRIER. WILLIAM H. NEELY, Detroit, Mich., assignor to Graham Brothers, Evansville, Ind., a Corporation. Filed Jan. 9, 1924. Serial No. 685,135. 1 Claim. (Cl. 224—29.)



The combination with a vehicle frame, of a double tire carrier suspended therefrom and positioned directly beneath the same, comprising a supporting frame suspended from said vehicle frame, a clamping rod, a head mounted on said rod in position to extend between said tires for maintaining them in spaced relation with each other, a clamping member mounted on said rod in position to engage the upper tire and clamp it against the lower tire and frame for maintaining the same in fixed position, and a second rod having a clamping and supporting head thereon in position to engage and clamp said lower tire rigidly in said frame and providing a support for said upper tire in spaced relation thereto.

1,536,405. LAND-CLEARING MACHINE. GEORGE E. NELSON, Brooklyn, N. Y. Filed Apr. 10, 1924. Serial No. 705,617. 11 Claims. (Cl. 25—92.)

1. In a land clearing machine, the combination with skids, of columns carried thereby, jack screws for the columns, nuts slidable on, and guided by, the columns, said nuts being engaged and operated by the jack screws, independent power-operated motors carried by the skids, operative connections between the respective motors and the jack screws aforesaid, a beam supported by the aforesaid nuts, and means jointly controlling said motors, whereby they may be simultaneously operated.



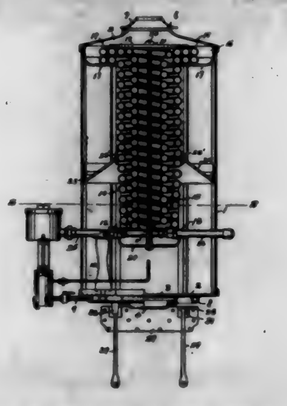
1,536,406. DRIER OR PREHEATER. ELLSWORTH P. OGDEN, Columbus, Ohio, assignor to John B. Owens, Zanesville, Ohio. Filed Nov. 3, 1920. Serial No. 421,543. 7 Claims. (Cl. 34—46.)

1. A drier or preheater of the tunnel type wherein the ware enters one end thereof and, after progressing therethrough, emerges from the other end thereof, hav-

ing interior metal or other heat-conducting walls and a chamber or space back of said walls, and means for delivering heated air to said space for the purpose of heating said walls.

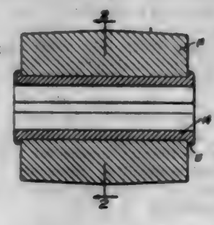
1,536,407. TAIL-LIGHT SUPPORT. JOHN MORR PETTUS, Ontario, Calif. Filed Feb. 21, 1924. Serial No. 694,371. 1 Claim. (Cl. 240—90.)

A yieldable tail-light mounting comprising a continuous rim frame adapted to be secured to an automobile, a transversely split tail-light embracing collar within said frame, a bolt for drawing the ends of said collar together to contract the latter around a tail-light, and coiled tension springs connecting said collar with said frame, the tension of said springs acting to expand the collar when the bolt is loosened, permitting the tail-light to be easily inserted into or removed from said collar.



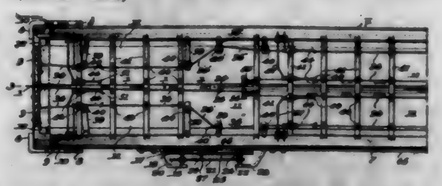
1,536,408. RING. LOUIS S. PINCK, Minneapolis, Minn. Filed Jan. 14, 1922. Serial No. 529,137. 2 Claims. (Cl. 63—17.)

2. An article of jewelry comprising, an engagement ring consisting of a circular band having a jewel mounting thereon arranged to hold a jewel centrally over the band thereby closing the face of the jewel mounting, said jewel mounting having a depression formed in the under face thereof at one side of said band to receive a circular ring against the band of the engagement ring, such portion of the circular ring being concealed by the mounting on the engagement ring.



1,536,409. WATER HEATER. FRANK L. PUTNAM, Houston, Tex. Filed June 19, 1923. Serial No. 646,296. 3 Claims. (Cl. 122—250.)

3. A water heater including a housing, a single water conducting coil in the housing, formed of two series of turns, one series being located within the other, a top baffle plate located on the coil, said coil being widened at the top by the formation of additional turns, supporting means carried by the housing and extending underneath said widened portion, a fixed yoke into which the lower ends of the coil are connected, a clamp rod

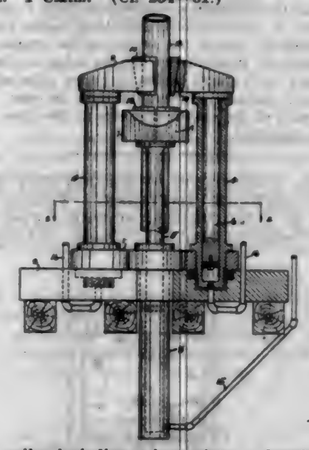


connected at its upper end to said baffle plate, a drip pan attached to the lower end of said rod beneath said coil, said rod being anchored to said yoke.

1,536,410. PULLEY. GEORGE O. ROCKWOOD, LOUIS C. MCANLY, and JOHN W. SKELLEY, Indianapolis, Ind., assignors to Rockwood Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Feb. 6, 1923. Serial No. 7,258. 8 Claims. (Cl. 64—17.)

1. An article of the character described, including a fibre body, and a metal hub or bearing member cast therein so that the surface metal of said member will unit and bond with the adjacent surface of the fibre.

1,536,411. MACHINE FOR FETTLING FLOOR AND WALL TILE. MALCOLM A. SCHWEIKER, New York, N. Y., and JAMES R. WESTBROOK, Zanesville, Ohio. Filed Apr. 16, 1923. Serial No. 632,590. 14 Claims. (Cl. 25—104.)



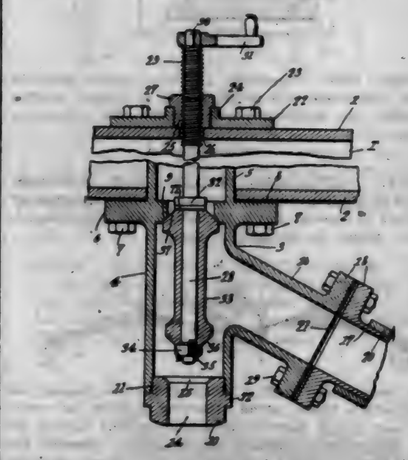
1. In a machine for fettling floor and wall tiles, of means for moving the tiles, means for fettling the tiles in succession, one behind another while they are being moved, and alinement belts for engaging the edges or sides of the tiles to hold them in alinement, one behind another, while they are being fettled.

1,536,412. FASTENER FOR CURTAIN RODS AND THE LIKE. WALTER SPARKS, Birmingham, England, assignor to William Henry Tonks, Birmingham, England, and Herbert James Preston, London, England, and North Sydney, Australia. Filed May 10, 1923. Serial No. 638,048. 2 Claims. (Cl. 156—22.)

1. A fastener for curtain rods and the like, comprising a U-shaped bracket arranged to be secured to a support with the limbs thereof one above the other and having oppositely offset outer ends, a U-shaped member, the free ends of the limbs of which are pivotally mounted to the free ends of the limbs of said bracket, so as to be movable in the planes of the said limbs, and yieldingly controlled means operable upon the limbs of the said U-shaped member to retain the same in substantial alignment with the limbs of the said U-shaped bracket and prevent casual movement thereof.

1,536,413. PIPE PULLER. HOMER C. THRIFT, Burkburnett, Tex. Filed Nov. 12, 1921. Serial No. 514,744. 1 Claim. (Cl. 254—31.)

A pipe puller including a base plate, a foundation on which said plate is mounted, opposing cylinders anchored at their upper ends to said base plate, and depending below the same, similar opposing cylinders anchored at their lower ends to said base plate and upstanding therefrom, a plunger in the respective cylinders, yokes arranged at substantially right angles to each other, one yoke being connected to the plunger of the depending cylinder, and the other yoke being connected to the plunger of the upstanding cylinders, each yoke being provided with a central upwardly flared opening aligned with the central opening of the base plate forming seats, wedge shaped slips having their inner faces serrated, said slips being mounted in the openings of the yokes, fluid pressure pipes entering the lower ends of the respective cylinders, and provided to admit fluid pressure into the depending cylinders and the upstanding cylinders alternatively.

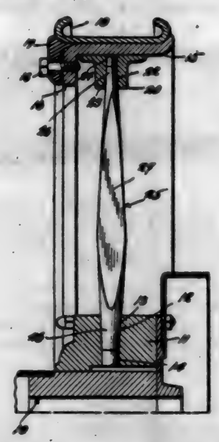


1,536,414. LICENSE-NUMBER-PLATE HOLDER. ROGER WILLYAMS WATTS, Tacoma, Wash. Filed Apr. 23, 1924. Serial No. 708,511. 3 Claims. (Cl. 40—135.)

1. A holder comprising a frame having a socket in one face thereof, adapted to receive a license-number plate for a motor vehicle, said frame being provided with an opening for disclosing the indicia on the plate which is disposed within said socket and being adapted to permit of the securing of said frame to said license-

number plate, and lugs extending laterally inward in the socket for engaging with the marginal edges of the plate within the socket to hold said plate against shifting in its place in the socket.

1,536,415. SELF-CLEANING TANK VALVE. LUCIEN G. BECK and ARCH C. WHITECOTTON, Elkins, W. Va. Filed June 20, 1924. Serial No. 721,328. 1 Claim. (Cl. 137—21.)



A device of the class described, including the water tank of a steam engine, the feed water pipe of a steam engine and a screen in the feed water pipe—in combination with a member provided at one end with an outlet and communicating at its opposite end with the tank, said member having a lateral branch communicating with the feed water pipe at a point between the tank and the outlet on the one hand and the screen on the other hand, said member being supplied with seats located on opposite sides of the lateral branch, one seat being located between the outlet and the branch and the other seat being located between the tank and the branch, a valve in said member, and means for moving the valve into engagement with either seat, to the exclusion of the other, thereby to place the feed pipe in communication with the tank, or in communication with the outlet to effect a blow-off through the feed pipe, the screen and the outlet, at the will of an operator.

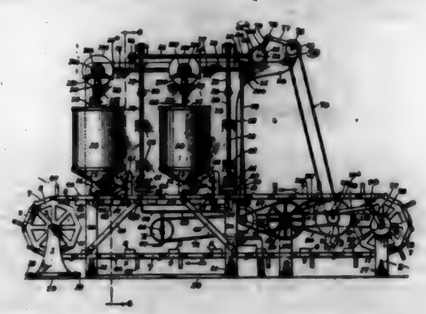
1,536,416. STEEL-HARDENING PROCESS. RICHARD BISCHOFF, Dusseldorf, Germany. Filed Mar. 26, 1924. Serial No. 701,959½. 1 Claim. (Cl. 148—20.)

The process of hardening wearing portions of shaftings made of air hardening chrome-nickel-steel, which process consists in rapidly rotating said shaftings and at the same time heating the wearing portions to approximately 800 degrees centigrade, and then cooling said portions at continued rotation in the open air.

1,536,417. WHEEL SPOKE. JEROME BOLICK, Conover, N. C. Filed Sept. 17, 1923. Serial No. 663,211. 1 Claim. (Cl. 152—28.)

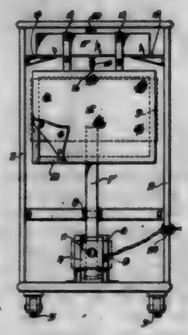
A wheel spoke comprising an intermediate flattened portion, cylindrical end portions and a tapered portion connecting the flattened portion with each cylindrical portion.

1,536,418. ATTACHING PLATE FOR SPRINGS. CHARLES C. BREAKFIELD, Allensville, Ky., assignor of one-half to Jesse B. Boyd, Allensville, Ky. Filed Jan. 4, 1924. Serial No. 684,388. 1 Claim. (Cl. 267—52.)



The combination with a channeled cross member of an automobile frame, of an attaching member for securing a leaf spring thereto, comprising a body having its upper side provided with a raised portion extended for the full length thereof and adapted to be freely received in the channeled cross member and having a convex upper surface for flatly contacting with the intermediate portion of the original leaf spring of the automobile, said body being provided at a point spaced below the lower edge of the channeled cross member with spaced laterally projecting ears at the intermediate and end portions of the body and extending beyond the outer sides of the channeled cross member, and fastening devices extending through said ears at the intermediate and end portions of the body for firmly holding the raised portion of the body in the channeled cross member, the convex upper surface of the body extending for the full length of the body and being entirely unbroken except for a single centrally located opening extending through the body and opening out through the upper surface of the raised portion.

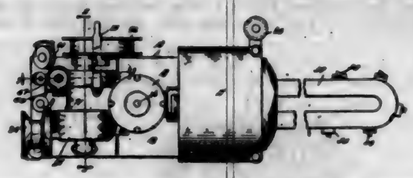
1,536,419. PROCESS OF EFFECTING ORGANIC REACTIONS. ARTHUR W. BURWELL, Poughkeepsie, N. Y. Filed Jan. 26, 1922. Serial No. 532,009. 4 Claims. (Cl. 204—9.)



1. Process of effecting organic reactions comprising causing an electric current to flow through an aqueous electrolyte to an electrode, and maintaining on the active surface of said electrode a moving film of an organic liquid to be transformed said organic liquid being substantially insoluble in and immiscible with said electrolyte.

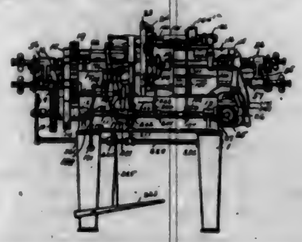
1,536,420. ICE-CREAM-MOLDING MACHINE. J. WILLARD CARPENTER, St. Louis, Mo. Filed Oct. 10, 1921. Serial No. 506,552. 8 Claims. (Cl. 226—100.)

1. A machine of the character described, comprising a pair of wheels having a plurality of flat surfaces, a link-belt carrier adapted to travel on the said wheels, a plurality of molds mounted on the said carrier, means for imparting intermittent movement thereto, a plurality of containers, a plurality of compacters, means for opening the containers, means for actuating the compacters, the said means for intermittent driving being so timed as to allow each of the said molds to pause adjacent to each of the said containers when the same is open and adjacent to each of the said compacters at the time when the same is operating.



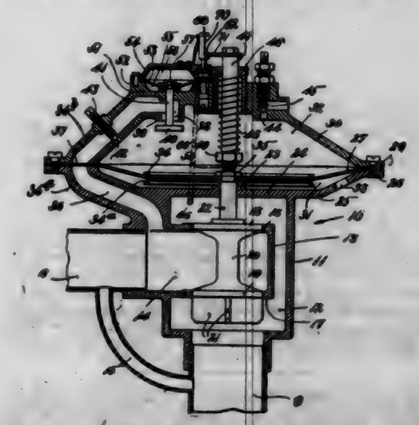
1,536,421. EXHIBITION OF MOTION PICTURES AND THE LIKE IN DAYLIGHT. WILLIAM C. CARROLL, St. Kilda, Victoria, Australia. Filed Nov. 20, 1924. Serial No. 751,123. 3 Claims. (Cl. 88—24.)

1. In a screen to be used for day light exhibition of motion pictures, including a fabric section to be impregnated with a fluid for rendering the same translucent, and a margin of absorbent material on such fabric section for delivering the fluid to the latter.



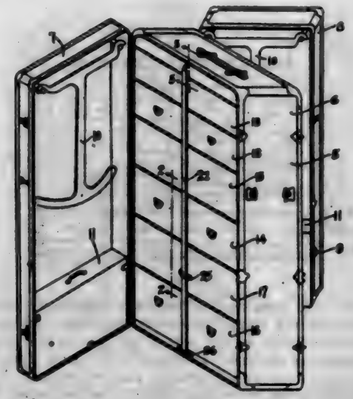
1,536,422. MINING MACHINE. FRANK CARTLIDGE, Terre Haute, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 12, 1915. Serial No. 33,650. Renewed July 26, 1921. Serial No. 487,724. 140 Claims. (Cl. 262—30.)

2. In combination, a cutter, a driving motor therefor, a feeding device for feeding said cutter, said feeding device being driven from said driving motor, and means for automatically varying the speed of operation of said



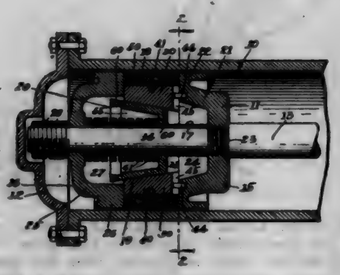
feeding device in relation to that of said driving motor to maintain the load on the cutter constant.

1,536,423. BUTTON-MAKING MACHINE. EMANUEL CLEMENS, East Orange, N. J., assignor to Superior Ivory Button Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 3, 1919. Serial No. 287,121. 22 Claims. (Cl. 79—9.)



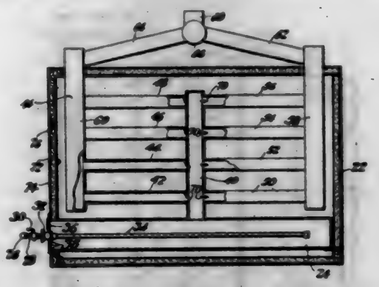
1. In a button making machine, the combination of a chuck for gripping and holding irregularly shaped button stock, a stock spotting finger for successively advancing against a plurality of points in the face of the button stock, a cutting tool and means for advancing said cutting tool against the button stock to a depth determined by the maximum advance of said spotting finger.

1,536,424. POWER CONTROLLER FOR CARRIER-DISPATCH SYSTEMS. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed June 5, 1923. Serial No. 643,570. 43 Claims. (Cl. 243—9.)



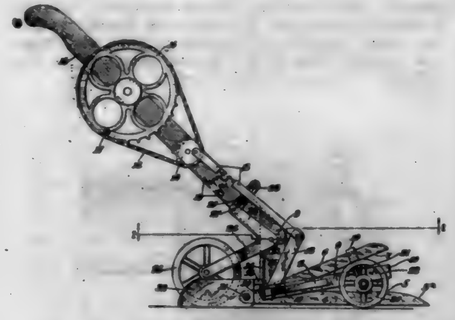
1. A power controlling apparatus comprising a main valve, a motor for actuating it, a normally open controlling valve, a motor for operating the controlling valve, and means operable upon movement of the main valve for initiating operation of the controlling valve motor.

1,536,425. WARDROBE TRUNK. METER DAVIS, New York, N. Y., assignor of one-third to Joseph Elias and one-third to Louis Mann, both of New York, N. Y. Filed Mar. 4, 1924. Serial No. 696,757. 2 Claims. (Cl. 190—13.)



1. A wardrobe trunk having a central drawer section, angle members for supporting the drawers, and means on said angle members for limiting the inward and outward movement of said drawers, the adjacent drawers being adapted to be drawn from the opposite sides of said section.

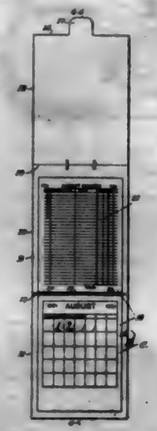
1,536,426. EXPANSIBLE PISTON PACKING. GROVER C. DEAKINS, Anaheim, and LELAND S. HAMER, Fullerton, Calif., assignors of one-third to Elihu C. Wilson, Los Angeles, Calif. Filed Oct. 19, 1922. Serial No. 595,694. 2 Claims. (Cl. 74—109.)



1. In combination, a piston rod, two plates on the piston rod, means spacing the plates apart, each plate having a recess in its inner face, packing carried between the peripheral portions of the plates, and means for automatically expanding the packing including, a conical wedge member with a recess in its large end, the wedge member being slidable longitudinally on the rod and adapted during the first part of its operation to have one end extend into the recess in one of the plates and during the last part of its operation to have its other end extend into the recess in the other plate, and a compression spring for moving the wedge member longitudinally, the spring having one end extending into the recess in the wedge member and having its other end extending into the recess in the plate adjacent the large end of the wedge member.

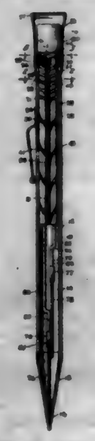
1,536,427. HEATING APPARATUS FOR GAS-FIRED OVENS. ALBIN MALMRAS DEGNER, Brooklyn, N. Y., assignor, by mesne assignments, to Combustion Utilities Corporation, New York, N. Y., a Corporation of Maine. Filed Jan. 16, 1923. Serial No. 612,922. 9 Claims. (Cl. 34—19.)

8. An oven, elongated, horizontal combustion chambers positioned in the lower portion of said oven and extending from the front to the rear of said oven, distributing flues extending upwardly from said combustion chambers, branch flues extending forwardly and rearwardly of said distributing flues, collecting flues to receive gases from the ends of said branch flues and means to vary the volume of gases passing through flues at different levels or for concentrating the flow of gases to the rear or front flues.



1,536,428. MOWER. ALFRED FELTON, Newburgh, N. Y. Filed Apr. 2, 1921. Serial No. 457,898. 10 Claims. (Cl. 56—247.)

1. A mower having in combination, a frame, a lower knife, an upper knife inclined to the lower knife, a pivoted movable knife cooperating with the upper and lower knives, the pivoted knife having a blunt end and the lower knife extending beyond the front end of the pivoted knife, a roller for supporting said knives, means for adjusting the height of said roller with respect to said knives, a handle member extending upwardly and rearwardly from said knives and manually operated gearing at the upper end of the handle member for oscillating said pivoted knife.

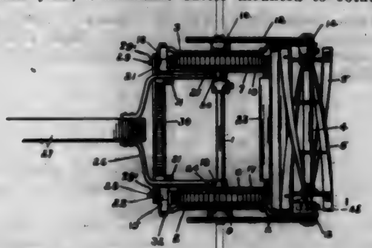


1,536,429. CALENDAR. EDWIN N. FERDON, St. Paul, Minn., assignor to The Blanchard Company, Aurora, Ill., a Corporation of Illinois. Filed Sept. 28, 1921. Serial No. 502,724. 2 Claims. (Cl. 40—119.)

2. A foldable calendar, including a back portion formed from a single blank of material, score lines dividing said back into approximately equal portions which are adapted to fold over unto each other, a calendar pad secured to one of said portions along one of said score lines, one of said portions being adapted to form a cover to conceal the up-turned leaves of said pad and means formed integral with and projecting from the free edge of said

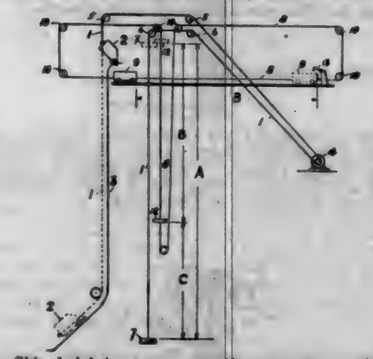
cover portion adapted to hold the same flat against the other portions of said back by engaging between said pad and a portion of said back to form a locking means for holding the cover portion in position when the calendar is hung to expose the calendar pad.

1,536,430. ADJUSTABLE WRITING IMPLEMENT. FRANK FURRDY, New York, N. Y. Filed Feb. 25, 1924. Serial No. 694,990. 20 Claims. (Cl. 120—14.)



1. A pencil comprising a case, a plurality of lead carriers supported for longitudinal and rotative movement therein, each lead carrier having a cranked lower portion, and means for simultaneously moving two of the lead carriers longitudinally in opposite directions and rotating them at certain points of their longitudinal travel.

1,536,431. LAWN MOWER. CHARLES W. GORMLY, Mount Morris, N. Y., assignor to Charles Woods, Buffalo, N. Y. Filed Oct. 20, 1921. Serial No. 509,171. 1 Claim. (Cl. 56—252.)

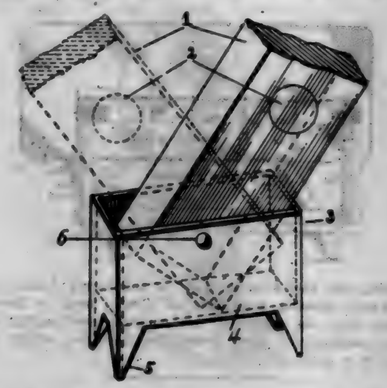


In a lawn mower, the combination of a shaft, drive wheels mounted to turn on said shaft, inner and outer frame bars fixed on the sides of each drive wheel and

rigidly held together at their rear ends, bolts depending from the rear ends of the frame bars, a connecting bar suspended from said bolts, a spring surrounding each of said bolts to yieldably hold said connecting bar against the under side of the rear ends of said frame bars, a yoke pivoted on the inner frame bars, a handle on said yoke, a revoluble cutter mounted to rotate be-

tween the forward ends of the outer frame bars, a roller mounted to rotate between the forward ends of the inner frame bars, a pawl pivoted on the side of said yoke and adapted to engage one of said inner frame bars to support said yoke on said inner frame bar, said pawl being adapted to be disengaged from said inner frame bar and allow said yoke to rest on said connecting bar instead of said side bar.

1,536,432. SKIP-HOIST AND TRAM-CAR OPERATING MEANS. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1924. Serial No. 696,778. 4 Claims. (Cl. 214—40.)



1. Skip hoist tram car operating means comprising a driven bucket cable, an endless tram car cable, and tappet mechanism interposed between said cables and adapted to operate the bucket and car to and from car-loading position for different distances.

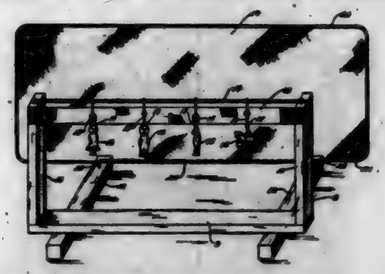
1,536,433. PIPE-PERFORATING MACHINE. WILLIAM WALTER HARTMAN, Los Angeles, Calif. Filed Mar. 31, 1923. Serial No. 629,206. 16 Claims. (Cl. 81—193.)

1. In a machine for operating internally upon a pipe or the like, means to support the pipe, a cutter head and means to advance the head within the pipe, a cutter movable in said head, means movable independently of the cutter head and adapted to move the cutter with reference to said head, and means to establish relative rotary cutting movement between the pipe and the cutter head.

1,536,434. ANTISLIPPING DEVICE FOR LADDERS. WALTER A. HEARN, Baltimore, Md. Substitute for application Serial No. 135,165, filed Dec. 5, 1916. This application filed Jan. 21, 1925. Serial No. 3,600. 1 Claim. (Cl. 228—61.)

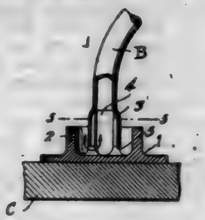
An anti-slipping ladder-foot attachment, comprising a multiple sided socket provided with a suitable bottom and provided with an area to substantially fit the sides of the stile of a ladder while being long enough to permit the stile to occupy different tilted positions with the end of the stile in engagement with the bottom of the socket, said socket having elongations of its vertical corners below the bottom to form prongs.

1,536,435. SAFETY RAZOR. STANLEY M. KATTELL, Syracuse, N. Y., assignor to The Shav-Rite Safety Razor Corporation, Patchogue, N. Y., a Corporation of Delaware. Filed Oct. 7, 1922. Serial No. 593,120. 4 Claims. (Cl. 30—12.)



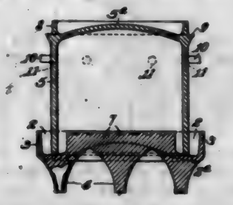
1. A safety razor comprising a holding member having a transverse hole spaced from its end, and a reversible guard having duplicate hooks, one at each end, one of said hooks adapted to engage in said hole while the other frictionally engages the end of the holder.

1,536,436. MAGNET TARGET GAME. ALEXANDER F. KOLINSKI, Milwaukee, Wis. Filed May 31, 1924. Serial No. 717,185. 12 Claims. (Cl. 124—15.)



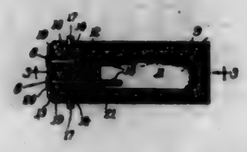
11. A magnet target game, comprising a target frame formed with a horizontal member, uprights secured thereto, pivotal members secured to the horizontal member and movable to transverse supporting positions and having apertures formed in their outer end portions, an elevated rod carried by said uprights, a plurality of magnets suspended from said rod at spaced intervals, targets formed of light flexible material provided with a metal stud,

said stud portions being attracted by the magnets whereby the targets are suspended, the targets being susceptible of disengagement from the magnets when struck by a missile, and a back-stop member having depending arms insertable in said pivotal member apertures for removably



holding the back-stop member to the target frame, said back-stop member consisting of a wire bent to form a frame with the adjacent end portions overlapping and bent angularly to form arms, the back-stop being covered by a netting.

1,536,437. SIPHON-TUBE BASE. RULOV KLEIN, Montclair, N. J. Filed May 27, 1921. Serial No. 473,174. 5 Claims. (Cl. 137—20.)



1. In a siphon tube, the combination of an elastic tube, and a base comprising a cup-shaped body portion having a rigid upstanding projection on the bottom thereof, said projection being adapted to telescopically and frictionally receive said tube thereover and being formed with passages to permit flow of liquid between itself and said tube, said base and said tube being maintained in said connected relation by the elasticity and frictional engagement of said tube with said projection.

1,536,438. ANNEALING BOX. IRVIN JOHN KOEHNLINE, Bridgeport, and WILLIAM EARL ARMSTRONG, Martins Ferry, Ohio. Filed Aug. 15, 1923. Serial No. 657,633. 2 Claims. (Cl. 263—49.)

1. An annealing box comprising a cast metal stand embodying a bed portion, an upright outer rim, and integral supporting legs, said bed portion and said rim being separated by a deep channel adapted for containing a bed of sand, the bottom of said channel having a drainage hole therein and having its surfaces inclined downwardly and outwardly toward said hole, said legs being of tapered form and disposed in substantially meeting relation beneath said bed whereby they complementally form a series of arches, and a cover of inverted box-like form adapted to seat upon said stand with its lower edges embedded in the sand bed in said channel.

1,536,439. MERCURY SWITCH. ROGER L. KNUTSEON, Rockford, Ill., assignor of one-half to Edgar C. Allen, Rockford, Ill. Filed Jan. 7, 1924. Serial No. 684,690. 1 Claim. (Cl. 200—152.)

A self-contained quick-detachable mercury switch adapted to be removably mounted in a bayonet socket, having, in combination, an elongated chambered body of insulating material, two pins to enter the slots of a bayonet socket, said pins being secured within said body and projecting from diametrically opposite points near one end of the body, two electrodes in the last-mentioned end of the body, the inner ends of said electrodes projecting into the chamber of the body, enlarged contacts secured to the outer ends of said electrodes and providing contact surfaces exposed upon the last-mentioned end of the body, and a globule of mercury in said chamber to bridge the gap between said electrodes.

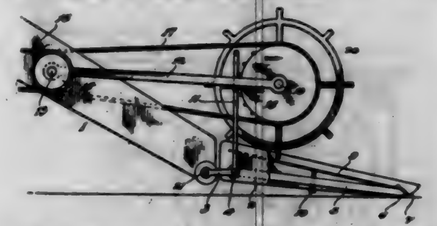
1,536,440. [WITHDRAWN.]

1,536,441. SNAP-SWITCH TERMINAL. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Mfg. Company, Plainville, Conn., a Corporation of Connecticut. Filed Jan. 8, 1921. Serial No. 435,810. 4 Claims. (Cl. 200—166.)

3. A snap switch terminal comprising a post member having a central body with two spaced apart supporting feet, a contact member having a contact arm and a base adapted to fit against the body of said said post member, one of said members having a centrally arranged opening and the other member having a single rivet integral with it secured in said opening and one of said members having a lug integral with it projecting from one edge and overlapping an adjacent edge of the other member for preventing relative rotation of said members and a binding screw passing through one of said members.

1,536,442. ELECTRIC-SWITCH CLIP. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Nov. 27, 1923. Serial No. 677,246. 7 Claims. (Cl. 200—171.)

1. The method of forming a solderless switch clip which comprises assembling the ends of two jaws in a base plate between spaced tongues and then forming grooves in the adjacent faces of the jaws and expanding

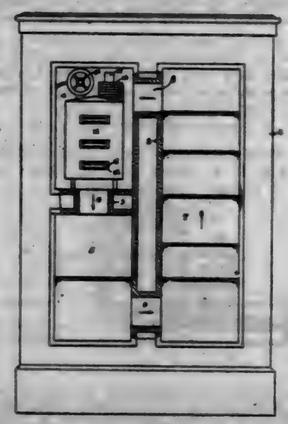


the jaw ends in said plate and spreading the tongues against the jaws in order to hold the parts together.

1,536,443. COLLAPSIBLE TUBE. HERMAN B. LERMER, Newark, N. J., assignor to Hygienic Tube Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 24, 1923. Serial No. 620,886. 1 Claim. (Cl. 221—60.)

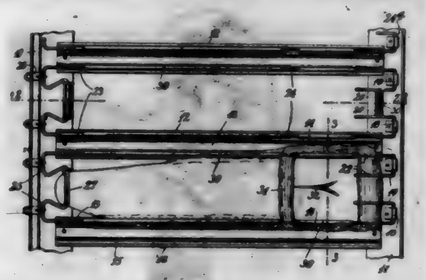
In a translucent container, a collapsible tube having a bottom element, the tube and its bottom element being made wholly of celluloid, said bottom element being more than twice the thickness of the walls of the tube, a downturned flange integral with said bottom element, a raised outer beaded member on said flange forming an annular recess with said downturned flange adapted to receive the lower end of said tube, the downturned flanged portion being bent to form a space between it and the inner side wall of said tube, and a cement filling in the said space and in the said recess.

1,536,444. PICKER-TEETH FOR LOADERS. EDWARD MARTIN, Colwich, Kans. Filed June 9, 1922. Serial No. 567,100. 4 Claims. (Cl. 56—358.)



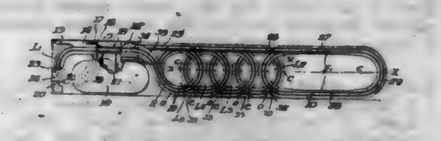
1. The combination of a supporting device, a plurality of picker teeth independently pivoted upon the supporting device, spring plates secured at their front ends upon the several teeth and extending longitudinally of the teeth and having their rear ends free, and means mounted in the several teeth and engaging the under sides of the respective plates to adjust the tension of the same.

1,536,445. DISPLAY DEVICE FOR BOTTLES AND THE LIKE. HENRY F. MAUPAI, Brooklyn, N. Y., assignor to Sackett & Wilhelms Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 24, 1924. Serial No. 708,687. 4 Claims. (Cl. 40—4.)



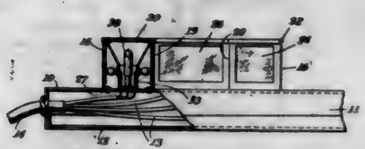
1. In a display device of the character described the combination of a display member, a flap formed from the lower portion of said display member and articulated at its upper edge thereto, a second flap articulated to the lower edge of said first flap, said flaps being provided with means for engaging a bottle on which the device is erected, and opposite wings articulated to the side edges of said second flap, said display member having opposite inreaching ears and said wings being adapted to engage said ears respectively.

1,536,446. REFRIGERATING APPARATUS. WILLIAM D. MERCER, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 24, 1924. Serial No. 701,863. 7 Claims. (Cl. 62—95.)



1. A cooling unit comprising a refrigerant chamber, a tank disposed about said chamber and adapted to be inserted within the cooling chamber of said refrigerator with its top in the path of the relatively warm air flowing from the storage chamber of said refrigerator, heat conducting fluid disposed within said tank and about said refrigerant chamber, and a top of equal thickness throughout forming part of said tank and having an exterior surface and an interior surface each sloping upwardly from the perimeter to a single elevated section thereof.

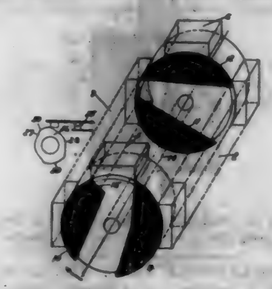
1,536,447. EMBROIDERY-MACHINE FABRIC HOLDER. OSWALD MEYER, Carlstadt, N. J.; Katherine Meyer administratrix of said Oswald Meyer, deceased. Filed Jan. 12, 1922. Serial No. 528,743. 5 Claims. (Cl. 112—90.)



1. A fabric holder for an embroidery machine comprising a frame having a plurality of stationary clamping members, and a plurality of movable clamping members hinged to said frame provided with transversely aligned downwardly open recessed portions to provide clearance spaces to receive surplus folds of the material to be embroidered.

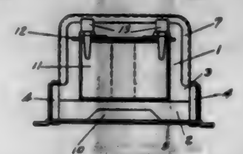
1,536,448. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Jan. 26, 1925. Serial No. 4,704. 14 Claims. (Cl. 104—63.)

1. In a pleasure railway, the combination of a track having a plurality of curves of the same radius length and track sections of other radius lengths between said curves, and cars for said tracks, the wheels of said cars being set to be tangential to the rail curvature when the cars travel over said curves and to be non-tangential when the cars travel over the other track sections.



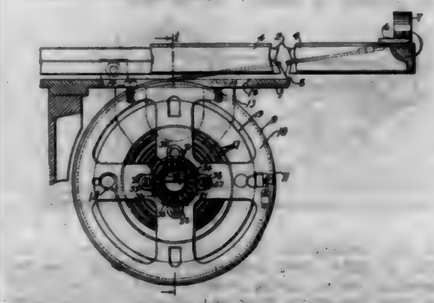
1,536,449. SIGN LETTER. JOHN JURGEN HENRY MULLER, Newark, N. J. Filed Feb. 12, 1923. Serial No. 618,450. 7 Claims. (Cl. 40—130.)

1. A sign character comprising a hollow body, containing interior partitions and having differently colored translucent side walls, lights in each compartment thereof, and an uncolored translucent cover for said body through which certain of said lights show.



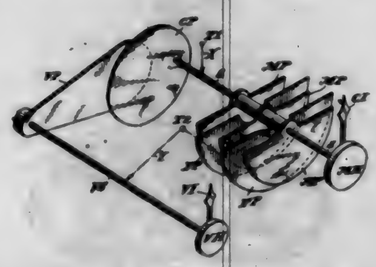
1,536,450. MAGNETO. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Apr. 19, 1921. Serial No. 462,583. 33 Claims. (Cl. 171—200.)

1. In an ignition apparatus adapted to deliver ignition sparks for firing an internal combustion engine at unequal angular intervals of engine crank shaft rotation, a magneto comprising diametrically spaced magnet pole pieces, and aligned spaced core pole pieces arranged on a cylindrical surface and a cylindrical rotor having pairs



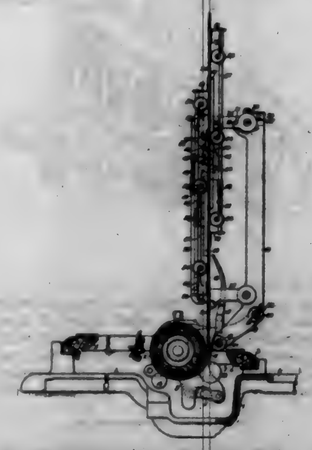
of inductors provided with flux breaking points co-operating with the pole pieces, the inductors being so positioned on the rotor that the angular distance between breaking points corresponds to the unequal angular firing intervals desired.

1,536,451. AUDIO-FREQUENCY TRANSFORMER. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Aug. 22, 1924. Serial No. 733,478. 7 Claims. (Cl. 175—356.)



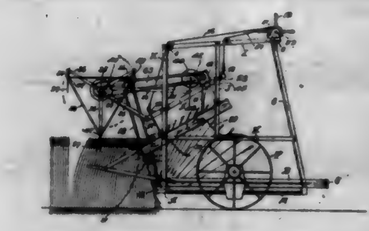
1. In a transformer, a core having windings associated therewith, said core having substantially E shaped laminations with projecting ends, bar laminations closing the E, a frame member adjacent the bar laminations and clamps passing over the projecting ends of the E shaped laminations and having parts passing through said frame member and fastened thereto.

1,536,452. TYPEWRITING MACHINE. JOSEPH PHELPS, North Caldwell, N. J., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 11, 1923. Serial No. 644,571. 11 Claims. (Cl. 197—68.)



1. In a typewriting machine, the combination of a rotary carriage motor, a rotary driven member having a hub, and a coiled spring clutch connected at one end to said motor and surrounding said hub, said spring clutch binding on said hub during rotary movements of said motor in one direction and releasing said hub and said driven member during rotary movements of said motor in the opposite direction.

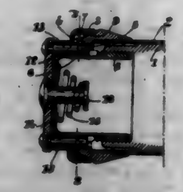
1,536,453. VERNIER FOR TUNING REACTANCES. GREENLEAF WHITTIER PICKARD, Newton Center, and JOHN ALBERT PROCTOR, Lexington, Mass., assignors to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,552. 8 Claims. (Cl. 250—41.)



1. A vernier for a rotatable condenser, which comprises an auxiliary condenser plate mounted eccentrically on the shaft of the condenser; a rotatable vernier shaft parallel with the main condenser shaft; and a vernier condenser plate mounted rotatably on the vernier shaft; the condenser plate on the main condenser shaft having a disklike shape, and the condenser plate on the vernier shaft having an approximately semicircular end adjacent the auxiliary plate on the main condenser shaft.

1,536,454. TYPEWRITING MACHINE. MORRIS W. POOL, Brooklyn, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 30, 1922. Serial No. 591,571. 32 Claims. (Cl. 197—127.)

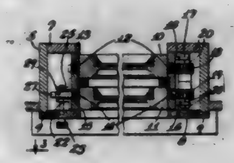
1. In a typewriting machine, the combination of a platen, an upright collating board the lower edn of which in normal position lies behind the platen, and means whereby said board may be raised to clear the platen and then turned to an angular position more suitable for assemblage of the work sheets, the face of the board that is normally presented towards the operator being uppermost when the board is in said angular position.



1,536,455. FLAX PULLER. EMIL PUSCH, New Rochelle, N. Y. Filed Jan. 24, 1922. Serial No. 531,234. 8 Claims. (Cl. 55—66.)

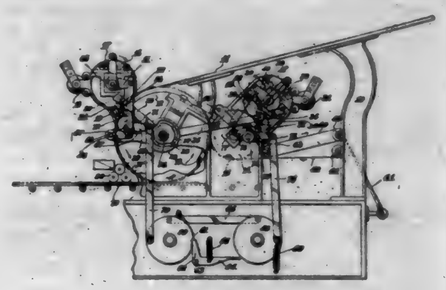
1. In a flax puller, in combination, a frame, grasping means mounted thereon adapted to grasp flax plants and exert a pulling force thereon and means positioned below said grasping means adapted to exert a pulling pressure upon the flax plants and adapted in conjunction with said grasping devices to remove the flax plants from the soil.

4. In a flax puller, in combination, a frame, two endless chains mounted thereon co-acting grasping devices pivotally mounted on said chains, the grasping devices of each chain being adapted to move successively in a continuous and predetermined path, corresponding grasping devices of each chain being adapted to describe independent pivotal movements relatively to said chains and thereby come together in surface engagement in proximity to the forward portion of the puller and grasp the flax plants between them and draw the plants rearwardly of the puller and in proximity to the rear end of the puller to pivotally move apart and independently of relatively to said chains and thereby release the plants after they have been pulled from the soil.



1,536,456. LOCKING DEVICE FOR REMOVABLE WHEELS. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Paris, France. Filed Apr. 11, 1922. Serial No. 551,680. 1 Claim. (Cl. 301—9.)

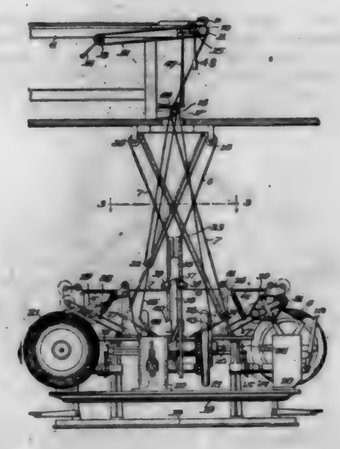
In a removable wheel of the type comprising an outer hub adapted to be removably secured on an inner permanent hub, a locking device comprising a central nut screwed on the inner hub and adapted to secure the outer hub on the inner hub, notches provided in the periphery of said outer hub, locking pins adapted to slide in bores provided in said central nut in a direction parallel with the axis thereof and adapted to engage said notches, a disc upon which the said pins are mounted at diametrically opposite points, a central stud secured on said disc and extending through the nut, an abutment on said central stud and a spring seated on the nut and in engagement with said abutment tending to hold the



pins in locking position in such manner that they are supported and guided throughout their length by the nut, their inner ends being engaged with the nut and also with said notches.

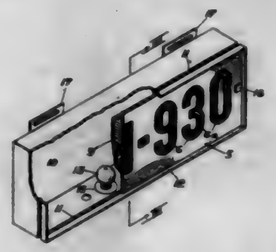
1,536,457. WINDOW CONSTRUCTION. HENRY SCHLESINGER and SAMUEL SIMONOVITS, New York, N. Y. Filed Feb. 9, 1924. Serial No. 691,539. 6 Claims. (Cl. 20—52.)

1. A lock device for window sashes, comprising racks secured to one side of the separate sashes, and manually controlled members cooperating directly with said racks for retaining the same against further opening when in predetermined positions in the sash frame.



1,536,458. NUMBERING MACHINE. AMOS H. SMITH, Brooklyn, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed Mar. 17, 1924. Serial No. 699,765. 15 Claims. (Cl. 101—77.)

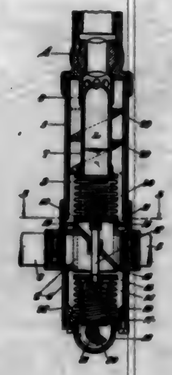
1. A numbering machine embodying therein a main impression cylinder, a secondary impression cylinder adapted to receive a sheet of paper therefrom, a numbering head cylinder associated with each of said impression cylinders, a striker mechanism associated with each numbering head cylinder, means operative upon each of said striker mechanisms whereby it will be made operative during one revolution of its numbering head cylinder, and will be made inoperative during the succeeding revolution thereof, and an actuating mechanism operative upon said last named means whereby the actuation of each of said striker mechanism is timed in relation to the delivery of a sheet to the impression cylinder with which it is associated.



1,536,459. MACHINE FOR THE MANUFACTURE OF TIRE CASINGS. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 14, 1918, Serial No. 262,495. Renewed Apr. 23, 1921. Serial No. 463,905. 29 Claims. (Cl. 154—10.)

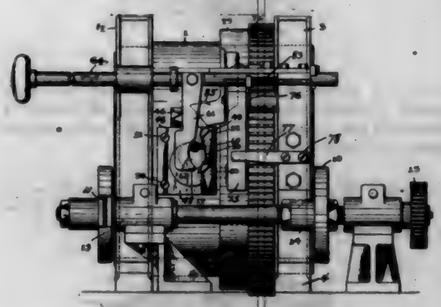
1. In a machine for manufacturing tires, the combination of an assembling table, a tire making machine, means for conducting fabric from said assembling table to said tire machine comprising guide rollers over

which the fabric passes to the machine, and a dance roller for forming an intermediate loop in said fabric between the machine and the assembly table.



1,536,460. LICENSE PLATE. HERMAN T. H. STUBBEN, Pittsburgh, Pa. Filed July 20, 1923. Serial No. 652,742. 2 Claims. (Cl. 40—133.)

2. A sign comprising a plate having embossed indicia thereon, the indicia and the plate being of contrasting colors, said indicia having the central areas thereof cut away to produce a stenciled outline of the characters within the colored outline thereof, and a transparent colored sheet at the inner face of the plate.

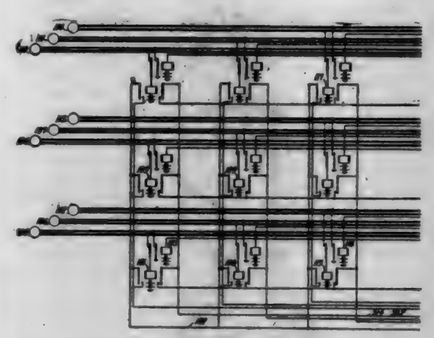


1,536,461. AUTOMATIC TEMPERATURE-CONTROL VALVE. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Mar. 14, 1923. Serial No. 625,050. 9 Claims. (Cl. 236—12.)

1. An automatic temperature control mechanism for mixing apparatus which comprises a thermostat, means for balancing the external pressure thereon and thereby eliminating the effect of pressure variations in the surrounding medium on its thermal movements, a spring for assisting the expansion of the said thermostat as

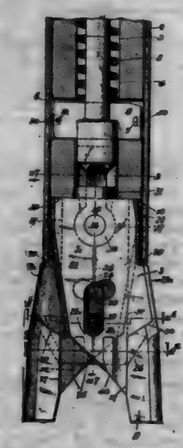
the temperature rises, a second spring for resisting said expansion movement, and manually operable means for varying the tension of the last mentioned spring.

1,536,462. STEREOTYPE-PLATE-FINISHING MACHINE. JOSEPH J. WALSER, Ann Arbor, Mich., and ALBERT A. HENN, Chicago, Ill., assignors to Goss Printing Press Company, a Corporation of Illinois. Filed Jan. 29, 1920. Serial No. 354,982. 16 Claims. (Cl. 29—21.)



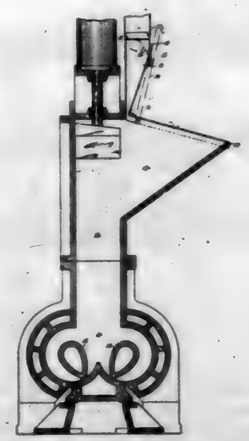
16. A stereotype plate finishing machine including in combination a plate trimming cylinder, a clamp for clamping the plate within the cylinder, a cam engaging with and moving the clamp to plate clamping position, means for positively moving the cam to cause the clamp to clamp the plate, and automatically operating means for moving the cam to unclamp the plate.

1,536,463. ABSORPTION PROCESS. ERIC HJALMAR WESTLING, Redwood City, Calif. Filed June 12, 1922. Serial No. 567,733. 10 Claims. (Cl. 23—1.)



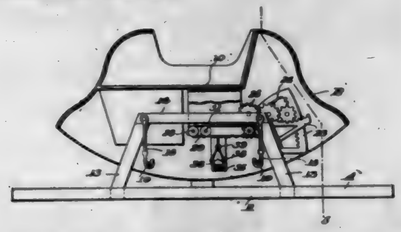
1. The process of absorbing gases or vapors in liquids which consists in introducing the gas into a body of the liquid and causing the kinetic energy of the gas to convert the liquid into a fog and condensing the fog.

1,536,464. TELEPHONE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1922. Serial No. 566,812. 9 Claims. (Cl. 179—18.)



1. In a switching system, a plurality of groups of lines, coordinate switches serving said lines, a relay individual to each group of lines, means responsive to the initiation of a call on a line in any particular group for operating one of said switches to extend said line and for operating the relay individual to the group in which said line appears, and another relay common to said groups of lines for maintaining the first named relay operated to render all remaining lines in said group ineffective to operate one of said switches until a calling line in another group has been extended.

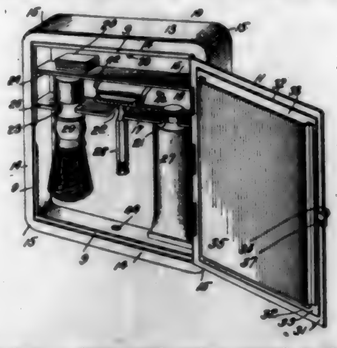
1,536,465. UNDERREAMER. ARTHUR ALLISON, Maywood, Calif., assignor to William W. Wilson, Los Angeles, Calif. Filed July 18, 1923. Serial No. 652,465. 5 Claims. (Cl. 255—75.)



1. An underreamer comprising a body, a pair of overlapping cutters in the body, the cutters bearing inwardly against the body, and overhanging shoulders on the overlapping cutters adapted to interengage to prevent outward movement of the cutters.

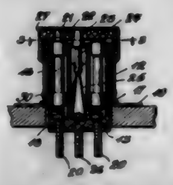
1,536,466. MACHINE FOR TREATING RUBBER AND OTHER HEAVY PLASTIC MATERIAL. FRENLEY H. BANBURY, Ansonia, Conn., assignor to Birmingham Iron Foundry, Derby, Conn., a Corporation. Filed Sept. 13, 1922. Serial No. 587,926. 6 Claims. (Cl. 18—2.)

6. In a machine of the character described, the combination with a powder-feed, of a closure therefor, a suction device having a long, narrow opening located adjacent to the inner portion of the closure, and means for limiting the action of the suction device to the period when the closure is open.



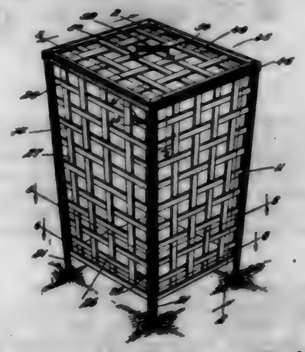
1,536,467. TOY. LAMBERT E. BRAVERS, Philadelphia, Pa. Filed Oct. 28, 1921. Serial No. 511,040. 1 Claim. (Cl. 272—56.)

A device of the character described comprising a base, a carrier capable of being supported above the base for oscillatory movement or to be positioned on the base for oscillatory movement, a supporting structure, a transverse pin carried by the carrier, hook elements carried by the suppoting structure and adapted to receive the pin to support the carrier above the base for oscillatory movement, and bearings carried by the base and pintles carried by the carrier and adapted to be received in the bearings when the carrier is resting upon the base.



1,536,468. CABINET FOR HOLDING SHAVING REQUISITES. MARCUS B. BEHRMAN, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed Oct. 7, 1922. Serial No. 592,955. 6 Claims. (Cl. 132—80.)

1. A cabinet for holding shaving requisites comprising a sheet metal rectangular body portion having a back, top, bottom, sides and front consisting of a border flange extending inwardly from said top, bottom and sides and leaving a large opening at the front of said body portion, all of said parts being of sheet metal and said body portion having rounded corners, a sheet metal door hinged at one edge to one side edge of said flange and comprising an open rectangular frame adapted at its edges to engage said border flange, said flange being offset inwardly to receive and seat the edges



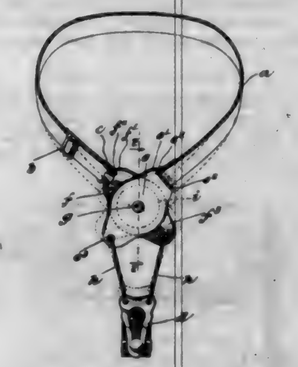
of said door, a sheet metal pocket secured to the back of said frame at the edges of the opening therein and having an open top for free access thereto, and a mirror set within said pocket and closing said opening, and means within said body portion for receiving and supporting the articles of a shaving outfit.

1,536,469. COMBINED SWITCH AND FUSE BOX. ROBERT H. BENNETT, Washington, D. C. Filed July 26, 1921. Serial No. 487,706. 14 Claims. (Cl. 200—114.)

1. In a device of the character described, in combination, a switch body having a plurality of circuits, a removable fuse associated with each circuit, and rotatable means for operating the desired circuit.

1,536,470. RUBBISH INCINERATOR. HARRY B. BORNSIDE, Providence, R. I. Filed Aug. 2, 1923. Serial No. 655,208. 1 Claim. (Cl. 220—4.)

As a new article of manufacture, a section for a rubbish incinerator comprising a top, bottom, a long side, a short side, a depending extension on the long side, a

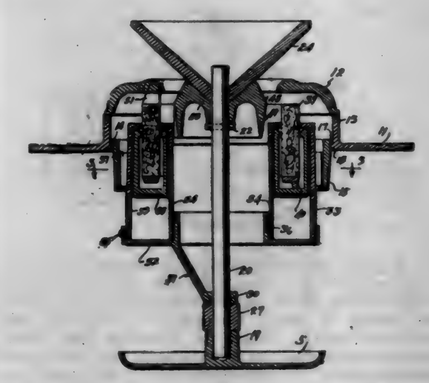


peripheral flange projecting from the top, bottom, and sides, and a metallic body fast to the top, bottom and sides.

1,536,471. EMBROIDERY. EDWIN BOSSHARDT, Hudson Heights, N. J. Filed Sept. 29, 1923. Serial No. 665,518. 1 Claim. (Cl. 2—278.)

Embroidery of the character described embodying a suitable fabric background and a plurality of separate and independent motifs of stitched embroidery, each of which is manufactured, finished and complete and is provided with an openwork portion extending longitudinally of the motif and inward of the edges thereof, and stitches passed through the openwork portions of the motifs and through the fabric background for assembling the motifs in permanent position on the background to form a predetermined optional design through the combination of such motifs.

1,536,472. HALF-HOSE GARTER. FERLEIGH E. BROWNE, Ridgefield Park, N. J. Filed Dec. 31, 1923. Serial No. 683,555. 4 Claims. (Cl. 241—6.)

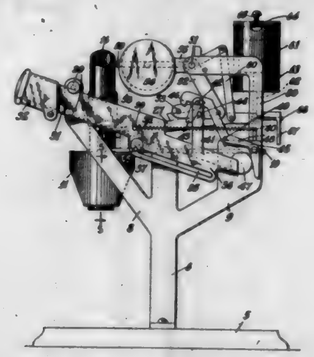


1. A half hose garter embodying therein a pair of crossed levers, a pivotal connection between said levers, a leg strap, one end of which is connected with one arm of one of said levers, the other end of which is adapted to be connected with the adjacent arm of the other lever, a clasp adapted to be connected with the half hose to be supported, and flexible connections between said clasp and the other arms of said levers respectively, whereby an enlargement in the bight of said leg strap will develop an upward pull upon said clasp, and the slack resulting from a reduction in the size of said bight will be automatically taken up as a result of the downward pull upon said levers by the half hose through said clasp and said flexible connections.

1,536,473. VEST. LOUIS P. BRUNELLE, Winnipeg, Manitoba, Canada. Filed Mar. 12, 1923. Serial No. 624,641. 1 Claim. (Cl. 2—102.)

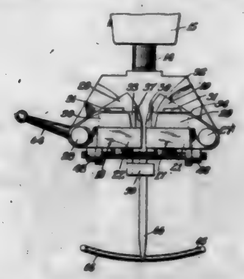
A collarless vest having the neck and vest front openings cut to meet at obtuse angles in a location in advance of the vest shoulder seams.

1,536,474. OIL BURNER. CARL BUBBEL, Detroit, Mich. Filed Jan. 11, 1924. Serial No. 685,510. 3 Claims. (Cl. 158—28.)



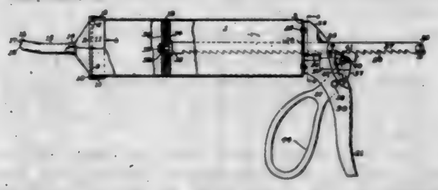
2. A device of the class described comprising a wick burner having a relatively small projection thereon and means for enclosing all of said wick except said projection in a housing whereby said projection may act as a pilot burner when the rest of the wick is extinguished.

1,536,475. LIQUID-DISPENSING APPARATUS. JOSEPH N. BURNO, Chicago, Ill., assignor to Budde & Westermann, a Corporation of New York. Filed Apr. 19, 1922. Serial No. 555,542. 15 Claims. (Cl. 194—30.)



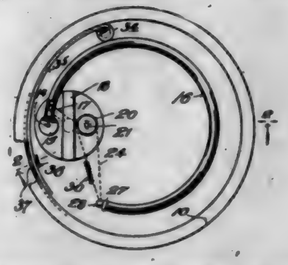
1. A coin controlled liquid dispensing apparatus having a conduit adapted to carry a liquid, a valve controlling the flow of the liquid through said conduit, a movable coin controlled operating member, means for normally locking said operating member in an inoperative position, means operable in the presence of a coin to release said operating member upon movement thereof,

means operable upon a predetermined movement of said member to open said valve, means operable upon the opening of said valve to move the same to its closed



position, means for retarding said valve in its movement to closed position, and means for varying the period of operation of said valve closing means.

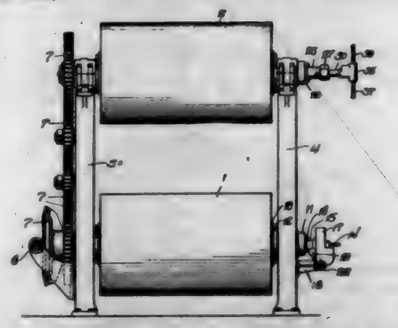
1,536,476. LIQUID DISPENSER. JOSEPH N. BURNO, Chicago, Ill., assignor to Budde & Westermann, a Corporation of New York. Filed Feb. 15, 1924. Serial No. 693,006. 10 Claims. (Cl. 225—21.)



1. A liquid dispensing apparatus adapted to be connected to different sources of liquid supply comprising a body portion, valve associated with said body portion and adapted to control the egress of liquid from said sources of supply, means for actuating said valves simultaneously, and means associated with said valve-actuating means for rendering one of said valves inoperative.

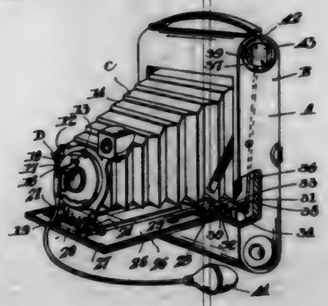
1,536,477. GUN FOR CALKING OR SIMILAR OPERATIONS. SAMUEL CREWE, East Cleveland, Ohio. Filed Oct. 11, 1922. Serial No. 593,817. 5 Claims. (Cl. 18—8.5.)

1. An apparatus of the character described comprising a container adapted to be loaded with calking material and having means for ejecting said material out of said container through said outlet opening, and an outlet opening, an outlet pipe over said opening out of alignment with the longitudinal axis of said container and the outer end thereof provided with two notches opposite each other and with a third notch intermediate these two notches to direct and equalize the flow and the spread of said ejecting material.



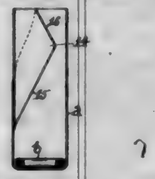
1,536,478. GAUGE. ERNEST B. CROCKER, Stratford, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Apr. 17, 1920. Serial No. 374,540. 12 Claims. (Cl. 73—109.)

1. In a Bourdon tube gauge, a casing, a Bourdon tube, a socket piece to which one end of said tube is anchored, said socket piece having a passage communicating with a source of pressure and with the tube and extending through an opening in the end wall of the casing, and an anchor member connected to the tube and extending through a portion of the socket piece and the end wall of the casing to lock said socket piece against rotative movement.



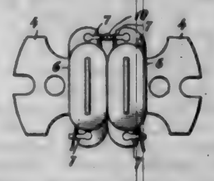
7. In a Bourdon tube gauge, a casing, a Bourdon tube, a socket piece mounted in said casing and to which one end of said tube is anchored a post fixed to said socket piece, a member rotatively mounted on said post and carrying a dial hand or pointer, and flexible connections intermediate the free end of said tube and said rotative member.

1,536,479. TEMPERATURE-CHANGING APPLIANCE. HARRY A. CUMFER, Chicago, Ill., assignor to Guyton & Cumfer Mfg. Co., a Corporation of Illinois. Filed May 15, 1922. Serial No. 561,235. 1 Claim. (Cl. 34—48.)



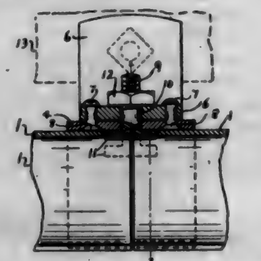
A structure of the character described comprising a pair of vertical frame members; a pair of hollow drums rotatably mounted on the frame, one above the other; means for driving one drum; connecting means to drive the other drum in the same direction; a hollow trunnion supporting one end of each drum; a relatively fixed pipe extending into each trunnion, said pipes for connection to the same source of supply; and drain pipes connected to said trunnions for connection to a common drain conduit.

1,536,480. SHUTTER-CONTROL MECHANISM FOR FOLDING CAMERAS. WILLIAM FRANCIS CUMNOR DEVLIN and SIDNEY WALKER GRAHAM, Ottawa, Ontario, Canada; said Graham assignor to said Devlin. Filed Dec. 17, 1921. Serial No. 523,112. 19 Claims. (Cl. 95—82.)



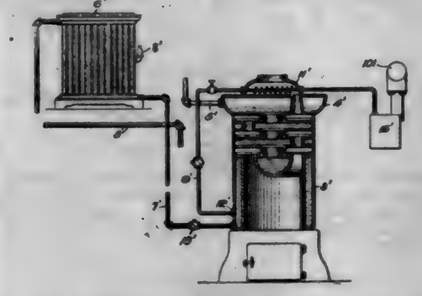
1. A folding camera comprising a film containing part, a film winding device therein, a folding and an extending part, shutter control mechanism on the extending part, means for preventing operation of the shutter control mechanism until after the film winding device has been operated including a longitudinally movable rod operated by the film winding device, a rocker operatively connected to the rod, a link connected to the rocker, a second rocker on the folding part having slidable engagement with the link, and means for operatively connecting the second rocker with the shutter control mechanism.

1,536,481. COIN PACKAGE. LEWIS J. DICKEY, Boston, Mass., assignor to Standard Coin Wrappers, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1922. Serial No. 585,475. 2 Claims. (Cl. 133—10.)



1. A coin wrapper composed of a blank wound into a plurality of convolutions with their upper side edges in the same transverse plane, the innermost convolution terminating in a point, formed by angular sections of unequal length, and located between the middle and the upper side edge of said innermost convolution, the lower side edges of said convolutions being inwardly crimped.

1,536,482. TELEPHONE RECEIVER. FREDERICK DIETRICH, Flushing, and EDWARD BERGMAN, New York, N. Y., assignors to C. Brandes, Inc., a Corporation of New York. Filed June 13, 1922. Serial No. 567,928. 4 Claims. (Cl. 179—117.)

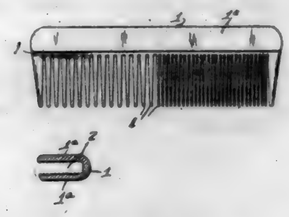


1. In an electro-magnet, a pair of adjacent magnet cores, a pair of terminal supporting members each being mounted on one of said cores, a pair of adjacent soldering terminals each of which is mounted on one of said terminal supporting members and a pair of windings one on each of said cores, one end of each of said windings being connected to its respectively associated one of said soldering terminals said soldering terminals being in electrical engagement one with the other.

1,536,483. TRACK SUPPORT. WILBERT NELSON ELLIOTT, Hamilton, Ontario, Canada, assignor to The N. Slater Company, Limited, Hamilton, Ontario, Canada. Filed Dec. 18, 1923. Serial No. 681,421. 7 Claims. (Cl. 16—94.)

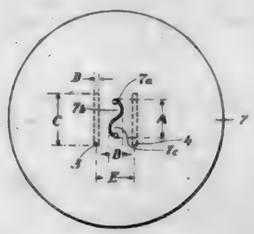
1. The combination with a tubular track of a coupling therefor, the inner periphery of the coupling conforming to the outer periphery of the track and slidable longitudinally thereof, and a protuberance detachably associated with the coupling and projecting from its inner periphery.

1,536,484. HOUSE-HEATING SYSTEM. HENRY M. ESSELEN, Roslindale, Boston, Mass. Filed Aug. 14, 1919. Serial No. 317,451. 4 Claims. (Cl. 237—9.)



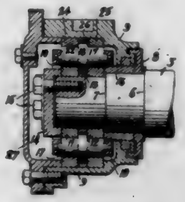
4. In a house-heating system including a boiler, and a radiator having supply and return lines connected thereto, an air inlet conduit connected to the boiler below the water level therein to produce heated moisture laden air bubbles in the boiler whereby to assist circulation therein and to produce aerated vapor for circulation in the radiator, a thermally controlled air injector connected to said inlet conduit, an air vent connected to the radiator above the return line connection thereto and an automatic valve in said air vent.

1,536,485. MEANS FOR REENFORCING TOILET AND OTHER COMBS. JOHN THOMAS FANNING, Moonee Ponds, Victoria, Australia. Filed Apr. 29, 1924. Serial No. 709,767. 1 Claim. (Cl. 132—17.)



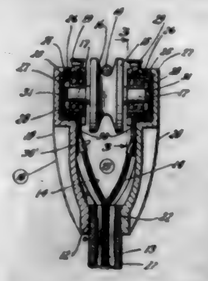
The combination with a hair comb which includes a non-metallic base having flat parallel sides and teeth integral with the base, of a reenforcing member of harder material than the base and formed to closely fit the outer edge and the major portions of the flat sides of the

base, said member comprising a neck bearing on the outer edge of the base, and gripping jaws confined by the neck against the major portions of the sides of the base and forming the sides of a groove which is open from end to



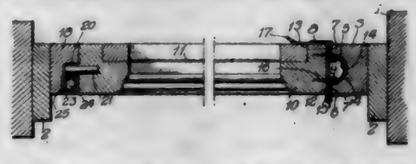
end, said jaws being provided with roughened internal surfaces engaging the base sides, the base being slidable endwise into, and entirely filling said groove, and confined therein against edgewise displacement by the engagement of the roughened surfaces with the base sides.

1,536,486. TELEPHONE DIAPHRAGM. HERMANN FISCHER, New York, N. Y., assignor to C. Brandes, Inc., a Corporation of New York. Filed Oct. 24, 1922. Serial No. 596,629. 6 Claims. (Cl. 171—115.)



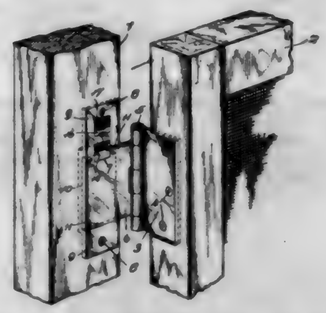
6. In a double pole telephone receiver, a diaphragm having a single *f* hole at its center portion.

1,536,487. ROLLER BEARING. LEO FLESCH, Elberfeld, Germany. Continuation of application Serial No. 474,212, filed June 1, 1921. This application filed July 14, 1922. Serial No. 575,123. 1 Claim. (Cl. 64—61.)



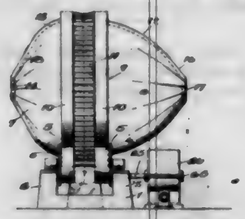
In a roller bearing, the combination of a plurality of rollers each provided with a collar intermediate its ends, a pair of mounting rings for holding the collars in spaced relation, a pair of inner races and a pair of outer races on opposite sides of the collars, ball and socket means for connecting the rollers to the mounting rings, rods for holding the the mounting rings in spaced relation, each rod having a small cross section at its middle portion and a relatively large cross section at each end thereof, and means for clamping said inner and outer races in position.

1,536,488. TROLLEY. EMIL F. LEWIS FRITZ, Chicago, Ill. Filed Feb. 28, 1924. Serial No. 695,666. 5 Claims. (Cl. 191—61.)



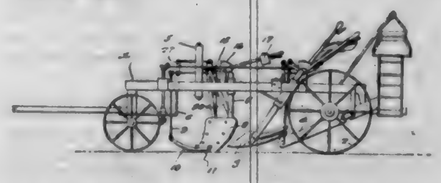
1. In combination with a trolley pole, of a support comprising symmetrical parts detachably secured together and having threaded connections with the pole at one end thereof and being provided with inwardly facing recesses, a trolley wheel having opposite fixed shaft ends journaled in the recesses, and a conductor member having portions extending along the inside of said symmetrical parts into the recesses and being in contact with the end faces of said shaft ends.

1,536,489. WINDOW SCREEN. CHARLES F. GESCHICKTER, Washington, D. C. Filed Oct. 19, 1923. Serial No. 669,592. 10 Claims. (Cl. 20—50.)



1. The combination with a window frame, of an undercut slideway secured to said frame, a resilient slide mounted in said runway, and a frame carried by and hingedly connected to said slideway.

1,536,490. DOOR AND WINDOW SCREEN HINGE. CHARLES F. GESCHICKTER, Washington, D. C. Filed Apr. 3, 1924. Serial No. 704,048. 3 Claims. (Cl. 16—149.)



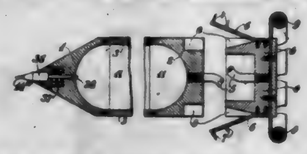
1. A hinge hanging plate having a recess in its outer face adapted to receive the leaf of a hinge, a slot through the plate at the upper end of said recess, and a bolt mounted on said plate and adapted to project into said recess, and means holding said bolt in its operative and inoperative position.

1,536,491. PEBBLE MILL. CHARLES JOSEPH GUNDEROTH, Copperhill, Tenn. Filed Feb. 2, 1924. Serial No. 690,314. 4 Claims. (Cl. 83—73.)

1. A pebble mill comprising a shell formed of a plurality of sections, the end sections providing head and tail sections, the head and tail sections having flat portions and a circular portion merged into the flat portion, an intermediate section, and means for connecting the intermediate section with the end section, said intermediate section being provided with supporting rings.

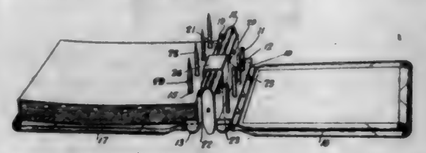
1,536,492. AUTOMATICALLY-ADJUSTING BEET TOPPER. JAMES A. HARWOOD, Wheatland, Wyo. Filed May 16, 1924. Serial No. 713,766. 3 Claims. (Cl. 55—107.)

1. A beet topping mechanism comprising a yoke, a vertically disposed shaft carried by the yoke, a sleeve slidably mounted thereon, a lever mechanism operatively connected with the sleeve, for sliding the same upon the shaft, plates disposed transversely of the sleeve, a collar located between the plates, spring means for holding the collar at the intermediate portion of the sleeve, set screws on the collar adapted to engage one of the plates, links pivotally connecting the plates together, a blade connected with the rear end of the lower plate, a rod connected with the forward end of the lower plate, and a beet top engaging plate carried at the lower end of the rod and disposed in advance of the blade.



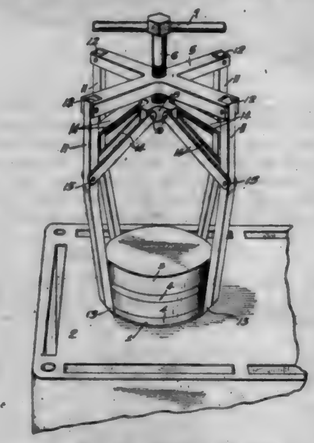
1,536,493. CLOTHESLINE. MORRIS HAUSMAN, Scranton, Pa. Filed Oct. 5, 1922. Serial No. 592,592. 1 Claim. (Cl. 68—3.)

A clothes line provided at intervals along its length with a series of ferrules extending through said line and a series of clamping members each provided with a pivot in one of said ferrules, said clamping members being formed on their inner faces with a series of ridges for engagement with clothes on said line.



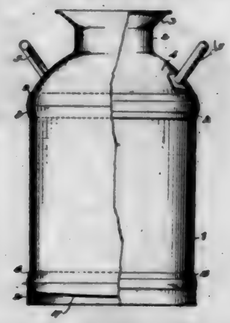
1,536,494. PROJECTILE FOR USE IN CATCHING WHALES AND OTHER MAMMALS. AUGUSTUS HENKES, Rotterdam, Netherlands, assignor to Improved Whaling Limited, Liverpool, England, a Corporation of Great Britain. Filed Dec. 30, 1920. Serial No. 434,013. 23 Claims. (Cl. 102—26.)

17. A projectile adapted to inflate the body of a whale by a gas liberated therefrom in a non-explosive manner, the said projectile having a sleeve adapted to be stripped off on the projectile penetrating the object, a



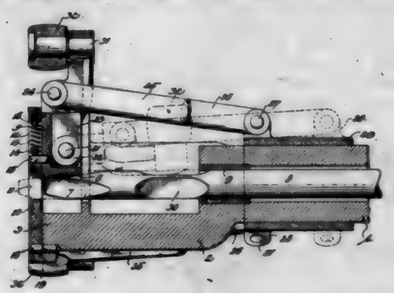
plugging-up member released thereby, and a gripping means similarly released for holding the said member in position to close the entry hole.

1,536,495. LOOSE-LEAF LEDGER. EDWARD W. HILL, Chicago, Ill. Filed Apr. 19, 1921. Serial No. 462,586. 8 Claims. (Cl. 129—8.)



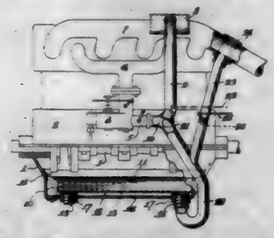
5. In a loose leaf binder, front and rear covers, telescoping posts carried thereby, means for holding the parts together with the posts in telescopic engagement, detachable extension members adapted to engage some of said posts when the posts are disconnected, and detachable means independent of said posts and independent of said extensions for holding the parts of the binder in predetermined relative position to prevent the posts from being brought into alignment when said extensions are in place.

1,536,496. PISTON-RING COMPRESSOR. FREDERICK S. HILL, Glendale, Calif. Filed May 26, 1921. Serial No. 472,629. 3 Claims. (Cl. 29—86.4.)



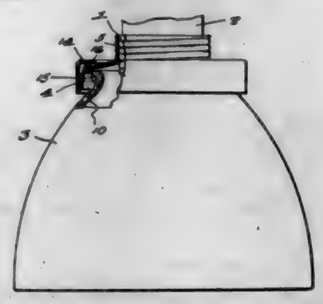
3. A piston ring compressor comprising a support, longitudinally extending arms pivoted to said support, said support and arms being arranged whereby the latter may be received over a piston and piston ring carried thereby, the swinging ends of said arms being inwardly inclined, an operating bolt extending through said support, and a toggle connection between said bolt and said arms for contracting said arms with the tips of said inclined arm ends engaging and compressing said piston ring and the remaining portions of said arms in transversely spaced relation from said piston.

1,536,497. MILK CAN OR CONTAINER. GEZA HORVATH, Detroit, Mich. Filed Nov. 23, 1922. Serial No. 602,712. 6 Claims. (Cl. 220—7.)



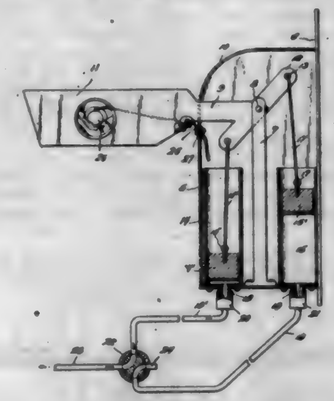
1. A container comprising rings having concave walls, and superposed parts having alining edges seated on and secured to the concave walls of said rings, said rings having a belly in proximity to the confronting edges of said parts.

1,536,498. EXPANSIBLE INTERNAL-SMOOTHING TOOL. GEZA HORVATH, Detroit, Mich. Filed Nov. 23, 1922. Serial No. 602,715. 8 Claims. (Cl. 153—81.)



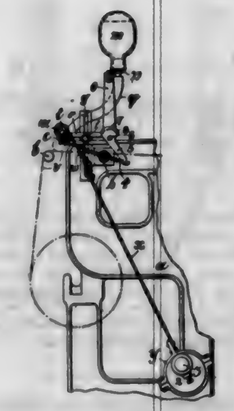
1. An expansible internal smoothing tool comprising a tool body having a head, radially disposed members slidable in the head of said body, foldable and retractible smoothing jaws pivotally supported by said slidable members, means reciprocable on said tool body adapted for folding and unfolding said smoothing jaws, and means in said tool body adapted for distending said smoothing jaws.

1,536,499. OIL COOLING AND HEATING SYSTEM. GEZA HORVATH, Detroit, Mich. Filed Aug. 9, 1923. Serial No. 656,505. 9 Claims. (Cl. 123—196.)



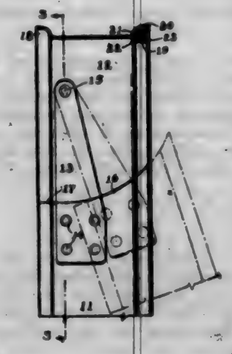
1. An oil cooling device for an internal combustion engine having a crank case, and a carbureter adapted to receive air, said device comprising an oil cooling radiator in the crank case and receiving air from outside of said crank case and discharging air into said carbureter, said oil cooling radiator having an upper wall above the level of oil in said crank case and adapted to cool air in said engine.

1,536,500. SHADE HOLDER FOR LIGHTING FIXTURES. EVERETT W. HOWE, Boston, Mass. Filed Apr. 21, 1924. Serial No. 707,948. 1 Claim. (Cl. 240—129.)



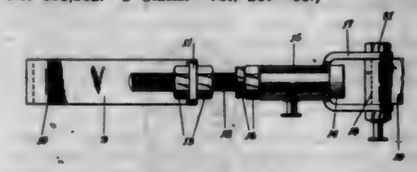
A lamp shade holder comprising a collar having radially disposed spaced arms, T-shaped spring members having their intermediate portions pivoted to the arms and the end portions of the said spring members being concaved transversely, the concaved surfaces being disposed toward the center of the collar and a locking band adapted to engage around the spring members.

1,536,501. DIRECTION INDICATOR FOR VEHICLES. LYDA DELBERT ICARD and HARRY FITZGERALD, Barbourville, W. Va. Filed May 17, 1924. Serial No. 714,038. 1 Claim. (Cl. 116—39.)



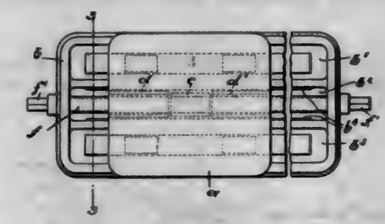
In a direction indicator for vehicles of the character described, a casing adapted to be attached to the vehicle, a pair of spaced vertically arranged cylinders within said casing, pistons movable within said cylinders, an indicating arm pivotally secured at one end to the upper end of a standard also within said casing and adapted to extend outwardly to a slot in said casing, a dingonally extending member formed upon the inner side of the arm, link connections between the opposite ends of said diagonal arms and the cylinder pistons, and valve controlled means whereby said cylinders may be connected to a suction means, whereby, by operation of the valve, a selective piston within its cylinder may be drawn downwardly for moving said signal arms to an indicating or non-indicating position.

1,536,502. MEANS FOR MOISTENING WARPS DURING WEAVING. CHARLES FREDERICK JONES, Newton Heath, Manchester, England. Filed Jan. 10, 1924. Serial No. 685,392. 4 Claims. (Cl. 139—36.)



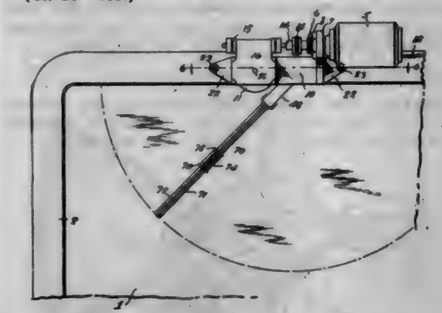
1. A warp moistening apparatus, comprising a stationary support, a water supply pipe mounted to rock in the support and having perforations in one side, a moistening pad secured at one side of the pipe over its perforations, a spring which moves the pipe axially in one direction to press the pad on the threads, and means for moving the pipe axially in the reverse direction at intervals to relieve the threads from the pressure of the pad.

1,536,503. VEHICLE WHEEL RIM. WALTER C. KEYS, Cleveland, Ohio, assignor, by mesne assignments, to James H. Wagenhorst, Jackson, Mich. Filed Sept. 20, 1919. Serial No. 325,242. 7 Claims. (Cl. 301—32.)



1. A vehicle wheel rim comprising a plurality of arcuate sections the ends of which are normally in abutting relation throughout their width, said sections being hinged together at points removed from their ends whereby they are capable of relative movement laterally of the plane of the rim and in such lateral movement the ends are relatively displaced laterally, and a one-piece detachable flange-ring on said rim adapted to normally hold said rim ends against relative movement.

1,536,504. VEHICLE SUSPENSION DEVICE. NATHAN H. KING, Modesto, Calif. Filed May 11, 1923. Serial No. 638,162. 1 Claim. (Cl. 267—66.)

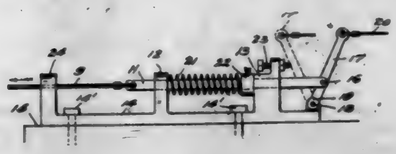


A tensioning rod for the structure described comprising a flat bar having a sleeve at one end and an upturned flange at its opposite end, a bolt adjustably and removably mounted through the flange, and a yoked sleeve, the bolt being turnably mounted in the sleeve.

1,536,505. APPLIANCE FOR REPLACING DERAILED RAILROAD VEHICLES. PAUL KREUTHAGE, Cannstatt, Germany. Filed Nov. 8, 1924. Serial No. 748,669. 8 Claims. (Cl. 104—273.)

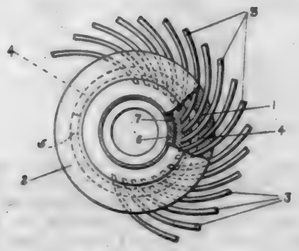
1. Device for replacing on the track derailed railroad vehicles comprising a base plate, a truck guided longitudinally on said plate, a screw spindle extending longitudinally on and mounted in said plate for rotation, a nut secured against rotation on said spindle and lugs projecting from said truck and embracing said nut.

1,536,506. WINDSHIELD CLEANER. CHARLES F. LAGANKE, East Cleveland, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 11, 1921. Serial No. 460,382. 10 Claims. (Cl. 15—253.)



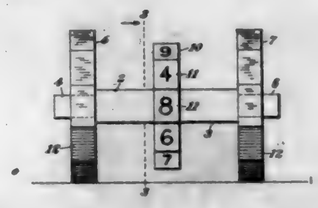
1. In a device of the character set forth, the combination of a casing designed to be attached to the inner side of a windshield frame, a motor supported by and exteriorly of the casing, a wiper supported on the outer side of the windshield in cleaning relation thereto, transmission mechanism within the casing, driving connections between the motor and said mechanism, said connections involving means for manually actuating said mechanism, and operative connections between the mechanism and the wiper.

1,536,507. HALTER. JOHN LAWSON, Meeting Creek, Alberta, Canada. Filed Mar. 1, 1924. Serial No. 696,251. 4 Claims. (Cl. 54—24.)



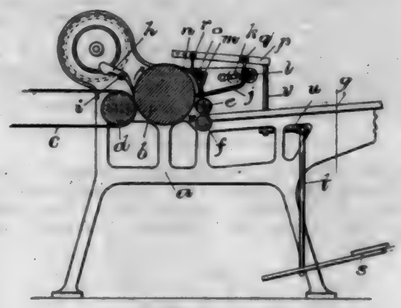
1. A halter comprising a plurality of similar fittings having a pair of openings separated by a cross web, a tie ring, and a single length of rope passed twice through all of the fittings and once through the tie ring to form a nose loop, a head loop and a throat loop.

1,536,508. WHISTLE-CONTROLLING ATTACHMENT. ALEXANDER LILJA, Noti, Oreg. Filed July 9, 1923. Serial No. 650,284. 3 Claims. (Cl. 74—5.)



1. A whistle control attachment embodying a whistle valve actuating lever, a guide element, means receivable in the guide element and connected with the actuating lever for moving the same, a combination adjusting and stop member carried by the guide element and adapted to intercept the lever at a predetermined point in its path of travel, and a combination adjusting and stop member carried by the means for moving the lever for regulating the movement of said means, said adjusting and stop members being disposed for independent and relatively parallel movement along a line defined by the longitudinal axis of the lever moving means.

1,536,509. HUB AND SPOKE CONNECTION. NICOLÁS LOZANO, Marcos Paz, Argentina. Filed Feb. 23, 1924. Serial No. 694,616. 1 Claim. (Cl. 301—84.)

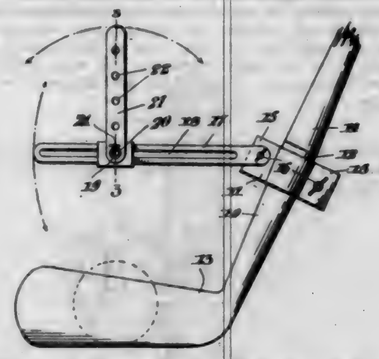


An improved hub and spoke connection comprising a casing; a plurality of spring blades in said casing each having an opening therein; and a spring ring in said openings adapted to secure the blades in said casing.

1,536,510. GAME APPARATUS. PATRICK J. MCGRATH and JOHN W. HALLOWELL, Brooklyn, N. Y. Filed July 12, 1921. Serial No. 484,092. 4 Claims. (Cl. 273—143.)

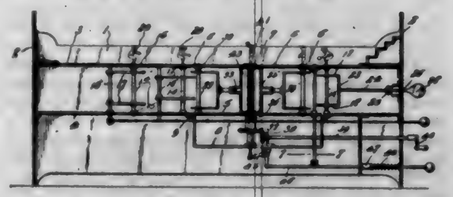
2. The combination of two members of substantially equal diameter mounted on a common axis and having alined flat peripheral bearing surfaces substantially concentric to the axis, a member of less diameter on the same axis having a series of characters spaced circumferentially, equal in number and alined respectively to the said peripheral bearing surfaces and means to prevent relative turning of said members.

1,536,511. GUMMING MACHINE. ANDREW BROWN MCLAREN, Toronto, Ontario, Canada. Filed Aug. 12, 1921. Serial No. 491,757. 1 Claim. (Cl. 91—49.)



A gumming machine, in combination with the gum reservoir thereof, said gum reservoir consisting of a metal trough formed with a declining bottom, said reservoir located in parallel and juxtaposition with the distributing roller forming an essential part thereof, an adjustable gate fitted across the back end of the said reservoir, a scraper connected in hinged relation across the top of said gate, said scraper adapted to engage in tangential relation against the periphery of the said distributing roller, a foot lever arranged in conjunction with the said gate and said reservoir, said gate adapted to be vertically adjusted by the said foot lever for the purpose of permitting a determined quantity of glue to escape from the said reservoir onto the periphery of the said distributing roller, the said scraper adapted to gather and direct back into the said reservoir the superfluous glue from the face of the said roller, substantially as specified.

1,536,512. DEVICE FOR GOLF INSTRUCTION. ARTHUR CAMPBELL MCLAREN, Victoria, British Columbia, Canada. Filed July 14, 1924. Serial No. 728,042. 5 Claims. (Cl. 273—35.)

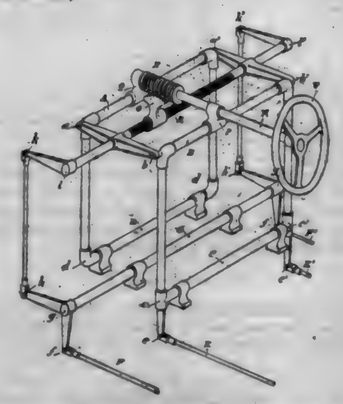


4. The combination with a golf club, of means for indicating the swing of the golf club and notifying the errors in the travel of said swing, comprising a flexible directing cord or the like anchored at both ends, an

arm parallel with the golf club head provided with an adjustable arm at right angles thereto, having a series of orifices therein adapted to individually receive there-

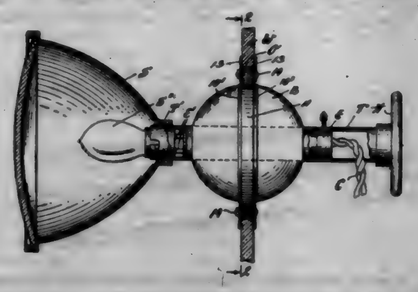
through said flexible directing means, and means on the golf club shank for adjustably supporting said spaced arm.

1,536,513. MECHANICAL BASEBALL GAME. HARRY MCNALL, Pittsburgh, Pa. Filed July 17, 1922. Serial No. 575,442. 3 Claims. (Cl. 273—89.)



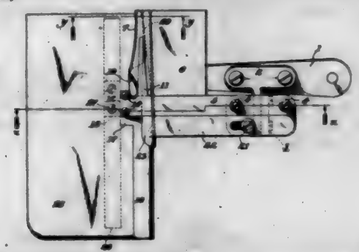
1. A game apparatus including a pair of parallel spaced boards having registering slots provided therein, a tube passing through the slots and provided with collars bearing against the affronting faces of the board to prevent the tubes from moving transversely through the slots, and means for moving the tubes longitudinally of the slots, a figure, a base pin on the figure adapted to be inserted in one end of the tube for movement on one of the boards.

1,536,514. CUTTING MECHANISM FOR HARVESTING MACHINES. FREDERICK W. MEHLS, Thief River Falls, Minn., assignor of forty-nine one-hundredths to John H. Fulton, Thief River Falls, Minn. Filed Feb. 12, 1923. Serial No. 618,577. 1 Claim. (Cl. 56—295.)



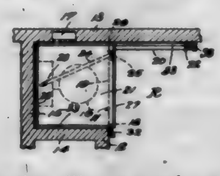
A cutting mechanism for harvesters or the like comprising a bar, a plurality of separable guard sections secured to said bar, a shaft mounted within each of the sections, the shafts of the sections being substantially aligned when the sections are applied to the bar, a coupling connection between the shafts of adjacent sections when applied, the shaft of each section being provided with a worm, a worm wheel coacting with the worm of the shaft, said wheel being supported by the section, a cutting element operatively engaged with the worm wheel, the coupling connection between the shafts on adjacent sections comprising two interlocking sleeve elements, each being carried by an adjacent shaft, said coupling connection permitting the shaft sections to be disconnected when the cutter mechanism is disassembled, and means for constantly urging the interlocking sleeve elements together when in operative or assembled position.

1,536,515. CONTROL POST. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed May 20, 1924. Serial No. 714,754. 7 Claims. (Cl. 244—29.)



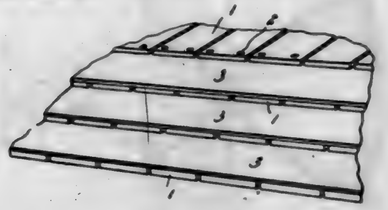
1. A control device for aircraft comprising, in combination with an elevator and ailerons, a pair of jointed parallelograms, levers for said elevator connected to said parallelograms, means connecting said parallelograms, a shaft slidable, mounted on said means between said parallelograms, a hand wheel carried by the shaft, a worm carried by the shaft, a bar pivotally carried by said parallelograms and having a splined portion, a worm sector slidably mounted in the splined portion of the bar and having engagement with said worm, a pair of parallelograms operatively connected to said bar, and levers connecting said ailerons and said last named parallelograms.

1,536,516. MEANS FOR SUPPORTING LAMPS. HERMAN H. MEYER, Jr., New York, N. Y. Filed Nov. 9, 1923. Serial No. 673,635. 3 Claims. (Cl. 240—61.)



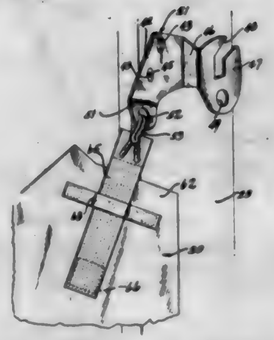
1. In a device for supporting a spotlight in the windshield of an automobile, a spherical element and a socket therefor adapted to be retained in said windshield, said socket comprising two resilient annular members having laterally curved parts engaging around said spherical element and a resilient band embracing said members and tightening them on said spherical element.

1,536,517. BORDER-FABRIC-STRIP GUIDE FOR SEWING MACHINES. WILLIAM OLDFIELD, Passaic, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,557. 8 Claims. (Cl. 112—137.)



6. In a border-fabric strip-guiding attachment for sewing machines, the combination with upper and lower edge-turning scrolls, and scroll-supporting means, of a central-fold forming member comprising a substantially parallel walled U-shaped tongue having its free edges projecting within said scrolls, and supporting means in advance of said scrolls for said member affording preliminary edge-guides for a border-fabric strip.

1,536,518. EXTENSIBLE WALL CABINET. EDWARD THOMAS OSBORN, Seattle, Wash. Filed May 13, 1924. Serial No. 712,985. 5 Claims. (Cl. 20—1.11.)



1. The combination with a room and a compartment in one of the walls thereof, of a structure comprising members hingedly connected to adjacent walls of said room so as to be swung into the room to enclose a space therein coextensive with the compartment, a ceiling member for said space, and means controlled by one of said doors to effect movement of the ceiling member to and from a concealed position within the compartment.

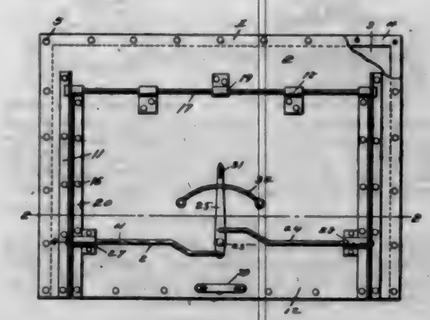
1,536,519. ROOF. EDWIN F. PARKER, Kansas City, Mo. Filed Apr. 30, 1923. Serial No. 635,422. 1 Claim. (Cl. 108—9.)

A roof structure comprising longitudinally tapered shingles arranged in overlapping rows upon a support, a plane strip of pliable material for each row of shingles, the strips being applied to the exposed upper surfaces of the rows of shingles, each strip having one of its edges flush with the butt end edges of one row of the shingles, and the opposite edge portion of the strip being inserted between the overlapping portions of adjacent rows of the shingles, securing devices passing transversely through the overlapping portions of adjacent rows of the shingles and passing through the edge portions of the strips, which are inserted between the overlapping portions of the adjacent rows of shingles, said securing devices entering the support, the arrangement being such that the butt end edges of the shingles are exposed above the upper surface of the strip which is applied to the upper surface of the next adjacent row of shingles.

1,536,520. AWNING STRUCTURE. GEORGE F. PARKER, Macon, Ga. Filed Apr. 20, 1922. Serial No. 555,757. 5 Claims. (Cl. 156—44.)

4. In an awning structure, the combination with a window casing, of a frame pivotally connected thereto, bracket members mounted upon said casing at a point remote from the connection of said frame thereto, a member supported by said brackets, a cover connected to the forward end of said frame and attached to said member, awning side panels connected to the side portions of said frame and extending upwardly along said cover to have an end thereof adjacent said brackets, an elastic tab upon the ends of the side pieces adjacent said brackets, and snap fastener means connected to said elastic tabs for attachment to said bracket whereby the side panels may be supported in taut relation from said frame.

1,536,521. PUMP FOR LAND-BURNING MACHINES. VERNON WOOD PARRISH, Medicine Hat, Alberta, Canada. Filed Jan. 19, 1924. Serial No. 687,285. 3 Claims. (Cl. 103—153.)

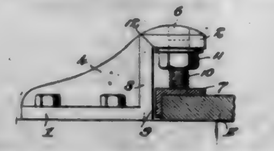


1. In a machine of the character described, and in combination, a pump, and means for regulating the pressure exerted by said pump, and comprising a casing, a pump chamber in said casing, a piston for said chamber, a spring-actuated ball valve communicating with the pump chamber, a ball-operated discharge valve communicating with the pump chamber, and fuel conveying pipes, the second spring-actuated ball valve communicating with the first-mentioned ball valve and with the discharge valve whereby, on the pressure exceeding a predetermined limit, the fuel is returned to the first-mentioned or intake ball valve, and to the pump chamber, and pump means communicating with the ball discharge valve.

1,536,522. EXTENSION PLUG FOR ELECTRIC SOCKETS. LOUIS P. PELLISSIER, Torrington, Conn. Filed Oct. 17, 1922. Serial No. 595,071. 1 Claim. (Cl. 175—343.)

In a lengthened separable attachment plug adapted to be connected to an electric lamp socket located in a position where it would be awkward or impossible to connect the ordinary "short" plug, a tubular casing, a pair of blocks fitting within the ends of said casing, each of said blocks having a pair of longitudinal conducting strips for connection with the male and female sections of an ordinary separable electric attachment plug, a pair of longitudinal conductors located in the central part of said casing and lying in substantial alinement with said strips, each of said blocks having an insulating barrier projecting inwardly for a substantial distance to separate said centrally located conductors from each other.

1,536,523. END-GATE CONSTRUCTION. VICTOR T. C. PETERSON, Atlanta, Nebr. Filed Aug. 5, 1924. Serial No. 730,288. 2 Claims. (Cl. 296—51.)



1. An end gate structure including a pair of spaced parallel plates having registering openings therein, one opening being smaller than the other, channel irons holding the plates in parallel spaced relation, two of said channel irons being disposed along the edges of the openings, and a door for said opening including a pair of spaced parallel walls, channel irons holding the walls in spaced parallel relationship, a pair of angle irons on the plate having the larger opening, one on each side of said larger opening, a rod attached to the upper edge of the door and extended through the angle irons so as to hingedly mount the door on the wall having the larger opening so that it may be swung into the openings for closing both openings, and slidable rods on the door projectable through the angle irons.

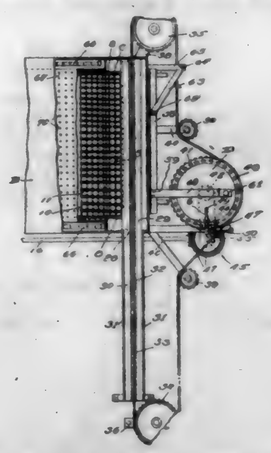
1,536,524. PROCESS FOR THE MANUFACTURE OF ARMOR PLATING. VICTOR PFERSDORFF, Hayange, Lorraine, France. Filed Aug. 8, 1922. Serial No. 580,547. 1 Claim. (Cl. 29—180.)

A process for the improvement of armor plates by means of hardening material, which consists in distributing a granular hardening material, of the abrasive type, over the metallic plate body in the form of a layer or stratum and in pressing it into said plate body in a warm state thereof to form an integral strengthening and protecting layer on the plate body capable of increasing its resistance to penetration.

1,536,525. CLOSURE FOR GRAIN CONTAINERS. WALTER H. PLATH, Baker, Mont. Filed May 16, 1923. Serial No. 639,298. 5 Claims. (Cl. 20—30.)

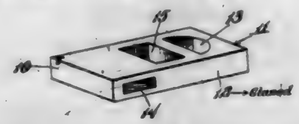
2. A device of the type described comprising a plurality of brackets, each formed with a head provided with an opening therein, a bar receivable beneath the heads of the brackets, studs formed on the bar, and means carried by the studs and operable upon the heads for adjusting the pressure exerted by the bar upon an object or objects therebeneath.

1,536,526. WINDOW CLEANER. THOMAS B. POLK, Seattle, Wash. Filed Sept. 15, 1922. Serial No. 588,377. 5 Claims. (Cl. 15—258.)



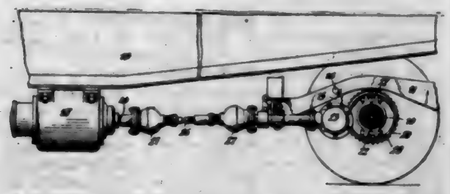
2. A window cleaning device having a cylinder mounted for reciprocatory movements across a window, a support for said cylinder comprising a stationary rod extending axially through both ends of the cylinder, a cleaning element, an arm therefor depending from and carried by said cylinder, a stationary guide rod disposed at a higher elevation than the cylinder and in parallel relation with the aforesaid rod, and a wheel carried by said cylinder and tracking against said guide rod.

1,536,527. EXHAUST BOX AND COOKER. CLIFFORD J. PUGH, Salem, Oreg. Filed Nov. 20, 1922. Serial No. 602,080. 1 Claim. (Cl. 198—31.)



An apparatus for preheating cans of fruit or the like before sealing the cans comprising, in combination, an exhaust box, a conveyor travelling therethrough, a runway extending within the box adjacent to an end of the conveyor and transversely of said conveyor, a member disposed transversely of the conveyor and outwardly of the runway, said member being movable transversely of the runway, a rotatable member positioned adjacent to the box, and beams operatively engaged with one end portion of the member and with the rotatable member, an outstanding arm carried by the box adjacent the opposite end of the member, a rigid link pivotally

engaged with the outer end portion of said arm and the member, and means for rotating the rotary member, such rotation of the rotary member intermittently

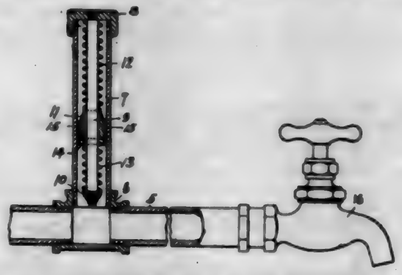


moving the first named member across the runway, the movement of said first named member across the runway in one direction forcing the cans upon the runway within the box upon the conveyor.

1,536,528. BUILDING BLOCK OR BRICK. CHARLES J. REEMANN, St. Louis, Mo. Filed June 5, 1924. Serial No. 718,095. 1 Claim. (Cl. 72—41.)

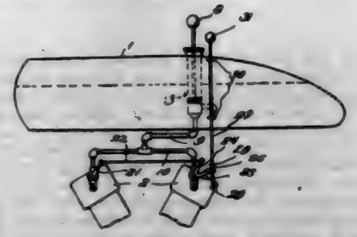
A building brick comprising a flat rectangular slab having adjacent one end face a vertical opening therethrough and adjacent the opposite end face a horizontal opening therethrough and intermediate said openings a second vertical opening, the end face adjacent the first named vertical opening and the adjacent portions of the side faces of the slab being glazed, the side of the second named vertical opening paralleling the glazed end face of the slab, the end walls of said second vertical opening being separated from the side walls by thin, readily breakable walls.

1,536,529. DRIVING MECHANISM FOR RAILWAY-CAR GENERATORS. WILLARD REA RICHARDS, Chicago, Ill. Filed Mar. 10, 1924. Serial No. 698,341. 5 Claims. (Cl. 105—109.)



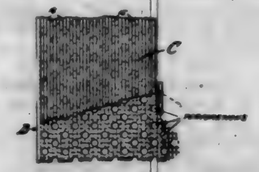
1. The combination with a car-body and a car-axle, of a generator mounted on the car body, a gear wheel mounted on the axle, a shaft-hanger supported for swinging movement toward and from said axle, a shaft journaled in said hanger parallel with said axle, a pinion mounted on said shaft and meshing with said gear wheel, co-operating distance drums mounted on said axle and said shaft for maintaining the gear wheel and the pinion constantly in proper mesh regardless of any movements of the car axle relative to the driven shaft, and means for transmitting motion from said shaft to said generator.

1,536,530. BUTTON. HYMAN ROSEN, New York, N. Y. Filed July 24, 1922. Serial No. 577,209. 6 Claims. (Cl. 24—93.)



1. A button of the character described comprising two interlocking halves and a fixed stem extending from the periphery of the button and secured between said halves on the interlockment thereof.

1,536,531. HYDRAULIC SHOCK ABSORBER. JOHN HENRY SCHERMANN, Pittsburgh, Pa. Filed Apr. 22, 1924. Serial No. 708,197. 5 Claims. (Cl. 137—71.)

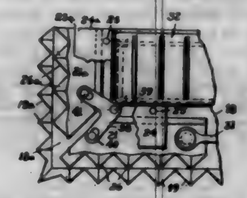


1. The combination with a water line, of a shock absorber comprising a chamber disposed outside of but tapped into said line, and a metallic piston fitting within said chamber and normally disposed intermediate the ends thereof, a communicating passage being provided between the opposite sides of said piston.

1,536,532. PRIMING MEANS FOR MOTOR-CYCLE ENGINES. ARTHUR SCHULZE and HARRISON SCHULZ, Deer Plain, Ill. Filed Apr. 19, 1924. Serial No. 707,709. 1 Claim. (Cl. 123—180.)

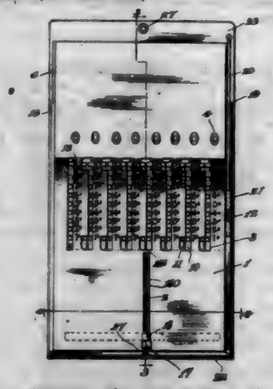
A structure of the class described comprising a manually operated pump including a cylinder and plunger reciprocable therein, a valved intake connected with said cylinder, and a discharge pipe leading from the bottom of the cylinder, oppositely extending branch pipes connected with said discharge pipe, pet cocks to which the outer ends of said branch pipes are connected, said cocks including a casing provided with parallel bores, the branch pipe communicating with one bore, and the other bore constituting an air passage, and being open to the atmosphere, a rotary turn plug in each casing, said plug being provided with ports in registry with each of said bores, a crank arm connected with one turn plug, a bell crank connected with the other turn plug, a link connecting said arm and one of the arms of the bell crank, and an operating rod connected to the remaining arm of the bell crank.

1,536,533. WET-WEB CARRIER FOR PULP AND PAPER MACHINES. WILLIAM E. SHEEHAN, Albany, N. Y. Filed Apr. 1, 1924. Serial No. 703,368. 5 Claims. (Cl. 92—49.)



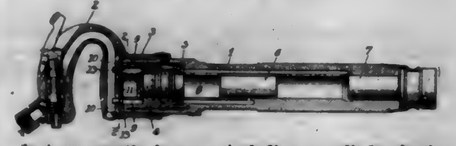
2. In pulp and paper machines the combination of a web forming device, press rolls, and conveying means adapted to convey the wet web of pulp from the web forming device to and between the press rolls said means including a perforated endless base of a resilient material, such as rubber, having a covering of yarns attached to the surface thereof.

1,536,534. COMB. BENJAMIN SILVERMAN, Chattanooga, Tenn., assignor of one-half to J. Russel Earp, Chattanooga, Tenn. Filed July 23, 1924. Serial No. 727,644. 3 Claims. (Cl. 132—14.)



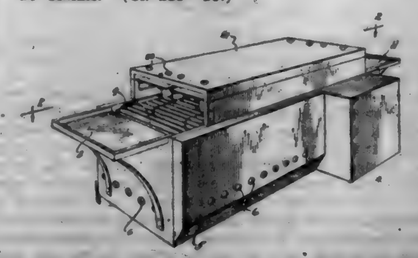
1. In a device of the kind described, a comb head comprising a cylindrical tube having an internally threaded portion at each end and a handle provided with a threaded shank selectively engageable in the threaded ends of said tube.

1,536,535. LOADING APPARATUS. CLYDE J. SMITH, Uniontown, Pa. Filed Apr. 27, 1923. Serial No. 635,001. 2 Claims. (Cl. 198—10.)



1. In a loading machine, a movable frame carrying a shoe arranged to move beneath a mass of loose material, a beveled toothed material agitating and lifting device slidable on the shoe at right angles to the movement of the latter, means to reciprocate said device and a carrier to receive the material under which the shoe and agitator have moved.

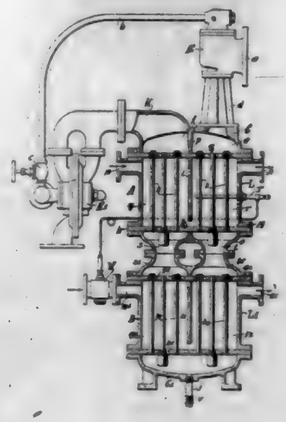
1,536,536. CALCULATOR. JOHN ANTHONY SMITH, Spokane, Wash. Filed Dec. 8, 1923. Serial No. 678,297. 3 Claims. (Cl. 235—69.)



1. In a calculator, the combination of a face plate, a guide plate supported below the face plate, and a plurality of bowed number strips slidably mounted upon the guide plate between the same and the face plate and provided at their lower ends with projections bearing against the under surface of the face plate.

1,536,537. PNEUMATIC HAMMER. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 7, 1922. Serial No. 579,988. 7 Claims. (Cl. 121—26.)

1. A pneumatic hammer including a cylinder having a piston chamber, a valve block located in the rear end of the cylinder and having a central bore, a hollow valve in such block, said bore and valve forming the rear end of the piston chamber, a handle having a socket secured to the cylinder and clamping the block in place, and a gasket arranged between the rear end of the block and handle socket and closing the rear end of the piston chamber, said block having a series of ports and said gasket having a corresponding series of ports registering therewith and provided with a projection to engage one of the ports in the block.

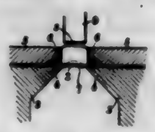


1,536,538. ELECTRIC GRILL. VERNON B. STOUFFER, Detroit, Mich. Filed Dec. 8, 1924. Serial No. 754,466. 10 Claims. (Cl. 219—19.)

1. An electric grill having an endless conveyor arranged to traverse a predetermined path during its upper flight, a single electric heating element, said element be-

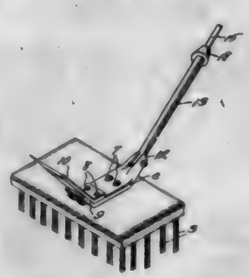
ing adjustably secured above the central portion of the upper flight of the conveyor, a casing covering the heating element, and means for moving the conveyor at any desired speed.

1,536,539. FLUID-COMPRESSING APPARATUS. ROBERT SUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1920. Serial No. 379,718. 38 Claims. (Cl. 230—13.)



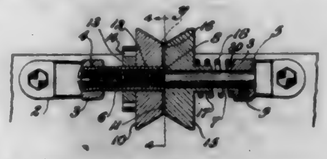
1. The combination with an ejector, of condenser structure into which said ejector discharges comprising a plurality of condenser units, and means for subjecting said units respectively to different cooling media.

1,536,540. FINGER RING. DAVID S. THOMAS, Brookline, Mass., assignor to Jason Weiler, William Weiler, and Gustavus Weiler, doing business under the firm name of Jason Weiler & Sons, Boston, Mass. Filed Mar. 11, 1924. Serial No. 698,363. 3 Claims. (Cl. 63—16.)



2. A pair of finger rings including a primary ring having coupling means wholly within its body, and embodied in an edge portion forming a wall of an internal cavity, and provided with a keyhole; and a secondary ring having coupling means wholly outside its outer surface, and embodied in a key projecting from an edge face of the secondary ring and adapted to be inserted in said key-hole and engage the edge portion of the primary ring in which the key-hole is formed, the arrangement being such that the key is insertible in the key-hole only when the auxiliary ring is out of coincidence with the primary ring, and is interengaged with said edge portion when the two rings coincide.

1,536,541. PROCESS AND APPARATUS FOR MAGNETIC SEPARATION. GEORG ULLICH, Magdeburg, Germany, assignor to the Firm Fried. Krupp Aktiengesellschaft Grusonwerk, Madgeburg-Buckau, Germany. Filed May 1, 1923. Serial No. 636,032. 10 Claims. (Cl. 83—71.)



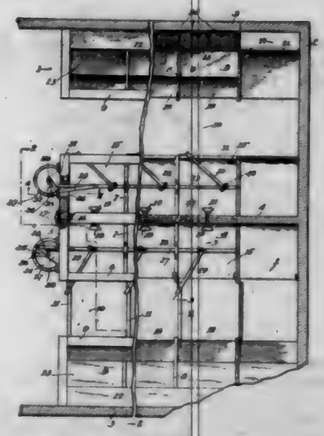
4. A process of magnetic separation consisting in conducting the material to be separated through a plurality of annular zones of a magnetic field, said zones lying in radial succession relative to a central axis, the strength of said fields increasing progressively from the inmost whereby the material passes through the outer field, to the inner field, and again through the outer field, the material being first subjected to magnetic influence on reaching the inner field.

1,536,542. COMBINATION FIRE BRUSH AND HOE. HERMAN A. WEGNER, Thief River Falls, Minn. Filed Oct. 15, 1923. Serial No. 668,754. 1 Claim. (Cl. 15—111.)

A brush including a flat rigid bristle plate having rectangular perforations, a plurality of flat-wire bristles fitted in each of said perforations and having laterally directed upper ends, a flat rigid cover plate disposed upon the bristle plate and having its margin turned about the edges of the bristle plate for securing said plates together, said laterally directed upper ends of the bristles being clamped between the lower surface of the cover plate and the upper surface of said bristle plate, and means securing the central portions of said plates together.

1,536,543. STRAND DETECTOR AND DETAINER. WILLIAM P. WILLIAMSON, Ludlow, Mass., assignor to Ludlow Manufacturing Associates, trustees, Boston, Mass. Filed Mar. 3, 1924. Serial No. 696,566. 10 Claims. (Cl. 242—36.)

2. In a filament handling machine having therein means to cause a filament to run past a point, the combination with said means of a guide about which the filament passes during operation of the machine, and having therein a slot of predetermined width adapted to be entered by a portion of the filament of less than the said predetermined thickness, thereby to detain the running filament.

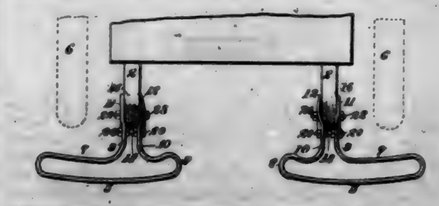


1,536,544. PROCESS OF PURIFYING ETHERS. HERMAN F. WILLKIE, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Sept. 10, 1921. Serial No. 499,616. 11 Claims. (Cl. 260—151.)

1. A process of purifying an ether comprising washing it with water and then with an oxidising liquid.

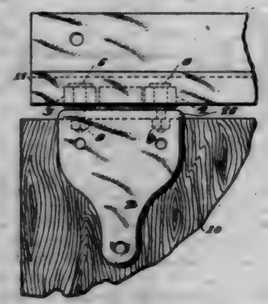
1,536,545. PURIFICATION OF ESTERS. HERMAN F. WILLKIE, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 29, 1921. Serial No. 525,756. 8 Claims. (Cl. 260—106.)

1. The process of purifying an impure amyl acetate comprising treating it with an oxidising agent while cooling the reaction mixture.



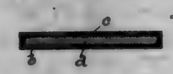
1,536,546. SHOWER AND DRESSING ROOM UNITS. CHARLES L. WILSON, Los Angeles, Calif., assignor to Charles Lewis Wilson, Incorporated, a Corporation of California. Filed Dec. 19, 1924. Serial No. 757,054. 11 Claims. (Cl. 20—1.)

1. A room having a plurality of longitudinally spaced transverse partitions at opposite sides thereof forming a central corridor extending the length of said room and compartments one beyond another at opposite sides of said corridor and opening into the latter opposite one another, showers in the respective compartments at one side of said corridor, the compartments at the opposite side of said corridor forming dressing rooms, closure means hinged at the openings for the respective shower rooms and adapted when swung in opposite directions to either close the shower rooms and provide an unobstructed central corridor communicating with the respective dressing rooms or extend across said central corridor and against the openings for the respective dressing rooms so that next adjacent closure means provide side closures for transverse passageways connecting opposite shower and dressing rooms, and means for dependently swinging said closure means to their respective positions.



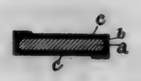
1,536,547. VEHICLE BUMPER. GEORGE F. WILSON and LOUIS M. GOLD, Sacramento, Calif. Filed Oct. 20, 1923. Serial No. 669,702. 3 Claims. (Cl. 293—55.)

1. For use with an automobile having a frame provided with downwardly inclined horns at its end, a bumper comprising in part a pair of attaching portions for embracing a horn, said attaching portions being inclined downwardly from their associated supporting arms, one of said attaching portions being outwardly curved to afford a resilient clamp and the other being angularly bent outwardly providing between them an enlarged recess for receiving opposite sides of the horn,



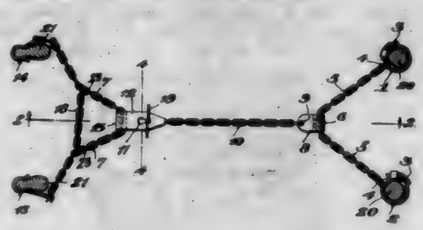
said curved and bent portions affording horn engaging flanges at their opposite terminals, and means passing through said attaching portions and said horn to secure the bumper thereto with said supporting arms substantially horizontally disposed.

1,536,548. DOOR HANGER. HENRY WOLTERS and MILO HARTMAN, Centralia, Wash. Filed Oct. 5, 1922. Serial No. 592,594. 1 Claim. (Cl. 16—91.)



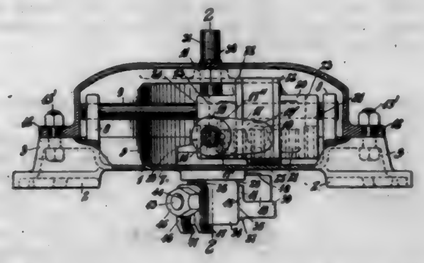
Means for supporting and guiding a sliding freight car door, said door having a longitudinal channeled bottom, comprising a plurality of brackets arranged at the door bottom, each of said brackets comprising a plate attachable to the car body, a flange at substantially right angles to said plate, a bearing roller having its axis perpendicular to said plate, a segment of said roller projecting through an aperture in said flange, a guide roller having a substantially perpendicular axis mounted on said flange and lying substantially in the plane of said bearing roller, and a wall on said flange spaced outwardly from said rollers for guarding the latter, said rollers projecting within said channeled door bottom for respectively supporting and guiding the door; and means for guiding the door top.

1,536,549. LIGHT-COLORED ASPHALTIC SURFACE. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 27, 1920. Serial No. 369,294. Renewed Oct. 8, 1924. 5 Claims. (Cl. 91—68.)



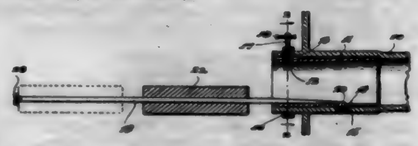
1. The combination with an article having an asphaltic or like hydrocarbonaceous surface, of a light-colored flexible, thin layer or film affixed directly to said asphaltic surface to contact therewith and having a base and a light-colored pigment whose color is substantially unaffected by said asphaltic surface.

1,536,550. PROTECTED METAL ARTICLE. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1921. Serial No. 455,963. 1 Claim. (Cl. 154—45.9.)



As an improved article of manufacture, a protected metal article comprising an article of corrodible metal, a layer of bituminous or like hydrocarbonaceous material covering said corrodible metal, and a metallic envelope of relatively non-corrodible metal foil covering the opposite surfaces and side edges of the corrodible metal article and affixed thereto by the interposed layer of hydrocarbonaceous material.

1,536,551. HOPPLE. THEODORE YOUNG, Waverly, St. Regis Falls, N. Y. Filed Oct. 24, 1924. Serial No. 745,579. 2 Claims. (Cl. 119—128.)



1. A hopple or anti-kicking device, comprising adjustable straps for the front legs, loops secured to said straps, a chain having its ends secured in said loops, a connector member having an eye through which said chain is passed, a second connector member having an eye and a key-hole slot, a second chain secured to said first member and adjustably engaged in said slot of the second member, a pair of hook shackles for the hind legs, one of said shackles having a key-hole slot, a third chain having one end engaged in said slot of one shackle and the other end secured to the other shackle, and a fourth chain passed through said eye of said second member and detachably connected to said third chain.

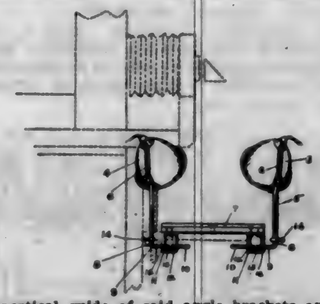
1,536,552. SWITCH STAND. FRANK C. ANDERSON, Cincinnati, Ohio. Filed Dec. 17, 1924. Serial No. 756,455. 31 Claims. (Cl. 246—411.)

3. In a switch-stand, mechanism comprising a lever and a crank coaxially connected, a rack engaged by said crank and having a series of teeth, a gear meshing with said teeth, means to operatively connect said gear to a switch, and means for operatively supporting said mechanism.

1,536,553. ROLLER-BEARING-SLEEVE PULLER. SIGO A. ANDERSON, Jr., Whipple Barracks, Ariz., assignor of three-fourths to Enoch C. Seale, Whipple Barracks, Ariz. Filed Jan. 27, 1923. Serial No. 615,269. 1 Claim. (Cl. 29—88.2.)

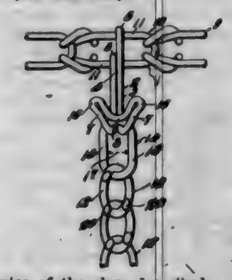
1. In a roller bearing sleeve pulling device, the combination of a unitary shank having a flat forward end portion provided at one side thereof with a terminal disc-shaped knob to fit in a circular opening in a bearing sleeve, the periphery of the knob being undercut at the rear side of the knob to coact with the rear portion of the wall of said opening for resisting dislodgment of the knob by the force of rearward impact upon the shank, a nut at the rear end of the shank, and a removable sleeve slidable upon the shank between the flat forward end portion thereof and said nut and movable to impact the nut for driving the shank rearwardly and removing the sleeve.

1,536,554. FRUIT GATHERER. GURNEY A. AYERS, Mount Airy, N. C. Filed June 1, 1921. Serial No. 474,223. 1 Claim. (Cl. 56—339.)



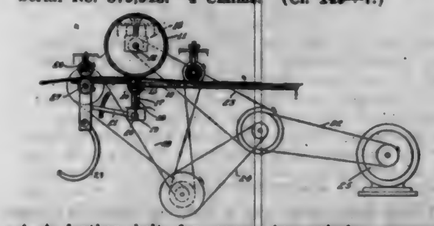
A fruit picking device comprising an elongated handle, a flat bar secured at the upper end of the handle provided with a laterally extending supporting tongue arranged over the end of the handle, a hoop secured to said tongue disposed in the same plane as the handle, a plurality of gathering fingers secured to the hoop and extending outwardly therefrom, a gathering chute provided with a lateral extension having an opening therein for receiving the handle and a plurality of spaced eyelets for receiving certain of the gathering fingers, and inwardly directed hooks formed on the fingers for facilitating the picking of the fruit and for preventing the displacement of the chute from off of said fingers.

1,536,555. ILLUMINATING APPARATUS FOR PHOTOGRAPHIC COPY BOARDS. WEBB W. AYRES, Pavilion, N. Y., assignor of three-eighths to Richard Walter White and two-eighths to Ambrose A. Merry, both of Rochester, N. Y. Filed Apr. 1, 1922. Serial No. 548,595. 3 Claims. (Cl. 240—2.)



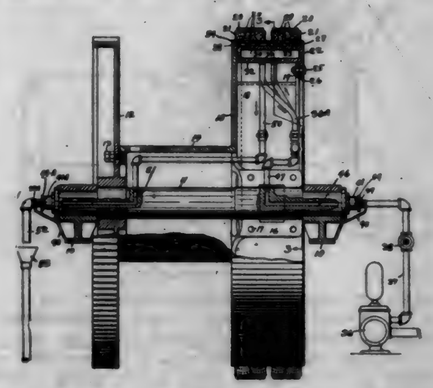
1. In an apparatus for illuminating a photographic copy board, the combination of a series of reflectors grouped at equal distances from the center of the copy board on all sides or corners thereof at a predetermined angle thereto, a support for each of said reflectors mounted on the under side of the copy board, an angle bracket mounted to horizontally slide in and out of each

of said supports and projecting above said copy board yielding means adapted to increase the frictional contact of said angle brackets with said supports, each of said angle brackets forming a horizontal and a vertical guide, means for adjustably supporting said reflectors



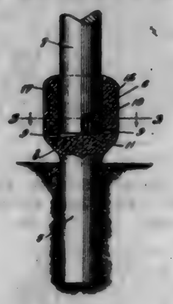
on the vertical guide of said angle brackets and means provided on the horizontal guide and vertical guide of said angle bracket to enable a vertical adjustment of the reflectors to a given horizontal adjustment of said angle brackets.

1,536,556. TIRE CHAIN. GILES A. BECKWITH, Waterford, Conn. Filed Sept. 15, 1923. Serial No. 662,931. 2 Claims. (Cl. 152—14.)



1. In a device of the class described, a connector comprising arms defining a shank, the arms merging into diverging hooks which are inclined toward the shank, the hooks being united by an integral U-shaped connection located between the hooks and extending in a direction opposite to that in which the hooks extend, a side chain wherewith the shank is engaged, and a cross chain embodying a link wherewith the hooks are engaged, the space between the ends of the hooks being greater than the distance between the sides of the last specified link.

1,536,557. POWER-TRANSMISSION BELT. FLETCHER W. BROWNING, Kingsport, Tenn. Filed Aug. 5, 1922. Serial No. 579,945. 4 Claims. (Cl. 149—7.)

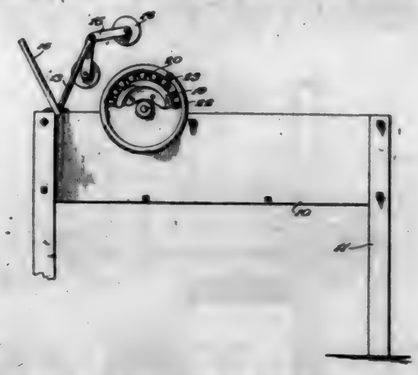


4. A leather belt for power transmission purposes having a grain side working surface with a portion of the epidermis removed uniformly from its entire surface whereby to increase the coefficient of friction between the belt and a pulley.

1,536,558. FORCED-CIRCULATION BRAKE. HARRY E. BUKOWSKY, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg., a Corporation. Filed July 28, 1923, Serial No. 654,494. Renewed Mar. 25, 1925. 10 Claims. (Cl. 188—264.)

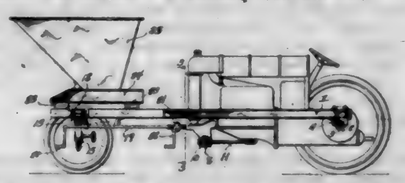
5. A brake drum consisting of a rotatable cylinder having formed in its outer surface a plurality of channels having placed across alternate channels two spaced rows of dams in a manner to make the ends of the adjacent channels overlap, a triple manifold formed on the inside of said drum the central section of said manifold lying under said overlapping channel ends, and having a port in the bottom of each overlapping channel opening into said central section, each channel also having an inlet port on the side of its dam opposite said first mentioned ports and opening into an outer portion of said manifold.

1,536,559. POST CONSTRUCTION. EDWARD WILLIAM CARROLL, Weston, W. Va. Filed May 26, 1923. Serial No. 641,782. 2 Claims. (Cl. 72—84.)



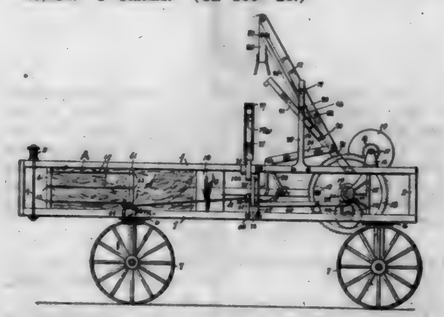
1. In a fence post construction, a base section having a post opening and having a groove formed therein, said grooves being formed with a right angled end portion, a post section having a groove adapted to register with the first mentioned groove when the post is fitted in the base section, and a roller of a width to extend into both grooves when the roller is dropped into the base section.

1,536,560. WASHING MACHINE. REUBEN E. CAUDILL, Northwilkesboro, N. C. Filed Sept. 14, 1923. Serial No. 662,691. 1 Claim. (Cl. 68—22.)



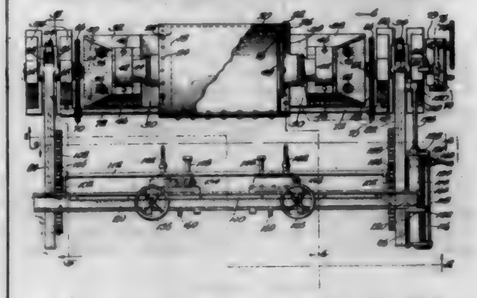
A washing machine comprising a tub, a longitudinally corrugated drum revolubly mounted therein, means for connecting the drum with a source of power, a rock shaft mounted on the tub at one end thereof, arms extending radially from the rock shaft over the tub,

yokes pivoted upon the free ends of said arms and each consisting of branches diverging downwardly relative to the arms, rollers extending between and journaled



in the ends of the yokes, a spring secured upon the tub and engaged with one of the arms to yieldably hold the rollers to the corrugated drum, and a handle member projecting from the rock shaft.

1,536,561. TRACTOR ATTACHMENT. ROBERT A. CHADWICK, Jr., Milwaukee, Wis. Filed Oct. 9, 1923. Serial No. 667,472. 3 Claims. (Cl. 180—1.)

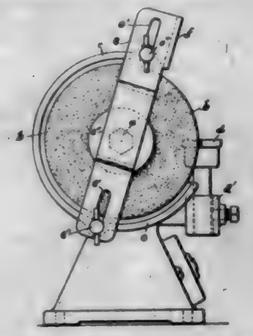


1. The combination of a tractor having a front axle, a wishbone brace extending therefrom, said tractor having a rear axle housing and rear wheels, a pair of side bars positioned upon opposite sides of said tractor, means clamping the rear portion of said side bars to said rear axle housing, brackets extending from an intermediate portion of said side bars and receiving the knuckles of the front axle, a front axle carried by the front portion of said side bars, and wheels carried by the last mentioned front axle.

1,536,562. BALING PRESS. DE YOE C. CHIPMAN, Ann Arbor, Mich. Filed June 15, 1923. Serial No. 645,484. 3 Claims. (Cl. 100—25.)

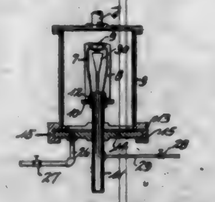
1. In a baling machine of the character described wherein the material to be baled is compacted within a baling chamber between dividing blocks, the combination of a conveyer to carry the material to the baling chamber, means to interrupt the passage of the material, means to position dividing blocks in the baling chamber, and means connecting said positioning means for the dividing blocks and the interrupting means to cause the latter to act while a dividing block is being positioned.

1,536,563. ASSEMBLY MACHINE. OSCAR L. COFFEY, Harvey, and WALTER DE VRIES, Chicago, Ill., assignors to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Mar. 7, 1923. Serial No. 623,364. 20 Claims. (Cl. 29—33.)



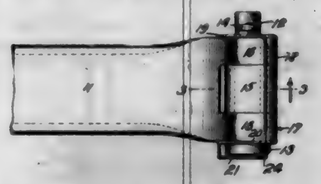
1. In mechanism of the class described, in combination, a support for an object to be worked upon, a swinging arm pivoted at each end of said support, means operating one of said arms, means operatively connecting said last mentioned arm to the other arm to correspondingly rock it, a tool carrying member connecting said swinging arms reciprocable along them to and from said work supporting means, power means reciprocating said tool carrying member, and a selectively positionable tool head reciprocable on said tool carrying member.

1,536,564. PROCESS OF TREATING SOUPLED SILK AND PRODUCT THEREOF. CHARLES P. COLE, Sr., Paterson, N. J. Filed Mar. 5, 1923. Serial No. 623,078. 9 Claims. (Cl. 8—13.)



3. The process of treating silk comprising soupling, weighting, weaving, completely degumming and dyeing it, in the order named.

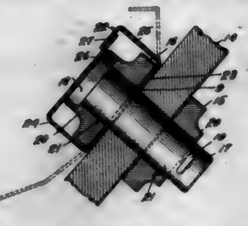
1,536,565. GUARD FOR GRINDING WHEELS. EDWIN L. CONNELL, Cleveland, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 15, 1922. Serial No. 553,027. 4 Claims. (Cl. 51—268.)



1. The combination with a grinding wheel, of a main guard casing conforming to and nesting over a greater portion of the periphery of said grinding wheel and exposing a portion of said wheel for grinding purposes, a supplemental guard support upon the end of said main guard and including means for guiding it radially with respect to said wheel, a laterally extending guard plate carried by said supplemental guard support and extending toward the wheel at the end of the main guard, and means for clamping said supplemental guard support in any adjusted position.

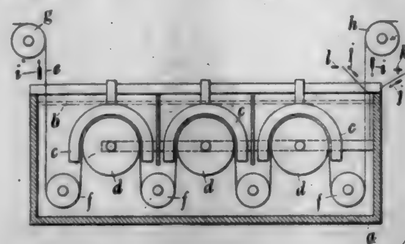
1,536,566. METHOD OF MAKING ARTICLES FROM PULP. SIMON COOPER, Brooklyn, N. Y. Filed Mar. 14, 1923. Serial No. 625,122. 1 Claim. (Cl. 92—57.)

The process of forming articles from pulp-like material which comprises applying suction to the exterior of a porous mold whose interior is in communication with a body of pulp, and controlling the application of such suction to cause a filling of the mold at a predetermined rate, and then admitting air directly at the top of the mold thereby relieving the suction on the interior of the mold.



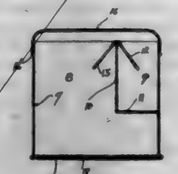
1,536,567. CAR-TRUCK BRAKE-BEAM MECHANISM. SETH A. CROND, East Orange, N. J. Filed Aug. 2, 1924. Serial No. 729,692. 6 Claims. (Cl. 188—213.)

3. In car-truck brake-beam mechanism, a brake-beam suspension bar, an overhead guard bar, said bars at their outer ends being formed with outwardly projecting matching transverse sleeves, a transverse pin extending through said sleeves for securing said ends together, said pin having a head on one end and equipped with a cotter key at the other end, and a retaining device for said pin, said device comprising a body portion bridging said sleeves, an apertured end member on the device between said cotter key and the adjacent sleeve, an apertured end member on said device between the head of the pin and the sleeve adjacent thereto and an extension member extending from the last mentioned end member and bent over against the outer face of said head.



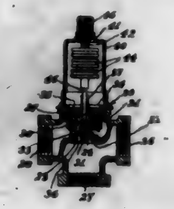
1,536,568. PIN OR BOLT RETAINER FOR RAILWAY-BRAKE-BEAM LEVERS AND CONNECTIONS. SETH A. CROND, East Orange, N. J. Filed Oct. 13, 1924. Serial No. 743,429. 3 Claims. (Cl. 188—231.)

1. A pin or bolt retaining device of the character described for brake levers and the like comprising two parts having holes in register and a headed pin inserted through said holes for connecting said parts in free face-to-face relation, in combination, said retaining device for said pin being of sheet metal and comprising a middle or base section interposed between said parts and having a hole through which said pin passes, end sections extending outwardly from the ends of said base section and outer sections extending from the outer ends of said end sections and adapted to be folded toward each other at the outer face of the head of the pin, said device forming a box-like band encompassing one of said parts and the head of the



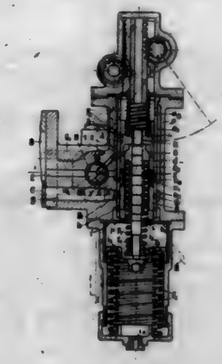
pin, and one of said outer sections being materially longer than the other outer section, which overlaps the outer end of said longer section, for the purpose described.

1,536,569. IMPREGNATION OF FIBERS BY ELECTROLYSIS. HENRY CRUSE, Hyde, England. Filed Aug. 15, 1924. Serial No. 732,318. 4 Claims. (Cl. 204—1.)



1. An apparatus for electrolytically impregnating fibers with a chemical compound, comprising an electrolyte including a metallic salt, electrodes arranged in the electrolyte for electrolytically producing a chemical impregnating compound, one of said electrodes being formed of metal, means for introducing an electric current into one of said electrodes and for discharging the same from the other one of said electrodes, and means for immersing the fibers in said electrolyte and between said electrodes, for causing the current to pass through the fibers and to electrolytically impregnate the fibers with said compound.

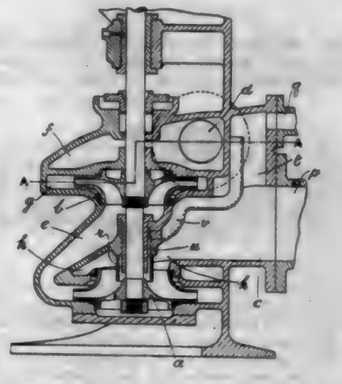
1,536,570. COMBINATION CIGARETTE AND MATCH BOX. SAMUEL W. DENNY, Detroit, Mich. Filed Apr. 8, 1924. Serial No. 704,910. 2 Claims. (Cl. 206—38.)



1. A container of the class described comprising a plurality of compartments, one of said compartments being of less depth than the other and provided with a side wall; and a metallic resilient member doubled upon itself and positioned on said side wall, one portion thereof being adapted to extend in one compartment for engaging material placed therein for maintaining the same in upright position and the other portion thereof being positioned in the other compartment for engaging material placed therein for maintaining the same in upright position.

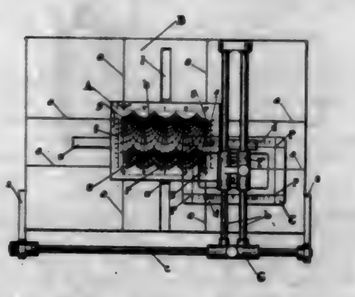
1,536,571. VALVE FOR TRAPPED SYSTEMS. JAMES A. DONNELLY, Brooklyn, N. Y. Filed Mar. 22, 1921. Serial No. 454,382. 8 Claims. (Cl. 236—56.)

1. In combination, a valve casing having a single closure member; a means constantly adjustably yieldably tending to close said member; and a temperature controlled means also acting to control said same single member.



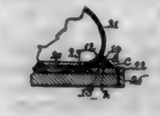
1,536,572. RAILWAY BRAKE. IVAR DROLSHAMMER, Drammen, Norway. Filed May 26, 1923. Serial No. 641,668. 10 Claims. (Cl. 303—28.)

1. A compressed-air railway brake of the type in which on initiating the braking the brake pressure rises at first rapidly up to a predetermined low limit, whereas the further rise proceeds but slowly, characterized thereby that the control piston which is moved into positions corresponding to the air pressure existing in the train pipe and being determined by the adjustment of the driver's brake valve controls, together with the control slide valve proper of the brake control valve, the flowing over of the compressed air into the brake cylinder in such a manner that on initiating the braking, the air can flow rapidly into the brake cylinder until a desired minimum pressure has been attained, whereas from that time the compressed air which is still required can flow automatically into the brake cylinder only through a narrow throttling aperture, so that the further rise of the braking pressure proceeds but slowly.



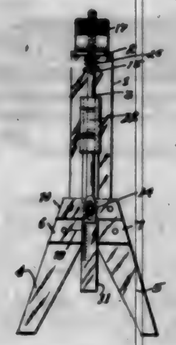
1,536,573. CENTRIFUGAL PUMP. JOHN WHITEHEAD WILSON DRYSDALE and JOHN YOUNG, Yoker, near Glasgow, Scotland, assignors to Drysdale & Company, Limited, Yoker, near Glasgow, Scotland. Filed Nov. 3, 1923. Serial No. 672,573. 3 Claims. (Cl. 103—108.)

3. A centrifugal pump having a vertical axis of rotation and comprising a first-stage impeller located at the bottom of the pump, the eye of this impeller being at the top thereof a second-stage impeller located above the said first-stage impeller, the eye of this impeller being at the bottom thereof, a chamber located above the said first-stage impeller and in communication with the eye of this impeller, a balance pipe connecting the said chamber with the vessel which is being drained



or drawn from, an annular passage located at the eye of the said first-stage impeller and leading upwards therefrom, and a duct leading from the said passage to the said chamber.

1,536,574. CALCULATING DEVICE. JESSE WILLIAM MUNROE DU MOND, Pasadena, Calif. Filed July 7, 1924. Serial No. 724,741. 9 Claims. (Cl. 235—61.)



1. A calculating device comprising essentially a reference chart having rectilinear coordinates and movable relative thereto with a movement of pure translation a chart having curvilinear coordinates and having attached to said reference chart and adjustable indicator.

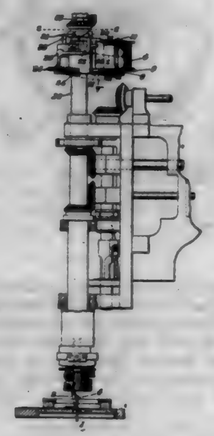
1,536,575. CORK-SOLE WELT. LE ROY F. EMERY, Brockton, Mass., assignor to Ashton Hamilton, Brockton, Mass. Filed Mar. 28, 1924. Serial No. 702,557. 4 Claims. (Cl. 36—78.)

1. A cork sole welt for boots and shoes comprising a substantially triangular inner member having two sides of substantially equal width and a third side of a greater width, and an outer member enveloping said inner member and extended beyond the same to form a flap.

1,536,576. CALIPER. CARL B. FIELDS, San Francisco, Calif. Filed July 14, 1921. Serial No. 484,561. 3 Claims. (Cl. 33—178.)

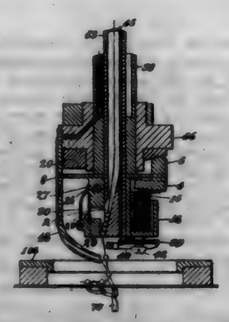
1. In a caliper, a plate, a pair of diverging arms carried thereby, at one end thereof, a slide projectable between the arms and carrying a series of graduations, a longitudinally slidable rod carried by the plate, means frictionally connecting said slide and rod for movement in unison, a micrometer nut having a series of graduations on its periphery and threaded on said rod, and a spring holding said nut in contact with an upturned portion of said plate there being reading lines on said plate cooperating with the graduations on said slide and nut respectively whereby the size of circular objects may be ascertained.

1,536,577. VENTILATED HAT. STANLEY FRITZ and ALEXANDER FRITZ, Manayunk, Philadelphia, Pa. Filed Aug. 2, 1924. Serial No. 729,775. 4 Claims. (Cl. 2—176.)



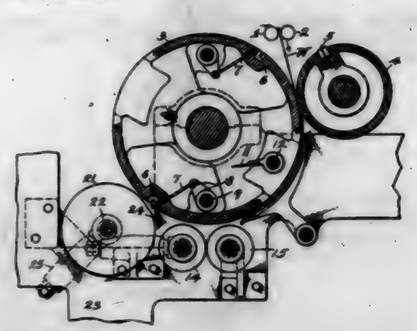
1. A hat comprising a rim, an upper crown section having its side wall spaced above said rim, a lower crown section of openwork form connecting the rim with the upper crown section, vertical guides at the inside of the hat connected with the rim and the upper crown section to hold them in properly spaced relation, slides movable vertically along said guides, and a band within the hat secured to said slides, said band being upwardly movable into the upper section of the crown or downwardly movable for disposition at the inner side of said open-work lower crown section.

1,536,578. FABRIC-FEEDER FOR BEAD SEWING MACHINES. JOSEPH A. GROBLI, New York, N. Y. Original application filed Feb. 18, 1921, Serial No. 445,943. Divided and this application filed Feb. 28, 1923. Serial No. 621,756. 5 Claims. (Cl. 112—216.)



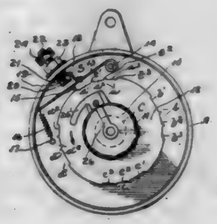
5. The combination, in a bead sewing machine, of a feeder foot, a fabric feeder provided with a yieldable fabric engaging face and surrounding the stitch position and having a ball and socket connection with the foot so as to permit the feeder to automatically retain a leveled position relative to the fabric during the feeding movements.

1,536,579. SEWING MACHINE. JOSEPH A. GROBLI, New York, N. Y. Filed July 16, 1923. Serial No. 651,767. 4 Claims. (Cl. 112—99.)



1. In a sewing machine, embodying loop stitch forming means including a barbed needle, the combination of rotatable thread carrying and supplying means, automatic means for temporarily and positively arresting and holding the thread carrying and supplying means once during each stitch cycle, so as to permit the release of the thread, and means for positively increasing the tension on the thread after the carrying and supplying means has been arrested and the loop has been cast around the needle below the barb, whereby the loop will be snugged under the barb for each stitch.

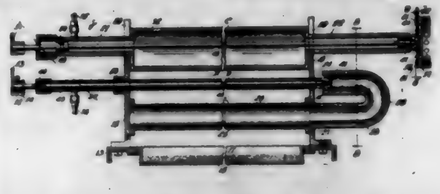
1,536,580. SEPARATOR FOR BEAD-SEWING MACHINES. JOSEPH A. GROBLI, New York, N. Y. Filed Jan. 9, 1924. Serial No. 685,084. 8 Claims. (Cl. 112—99.)



1. The combination, in a sewing machine, of stitch-forming mechanism means for supplying a thread with beads loosely strung thereupon, bead separating means, and optionally operable means for superseding the operation of the separating means.

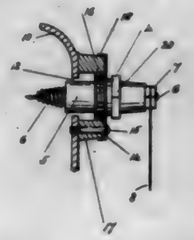
1,536,581. FOLDING MECHANISM. JOHN J. HALLIWELL, Mount Vernon, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Jan. 15, 1923. Serial No. 612,582. 12 Claims. (Cl. 270—76.)

1. The combination of a folding cylinder having sheet taking devices and a folding blade, folding devices co-operating therewith to fold off a sheet, and pressure devices acting to hold the sheet and prevent it from slipping on the cylinder between the time the sheet taking devices release the sheet and the time the blade tucks the sheet into the co-operating folding devices.



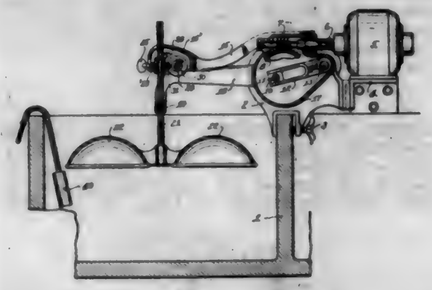
1,536,582. IGNITION-CONTROLLING APPARATUS. ALONZO HOWARD, Chicago, Ill. Filed May 23, 1924. Serial No. 715,397. 11 Claims. (Cl. 123—146.5.)

1. In an ignition system the combination of inductively related primary and secondary circuits, a spark plug connected in the secondary circuit, a source of alternating current for the primary circuit, circuit controlling mechanism for said primary circuit, and means for causing three or more operations of said circuit controller mechanism during each ignition period of the engine with which said spark plug is associated, each operation controlling the primary circuit to cause a flow of secondary current and a spark at the spark plug whereby a series of distinct sparks is caused at the spark plug during each ignition period, the time intervals between the sparks being different.



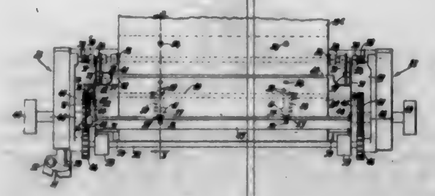
1,536,583. HYDROCARBON BURNER. RALEIGH O. HUMPHREY, Chicago, Ill., assignor to American Automatic Heating Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 18, 1922. Serial No. 537,366. 5 Claims. (Cl. 158—61.)

3. In a hydrocarbon burner, the combination with a main vaporizing generator; of an auxiliary vaporizing generator in the form of a pipe; a burner proper comprising twin arranged laterally separated slotted pipes



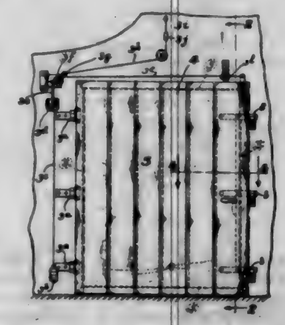
disposed below said auxiliary generator and the main generator; and means for supplying said burner proper with vaporized fuel.

1,536,584. MAGNETO POST. DON C. HUSTED, Marshall, Okla. Filed Apr. 11, 1922. Serial No. 551,616. 1 Claim. (Cl. 173—324.)



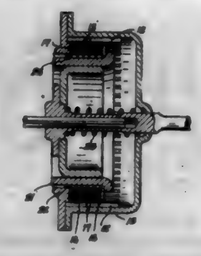
A magneto contact comprising a short tubular body adapted to be arranged about the magneto contact opening of a magneto casing, an annular disk applied to the outer end of the short tubular body and having inner and outer strengthening flanges defining an annular groove snugly receiving the outer portion of said short tubular body, said inner strengthening flange being internally threaded, a contact member threaded through said inner flange and extending beyond the inner end of said short tubular member, and fastening devices extending through said annular disk and said body and adapted to connect the body to a magneto casing.

1,536,585. WASHING MACHINE. AXEL JOHNSON, Oakland, Calif. Filed Aug. 26, 1924. Serial No. 734,198. 5 Claims. (Cl. 259—144.)



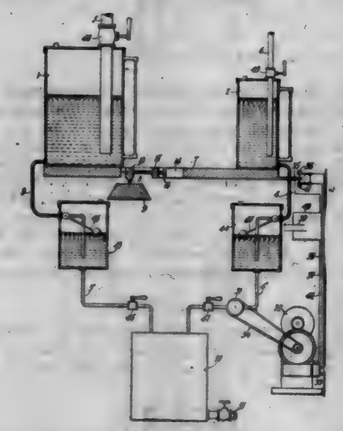
1. A washing machine comprising a supporting member; a substantially vertically reciprocating arm extending therefrom; a dasher pendulously carried by said arm and vertically movable therewith; a fixed bracket disposed parallel with the arm, and affording a guide for the dasher and means actuated by the relative swinging movement between said arm and said dasher for imparting horizontal angular oscillating motion to said dasher.

1,536,586. TYPEWRITING MACHINE. ARTHUR A. JOHNSON, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 30, 1923. Serial No. 615,846. 17 Claims. (197—126.)



1. In a typewriting machine, a rotary platen, means for feeding a multiple-ply, continuous web, with interleaved carbons, to and around the platen, a frame for the platen movable with the platen between a writing station and a carbon-releasing station, pins adapted to be pressed against the web to find and enter openings therein for gaging the position of the web for removal therefrom of its leading lengths of typewritten form-sections, and means for automatically withdrawing the pins from the web on return of the platen-frame to the writing station.

1,536,587. AIR-CHAMBER FIRE DOOR. HOWARD A. JOHNSON, Norfolk, Va., assignor to J. G. Wilson Corporation, Norfolk, Va., a Corporation of Virginia. Filed May 31, 1922. Serial No. 564,948. 16 Claims. (Cl. 187—46.)

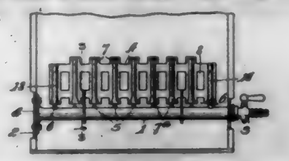


1. A heat retarding door comprising a circumferential metal frame work of channel irons, the central webs of said channel irons being turned toward the interior of the door, spaced vertical metal ribs supported by and of the same width as said frame work, in the direction perpendicular to the plane of the door, and metal sheets covering said frame work and ribs and contacting therewith, the edges of said sheets having hooked engagement with the edges of the channel irons in the frame work.

1,536,588. CLUTCH. MORTON F. JUDD, Stratford, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 27, 1922. Serial No. 603,560. 10 Claims. (Cl. 192—107.)

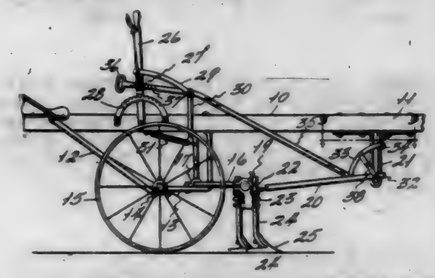
6. A friction disk for a multiple disk clutch composed of compressed fibre held together by a suitable binder, said disk being provided with driving teeth on the periphery thereof integral with the body of the disk.

1,536,589. APPARATUS FOR SUPPLYING MATERIALS IN A DESIRED RATIO OF WEIGHTS. ALEXIS W. KERR, New York, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed May 3, 1924. Serial No. 710,720. 17 Claims. (Cl. 137—78.)



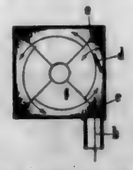
12. An apparatus for supplying the materials in a desired ratio of weights comprising, receptacles for containing the material in the desired weight ratio, conduits communicating with the receptacles for supplying the materials in the desired weight ratio, means for regulating the flow through one of the conduits, and a balance supporting the receptacles adapted to operate the regulating means when thrown out of balance by a variation in the ratio of weights of the materials in the receptacles.

1,536,590. BURNER FOR GAS HEATERS. HENRY KIELKOPF, Martins Ferry, Ohio, assignor to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Apr. 18, 1923. Serial No. 631,750. 1 Claim. (Cl. 158—106.)



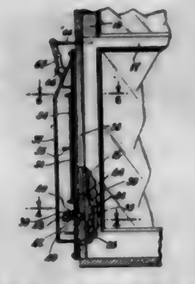
In a gas heater, the combination with a heater casing, of a gas supply tube disposed horizontally within said casing, relatively spaced nozzles carried by said tube, upright posts carried by said tube adjacent to its opposite ends, supporting members carried by said tube inter-

mediate said posts and a burner element superposed upon said supporting members and having engagement with said posts, said element comprising companion sheet



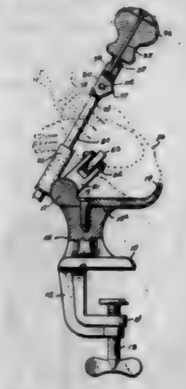
metal plates attached together in face-to-face relation and shaped to form complementally a plurality of relatively spaced Bunsen burner tubes and post-receiving sleeves.

1,536,591. AGRICULTURAL IMPLEMENT. TIMOTHY M. KIRKPATRICK and WILLIAM A. CLAUNCH, Maypearl, Tex. Filed Nov. 13, 1923. Serial No. 674,433. 1 Claim. (Cl. 97—457.)



In an agricultural implement, a longitudinal wheel supported beam, a yoke movable under the longitudinal beam, a transverse plow beam rotatable on the yoke, sweeps carried by the transverse beam, a vertical adjusting lever mounted on the longitudinal beam, a connection between the adjusting lever and the yoke normally holding the latter immovable, a member having its rear end rigid on the transverse beam, a guide hanger at the forward lever connected with the forward end of the member, and a pitman extending rearwardly from the forward lever and detachably engaging the adjusting lever.

1,536,592. CYCLONE DUST COLLECTOR. HERMANN KLUG, Berlin-Hermsdorf, Germany. Filed Oct. 11, 1922. Serial No. 593,820. 4 Claims. (Cl. 183—48.)



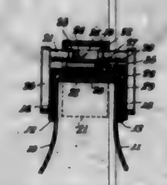
1. A dust collector having, in combination, a substantially vertically disposed casing polygonal in cross section, the polygon having a relatively small number of sides, the casing having an inlet opening through which dust-laden air or other gas is adapted to enter the casing, and a baffle plate disposed within the casing near the inlet opening at an angle to the direction of travel of the entering gas, the baffle plate being adapted to deviate the path of the entering gas, the interior portion of the casing near the baffle plate being unobstructed from the center of the casing to the sides thereof so as to permit the gas to whirl therein in a path determined by the angular position of the baffle plate, dust being adapted to be removed from the whirling dust-laden gas at the corners of the casting, and the gas being then adapted to travel to the upper portion of the casing.

1,536,593. SAFETY WINDOW CONSTRUCTION. IRVING L. KORROL, Brooklyn, N. Y. Filed Nov. 24, 1923. Serial No. 676,682. 5 Claims. (Cl. 20—12.)

1. The combination with a window frame, a sash slidable up and down therein, and counterweights connected to the sash, of a connection for one of the counterweights including a socket piece counter sunk in a cavity in the side of the sash and a clip engageable inward and upward into said socket piece for normal engagement, and a detaching dog for said clip normally outward beyond the edge of the sash and movable inward and downward to engage said clip to remove it and hold it in position withdrawn from the sash, said dog being mounted for combined slidable and rotating movement with respect to a fixed pin to cause the same to have a reaching and sweeping movement into engagement with the clip.

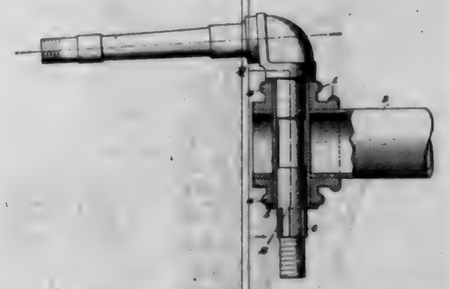
1,536,594. UTENSIL FOR PEELING OR SLICING VEGETABLES. GEORGE ALBERT LEBARCHE, Freeport, Ill. Filed May 15, 1924. Serial No. 713,573. 14 Claims. (Cl. 146—43.)

1. A potato peeler comprising a base formed to provide a support for the potato, a peeling knife pivotally mounted upon the base at one end thereof for oscillation toward and from the base and for rectilinear movement toward and from its point of pivotal support, and means for supporting the potato at an angle to the base.



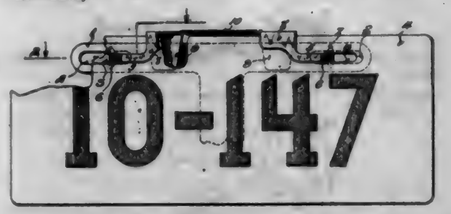
1,536,595. METALLIC PACKING RING. RALPH A. LIGHT and JOSEPH W. PRICE, Jr., Philadelphia, Pa., assignors to The United States Metallic Packing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 608,463. 5 Claims. (Cl. 288—3.)

1. A metallic packing ring made up of four sectional blocks abutting against each other in two parallel planes so that the end or packing blocks can slide freely towards each other on the abutting ends of the side or guide blocks, said sectional blocks being externally circumferentially grooved for the reception of of a garter spring



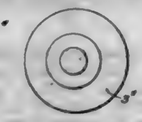
and the grooves in the side or guide blocks being formed deeper than in the end or packing blocks, so that the pull of the spring will be mainly exerted on the packing blocks.

1,536,596. BAG-FRAME REGISTERING CONNECTION. WILLIAM A. LOTZ, Newark, N. J., assignor to The T. & L. Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed June 7, 1924. Serial No. 718,504. 4 Claims. (Cl. 292—213.)



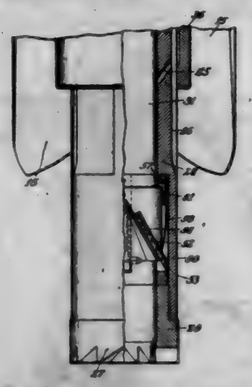
1. A bag frame registering connection comprising a hollow casing fixedly engaged on one member of the bag frame, and having recesses in its side walls, a seat formed in said casing, a flat spring plate seated thereon, means for securely holding said plate in place, a turn-handle shaft journaled in said recesses, beaded flanges on said shaft for limiting its lateral movements, said shaft having a triangular cross-section between said beaded flanges, the sharp edges of the triangular section engaging said plate for depressing the same upon the rotation of said shaft by its handles, and means secured to the other member of the bag frame constituting a firm support to prevent disruption under a heavy load pressing on the connection.

1,536,597. STEERING KNUCKLE. LAMAR LYNDON, New York, N. Y. Filed Oct. 17, 1921. Serial No. 508,236. 6 Claims. (Cl. 280—96.1.)



1. In a connection between an axle and a spindle, a member surrounding said axle and co-operating therewith to provide a bearing for said spindle, said spindle passing through both, said axle and said member.

1,536,598. AUTOMOBILE LICENSE-PLATE FASTENER. ELMER W. ABEL, Sheboygan, Wis. Filed Apr. 16, 1923. Serial No. 632,413. 8 Claims. (Cl. 40—125.)

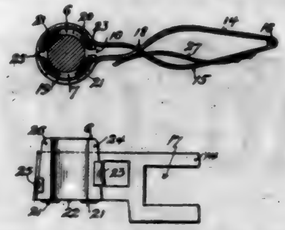


1. A device for detachably locking a plate having aligned slots to a support having similar slots, said device comprising a pair of spaced members, and a spring joining said members, each of said members comprising an elongated portion having transverse ears adjacent one end adapted to be passed through a slot in said plate and a slot in said support to slidably lock when said ears are turned transversely of said slots.

1,536,599. PAPER-MAKING MACHINE. ALONZO ALDRICH, Beloit, Wis. Filed Oct. 18, 1922. Serial No. 595,255. 1 Claim. (Cl. 92—44.)

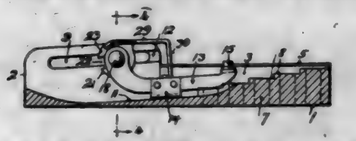
In a Fourdrinier machine, the combination with the wire of table rolls mounted eccentrically on their axes.

1,536,600. EXPLORING DRILL. OLOF B. ANDERSON, Marquette, Mich. Filed Oct. 28, 1922. Serial No. 596,421. 9 Claims. (Cl. 255—72.)



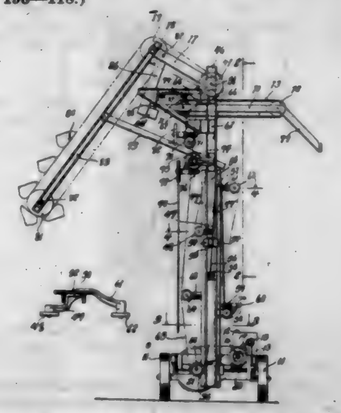
1. A device of the character described, comprising a drill stem, an inner rotary bit, and an outer rotary fish tail bit thereon, said bits being spaced to provide a fluid passage between said bits, said passage having its mouth adjacent the cutting edge of said fish tail bit.

1,536,601. TOOL FOR INSERTING SPLIT SLEEVES. NILS ALFRED ANDERSON, Woodmere, N. Y. Filed Aug. 18, 1922. Serial No. 582,689. 6 Claims. (Cl. 29—80.3.)



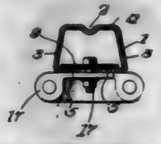
1. A tool for the purpose set forth comprising members forming a handle and jaws carried thereby and mov-

able toward and from each other, said jaws each having curved sockets including a bottom support and lugs for engaging over the edges of a split sleeve whereby



each jaw may separately carry separate sections of the split sleeve to permit the split sleeve sections to be applied laterally against a grooved spindle by said jaws.

1,536,602. TOOL FOR TRUING CONTACT POINTS. NILS A. ANDERSON, Brooklyn, N. Y. Filed June 12, 1924. Serial No. 719,515. 6 Claims. (Cl. 51—216.)



1. A tool for refacing contact points of ignition levers, comprising a base having tracks for guiding a grinding stone said base having a guiding surface inclined relatively to the plane of the tracks for guiding the lever, spaced walls having slots extending parallel to said guiding surface, and a lever holder guided in one of said slots and adapted to hold a lever having its shaft projecting into the other of said slots.

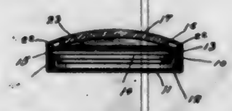
1,536,603. COMBINATION PORTABLE LOADER AND CAR UNLOADER. GEORGE P. BALL, Milwaukee, Wis. Filed Apr. 11, 1922. Serial No. 551,492. 2 Claims. (Cl. 198—118.)

1. In a device of the class described, the combination of a telescopic vertical support having an upper elongated member and a lower elongated member with the upper of said members adapted to project above the said lower member, a conveyor operatively carried by the projecting portion of the upper member, means for varying the length of said vertical support, a driving means for said conveyor permanently mounted adjacent the bottom of said lower elongated member, and means maintaining an operative driving connection between said driving means and said conveyor for all telescoping movements of said vertical support.

1,536,604. TRACTOR BELT CONSTRUCTION. HANS J. BENTSON, Kenosha, Wis., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Nov. 10, 1919. Serial No. 337,100. 14 Claims. (Cl. 305—10.)

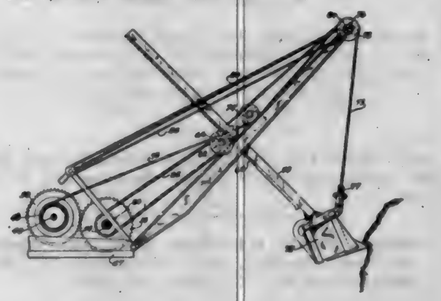
1. A multi-pedal traction belt tread unit, comprising a hollow sheet metal member bent to substantially tubular form with the edges thereof in juxtaposition, and means extending between said edges for securing said member to the belt with the closed side thereof toward the ground.

1,536,605. TYPE CLEANER. ARETE C. BISHOP, New York, N. Y. Filed Jan. 13, 1923. Serial No. 612,515. 7 Claims. (Cl. 197—184.)



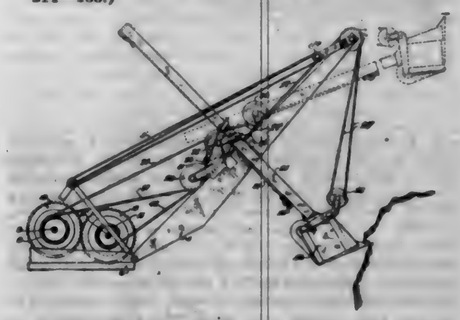
1. A type cleaning attachment for typewriters comprising supporting members adapted to be secured to the frame of the typewriter at opposite sides of the group of type and having bearing apertures extending forwardly and rearwardly of the typewriter, a rod slidable endwise in each of said bearing apertures, a brush device connected between the rods and carrying bristles which move across and in contact with the face of the type when the rods and brush device are reciprocated from front to rear, springs surrounding the rods and pressing them and the brush device to one position in which the bristles are clear of the type, and means for limiting the movement of the rods and brush device beyond said one position.

1,536,606. BOWLING PIN. JOSEPH W. BISHOP and JESSE O. MATTESON, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed June 5, 1922. Serial No. 565,966. 9 Claims. (Cl. 273—82.)



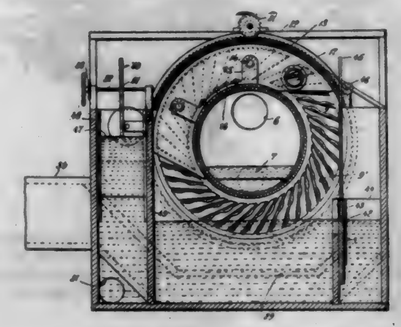
1. A bowling pin comprising a core, a composition covering enclosing the core, and a metal reinforce embedded in said covering.

1,536,607. WATCHCASE BEZEL. HERMAN BUHLMAN, Providence, R. I. Filed Oct. 9, 1924. Serial No. 742,552. 9 Claims. (Cl. 58—91.)



1. In a watch case, a body member formed of sheet stock having a bezel rim with an inturned inwardly flaring marginal flange forming a beveled seat for the crystal, and means beneath the crystal for pressing it to its seat.

1,536,608. POWER SHOVEL. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Original application filed May 26, 1924, Serial No. 716,000. Divided and this application filed Feb. 9, 1925. Serial No. 7,973. 6 Claims. (Cl. 214—135.)

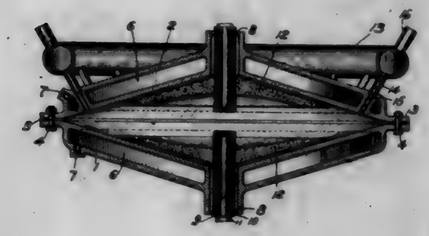


1. In an excavating machine, the combination with a supporting boom, of a dipper and dipper handle mounted thereon to move lengthwise and swing with respect thereto, of means for moving the dipper and its handle lengthwise in both directions and including a reversible member, and a dipper-hoisting cable associated with said means for conjoint outward thrusting therewith during outward lengthwise movement of said dipper and dipper handle.

1,536,609. POWER SHOVEL. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed May 26, 1924. Serial No. 716,000. 12 Claims. (Cl. 214—135.)

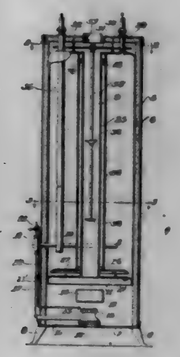
1. In an excavating machine, the combination with a supporting boom, of a dipper and dipper handle mounted thereon for swinging and shifting movements relative thereto, a hoisting and thrusting cable associated with the dipper and crowding it outwardly into the material to be excavated, and separately controlled means also operable for moving the dipper and its handle outwardly conjointly with the operation of said hoisting cable.

1,536,610. SUCTION CYLINDER. WALTER N. BURNHAM, Ballston Spa, N. Y., assignor to The Beaver Company, Beaver Road, Buffalo, N. Y., a Corporation of Ohio. Filed Nov. 9, 1920. Serial No. 422,773. 13 Claims. (Cl. 92—48.)



8. A paper making machine comprising a vat for the pulp stock, a hollow shaft supported within the vat and adapted for connection with exhausting mechanism, a sleeve valve mounted to move angularly of the shaft, a laying cylinder mounted to rotate on the valve, said cylinder being divided into a series of radially extending compartments by imperforate compartments extending longitudinally thereof, the compartments opening at the periphery of the shaft, the shaft and the sleeve having registering ports at the point where the compartments emerge from the stock and the compartments having openings for registering with said ports, means at each end of the cylinder for closing the ends of the compartments while the ports thereof are in register with the ports of the valve.

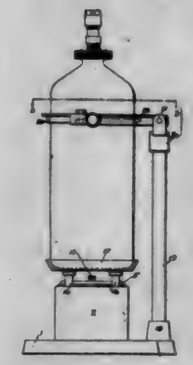
1,536,611. TRUCK SKID. CALVIN F. DUKE, Indianapolis, Ind., assignor to Central Machine Works, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 8, 1922. Serial No. 599,640. 15 Claims. (Cl. 214—85.)



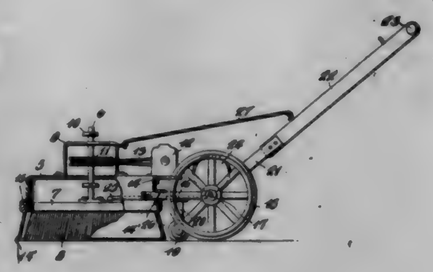
1. In combination, a load-carrying truck frame, a floor-engaging skid pivotally mounted on said frame for facilitating the rolling of articles onto said frame, and a supporting wheel for said truck frame on each side of the axis of pivotal mounting of said skid.

1,536,612. METHOD OF PRODUCING CARBON BLACK. WARREN K. LEWIS, Newton, Mass., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 15, 1923. Serial No. 619,260. 3 Claims. (Cl. 204—64.)

3. A method of producing carbon black that comprises heating a hydrocarbon gas in the gaseous phase to decompose it, distributing the products of decomposition in a cool inert gas and collecting and separating the products.



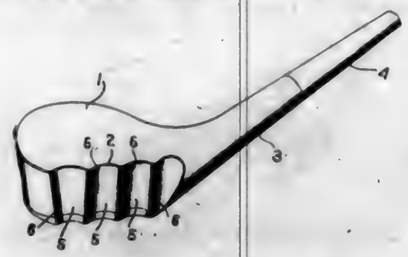
1,536,613. STORAGE WATER HEATER. HARRY J. LYONS, Geneva, Ill., assignor to Geneva Heater Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1924. Serial No. 700,530. 5 Claims. (Cl. 126—362.)



1. In a water heater the combination of a tank having a vertical flue extending therethrough, a combustion chamber beneath the tank, a burner in said chamber, a circulating baffle disposed within and spaced above the bottom of said tank, a pipe surrounding said flue and communicating at its lower end with the space beneath said baffle, and means within and above said flue for baffling the products of combustion rising from said burner.

1,536,614. WEIGHING MACHINE. HARRY J. MACKEY, Decatur, Ill. Filed Feb. 13, 1922. Serial No. 536,392. 5 Claims. (Cl. 265—27.)

1. In a weighing device of the character described, in combination, a base, a scale thereon, means coacting with the scale and forming a rest for a drum, a standard upstanding from said base to one side of said drum rest, and guiding means extending laterally from the upper end of said standard and above said drum rest and arranged to loosely embrace the upper end of the drum.



1,536,615. FLOOR-SCRUBBING MACHINE. WALTER MAJUSICK, Cleveland, Ohio. Filed July 12, 1924. Serial No. 725,560. 3 Claims. (Cl. 15—50.)

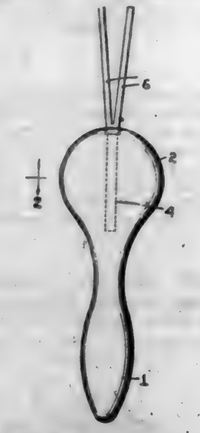
1. A floor scrubbing machine comprising, a rotatable brush, a shell arranged above the brush and extending downwardly around the brush head, a shield depending from the periphery of the shell to a point adjacent the end of the brush, an annular buffer arranged at the juncture of the shell and shield, a vertical central shaft carried by the brush and extending upwardly through the shell and vertically movable therein, a motor arranged to rotate the shaft, a pair of rearwardly diverging arms carried by the shell, a shaft loosely journaled in the rear ends of said arms, supporting wheels carried by the shaft, a handle member fixed to the shaft and extending rearwardly therefrom, water supply tank between said wheels and means for conducting fluid from the tank to said brush.

1,536,616. GOLF CLUB. JOHN T. MANNING, Brookline, Mass. Filed Nov. 22, 1924. Serial No. 751,491. 3 Claims. (Cl. 273—77.)

2. A golf club having a scalloped or fluted driving face presenting vertically-extending shallow grooves each having a transverse curvature approximately that of the golf ball, the ridges between the groves being rounded.

1,536,617. CASING HOOK FOR DRILLING APPARATUS. GUSTAVUS A. MONTGOMERY, Titusville, Pa., assignor to Titusville Forge Company, Titusville, Pa., a Corporation of Maryland. Filed July 23, 1923. Serial No. 653,064. 6 Claims. (Cl. 294—82.)

1. A casing hook of the character described, comprising a pair of relatively movable members, one being formed with a piston and the other in the form of a cylinder engaging said piston, a casing hook carried by one of said members and capable of swiveling relatively to the other member, yieldable means for resisting movement of said members out of their normal contracted position, and anti-friction devices interposed between the opposing ends of said relatively movable members and applied to one of the latter, said devices being operative in the expanded position of said members to permit a free swiveling action of one member on the other.



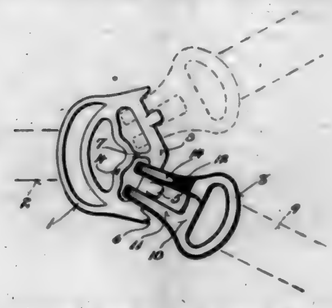
1,536,618. PROCESS OF TREATING LEAD COMPOUNDS. ALEXANDER NATHANSOHN, Bad Harsburg, Germany. Filed Mar. 7, 1924. Serial No. 697,537. 3 Claims. (Cl. 23—69.)

2. A process for treating chlorine compounds of lead by subjecting said compounds to the action of lime, treating the resultant product with carbon dioxide and removing and washing the precipitate so produced.

1,536,619. PROCESS FOR THE RECOVERY OF ZINC COMPOUNDS FROM ZINC-CHLORIDE SOLUTIONS. ALEXANDER NATHANSOHN, Bad Harsburg, Germany. Filed Mar. 7, 1924. Serial No. 697,538. 4 Claims. (Cl. 23—61.)

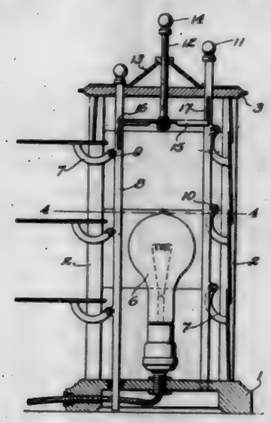
4. The process of recovering zinc values from products containing zinc by treating such zinc products with lime in contact with water, subjecting the resultant precipitate to the action of carbon dioxide so as to convert said precipitate into zinc carbonate and washing said zinc carbonate until it is free from chlorine.

1,536,620. WEEDER. FRED W. NEWELL, Seattle, Wash. Filed Mar. 18, 1924. Serial No. 700,159. 1 Claim. (Cl. 254—132.)



In a weeding implement, a handle having an enlarged spherical end, and a weeding blade secured in said spherical end and having divergent prongs projecting therebeyond, said prongs being of less width than height.

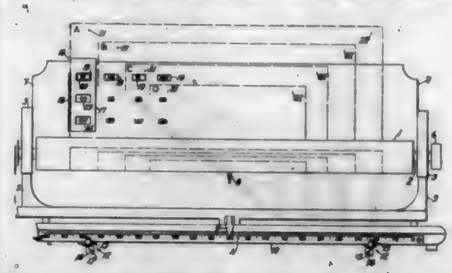
1,536,621. BUCKLE. CHESTER E. NICHOLS, Bridgeport, Conn. Filed May 31, 1924. Serial No. 717,018. 2 Claims. (Cl. 24—193.)



1. A double-loop buckle including a loop with hanger strap, a loop with eyes pivotally associated with the loop with hanger strap, said loop with eyes being adapted to swing upon the hanger strap away from or toward the loop with hanger strap to the open or closed position of the buckle whereby the loops can support a cloth or the like in such manner that a pull upon the cloth will force said loops toward each other, and means for releasably locking the loops in the closed position of the buckle so that the loops will remain in fixed relation to each other when there is no pull being exerted upon said cloth, the locking means being constituted by the interengagement of end portions of the different loops, and being dependent in its operation upon the resiliency of one of the loops.

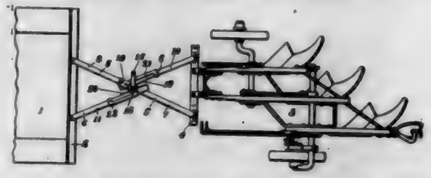
1,536,622. HOOK COUPLING FOR HARNESS. JOHN C. NICHOLS, Sheboygan, Wis. Filed May 22, 1923. Serial No. 640,686. 3 Claims. (Cl. 24—201.)

1. A detachable coupling for harness comprising two main elements, one of said elements having a strap receiving portion, an outer transverse bar, and an inner transverse bar; and the other of said elements having a strap receiving portion having a base, a pair of roughly parallel arms extending from opposite sides of said base, and inwardly directed prongs carried by the end of said arms and located upon opposite sides thereof.



1,536,623. LIGHT. BENJAMIN E. NORVELL, Pasadena, Calif. Filed Oct. 31, 1923, Serial No. 671,976. Renewed Mar. 21, 1925. 2 Claims. (Cl. 240—11.)

2. A device of the class described comprising a casing, a lamp therein, a set of shutters at each side of the casing, a curved arm on each shutter, a rod to which the arms of each set of shutters are connected, means for reciprocating the rods, a spider having parts engaging slots in the rods and a vertically movable rod arranged in the top of the casing and connected with the spider.



1,536,624. TYPEWRITING MACHINE. CHARLES C. PARKER, Houston, Tex., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1921. Serial No. 441,559. 14 Claims. (Cl. 197—140.)

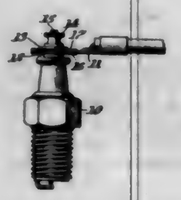
1. In a typewriter having a platen, a traveling carriage on which said platen is mounted, and adjustable margin-stops to limit the movements of said carriage, in combination, a side-edge gage and an introductory paper table having arranged thereon groups of numbers, one number of each group indicating the width of a work sheet to be used and the others indicating the letter-space positions at which the margin-stops are to be set,

and a mark adjacent the first number of each group to assist in positioning said side-edge gage, the latter being provided with means to co-operate with said mark in such positioning.

1,536,625. TRACTOR HITCH. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 2, 1921. Serial No. 482,028. 15 Claims. (Cl. 280—335.)

1. A hitch including cross reaches connecting a tractor with an object to be drawn, one of said reaches formed of two adjustable sections, and means operable at will to adjust said sections longitudinally in opposite directions.

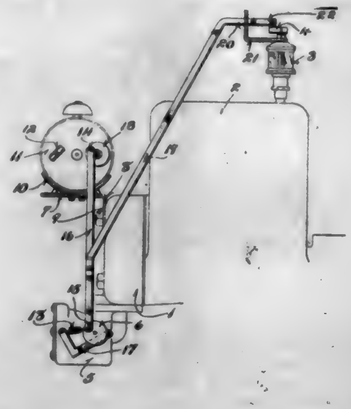
1,536,626. HINGE CONSTRUCTION. ALBERT T. POTTER, Detroit, Mich., assignor to Ainsworth Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 27, 1924. Serial No. 746,078. 4 Claims. (Cl. 16—135.)



1. The combination with a closure member, and a support therefor, of a hinge having sections secured to the support and closure member respectively, the section secured to the support having a depending portion terminating in spaced return bent portions extending above the lower edge of the depending portion, the section secured to the closure member having spaced return bent portions, a pintle connecting the return-bent portions of the hinge sections, and means for concealing the joint between the hinge sections in all positions of adjustment of the closure member including a plate secured to the closure member and one hinge section having a return bent portion extending around the return bent portions of both hinge sections.

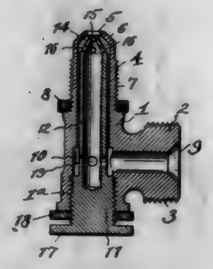
1,536,627. LIFE PRESERVER. THOMAS IRVING POTTER, Orange, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 19, 1922. Serial No. 582,973. 15 Claims. (Cl. 9—20.)

1. A jacket life preserver opening down the front and buoyantly reinforced adjacent its meeting edges and means for circumferentially contracting the jacket and bulging said buoyant material outwardly from the body of the wearer.



1,536,628. SPARK-GAP MECHANISM. CHARLES J. REED, San Mateo, Calif., assignor of one-half to Alice A. Hall, San Francisco, Calif. Filed Feb. 28, 1921. Serial No. 448,664. 3 Claims. (Cl. 123—148.)

3. A spark-gap mechanism comprising the terminals of an electric circuit, one being a fixed binding post, the other a flattened conducting strip clamped between two sheets of insulating material, by which it is held in close proximity to, but insulated from the binding post, said two insulating sheets and said conducting strip being in the form of collars to the binding post, one of said insulating sheets being perforated to allow passage of an electric spark.

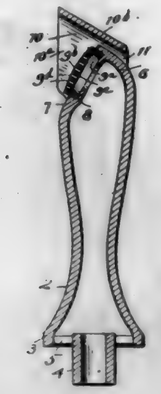


1,536,629. STOPPING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. OTTO REHME, Mosling, Wis. Filed July 12, 1924. Serial No. 725,650. 1 Claim. (Cl. 161—7.)

The combination of an internal combustion engine having a fuel control valve provided with a disk, an alarm clock secured to said engine and having a disk operated by the alarm mechanism, pins in said disks, a substantially vertical link connecting said pins, a spring secured to one end of said link and extending at right angles thereto adjacent said valve control, an arm extending laterally from said link and rigidly attached thereto and provided with a looped outer end, an oiler

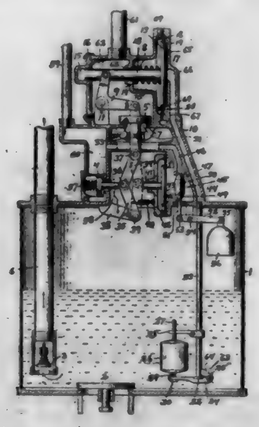
carried by said engine, and a control lever for said oiler adapted to be positioned within the looped end of said rod.

1,536,630. GAS-VALVE STRUCTURE. JOHN P. REINECKE, Lorain, Ohio, assignor to The Hoffman Heater Company, Lorain, Ohio, a Corporation of Ohio. Filed Apr. 20, 1923. Serial No. 633,507. 3 Claims. (Cl. 158—120.)



1. A gas valve comprising a tubular body having at one end a tapering wall provided with an axial discharge opening and a gas inlet adjacent the opposite end, a tubular member within said body and adjustable longitudinally thereof, said tubular member being of less diameter externally than the internal diameter of the body whereby an annular passageway from the inlet to the discharge opening is provided upon the exterior of the tubular member, said tubular member having openings in the wall thereof establishing communication with said passageway and a tapering end portion adapted to be moved into engagement with the discharge end of the body to close said annular passageway, said end portion of the tubular member having an axial opening of less diameter than the discharge opening of the body.

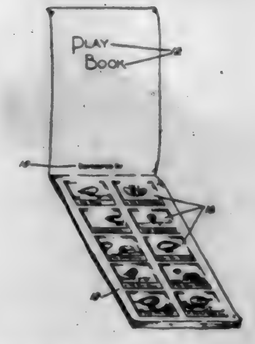
1,536,631. GAS BURNER. JOHN P. REINECKE, Lorain, Ohio, assignor to The Hoffman Heater Company, Lorain, Ohio, a Corporation of Ohio. Filed July 18, 1924. Serial No. 726,818. 6 Claims. (Cl. 158—99.)



1. A gas burner comprising a hollow body having a mixer portion and a head portion provided with per-

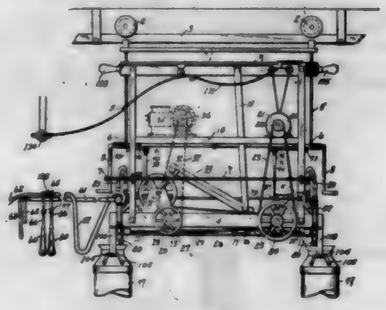
forated burner portions and a deflecting member carried by the head and projecting therefrom adjacent the

burner portion, said deflecting member being spaced from the head to provide an air passage to the burner.



1,536,632. PNEUMATIC PUMP. HOMER S. ROGERS, Milwaukee, Wis., assignor to Milwaukee Air Power Pump Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,807. 12 Claims. (Cl. 103—246.)

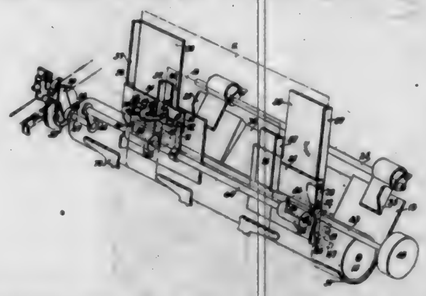
1. In a pneumatic pump, the combination with a pump chamber provided with water inlet and outlet valves, an air admission valve and an air exhaust port, of an air exhaust valve located outside of said pump chamber to control said air exhaust port, means for keeping said air exhaust valve closed against the pressure in said pump chamber, and a motor for opening said air exhaust valve.



1,536,633. ADVERTISING NOVELTY. MAX B. SHEPPER, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,806. 1 Claim. (Cl. 283—1.)

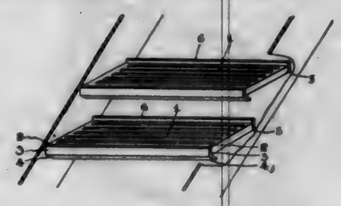
An advertising novelty comprising a binder for subject matter or title of a play or scenario, a plurality of leaves within said binder and having upon their faces a number of uniformly sized spaces bearing number in consecutive order, and a series of cards, each having a different picture from said play or scenario and number and a short descriptive title thereon, said series of cards when complete and affixed to the spaces upon said

pages in the order corresponding to the number designating each individual space being adapted to provide a pictorial and word synopsis of the subject matter shown by the title upon said binder.



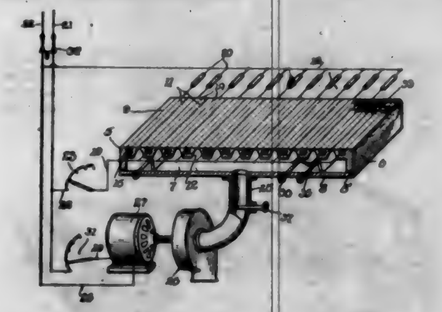
1,536,634. MILKING APPARATUS. WARREN A. SHIPPERT, Dixon, Ill., and GEORGE BAILEY, Milwaukee, Wis. Filed Nov. 21, 1921. Serial No. 516,810. 15 Claims. (Cl. 31—73.)

1. In a milking apparatus, the combination with a vacuum chamber, of a vacuum producing pump associated therewith, a set of teat cups operatively connected with the vacuum chamber for milk delivery thereto, and means for delivering air into the cup connections to drive the milk from said connections into the vacuum chamber.



1,536,635. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 24, 1920. Serial No. 432,906. 17 Claims. (Cl. 197—127.)

1. In a front-strike typewriting machine, the combination with a platen-frame and a revoluble platen journaled therein, of a rear paper-table fixed in said frame and provided with side-edge gages for aligning thereon a wide work-sheet, and provided with other side-edge gages for separately aligning thereon a narrow work-sheet lying between the edges of the wide work-sheet, devices carried by the platen-frame at the front of the platen for separately aligning each of said sheets to conform to its rear alignment, said devices comprising a wide front collating table provided with side-edge gages for aligning the wide work-sheet, and a narrow front collating table provided with side-edge gages for separately aligning the narrow work-sheet, and

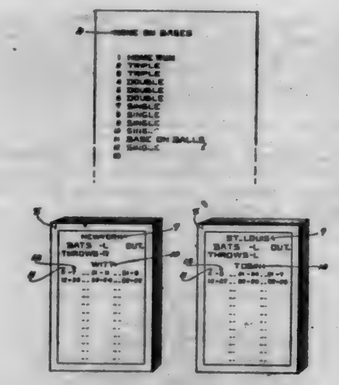


releasable means for gripping the narrow sheet to the narrow collating table independently of the wide sheet, and in any position to which the narrow sheet may be collated.

1,536,636. STAIR TREAD. ALEXANDER BONNELL TAPPEN, Briarcliff Manor, N. Y., and WILLIAM HINCKLEY MITCHELL, Nutley, N. J., assignors to Hendrick Manufacturing Company, Carbondale, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1923. Serial No. 664,865. 7 Claims. (Cl. 189—43.)

6. In a stair tread the combination of a fascia plate and a rearwardly positioned offset plate adapted to obstruct the passage of light through the tread.

1,536,637. METHOD OF AND APPARATUS FOR IRONING. MAX H. THURNAUER, Cincinnati, Ohio. Filed Nov. 12, 1920. Serial No. 423,517. 5 Claims. (Cl. 26—38.)

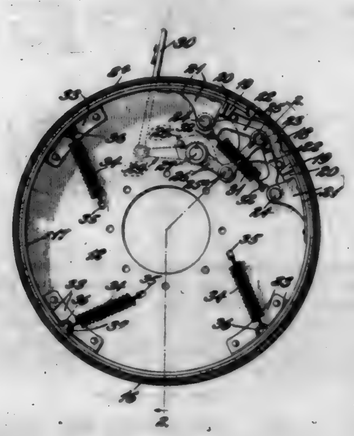


1. In an ironing device, an ironing member having an ironing surface for receiving the fabric to be ironed, said member having perforations opening through said ironing surface, means for establishing a suction through said perforations for creating the requisite ironing pressure between said fabric and said ironing surface, said means tending to create a flow of air through the fabric on the ironing surface and thereby tending to extract any moisture from the fabric and means for heating the ironing surface simultaneously with the ironing pressure and moisture extracting suction therethrough.

1,536,638. AUTOMATIC STABILIZING DEVICE. ALFRED C. TRAPP, Milwaukee, Wis. Filed Sept. 12, 1923. Serial No. 662,241. 6 Claims. (Cl. 114—191.)

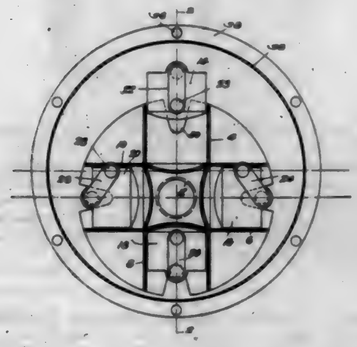
1. A ship provided with a hull having pivoted longitudinally thereof a frame, cargo carrying units pivoted transversely of said frame, said units adapted to swing with and independently of said frame, and means connected to the frame and each unit and carried by its respective supporting element for maintaining the same in a level position.

1,536,639. GAME. CLIFFORD A. VAN BEEK, Green Bay, Wis. Filed Sept. 17, 1923. Serial No. 663,170. 3 Claims. (Cl. 273—93.)



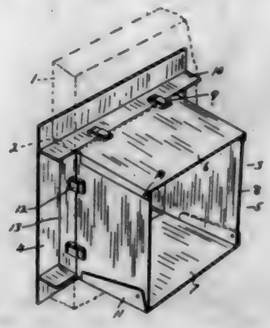
1. A game comprising a set of dice each of which indicates a digit of a number, a set of cards each representing players having two columns of numbers, one column having numbers which may be indicated by the dice and the other column having selected numbers, and a set of play sheets having a column of numbers corresponding to the last mentioned numbers and having plays marked opposite such numbers.

1,536,640. VEHICLE BRAKE. HERBERT VANDERBEEK, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed May 20, 1921. Serial No. 471,143. 5 Claims. (Cl. 188—78.)



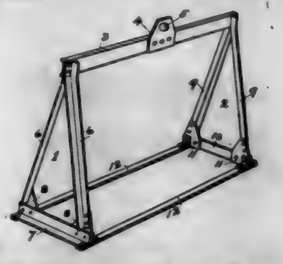
1. A brake drum, a brake band adapted to frictionally engage said drum to retard the movement thereof, a stationary stop member adapted to cooperate with an end of said band in the engaged position thereof, a toggle joint operatively connected to the ends of said

band for moving the same into and out of engagement with said drum, said toggle joint being disposed with its elbow offset outwardly from its points of connection with said band and with its points of connection with



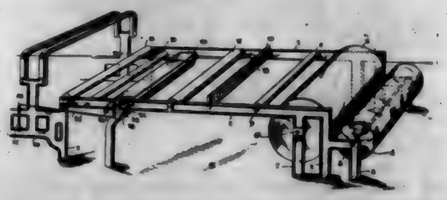
said band located inwardly from the inner peripheral surface of said band, and a spring device operatively engaging the ends of said toggle joint at points offset inwardly from the points of connection of said toggle with said band towards the center of said drum.

1,536,641. PISTON SUSPENSION IN PNEUMATIC HUBS WITH GUIDE OPERATION. BORIS VON LOUTZKOY, Berlin, Germany. Filed June 20, 1923. Serial No. 646,711. 6 Claims. (Cl. 152—44.)



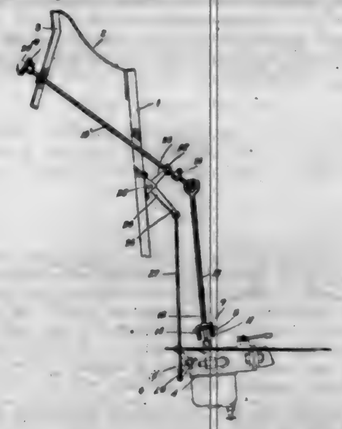
1. In a pneumatic hub having piston cylinder units, means for suspending the pistons comprising double cranks connected to the pistons, a casing for said units and bearings in the casings for said cranks.

1,536,642. COAL-CHUTE CONSTRUCTION. FRANK E. WALL, Detroit, Mich., assignor to Gabriel Steel Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 7, 1924. Serial No. 704,889. 8 Claims. (Cl. 193—34.)



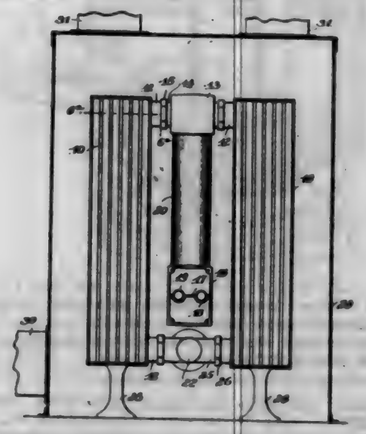
1. In a chute, the combination with a supporting frame, of a collapsible box-like body connected thereto.

1,536,643. SLING. IRVIN H. WILLIAMS, Richmond, Va. Filed Apr. 16, 1924. Serial No. 706,887. 7 Claims. (Cl. 294—67.)



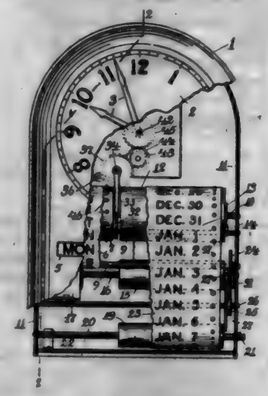
1. A sling adapted to carry a load, having two flat members spaced apart and substantially parallel to one another to form a cradle to carry the load, with cross members secured to each end of the flat members to hold them in their spaced relation, and forming with the flat members an open frame of substantially rectangular shape, and having means secured to the frame by which it may be suspended in a substantially horizontal plane.

1,536,644. FABRIC-TREATING MACHINE. CHARLES W. YOUNG, Goodyear, Conn., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 21, 1924. Serial No. 744,887. 15 Claims. (Cl. 139—97.)



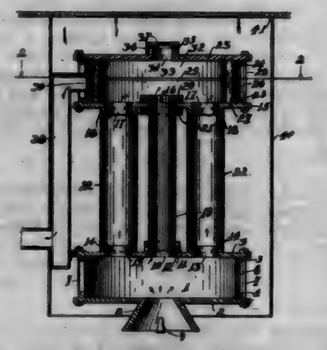
1. A device for treating fabric, comprising mechanism for directing fabric from a re-weaving roll into a loom, means for cutting transverse threads of the fabric, and a member for shaking out the cut threads.

1,536,645. CARBURETOR CONTROL. JOSEPH C. YOUNGBLOOD, Atwood, Kans. Filed Nov. 8, 1922. Serial No. 598,821. 2 Claims. (Cl. 137—139.)



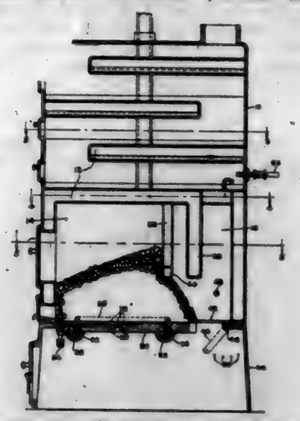
1. The combination with a motor vehicle of the Ford type comprising a dash having an opening therein, a carburetor having separate choke and needle valves, a bell crank lever mounted on the dash and a link operatively connecting one arm of the bell crank with the choke valve, of a carburetor control device comprising a rod having operative connection with the needle valve, a second rod extended through the dash opening and connected with the first rod to effect rotary movement thereof, a stud slidable on and rotatably supporting the second rod and having pivotal supporting connection with the other arm of the bell crank and a stop collar on the second rod engageable with the stud to rock the bell crank when the second rod is moved longitudinally.

1,536,646. HEATING APPARATUS. JOHN B. ALLINGTON and CHARLES L. CADLE, Rochester, N. Y. Filed Sept. 29, 1924. Serial No. 740,483. 5 Claims. (Cl. 126—116.)



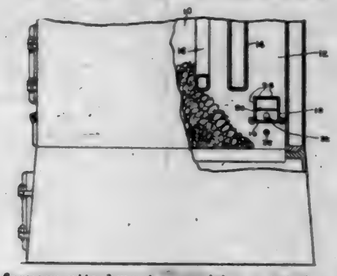
1. A heating apparatus comprising a plurality of radiator sections arranged in spaced relation, a combustion chamber located between said sections and having at its top a distributing manifold connected on opposite sides with the upper portions of the sections, a discharge manifold below said chamber between said sections and connected on opposite sides to the lower portions of the latter, all of said parts being constructed of cast metal to resist corrosion and in fluid-tight connection with one another to form a closed system for the products of combustion, fluid fuel burning means in said combustion chamber and a casing enclosing said parts to form an air heating space.

1,536,647. AUTOMATIC CALENDAR CLOCK. AMANDUS ANDRESEN, Brockton, Mass. Filed Nov. 10, 1923. Serial No. 674,069. 2 Claims. (Cl. 58—6.)



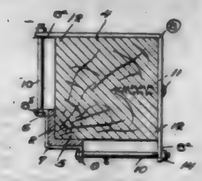
1. The combination of an escapement comprising a spindle supported to have a longitudinal movement, an escape wheel, a pallet member carried by said spindle to engage said wheel, a cam hub rotated by said clock once in a day, a pin projecting from said spindle to be engaged by said cam hub for moving the spindle and hence the pallet member in one direction, and a spring for oppositely moving the spindle and member.

1,536,648. AIR HEATER. FRANK R. ARTHUR, Mountain View, Calif. Filed June 2, 1924. Serial No. 717,269. 6 Claims. (Cl. 126—116.)



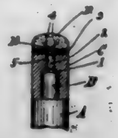
1. In a heater of the character indicated, a pair of vertically spaced chambers, an axially arranged tube connecting said chambers, a plurality of tubes spaced about said central tube and connecting said chambers, a chamber arranged within the upper chamber and communicating therewith, and an outlet from said upper chamber at a point remote from its communication with said inner chamber.

1,536,649. SMOKE-CONSUMING FURNACE. CHESTER E. BETCHER, Minneapolis, Minn. Filed Apr. 26, 1924. Serial No. 709,157. 3 Claims. (Cl. 110—65.)



1. A furnace comprising a firebox, a combustion chamber, a firewall between said firebox and said combustion chamber and spaced above the bottoms thereof, and a grate consisting of vertically disposed, depending grate bars spaced in front of said firewall having its lower end spaced above the bottom of said firebox.

1,536,650. FURNACE ATTACHMENT. CHESTER E. BETCHER, Minneapolis, Minn. Filed May 2, 1924. Serial No. 710,573. 4 Claims. (Cl. 110—60.)

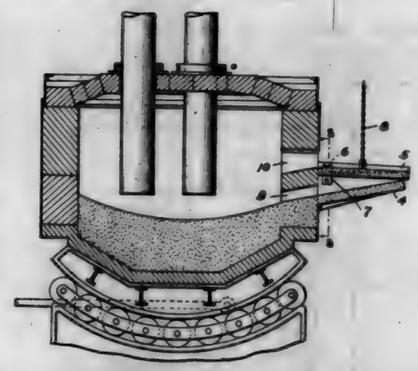


1. A furnace attachment comprising a tubular member in the combustion chamber of the furnace, a horizontal partition extending for a portion of the length of said tubular member, a water supply pipe extending into said tubular member beneath said partition and a spraying nozzle on the end of said pipe, said tubular member having perforations above said partition for the escape of steam.

1,536,651. STEEL-DERRICK REENFORCEMENT. TROY ALMOND LEONARD BOWEN, Tulsa, Okla. Filed Nov. 6, 1924. Serial No. 748,185. 2 Claims. (Cl. 20—0.5.)

1. The combination with a corner upright of a derrick formed from angle iron, of reenforcing means therefor, said means comprising a rectangular shaped bar, said bar having one of its corners disposed within the angle iron, right angularly shaped plates carried by the angle iron and the bar and oppositely disposed, and right angularly disposed bolts connecting the plates together.

1,536,652. CUE TIP. GEORGE A. BROCKWAY, St. Paul, Minn. Filed Jan. 20, 1921. Serial No. 438,787. 1 Claim. (Cl. 273—70.)

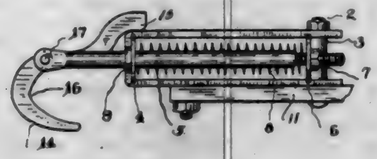


A cue tip comprising a ferrule secured upon the end of a cue, a tip member disposed upon the outer end of said ferrule, a spring member extending from said tip member and frictionally engageable within the ferrule recess, the transverse edge extremities of the ends of the spring member being beveled inwardly toward each other whereby the ends will extend divergently when driven into the tip member, each diverging end of said spring member being formed with a spear-like head having a pair of lateral sharp spurs directed divergently toward the ferrule and undercut.

1,536,653. METHOD OF MAKING SILICON STEEL. VERE B. BROWNE, Brackenridge, Pa. Filed May 15, 1923. Serial No. 639,195. 4 Claims. (Cl. 75—45.)

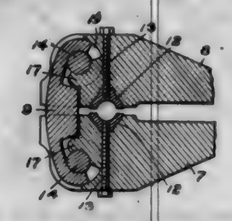
1. The method of adding manganese to steel, which consists in directly reducing manganese from manganese ore by bringing together in the ladle manganese ore and molten steel.

1,536,654. TILTING FURNACE. VERE B. BROWNE, Brackenridge, Pa., assignor to Valley Holding Corporation, Brackenridge, Pa., a Corporation of Pennsylvania. Filed June 23, 1923. Serial No. 647,267. 5 Claims. (Cl. 266—38.)



1. A tilting furnace provided with two vertically aligned tap-holes one of which is located below and the other above the slag line and spouts adapted to cooperate with said tap-holes.

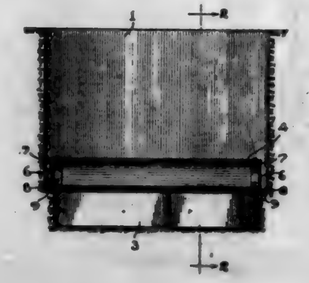
1,536,655. METHOD OF MANUFACTURING STEEL SHEETS. VERE B. BROWNE, Brackenridge, Pa., assignor to Valley Holding Corporation, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1924. Serial No. 743,498. 2 Claims. (Cl. 148—12.)



1. The method, which consists in hot-rolling sheet bars to approximately sixty per cent of the finished length of the sheets required, then in annealing and pickling the semi-finished sheets, then in cold rolling the same to an extent necessary to remove superficial surface defects, then in matching and heating the same to a relatively low temperature, then in rolling the match sheets to length between highly polished smooth rolls and then in annealing and pickling the sheets whereby steel sheets having a high-grade surface and suitable for deep drawing and stamping operations are produced.

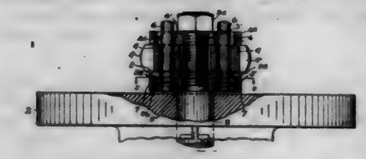
1,536,656. DRAFT BREAK HOOK. GEORGE WESLEY BRYANT, Ashburn, Ontario, Canada. Filed Aug. 29, 1924. Serial No. 734,998. 3 Claims. (Cl. 280—33.16.)

1. A break-hook comprising a frame adapted to be secured to a draft connection; a pair of rods slidably mounted at opposite sides of the frame and extending forwardly of the same; a coil spring normally in compression mounted in and bearing at one end against the frame; a cross head to which the rods are connected bearing against the other end of the spring; a hook pivotally mounted between the forward ends of the rods, the throat of said hook being substantially in line with the aforesaid draft connection; and a tail on said hook extending towards the frame and normally resting on top thereof but adapted to swing by the frame when the rods move a sufficient distance against the compression of the spring, the hook being proportioned to swing by the end of the frame when the rods are in normal position relative to the frame.



1,536,657. WIRE CLAMP. JOHN J. CAMPBELL and FERDINAND J. SPANG, Butler, Pa., assignors to Spang and Company, Butler, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1921. Serial No. 522,517. 12 Claims. (Cl. 24—135.)

1. A wire line clamp comprising a back plate, clamp arms, a separate pin for pivotally securing each arm to said plate, said arms and plate being provided with pin encircling lugs and additional pin engaging surfaces so formed as to substantially relieve the pins of shearing strains when the arms are forced to a closed position.



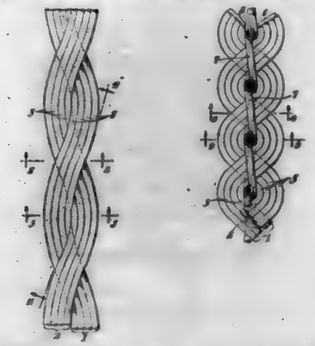
1,536,658. METAL PROTECTOR FOR GRAVES. CHARLES B. CARR, Drummond, Okla. Filed Apr. 10, 1924. Serial No. 705,589. 2 Claims. (Cl. 27—30.)

1. As an article of manufacture, a metallic grave protector comprising a body having ends, said body being adapted to be positioned to arch over the casket receiving container, the wall of the body being spaced from the top of the container to withstand the earth thereabove, said protector having a marginal flange upwardly

curved in cross section and adapted to engage and rest upon a ledge constructed on the side and end walls of the grave.

1,536,659. ADJUSTABLE CUTTER HEAD. RAY L. CARTER, Syracuse, N. Y. Filed June 19, 1924. Serial No. 721,045. 9 Claims. (Cl. 144—218.)

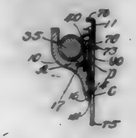
1. In a cutter-head, the combination with a stationary table, a driven threaded spindle, and a pair of similar cutters said cutters being bored out axially, of a pair of similar collars having registering radial slots adjustably mounted on said spindle, said collars adapted to be spaced for receiving therebetween the said cutters, means for moving said cutters, means engaging the bores of the cutters and said radial slots for controlling the cutters radially relatively to said spindle, and means for clamping the collars to said spindle.



1,536,660. METHOD OF MANUFACTURING STEEL SHEETS. WILLIAM E. CAUGHERTY and SAMUEL C. HOOKEY, Natrona, Pa. Filed Oct. 13, 1924. Serial No. 743,499. 6 Claims. (Cl. 148—12.)

1. The method of making highly finished steel sheets free from Stead's brittleness, which consists in heating the sheet bars to a relatively high temperature, then in rolling said bars to less than 75 per cent of the length of the sheets to be produced, then in annealing and pickling the semi-finished sheets, then in cold rolling the semi-finished sheets to length and then in annealing the sheets.

1,536,661. CABLE AND METHOD OF MAKING THE SAME. EDWARD A. CONNER, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Apr. 27, 1922. Serial No. 556,840. 6 Claims. (Cl. 245—1.5.)

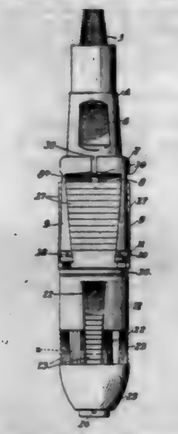


1. A cable consisting of two flat strands each of which is composed of a plurality of wires lying side by side, the said strands being so plaited together that their flat surfaces lie in contact with each other at points of crossing.

5. The method of making cable which consists in forming a plurality of wires into two flat strands and twining the strands thus formed together to form a substan-

tially flat structure, the twining being carried out so that the flat sides of the strands lie in contact with each other at points of crossing.

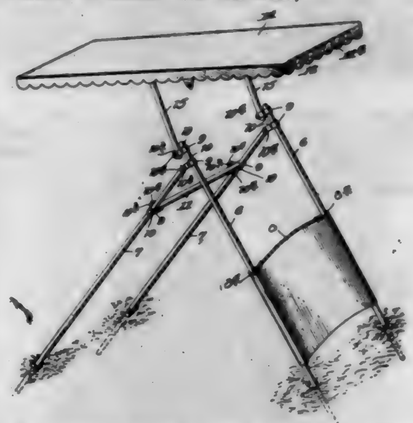
1,536,662. COMBINATION HAIR CUTTER AND SAFETY RAZOR. JOHN HENRY COWAN, Kansas City, Mo., assignor, by mesne assignments, to Nicholson Construction Company, a Corporation. Filed Apr. 3, 1922. Serial No. 549,072. 2 Claims. (Cl. 30—12.)



1. A device of the character set forth, comprising a blade-supporting member having a substantially flat blade-supporting surface on top with a tapered forward guard edge, a handle-retaining member pivotally mounted on said blade-supporting member, a handle detachably secured to said handle-retaining member, a thin safety razor blade adapted to lie on said flat blade-supporting surface with its cutting edge slightly in front of said tapered guard edge, and a comb-plate with teeth on its forward edge adjustably mounted on said blade-supporting member and lying over said blade.

1,536,663. METHOD OF MANUFACTURING STEEL SHEETS. OTTO HERRON CUNNINGHAM, Brackenridge, Pa., assignor to Valley Holding Corporation, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1924. Serial No. 743,497. 7 Claims. (Cl. 148—12.)

1. The method, which consists in hot rolling steel sheets to a size considerably less and a gauge considerably greater than the size and gauge of the finished sheets, in then annealing the sheets at a normalizing temperature, in then pickling the sheets to remove the scale, in then cold rolling the sheets to length and gauge and then in annealing the sheets at a temperature below the normalizing temperature.

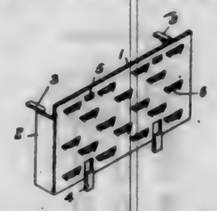


1,536,664. CASING SPEAR. BERT R. EMRICK, Nyaunghla, Upper Bufma, India. Filed June 14, 1922. Serial No. 568,184. 15 Claims. (Cl. 294—86.)

1. A casing spear comprising a mandrel having slips slidable on the upper part thereof, a wedge member slidable on the mandrel below the slips, lower slips in contact with the wedge member, said mandrel being recessed below the top of said wedge member, pivoted dogs in the recess having means thereon for engaging the wedge member when it is in its uppermost position to prevent downward movement thereof, and resilient means

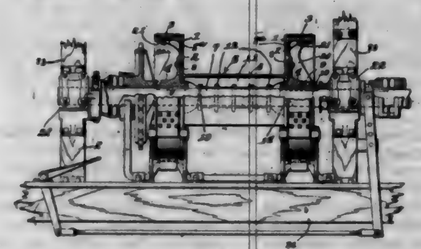
for urging the dogs into wedge engaging position, said dogs normally being confined by the wedge member when said wedge member is below the uppermost limit of movement, the top of said wedge member transmitting motion to said upper slips.

1,536,665. COLLAPSIBLE BACK REST. FRANK M. FARGO, Evanston, Ill. Filed June 19, 1924. Serial No. 721,009. 2 Claims. (Cl. 155—158.)



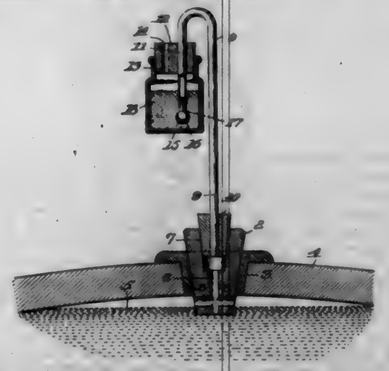
1. A back-rest having a pair of front legs connected by an interposed back-support of flexible material, a pair of rear legs pivotally and collapsibly connected at their upper-end portions with those of the rear legs, and a spreader releasably connecting the rear legs, characterized by the connecting means comprising yokes embracing and pinned to the front legs near their upper ends and embracing the rear legs near their upper ends, and pivot bolts passing through the yokes and rear legs and releasably fastened in place.

1,536,666. WALL STRUCTURE. JOSEPH P. FRANK, Knoxville, Pa., assignor of one-third to Philip S. Chess, Pittsburgh, Pa. Filed Feb. 27, 1924. Serial No. 695,450. 2 Claims. (Cl. 72—116.)



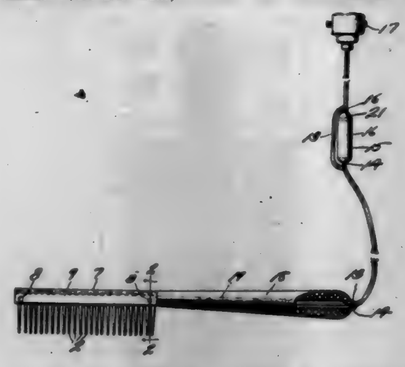
1. A unit for a wall structure formed of sheet metal and including a medial plaster-sustaining web, opposite

terminal flanges adapted to bear directly upon the vertical surface of an adjacent wall member, and tongues extending from said terminal flanges and adapted to



engage such adjacent wall member and by engagement to sustain the unit together with the plaster facing thereof.

1,536,667. BRAKE-DRUM CONSTRUCTION. EDWIN W. GOESER, Los Angeles, Calif., assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Sept. 5, 1923. Serial No. 661,018. 6 Claims. (Cl. 242—117.)



1. In a drum construction for a rotary draw works, the combination of a shaft, a drum having a metal spool of larger diameter than the shaft so as to form an annular space between the shaft and the spool, said spool having a plurality of integral longitudinally disposed ribs on its inner side engaging the side of the shaft, and operating to impart compression forces of the cable to the shaft.

1,536,668. GAS-VENTING DEVICE. SIGMUND L. GOLDMAN, Chicago, Ill. Filed Dec. 5, 1923. Serial No. 678,604. 4 Claims. (Cl. 217—105.)

1. A bung formed of a tapered body having continuously open ports for gas-venting, at its inner face and at the side of the tapered portion of the body which extends below the inner side of the cask when the bung is applied to use.

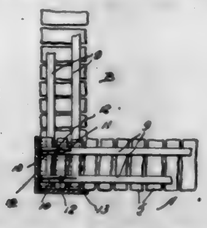
1,536,669. HEATED COMB. CLARA GRANT, St. Louis, Mo. Filed Mar. 6, 1923. Serial No. 623,197. 1 Claim. (Cl. 219—21.)

A hair straightening comb having teeth, hollow conically shaped members disposed in conically shaped recesses of the teeth, said hollow conically shaped members being connected together at their outer ends and held spaced and against movement in relation to each other, resistance coils permanently fixed in said conically shaped members, a U-shaped member detachably connected to the comb and arching the rear side thereof and housing the outer ends of the conically shaped members, said U-shaped member also forming a housing for conductor wires.

1,536,670. PAPER-FEEDING DEVICE. LAWRENCE B. GRASBERGER and JAMES T. FAY, Richmond, Va. Filed May 15, 1922. Serial No. 561,118. 18 Claims. (Cl. 271—42.)

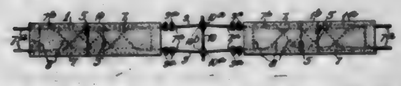
1. A paper feeding device comprising rigid paper engaging means positively engaging the paper, adjacent yielding means for frictionally engaging the paper and flush with said rigid means and devices compressing said means between them, whereby when pressure is applied to said device said rigid means may project slightly beyond the surface of said yielding means.

1,536,671. LIGHTER. HANS GROSSMANN, Zurich, Switzerland. Filed June 2, 1922. Serial No. 565,450. 4 Claims. (Cl. 67—7.)



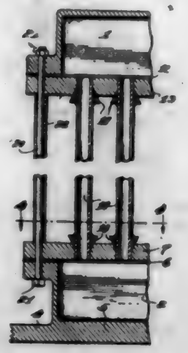
1. A lighter comprising in combination an apertured receptacle adapted to hold combustible pellets completely surrounded by an ignitable composition, means on said receptacle forming a chamber registering with said aperture in which chamber said pellets are singly presented to said aperture, tongs consisting of two relatively movable parts and a spring placed between them, one of said movable parts being a sleeve in which the other part is longitudinally movable against said spring, a single pellet being gripped by the relative movement of said tongs parts for withdrawing a pellet, holding the withdrawn pellet during ignition and while it burns, said tongs being normally inserted in said chamber and covering said aperture.

1,536,672. GAME. ERNEST HAVILAND HOBBS, Washington, D. C. Filed Oct. 1, 1924. Serial No. 740,969. 9 Claims. (Cl. 273—134.)



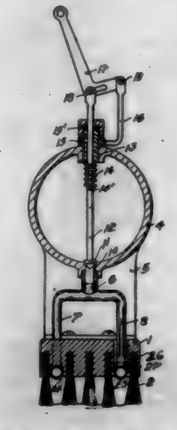
1. A game comprising a game board having spaces arranged in a series, a game piece, a change device controlling the primary movement of said game piece, and a qualifying chance means for controlling a possible further movement of said game piece.

1,536,673. WALL CONSTRUCTION. JOHN W. JOHNSON, Waycross, Ga. Filed Nov. 2, 1923. Serial No. 672,393. 1 Claim. (Cl. 72—83.)



In a wall construction, a plurality of superposed horizontal rows of comparatively short logs extending transversely of the length of the wall, said logs being substantially uniform in diameter and the logs of one row being disposed in staggered relation with respect to those of the other row, all of said logs being spaced apart to permit a cement filler or binding material to be placed therebetween for maintaining them in their proper relative positions, bonding and leveling strips arranged between alternating rows of the logs, and tie wires for connecting the end logs and leveling strips together.

1,536,674. RAIL TIE. CHARLES JONES, Geelong, Victoria, Australia. Filed Sept. 24, 1924. Serial No. 739,497. 4 Claims. (Cl. 238—31.)



1. A rail tie of the character described, comprising spaced blocks for supporting rails, said blocks having projections, normally parallel links connecting the projections of one block with those of the other, and means for adjustably forcing said links out of parallelism to reduce the space between the blocks.

1,536,675. RADIATOR. LOUIS J. LA LONDE, Detroit, Mich. Filed July 30, 1921. Serial No. 488,572. 2 Claims. (Cl. 257—129.)

1. A radiator comprising a pair of tanks arranged to discharge a liquid one into the other, detachable cover plates for said tanks provided with oppositely disposed countersunk openings, tubes fitted in the latter conveying the liquid to and from the tanks continuously, said tubes having straight portions at their extremities to snugly fit within the straight portions of said openings, conical wedges on the exterior surface of said tubes inwardly from the extremities thereof to fit within the countersunk portions of said openings, bolts serving to unite the tanks with each other at the opposite ends, including the terminals of their said plates, and tubular spacers enclosing said bolts intermediately of the plates, said spacers operating to maintain the wedges on and around the tubes in a set position relatively to the countersunk openings.

1,536,676. SCRUBBING BRUSH. ANTON A. LERAAS, Spokane, Wash. Filed Feb. 26, 1924. Serial No. 695,154. 2 Claims. (Cl. 15—131.)

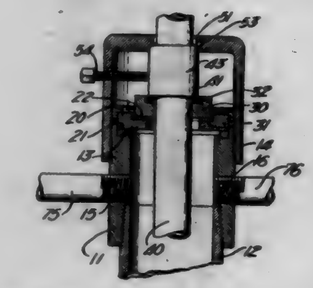
1. The combination with a brush head having a pair of spaced grooves, of perforated, distributing pipes slidably mounted in said grooves and having inlet ports, spaced collars on said pipes forming annular grooves, a pivoted detent on said head for engagement with each groove, and means for supplying a liquid detergent to each distributing pipe.

1,536,677. TOY. GAETANO LIPARI, San Jose, Calif. Filed May 6, 1924. Serial No. 711,437. 1 Claim. (Cl. 46—14.)

An article of manufacture comprising two symmetrical vanes, each vane comprising a circular element cut at one place from circumference to center and having the two quarters of the element on either side of said cut bent in opposite directions at right angles to the remaining half of the element, the two vanes being arranged in opposed relation to each other and at right angles to each other with the angularly bent quarters of one element overlapping the opposing angularly bent quarters of the other element, the overlapping quarters being secured together and having pivot pins mounted therein on the axis bisecting the same.

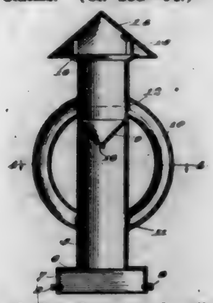
1,536,678. PLANT SUPPORT. ANTHONY MARKOWSKI, Chestnut Hill, Pa. Filed Aug. 24, 1923. Serial No. 659,031. 2 Claims. (Cl. 47—47.)

1. A plant support comprising a doubled-wire standard embodying vertically parallel rods with the free ends coiled together and offset to provide a pair of legs, a third offset leg pivoted in the coiled portion aforesaid, and an associated plant engaging means embracing two hoops each fashioned from a single strand of wire and each provided with an integral sustaining shank, said shanks being aligned and twisted together centrally of the member to an extent conforming with the space intervening between the aforesaid parallel rods, with the ends of the wires projecting beyond the region of the juncture bent to afford, adjacent said juncture, a pair of main friction loops with their approaches facing each other, and at their terminals with a pair of auxiliary friction loops aligned with the former but with their approaches facing in a direction from one another, said coordinated pairs of friction loops being adapted to engage respectively with the parallel bars of the standard.



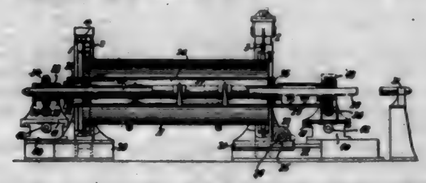
1,536,679. PLANT SUPPORT. ANTHONY MARKOWSKI, Chestnut Hill, Pa. Filed Aug. 24, 1923. Serial No. 659,032. 13 Claims. (Cl. 47—47.)

1. A plant support including a standard comprising a main component member of wire affording a single strand mounting stem with an integral offset leg, and a complementary member affording two additional offset legs to form a tripod base for the standard, in combination with a plant engaging member having integral bifurcate loops adapted to frictionally engage the stem of the standard.



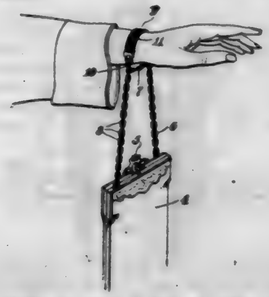
5. A plant support comprising a single mounting stem having a tripod base, in combination with a plant engaging member in the form of a hoop with an internal radial sustaining shank terminated with bifurcate grips adapted to frictionally engage the mounting stem.

1,536,680. CASING HEAD. WILLIAM L. MCLAINE, Los Angeles, and WILLARD L. BOROUGH, Fullerton, Calif. Filed Sept. 28, 1922. Serial No. 591,177. 8 Claims. (Cl. 166—14.)



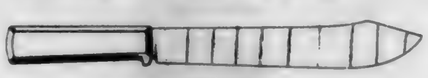
1. A casing head structure comprising: a member adapted to be attached to the top of the well casing and having a seat formed in the top thereof; a casing head ring resting on said seat and upon which a collar of the tubing may be supported; and means for engaging the top of said collar and said member.

1,536,681. SPARK ARRESTER. STANISLAW MICHALAK, Toledo, Ohio. Filed Sept. 19, 1924. Serial No. 738,631. 3 Claims. (Cl. 183—94.)



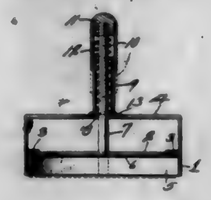
1. A device of the character described including a pipe, an inverted truncated cone shaped baffle plate mounted within said pipe, and a plurality of branch passages having one end connected to said pipe below said baffle plate and their opposite ends connected to said pipe above said baffle plate.

1,536,682. MEANS FOR THE LINING OR MANUFACTURE, CENTRIFUGALLY, OF PIPES, COLUMNS, AND OTHER HOLLOW ARTICLES. DONALD MOIR and HUGH BUCHANAN, Rosario de Santa Fe, Argentina. Filed Oct. 13, 1923. Serial No. 668,320. 6 Claims. (Cl. 25—30.)



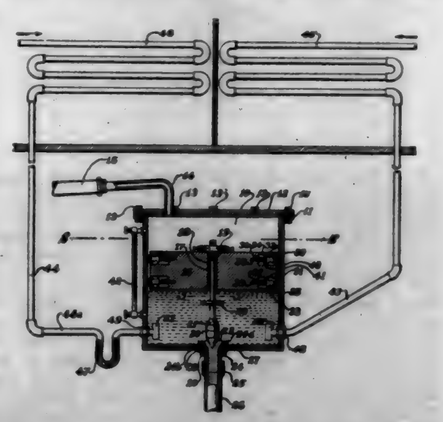
1. In means of the kind herein referred to a chuck ring, pinching screws projecting radially inwards from said chuck ring, brackets removably secured to the chuck ring and members arranged to slide in said brackets, said members constituting inward extensions of the pinching screws, for the purpose set forth.

1,536,683. DEVICE FOR CARRYING ARTICLES FROM THE WRIST. CÉCILE MOREAUX, New York, N. Y. Filed Dec. 5, 1923. Serial No. 678,633. 4 Claims. (Cl. 224—29.)



1. In a device to carry a bag or other article from the wrist, the combination of a continuous flexible suspending member looped above the article to be carried, and a short stretchable bridging member extending across between two separated points on the suspending member and connected at its ends to such points, whereby the wrist may be inserted and is surrounded by the bridging and part of the suspending member.

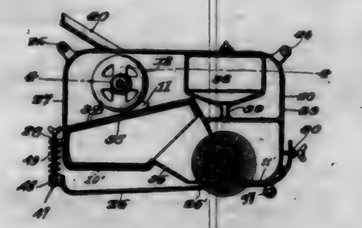
1,536,684. STAINLESS STEEL AND HARDWARE ARTICLES MANUFACTURED THEREFROM. HAROLD H. MORGAN, Pittsburgh, Pa. Filed Dec. 18, 1922. Serial No. 606,612. 1 Claim. (Cl. 75—1.)



An article of cutlery manufactured from steel containing from about 2 to 30 per cent of nickel and from about 6 to 20 per cent of manganese.

1,536,685. COOKY CUTTER. HENRI HAROLD MUIRHEAD, Bloomsburg, Pa. Filed May 26, 1924. Serial No. 715,890. 1 Claim. (Cl. 107—51.)

A cooky cutter comprising a chambered body member, a disc disposed within the chamber of the body member and spaced from the wall thereof, a U-shaped handle member carried by the body member, a shaft carried by the disc and extending through an enlarged aperture of the handle member, a knob threaded on the upper end of the shaft, a sleeve carried by said knob and disposed in an annular channel of the knob, said knob carried sleeve telescopically engaging a sleeve rigidly carried by the center of the handle member and surrounding the aperture therein, a coiled spring surrounding the shaft and disposed within the sleeves and entirely housed thereby, said sleeves forming sole means for axially guiding the shaft and disc during a cooky ejecting operation and maintaining the disc in spaced relation to the wall of the chambered member.

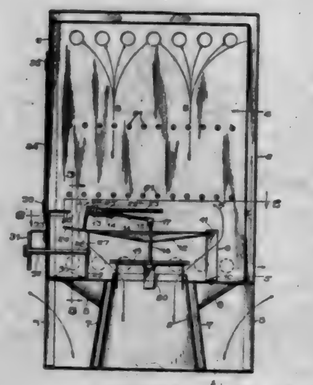


1,536,686. HEATING SYSTEM. JAMES MULLEN and LEAMAN S. HARVEY, Waterbury, Conn. Filed May 19, 1924. Serial No. 714,269. 1 Claim. (Cl. 137—103.)

In a steam trap for a steam heating system, a casing having an inlet at the bottom for receiving condensed steam from the heating system, an outlet in the bottom

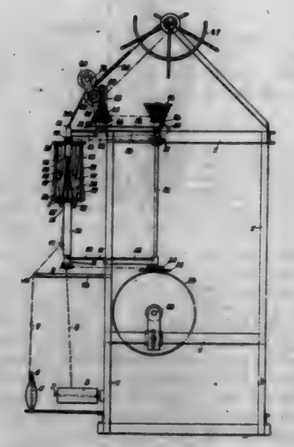
of said casing, a float in said casing, a vertical valve rod passing loosely through said float, said valve rod having a valve head for normally closing said outlet, said rod having a collar above said float, whereby the valve head will be lifted by said float to permit water to escape when the level in the casing rises to a predetermined point, and a combined air outlet pipe and excess steam condenser leading from the top of said casing, said condenser having a downwardly inclined enlarged section adapted to be cooled by the surrounding air to condense any excess steam which may pass through the casing.

1,536,687. ELECTRIC CLEANING DEVICE. CHARLES C. OATEY, Dubuque, Iowa. Filed Aug. 11, 1921. Serial No. 491,540. 10 Claims. (Cl. 15—50.)



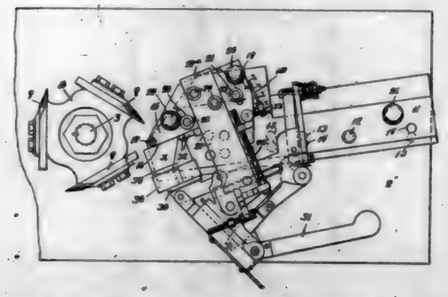
1. A cleaning device including a housing, detachable supporting runners carried by the housing and formed to provide an opening, a brush mounted within the housing and operating through the opening, and means for normally urging the runners and housing apart.

1,536,688. ELECTRIC FLATIRON CONNECTION. IVYAL R. OSBORN, River Falls, Wis. Filed Mar. 29, 1924. Serial No. 702,773. 1 Claim. (Cl. 173—332.)



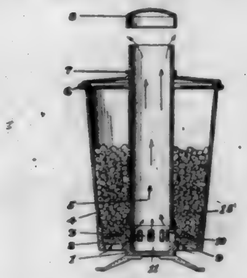
An electric cable connection comprising two coupling members, one of which has two contact tongues with lateral notches, the other member having openings in which to receive said tongues, a metallic channel secured in each opening and having an offset resilient arm secured with one end to the inner end of the channel and to the electric cable in said member, the other end portion having at its bottom side teeth arranged to interlock in the notches of the tongues, said coupling member having a longitudinal slot, a finger operated catch slidable upon the slotted side of the coupling member and having a neck slidable in the slot and provided with an actuating element movable upon the resilient arms to press their teeth into the notches of the tongues when the catch is moved toward the swinging end of the resilient arm and to permit the arm to spring away from the tongues when the catch is moved in the opposite direction.

1,536,689. TEMPERATURE-CONTROLLED HEATING DEVICE. RAYMOND C. PIERCE, New York, N. Y. Filed Oct. 18, 1923. Serial No. 669,489. 16 Claims. (Cl. 236—16.)



1. In a heating device, the combination of a thermostat, a valve, means operatively connecting the thermostat and valve, and a deflector to direct the products of combustion to secure a uniform temperature and adapted to support the thermostat.

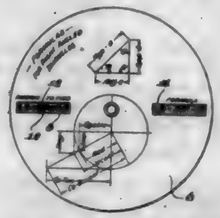
1,536,690. MACHINE FOR MANUFACTURING LOOP YARN. ARMIN RICHTER, Isselhorst, Germany. Filed June 26, 1922. Serial No. 570,891. 6 Claims. (Cl. 117—1.)



1. In a machine for the purpose described, the combination of a relatively stationary support for a core thread bobbin, a similar support for a loop thread bobbin, a winding peg spindle positioned to receive thread from bobbins on both said supports, and a rotatable support for a winding thread bobbin positioned to deliver thread from the bobbin thereon at the end of the winding peg spindle.

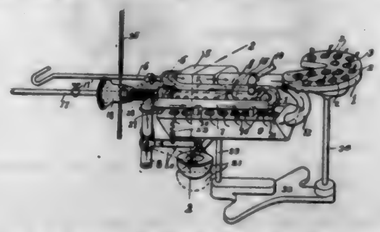
1,536,691. HEEL-BLANK BREAST-SHAPING MACHINE. HARLEY W. RUSS, Haverhill, Mass., assignor to Merrimack Wood Heel Co., Salem, N. H., a Corporation of Massachusetts. Filed May 15, 1924. Serial No. 713,465. 9 Claims. (Cl. 144—137.)

1. A machine for shaping the breast side of a heel blank comprising a rotary cutter having its cutting edges movable in a circular path and adapted to form a transversely concave groove, a heel blank holder movable in a curved path and having means to hold the blank with its base end at a predetermined angle to said path and in position to be carried longitudinally past the cutter with its base end at an oblique angle to the path in which it is moved, to form a groove in one side of the blank from end to end having a predetermined longitudinal convexity and an obtuse angularity to its base end.



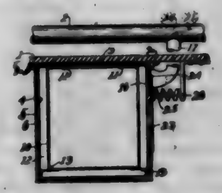
1,536,692. ORCHARD HEATER. WILLIAM C. SCHEU, Upland, Calif. Filed May 17, 1923. Serial No. 639,608. 9 Claims. (Cl. 126—59.5.)

1. A device of the character described comprising a base member having an annular recess and a central chamber formed by walls integral with said base member, two of the said walls forming said annular recess being provided with draft openings, an outer member rising from the outer wall of said recess and an inner member rising from the inner wall of said recess whereby a magazine is formed for maintaining a supply of fuel therein, and a cover for said magazine having a central opening through which said inner member extends and a separable cap for covering said inner member.



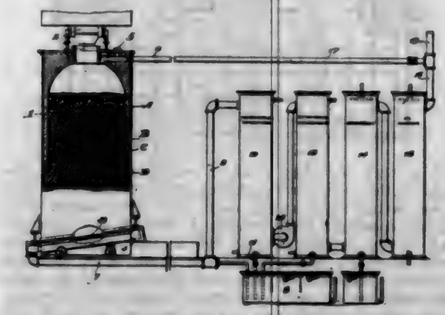
1,536,693. TABULAR CALCULATOR. FRANK A. SCHNEIDER, Cleveland, Ohio. Filed Aug. 15, 1922. Serial No. 582,021. 2 Claims. (Cl. 40—70.)

1. A tabular calculator comprising a slotted disc having legends associated with the slots and indicating known quantities, a problem, and a formula for solving the problem, a key picture upon the disc with symbols, and a second rotary disc mounted behind said first mentioned disc and having data thereon expressed in terms of the symbols of the key picture arranged in two semicircles, one semicircle being divided to show in tabular



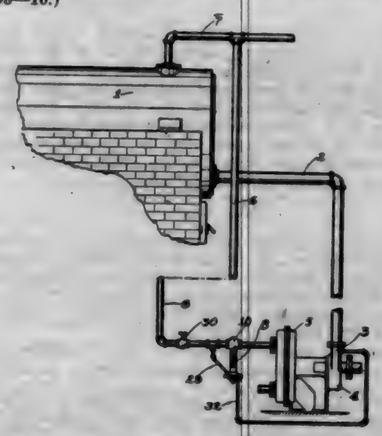
form the known quantities and the problem quantities, and the other semicircle showing the formula by which the problem quantities may be found.

1,536,694. OIL BURNER. GEORGE H. SIBLEY, Hartford, Conn., assignor of one-half to Charles F. Chandler, Stafford Springs, Conn., and one-half to Elizabeth S. Sibley, Hartford, Conn. Filed Dec. 17, 1924. Serial No. 756,457. 4 Claims. (Cl. 158—61.)



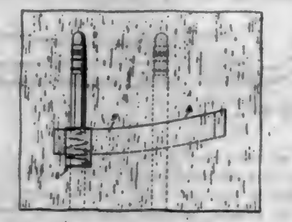
2. An oil burner comprising in combination, with a main burner proper, an auxiliary burner for pre-heating and vaporizing the oil, a mixing chamber connected to the burner, a U-shaped pipe connected to a source of oil supply and extending over the auxiliary burner, a perforated pipe located between limbs of the U-shaped pipe and connected to a gas supply for preheating the U-shaped pipe before the auxiliary burner is ignited, a pipe connecting the mixing chamber at an angle less than a right angle for causing a part of the contents of the mixing chamber to be diverted into the auxiliary burner after the perforated pipe has initially vaporized the oil in the U-shaped pipe and discharged it into the mixing chamber and the flame on the perforated pipe is extinguished, a valve for controlling the flow of vaporized oil into the mixing chamber, means for supplying air to the mixing chamber, and a pilot device on the perforated pipe for igniting the main burner.

1,536,695. STOVE. CLIFFORD H. SMITH, San Jose, Calif. Filed June 30, 1923. Serial No. 648,762. 1 Claim. (Cl. 126—20.)



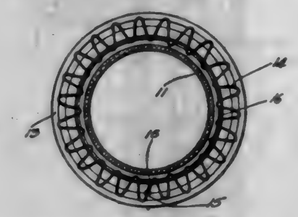
In combination with a case, a receptacle arranged therein and closed off therefrom and spaced a distance therefrom, a door common to said case and receptacle, a door mounted on said case, resilient means for normally holding said door in a closed position said case having inlet and discharge openings formed therein communicating with said space, an internal combustion engine exhaust pipe, and a tube communicating with said inlet opening and said exhaust pipe.

1,536,696. PROCESS OF CARBONIZING. GEORGE WIGHTMAN WALLACE, San Francisco, Calif. Filed Sept. 17, 1923. Serial No. 663,240. 10 Claims. (Cl. 202—16.)



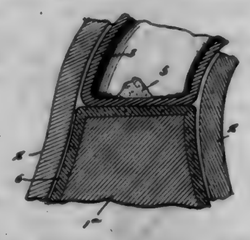
In the low temperature carbonization and distillation of shale and the like, the process of producing a controlled rapid low temperature carbonization which comprises initiating, maintaining and controlling a downwardly advancing zone of low temperature carbonization and distillation in a moist column of material by a down-draft of hot gases therethrough, said gases comprising returned combustible gases, arising from the operation, burning with admixed air and control of the advance of the zone being effected by regulation of the amount and proportion of the said gases and air.

1,536,697. GOVERNING DEVICE FOR PUMPS. OTTO WECHSBERG, Worcester, Mass., assignor to Coppus Engineering and Equipment Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1921. Serial No. 496,270. 7 Claims. (Cl. 103—10.)



1. In apparatus of the class described, the combination with a steam boiler and a pump for supplying water thereto, of a governing device for controlling the operation of said pump so as to automatically maintain the discharge pressure thereof a predetermined amount above the boiler pressure and to stop said pump should the discharge pressure fall below a predetermined amount.

1,536,698. PENCIL CLIP. WILLIAM J. WHITE, San Francisco, Calif., assignor of one-half to William H. Gilbert, San Francisco, Calif. Filed Feb. 5, 1923. Serial No. 616,983. 1 Claim. (Cl. 24—11.)

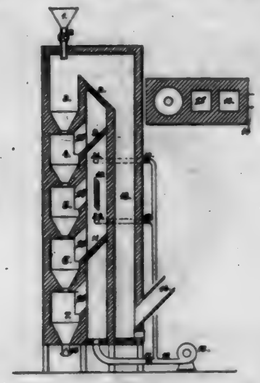


A pencil clip comprising opposed resilient jaws joined at their upper ends and spaced apart at their lower ends, between which jaws the outer wall of a garment pocket may be clamped, and a resilient member carried by and extending laterally across one of said jaws with its outer end curved outwardly away from said jaw, one of said jaws being longer than the other and having its outer end curved inwardly towards the other jaw and teeth on the shorter jaw extending towards the longer jaw.

1,536,699. GUARD FOR CHICK FOUNTS. ROBERT S. WHITMAN, Van Nuys, Calif. Filed Apr. 19, 1924. Serial No. 707,634. 2 Claims. (Cl. 119—63.)

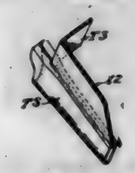
1. In a poultry appliance, a guard formed of resilient material and adapted to be supported by engagement with a wall of a receptacle, said guard comprising a single wire coiled in a helix and having its ends connected.

1,536,700. METHOD OF MAKING HOLLOW RUBBER ARTICLES. FERDINAND F. BRUCKER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 19, 1924. Serial No. 721,092. 5 Claims. (Cl. 18—56.)



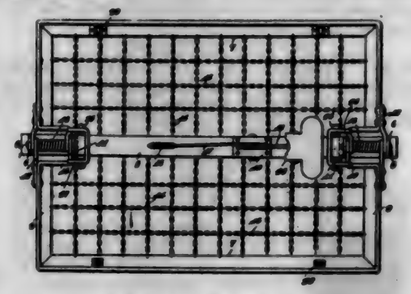
1. The hereindescribed method of making a rubber article, which consists in confining unvulcanized rubber between a mold and a core which does not fill the entire mold cavity, and other unvulcanized rubber in the part of the mold cavity not occupied by the core in the shape of a hollow biscuit containing a material which will be gasified by heat, and thereafter subjecting the mold to vulcanizing temperature.

1,536,701. DEVICE FOR MOORING SHIPS AND THE LIKE. JAMES FRANK BUCKINGHAM and CHARLES EDWARD BOWDEN, Leamington Spa, England; said Buckingham assignor to said Bowden. Filed Sept. 22, 1924. Serial No. 739,215. 4 Claims. (Cl. 114—230.)



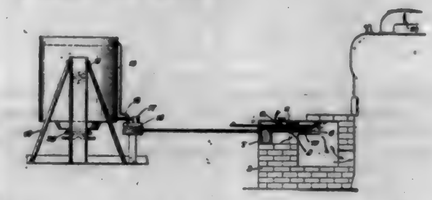
1. In a mooring device for ships and the like, the combination of a mooring rope, a hook attached thereto, a closure device for said hook, and a pole upon which said hook is loosely mounted adapted to control said closure device to hold it open when the pole and the hook are engaged and to allow its closure when said pole is withdrawn, substantially as set forth.

1,536,702. METHOD OF AND APPARATUS FOR ROASTING ORES. MARCH F. CHASE, Ardsley-on-Hudson, and JOHN SKOGMARK, New York, N. Y. Filed May 4, 1923. Serial No. 636,652. 10 Claims. (Cl. 263—21.)



7. Apparatus for roasting ores, comprising a plurality of superposed chambers, each of said chambers communicating with the chamber next beneath through a restricted passage, means for supplying the uppermost chamber with ore in subdivided condition, means for supplying the lowermost chamber with an oxidizing gas, and means for by-passing the oxidizing gas around each of said chambers independently.

1,536,703. AXMINSTER TUBE FRAME. CHARLES H. COLLINS, Amsterdam, N. Y. Filed Oct. 23, 1923. Serial No. 670,376. 8 Claims. (Cl. 139—10.)

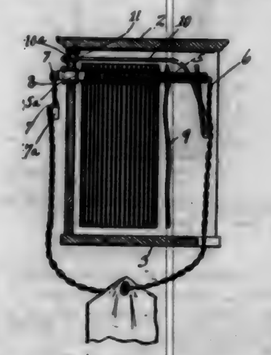


1. In a tube frame for an Axminster loom: a tube bar; frame carrying chain engaging members attached at the ends of said tube bar; and a series of yarn tubes projecting from said tube bar, the end tubes of said series having reinforcement and bracing parts so disposed that said end tubes are capable of withstanding a greater force than will the rest of the series.

1,536,704. TRAP. FELIX H. CRAGO, Milltown, Mont. Filed May 10, 1924. Serial No. 712,862. 2 Claims. (Cl. 43—68.)

1. A trap including a base, bracket members at the ends of the base, jaws including inwardly extended portions having right angled ends, said right angled ends having openings, bolts extending through the openings and having connection with the bracket members, said bolts providing supports for the jaws, latch members pivotally supported by the base and adapted to move into engagement with the right angled end portions to normally hold the jaws in their inactive positions, and coiled springs supported on the bolts and engaging the jaws for normally urging the jaws towards each other.

1,536,705. OIL BURNER. LUIS DE FLOREZ, Pomfret, Conn. Filed Oct. 26, 1922. Serial No. 596,956. 3 Claims. (Cl. 158—37.)



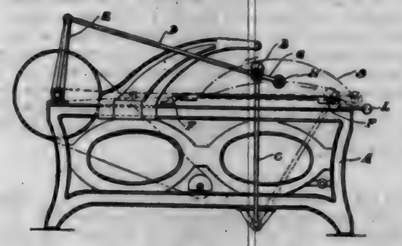
1. In a device of the kind described, an oil burner having a substantially constant level of oil therein, an oil level equalizing tank connected to the burner, a pivoted oil tank having vent and discharge pipes extending into the equalizing tank, the discharge pipe terminating in a casing containing a double seated valve adapted to be held open when in the said equalizing tank and to close when removed from said equalizing tank by the pivoting of the oil tank.

1,536,706. PROCESS FOR CHLORINATING BENZENE. OTTO ERNST and HANS WAHL, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 21, 1923. Serial No. 676,176. 1 Claim. (Cl. 260—161.)

Process of chlorinating benzene which comprises passing a mixture containing benzene vapors, hydrochloric acid vapors and oxygen, at a temperature of at least 300° C. over a contact substance which promotes the interaction of hydrochloric acid and oxygen with the liberation of chlorine.

1,536,707. TOWEL-SERVICE DEVICE. STEPHEN B. FETHEROLF, Cincinnati, Ohio. Filed Jan. 12, 1921. Serial No. 436,785. 1 Claim. (Cl. 45—82.)

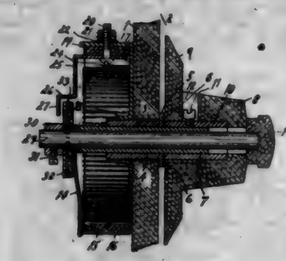
In a towel cabinet of the character described, the combination with a support, of a rigid stringer for towels demountably secured to the support, said stringer having a depending element extending therefrom, over which the towels are drawn for use, and a confining member to keep the towels on the support, comprising a piece of wire connected to the support at its ends



and extending outwardly above the stringer and then formed into a pair of depending loops lying across the towel bundle at two points and thence passing in a single loop over the top of the stringer, as and for the purpose described.

1,536,708. PROCESS FOR PRODUCING SULPHURYL CHLORIDE. HERBERT GORKE, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Filed Oct. 17, 1924. Serial No. 744,256. 1 Claim. (Cl. 23—203.)

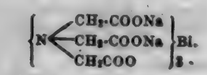
The process for producing sulphuryl chloride, which process consists in treating chlorine with sulphur dioxid in the presence of graphite.



1,536,709. GUARD FOR CLOTH-FOLDING MACHINES. CLARENCE T. GRAHAM, Ridgefield, N. J. Filed July 1, 1924. Serial No. 723,611. 4 Claims. (Cl. 74—105.)

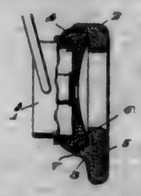
4. In a cloth-folding machine, the combination with a cloth-folding device, and connecting rods for operating the same, of extensions on said connection rods projecting beyond the cloth-folding device and a guard mounted on said extensions for eccentric adjustment relatively to the cloth-folding device.

1,536,710. RADIORHEOSTAT. AUGUSTINE E. GREENE, Willimantic, Conn. Filed Dec. 15, 1923. Serial No. 680,977. 6 Claims. (Cl. 201—65.)



1. The combination, in a rheostat, with a hollow threaded member having a head, of a bracket having a hub tapped to receive said member, and also having a flange, a main resistance element and a vernier brush and stop bracket secured to said flange, a hollow shaft in said first-named member, a contact arm secured to said shaft for said element, a spindle in said shaft, a collar secured to said spindle, a vernier disc of insulating material secured to said collar, said disc being provided with a stop pin, and a vernier wire

carried by said disc, one end of said wire being in circuit-forming relation with said collar, and the other end being remote from the first.

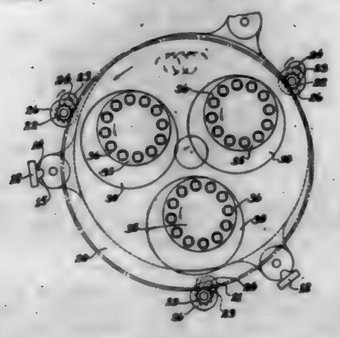


1,536,711. COMPLEX SODIUM BISMUTH SALT OF TRIGLYCOLLAMIC ACID. HANS HAHL, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Oct. 17, 1924. Serial No. 744,266. 1 Claim. (Cl. 260—11.)

The herein described new complex sodium bismuth salt of triglycollamic acid having most probably the formula:

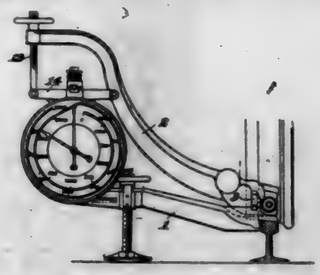
and being a whitish amorphous compound containing about 20 per cent bismuth soluble in water with a neutral reaction.

1,536,712. TELEPHONE-RECEIVER ATTACHMENT. FRANK K. HEHNLY, Madera, Pa. Filed Mar. 3, 1924. Serial No. 696,613. 1 Claim. (Cl. 179—182.)



An attachment for telephone receivers comprising an apertured body shaped to snugly fit over the face portion of a receiver and also shaped in general conformity to the human ear, means for holding said body on a receiver, said means carried by the body, and an apertured pad corresponding in shape to the body and affixed thereto and adapted to bear against the head of a person; the said body being formed of hard vulcanized rubber, and the pad being formed of felt and having its inner portion affixed in the rubber whereby the body and the pad are connected of themselves.

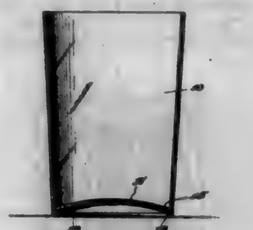
1,536,713. PROCESS FOR THE PREPARATION OF DIAZO DERIVATIVES OF AMINOAZO COMPOUNDS. KARL HEUBNER and MAX SIMON, Leverkusen, near Cologne, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Original application filed July 24, 1924, Serial No. 727,984. Divided and this application filed Feb. 24, 1925. Serial No. 11,849. 3 Claims. (Cl. 260—69.)



1. In processes of preparing alpha-diazo-naphthalene-alpha-azo compounds the steps comprising coupling diazo compounds with alpha-naphthylsulfaminic acids, splitting off the sulfo-group of the naphthylsulfamic acid and diazotizing in acid solution with alkali-metal-nitrites.

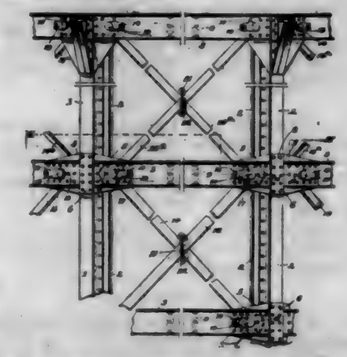
1,536,714. APPARATUS FOR AND METHOD OF MAKING SIMILAR ARTICLES. WILLIAM B. HOKE, St. Louis, Mo., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 4, 1921a Serial No. 458,280½. 12 Claims. (Cl. 51—161.)

1. An apparatus for making similar articles having opposite plane parallel end faces, comprising in combination, a pair of laps having adjacent plane lapping surfaces adapted to contact with the articles being ground, a spider adapted to operate therebetween, said spider having openings therethrough in each of which a plurality of articles may be located, and means within said openings whereby said articles are maintained symmetrically disposed.



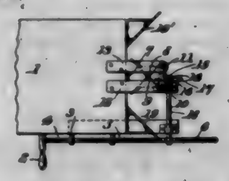
1,536,715. WEIGHING MACHINE FOR LOCOMOTIVES, RAILWAY WAGONS, AND OTHER VEHICLES. CARL HÖCKEL, Neutitschein, Moravia, Czechoslovakia. Filed Oct. 31, 1924. Serial No. 747,089. 5 Claims. (Cl. 165—52.)

1. A weighing machine for locomotives, railway carriages and wagons and other vehicles having wheels normally resting upon a stationary support, comprising two levers rotatable relatively to one another, a dynamometer arranged between adjacent ends of the two levers, the end of each lever remote from the dynamometer engaging between the wheel of the vehicle and its stationary support on each side of the point at which the wheel normally rests upon said support, and means for directly adjusting the points at which the ends of the levers come into contact with the wheel and the stationary support in the plane passing through the point at which the wheel normally rests upon its stationary support.



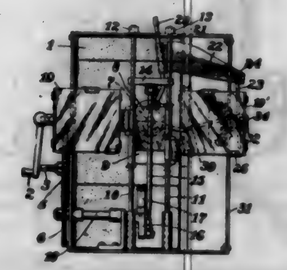
1,536,716. ADVERTISING DEVICE FOR DRINKING VESSELS. FREDERICK C. KADE, Philadelphia, Pa. Filed July 17, 1924. Serial No. 726,534. 4 Claims. (Cl. 40—10.)

1. An advertising device for drinking vessels of transparent material comprising a disk carrying a suitable imprint on one side and adapted to fit under the bottom of the vessel, and a bead provided below the bottom of the



vessel adapted to engage with the edge of the disk to retain the same in position.

1,536,717. METALLIC BUILDING STRUCTURE. HUBERT KREKEL, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 11, 1922. Serial No. 551,569. 5 Claims. (Cl. 189—12.)



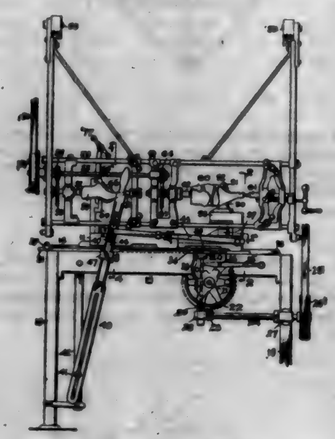
3. In a metallic building structure, the combination of a plurality of columns; a plurality of struts arranged in spaced relation and connecting said columns; a pair of eye-bars arranged in diagonal relation between each pair of struts; means attached to the struts adjacent the columns for supporting the upper ends of the eye-bars; and means associated with the means aforesaid for holding the lower ends of the eye-bars next above and placing the same under tension.

1,536,718. PHOTOGRAPHIC APPARATUS. GEORGE LANE and JOHN E. PATTERSON, Poughkeepsie, N. Y. Filed July 24, 1922. Serial No. 577,190. 6 Claims. (Cl. 88—16.6.)

1. A photographic apparatus including a casing, a lens, a mirror movable across the lens axis to reflect an image into said lens, a light sensitive surface behind said lens, a shutter between the image and the sensitive surface, and means to move said mirror during exposure of said surface, said surface receiving a reflected image from said mirror alone, during the reflective period of the mirror.

1,536,719. METHOD OF AND APPARATUS FOR STEREOSCOPIC PHOTOGRAPHY. GEORGE LANE and JOHN E. PATTERSON, Poughkeepsie, N. Y. Filed Aug. 11, 1923. Serial No. 656,836. 4 Claims. (Cl. 88—16.6.)

1. An apparatus of the type described including a casing adapted to contain a light sensitive surface, a lens, means to expose the sensitive surface to images of an object viewed from a convergent angle, and means to adjust the position of the images on the sensitive surface, said position adjusting means including a pivoted mirror and means to cause rotation of said mirror about a vertical pivot, said last named means including an arm connected with a focus adjuster attached to the lens.

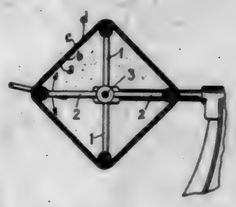


1,536,720. PNEUMATIC DISPLACEMENT PUMP. JOHN L. LATTA, Hickory, N. C. Filed Nov. 22, 1921. Serial No. 516,944. 9 Claims. (Cl. 103—246.)

1. In a pump of the character described, a billet comprising a core, a covering of resilient material on said core, a resilient disk valve integral with the lower end of said resilient covering, and a guide member secured to the core.

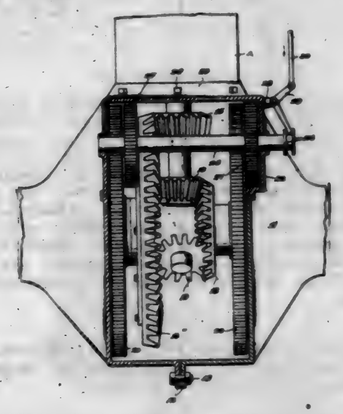
1,536,721. LAST LATHE. GEORGE B. MAGOON, Worcester, Mass. Filed June 27, 1922. Serial No. 571,161. 1 Claim. (Cl. 142—15.)

In a last lathe, a fixed base, a frame pivotally mounted for angular movement about a horizontal axis relative to said base, said frame rotatably supporting a pattern and a last block with their axes parallel to the pivotal axis of said frame, means to simultaneously rotate said pattern and said last block, a carriage mounted on said fixed base for sliding movement parallel to the axis of said pattern and last block, a cutter shaft vertically mounted in bearings in said carriage, a ball-shaped cutter mounted on said cutter shaft and having its cutting edges formed substantially as arcs of a sphere centered



on said shaft, a ball-shaped pattern roll substantially equal in size and curvature to said cutter, and a support for said roll on said carriage, said roll being mounted for rotation about a horizontal axis parallel to the axes of said pattern and last block and said pattern and last block being simultaneously movable toward and from said roll and cutter by rolling contact of said roll and pattern.

1,536,722. PARACHUTE TOY. RALPH L. MILLER, Dayton, Ohio. Filed Dec. 8, 1924. Serial No. 754,560. 2 Claims. (Cl. 244—21.)

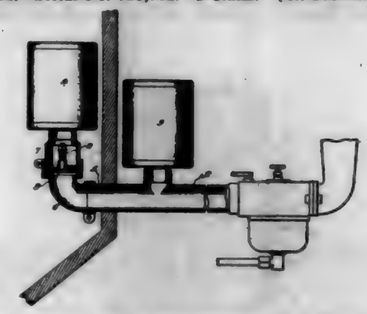


1. A toy comprising a substantially flat member free to be sailed into the air and formed with a projection, a band connected at one end to the flat member, with its other end free to be wound around the projection on the flat member and then to extend down for pressure against it by the thrower, and a parachute connected at one end to said flat member and held against one face of it by the band until the pressure against the free end of the latter is released by the thrower, for the purpose specified.

1,536,723. METHOD OF MAKING TIRES. FRANKLIN G. NEAL, Springfield, and DAVID F. LOGAN, Chicopee Falls, Mass., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 16, 1922. Serial No. 594,755. 17 Claims. (Cl. 154—14.)

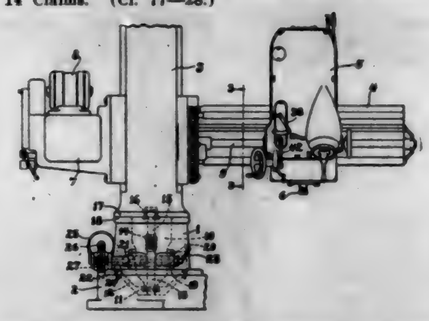
1. In a method of tire building, the steps of stretching an endless band of carcass material in substantially flat form on a stretcher, completely releasing the band for a short interval of self-adjustment, and then applying the loose band to a tire shaping former.

1,536,724. DIFFERENTIAL. ROBERT G. NELSON, Belt, Mont., assignor of one-half to Clinton L. Crane and one-half to S. L. Crane, both of Armington, Mont. Filed July 25, 1923. Serial No. 653,754. 5 Claims. (Cl. 74—100.)



2. A differential including a differential housing, rear axle shafts extending therein, a propeller shaft associated with the housing, a differential gearing forming a driving connection between the propeller shaft and said axle shafts, companion gears fixed to the axle shafts, a longitudinally movable counter-shaft, companion gears fixed upon said counter-shaft, means for shifting the counter-shaft longitudinally and thereby moving said pinions into mesh with said last mentioned gears, and means secured to said housing forming a closure therefor and journaling said countershaft, said means with the countershaft and pinions being bodily removable as a unit.

1,536,725. PROCESS FOR DYEING FURS, SKINS, HAIRS, FEATHERS, OR THE LIKE. PAUL ONNERTZ, Berlin-Wilmersdorf, Germany, assignor to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Nov. 22, 1924. Serial No. 751,676. 1 claim. (Cl. 8—5.)

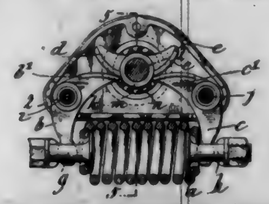


A process for dyeing furs, skins, hairs, feathers or the like consisting in treating the material to be dyed with a solution of 4-chloro-1.2-diaminobenzene in the presence of an oxidizing agent.

1,536,726. AIR CLEANER FOR CARBURETORS. FREDERICK S. OREM, Baltimore, Md. Filed July 12, 1924. Serial No. 725,702. 1 Claim. (Cl. 183—34.)

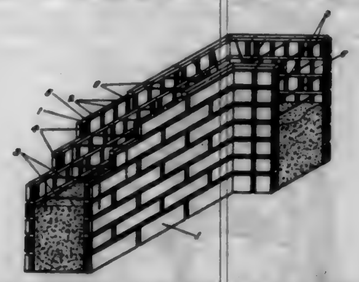
In combination with a carburetor, an air cleaner connected therewith, a supplemental air cleaner, a pipe connecting the main air cleaner with the supplemental air cleaner in spaced apart relation, and a valve for bringing said supplemental cleaner into service automatically when the main cleaner is out of service.

1,536,727. CLAMPING MECHANISM FOR RADIAL DRILLS. CLIFFORD F. RANDOLPH and CHARLES L. RICARDS, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1922. Serial No. 533,610. 14 Claims. (Cl. 77—28.)



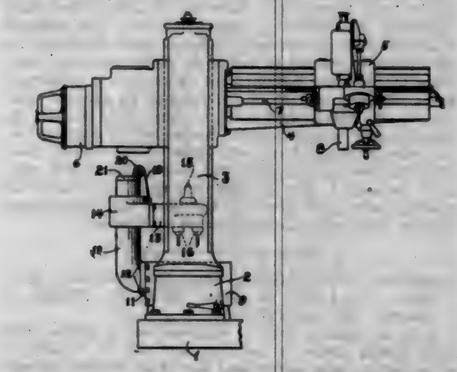
1. In a drilling machine, the combination of a base, a column supported thereon, an arm mounted on the column, projecting horizontally therefrom and normally adjustable about the column axis, a spindle supporting saddle carried by and adjustably along the arm, means including electrically operated means for clamping the arm against movement about the column axis and the saddle against movement along the arm, a switch for controlling the electrically operated means, a hand lever for controlling the switch and both said clamping operations, movement of the lever in one direction being adapted to perform the clamping operations and movement thereof in the opposite direction being adapted to perform the unclamping operations, and means normally holding the switch and lever in a neutral position with the said clamping means in either an arm and saddle clamping or unclamping position.

1,536,728. SPRING SUSPENSION ARRANGEMENT. ARTHUR WILLIAM REEVES, Alvechurch, England. Filed Nov. 29, 1921. Serial No. 518,658. 8 Claims. (Cl. 267—70.)



1. A spring arrangement suitable for use between two relatively movable bodies, said arrangement comprising two sets of differentially acting levers adapted to be connected to one of said bodies and arranged to be moved

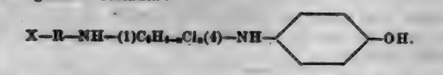
in opposite directions from a normally stationary position, a spring arranged to be strained from one or the other end thereof by movement of one or the other of said sets of levers from its normal position the other



set of levers being then adapted to prevent movement of the other end of said spring and means adapted to be connected to the second body and to move one or the other of said sets of levers from its normal stationary position.

1,536,729. BUILDING-WALL STRUCTURE. WILLARD D. RICHARDSON, Columbus, Ohio. Filed Apr. 17, 1920. Serial No. 374,582. 7 Claims. (Cl. 72—43.)

1. The method of laying bricks in a wall which comprises providing a mortar of preformed cross-section and of such composition that it will hold any form given it, receiving such mortar upon a pallet, severing a portion of said column, and applying it to a brick to form a mortar joint by means of said pallet.

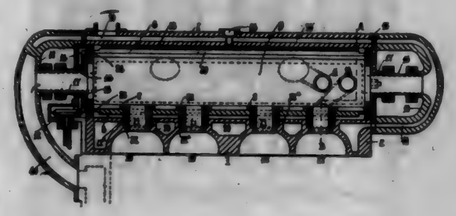


1,536,730. AUXILIARY COLUMN AND DRILL HEAD FOR RADIAL DRILLS. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 20, 1922. Serial No. 545,200. 6 Claims. (Cl. 77—28.)

1. In a radial drilling machine, the combination of a bed, a column mounted thereon, an arm mounted for rotary adjustment about the column axis, a drill spindle carried by the arm, an auxiliary column mounted on the bed adjacent the first named column, a tool head vertically movable thereon, and counterbalance means in the auxiliary column operatively connected to the tool head for normally holding the same in a raised position, the arm adjustment permitting the aligning of the spindle over the tool head, and the spindle being adapted to engage the tool head to drive the tools therein and to feed the head downwardly against the action of the last named means.

1,536,731. SULPHURIZED DYES. OSCAR SPENGLER, Dessau, and KARL KRÄUTZER, Nuremberg, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Jan. 25, 1924. Serial No. 688,601. 4 Claims. (Cl. 260—19.)

1. The herein-described sulphur dyes being, in the dry sulphurized state, dark powders with a metallic luster, dissolving in concentrated sulphuric acid to blue solutions and in a diluted solution of sodium sulphide to vats from which cotton is dyed in bluish violet to violet tints, being derivatives of the leucoindophenols of the general formula:

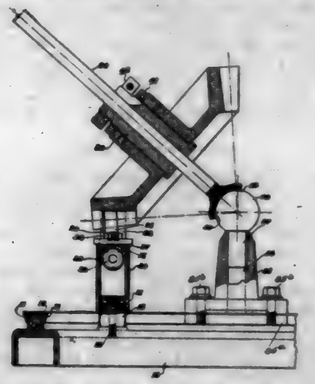


R meaning an aromatic radical, and X meaning a univalent radical.

1,536,732. MANUFACTURE OF VANILLIN. OSKAR SPENGLER and HUGO PFANNENSTIEL, Dessau-in-Anhalt, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin. Filed Aug. 1, 1924. Serial No. 729,655. 2 Claims. (Cl. 260—137.)

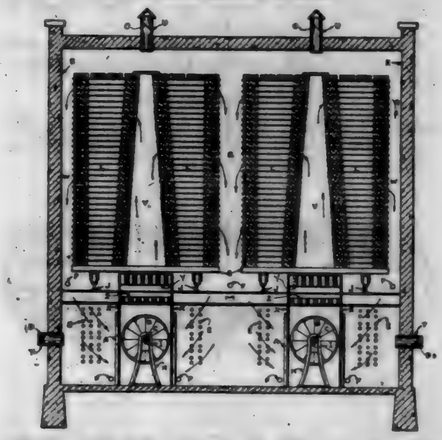
1. Process for manufacture of vanillin which consists in saponifying and oxidizing trihalogenmethylguaiacylcarbinol.

1,536,733. ROTARY VALVE. SYDNEY SYMONDS, Wembley Park, England. Filed Oct. 29, 1924. Serial No. 746,660. 12 Claims. (Cl. 123—190.)



1. A rotary valve of the character described, comprising in combination, a valve casing having ports therein, a cock having ports therein, a self-tightening non-rotating floating sleeve having ports therein, said ported cock running in said sleeve, a drive for said cock, and floating ferrules fitting in the valve casing ports and the corresponding ports in the floating sleeve whereby the floating sleeve is maintained in position between said valve casing and said cock.

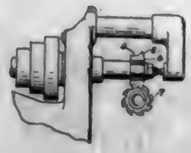
1,536,734. BEVEL-GEAR-TESTING DEVICE. HUBERT D. TANNER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 18, 1921. Serial No. 516,150. 17 Claims. (Cl. 33—147.)



1. A device for testing bevel gears comprising in combination, means to support a gear so that it may be moved about the apex of its pitch cone, a member having a surface adapted to contact with the surface of one of the teeth of said gear, means holding said gear

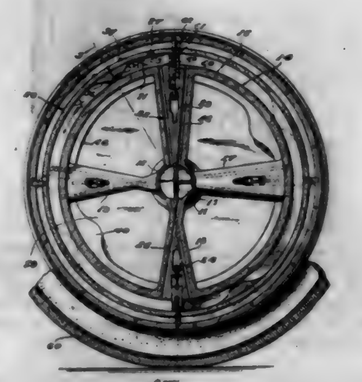
against said surface, a movable member adapted to contact with the corresponding surface of an adjacent

tooth, and means to indicate the amount of movement of said movable member as said gear is rolled upon said members.



1,536,735. REVERSIBLE CIRCULATION INTERNAL FAN KILN. ROLF THELEN, Madison, Wis., dedicated, by mesne assignments, to the Citizens of The United States of America. Filed Oct. 24, 1923. Serial No. 670,568. 17 Claims. (Cl. 34—46.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

12. In a dry kiln arranged for flatwise end piling: two series of fans; two shafts upon which the fans are mounted for rotation; means for rotating said shafts in either direction to cause reversal of the circulation of the air and vapor in said kiln; dampered air inlet flues and dampered air outlet flues; means for heating the kiln and its contents; means for humidifying the atmosphere in the kiln; a series of plenum chambers for each fan; and a diffuser with restricted discharge passages for each plenum chamber.

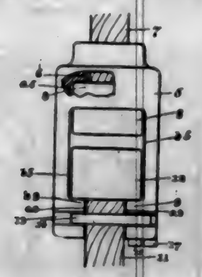


1,536,736. PROCESS OF MAKING MILLING CUTTERS. PAUL F. VOKAL and ALBERT W. ERDMAN, Hartford, Conn., assignors to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 24, 1921. Serial No. 472,029. 6 Claims. (Cl. 76—101.)

1. The process of forming a milling cutter which consists in cutting teeth and spirally relieving the surfaces thereof in a cylindrical blank by means of a formed milling cutter, in grinding the relieved surfaces of the

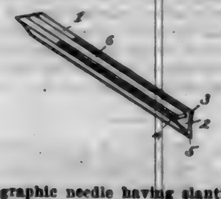
teeth by a formed grinding wheel which is so shaped as to maintain the spirally relieved surfaces, and in sharpening the teeth by grinding the front cutting faces.

1,536,737. ROTARY ENGINE FOR VEHICLE WHEELS. ARTHUR J. WILLIAMS, Nashville, Tenn., assignor of one-fourth to Cheever J. Cameron, one-fourth to William F. Glenn, jr., and one-fourth to Iva B. Glenn, all of Nashville, Tenn. Filed Aug. 23, 1922. Serial No. 583,843. 2 Claims. (Cl. 121—26.)



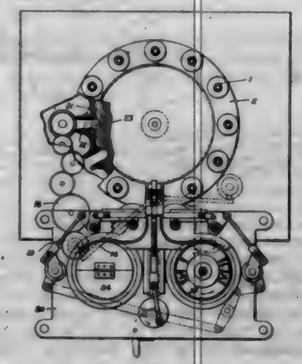
1. A rotary engine comprising a stator in the shape of a cylindrical drum, a central hollow shaft, radial spokes connecting said drum and shaft and being integral therewith, a longitudinal partition in said hollow shaft extending diametrically across the same and defining manifolds, said spokes each having a pair of tubular intake passages leading in radial direction from said manifolds to the outer periphery of the drum; a cylindrical rotor enclosing said drum and forming an annular space around the same, abutments on the rotor having the radial extent of said annular space and the circumferential extent identical on both sides of their apex, gates yieldably mounted in said drum, and symmetrically situated between a pair of said passages, and means for raising each gate over an abutment and independent thereof, said means being actuated by said rotor.

1,536,738. BULL HOOK. OSCAR A. WIRKKALA, Kent, Wash. Filed July 16, 1924. Serial No. 726,410. 2 Claims. (Cl. 24—123.)



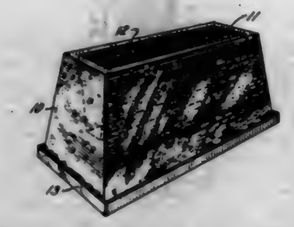
1. In a logging hook in combination, a hollow hook body having means on its upper end for the attachment of a hauling cable thereto and having an opening through its front wall near its lower end for the passage of a service-cable knob therethrough, transverse jaws on the lower end of said hook body having a slot therebetween

adapted to receive a service cable and having an upper surface adapted to seat said service-cable knob, and a removable keeper disposed in recesses in said jaws and



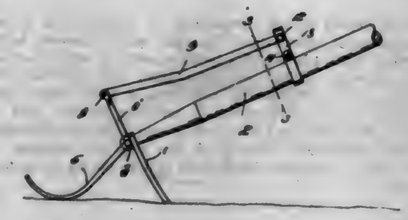
adapted to bar said jaw slot in front of said service cable whereby said service cable is removably retained between said jaws with said service-cable knob on top thereof.

1,536,739. PHONOGRAPHIC NEEDLE. HENRY A BRASSARD, Cleveland, Ohio, assignor of one-half to Thomas J. Dugan, Cleveland, Ohio. Filed Mar. 19, 1920. Serial No. 367,062. 4 Claims. (Cl. 274—38.)



3. A phonographic needle having slanting walls which converge, the said walls having an edge which is free to vibrate and a tongue which is also free to vibrate extending between said walls.

1,536,740. FEEDING MECHANISM FOR BASE-MAKING MACHINES. JULIUS A. AKEROYD, Edgewood, Providence, R. I., assignor to General Electric Company, a Corporation of New York. Filed Sept. 5, 1919. Serial No. 321,967. 11 Claims. (Cl. 49—2.)

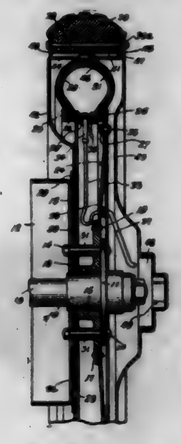


1. In a base making machine, the combination of a mold, means for carrying the same and means for causing it to assume a definite position when desired, with a plurality of receptacles for holding a supply of contacts, discharge passages communicating with said receptacles and feeding mechanism disposed between the delivery ends of said passages and said mold position comprising a common guideway leading to said mold position into which said contacts are fed and means for engaging said contacts and for forcing them along said guideway.

1,536,741. HUMIDIFIER. EARLE G. ALDEN, Denver, Colo. Filed Apr. 7, 1923. Serial No. 630,523. 3 Claims. (Cl. 131—30.)

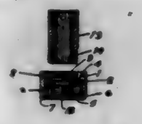
1. A humidifier comprising a block of porous material having a recess formed in the top thereof, the cubical contents of said recess being substantially equal to the cubical capacity of the cellular spaces in said porous material.

1,536,742. RAKE ATTACHMENT. ERNEST G. ANDERSON and WILLIAM J. GRATRICK, Minneapolis, Minn. Filed Apr. 24, 1924. Serial No. 708,816. 2 Claims. (Cl. 55—10.)



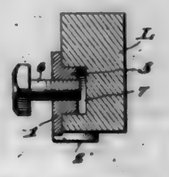
1. In combination with a rake and the handle thereof, of a gage associated therewith comprising a shaft extending longitudinally on the head of said rake and adapted for rotary movement thereon, gage elements formed on the outer ends of said shaft and extending forwardly and downwardly therefrom, a projection extending upwardly from the intermediate portion of said shaft, a lever connected to the upper end of said projection, and extending rearwardly over said handle, and an adjustable clamp supported on the handle and connected to the opposite end of said lever.

1,536,743. RESILIENT DISK WHEEL. HIRAM C. ANDERSON, New York, N. Y. Filed June 27, 1923. Serial No. 647,974. 4 Claims. (Cl. 152—34.)



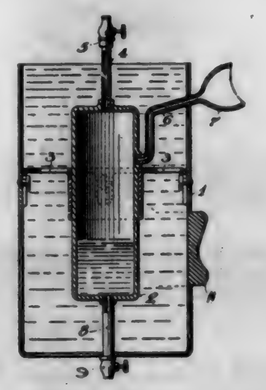
3. In disk wheel construction, the combination with a relatively wide tread rim and a tread adapted to be supported thereby, of securing means for attaching said tread to the rim comprising a cylindrical portion having

flanges extending inward and outward therefrom, the tread member being seated between the outwardly ex-



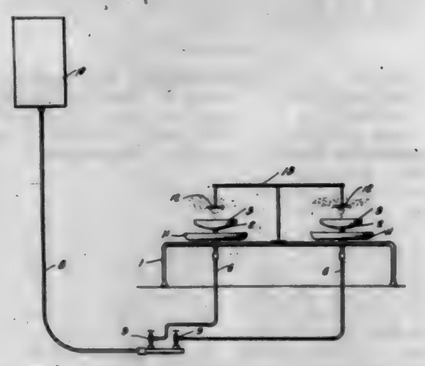
tending flanges, while the inwardly extending flanges abut against said rim so as to rest thereon and to form in co-operation therewith a dead air space.

1,536,744. TIRE LOCK. MARTIN E. ANDERSON, Denver, Colo. Filed Apr. 10, 1924. Serial No. 705,431. 14 Claims. (Cl. 152—12.)



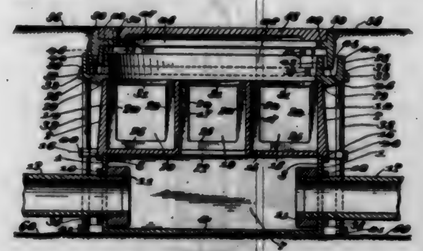
1. A locking device comprising, in combination, a casing having a cylindrical chamber, said chamber being provided with a top and a bottom, each of which has an axial opening of less diameter than the chamber, the opening in the top being threaded, a nut within said chamber, said nut being freely movable therein, and of greater diameter than the opening and a tubular threaded member operatively related to the top and adapted to force the nut against the bottom and to clamp it against rotation.

1,536,745. LOOM-CHECK MOUNTING. JAMES A. ANDREWS and JOHN W. HERBERT, Biddeford, Me. Filed Oct. 6, 1924. Serial No. 741,890. 4 Claims. (Cl. 139—161.)



1. In a loom check mounting, a bracket having a vertical front web formed to seat against an end of the loom lay and having a spaced pair of right-angular feet at the ends of its lower side to engage the bottom side of said lay, fastening screws extending through the web and into the lay, and a central boss integral with the web and having a threaded bolt-receiving opening therein, said boss being formed to be received in an opening provided therefore in said lay.

1,536,746. DEVICE FOR MAKING WATER. CHARLES W. ARMBRUST, Albany, N. Y., assignor to Charles H. Jockmus, doing business under the name of Ansonia Manufacturing Company, Ansonia, Conn. Filed Mar 25, 1918. Serial No. 224,697. 2 Claims. (Cl. 257—1.)

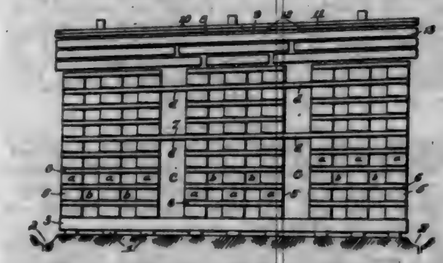


1. The combination with a container of a vessel located therein to form a space therebetween to accommodate a cooling medium therein, a vent for said vessel and a supply tube to said vessel, and a mouth piece for said supply tube, and means for securing said container to the head of a person or animal.

1,536,747. OIL BURNER. AARON ARROWSMITH, Sisseton, S. Dak. Filed Nov. 22, 1923. Serial No. 676,342. 2 Claims. (Cl. 158—66.)

1. A burner device of the class described having a support, fuel supply pipes rising above said support, burners to which said pipes lead having casing attached to the pipes, valves within the casings subject to the pressure of the fuel when seated directly on the upper ends of the pipes, stems on said valves depending into the pipes, the upper walls of the casings serving to prevent displacement of the valves, a substantially T-shaped bracket rising from the support, spreaders carried by said bracket and arranged substantially centrally with respect to and over the burners, and starter pans of greater area than the burners secured on the pipes intermediate the supporting plate and burners.

1,536,748. ELECTRICAL WIRING SYSTEM. EDWARD E. ASHLEY, Jr., Noroton, Conn., assignor to Walker Brothers, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1924. Serial No. 686,141. 28 Claims. (Cl. 247—3.)



1. An electrical wiring system comprising a network of main and branch circuit conduits disposed in a wall, boxes in said wall at which the main and branch circuit conduits meet, each of said boxes having passages disposed in different planes, said main and branch circuit conduits communicating with said passages in different planes, and means for effecting within the box communication between passages in different planes therein.

1,536,749. INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Original application filed Dec. 3, 1919, Serial No. 342,196. Divided and this application filed June 6, 1923. Serial No. 643,628. 24 Claims. (Cl. 173—318.)

1. In combination, a dielectric member having a metallised roughened surface, and means for connecting said surface with a coacting member.

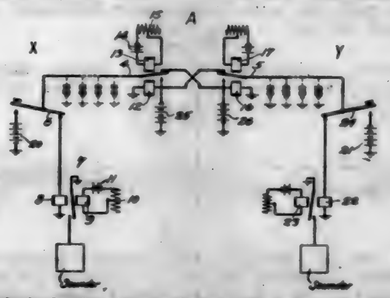
1,536,750. METHOD FOR PILING LUMBER FOR DRYING PURPOSES. CLARENCE D. BALDWIN, Nashua, Iowa. Filed Dec. 3, 1923. Serial No. 678,867. 1 Claim. (Cl. 34—24.)

A method of seasoning lumber consisting in supporting a pile mounted on a foundation, disposing lumber layers, spacing the lumber of the layers to insure circulation of air, staggeredly disposing cleats spacedly to further insure the circulation of air, spacing one pile of lumber from an adjacent pile, also insuring a circulation of air, binding the several piles together, and then roofing the several piles, thereby additionally connecting the piles.

1,536,751. VEHICLE TOW BAR. THOMAS BARNES, Ogden, Utah. Filed May 22, 1923. Serial No. 640,675. 1 Claim. (Cl. 280—33.14.)

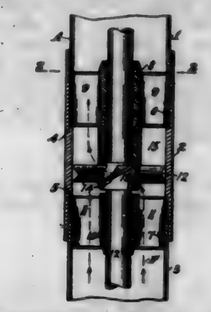
A tow bar comprising hollow sections arranged to telescope one within the other, the inner section being provided at its end with an annular flange having a bevelled face, and the outer section provided at its end with an internally located flange having a bevelled face, the bevelled faces of the flanges adapted to engage each other when the sections are extended with relation to each other, a sleeve located within and disposed transversely of the inner section, the inner section being provided with openings which register with the ends of the sleeve, a coiled spring housed within the sleeve, and pins loosely mounted in the openings and having heads which bear against the ends of the spring, the parts being so arranged that the pins are disposed transversely across the edge of the outer section when the sections are extended with relation to each other and the ends of the pins bear against the inner surface of the outer section when the sections are moved one within the other whereby the pins serve to hold the tow bar in a collapsed condition.

1,536,752. ROPE CUTTER. FRANKLIN E. BEATTY, Philadelphia, Pa. Filed May 8, 1924. Serial No. 711,762. 3 Claims. (Cl. 30—14.)



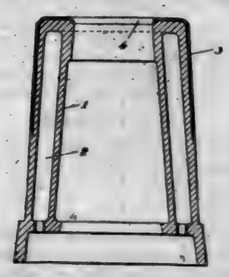
1. In a rope cutter, an elongated, curved upper bar, an elastic band having its ends detachably connected to the ends of said bar, a cutting blade positioned upon the top of said bar and extended throughout the major portion of its extent, a guard to receive the pointed end of said blade and an upper guard for the upper edge of said blade and having its terminal above the exposed edge of said blade deflected away therefrom.

1,536,753. TELEGRAPH SYSTEM. JOHN HUMB BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1922. Serial No. 553,720. 2 Claims. (Cl. 178—2.)



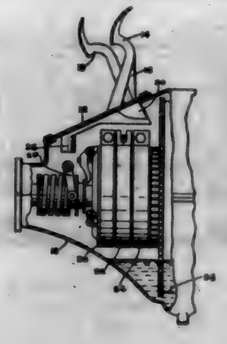
1. A telegraph system provided for open circuit operation, a line conductor possessing considerable electrostatic capacity and divided into sections, repeating apparatus intermediate the line sections comprising polarized relays, current sources of opposite polarity connected to the respective line sections by said relay, transmitting and receiving mechanisms associated with the terminal of each line section, means associated with said

receiving mechanism for controlling its operation, and circuit connections effective following the impression of an impulse on a line, section and the operation of



a polarised relay for rendering said means effective to prevent the receiving mechanism from giving a false indication.

1,536,754. AXIAL-FLOW PUMP. HARRY F. BENSON, Holyoke, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Feb. 10, 1921. Serial No. 443,830. 9 Claims. (Cl. 103—90.)



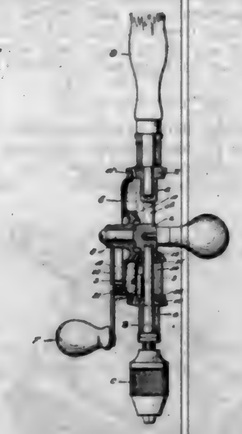
1. In a fluid pump, a casing, an axial flow impeller therein, and conversion vanes in the casing and having their entrance positioned at the point where the streams leaving the impeller initiate movement in only an axial direction, whereby a conversion chamber is provided between the impeller and said vanes.

1,536,755. TUYÈRE FOR BLAST PIPES FOR HIGH AND OTHER METALLURGICAL FURNACES. THEODOR BERG, Werdohl, Germany. Filed Apr. 9, 1924. Serial No. 705,396. 1 Claim. (Cl. 266—1.)

A water cooled tuyère for blast pipes for high and other metallurgical furnaces formed of aluminium or aluminium alloy and having a protecting cover of copper covering the nose of the tuyère up to the outlet opening for the blast air.

1,536,756. ATTACHMENT FOR MOTOR-VEHICLE TRANSMISSIONS. CARL G. G. BERGSTROM, St. Paul, Minn. Filed Aug. 24, 1923. Serial No. 659,043. 2 Claims. (Cl. 184—11.)

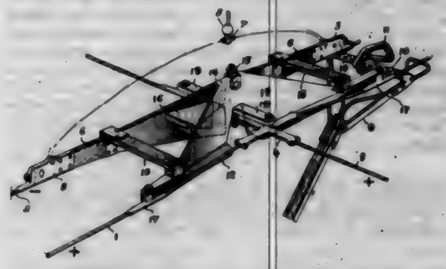
1. An attachment for motor vehicle transmissions comprising a dished member for catching oil thrown off from the fly wheel, said member having an inclined floor portion, a filter at the lower end of said inclined portion located above the clutch fork, the upper portion of the floor of said member having an opening positioned above the bands of the transmission, and means for preventing particles of grit from passing to said opening.



1,536,757. ADDING ACCUMULATOR. FREDERICK W. BERNAU, Newark, N. J., assignor to Ellis Adding-Typewriter Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 24, 1921. Serial No. 510,029. 4 Claims. (Cl. 235—137.)

1. In an adding accumulator, the combination with a movable actuator, of an accumulator wheel normally disengaged from the actuator and adapted for engagement therewith, and "carrying" mechanism for said accumulator wheel comprising a movably mounted detent adapted to engage the accumulator wheel when said wheel is free of its actuator and to become disengaged from the accumulator wheel when the latter is engaged by its actuator, and a shifting member having an operative connection to the detent, adapting said member to positively move the detent in one direction to effect "carrying" in the accumulator wheel and to positively move it in the opposite direction to restore said detent to normal position and to retain it in that position.

1,536,758. HAND DRILL OR THE LIKE. CHRISTIAN BODMER, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 13, 1923. Serial No. 662,443. 4 Claims. (Cl. 145—66.)

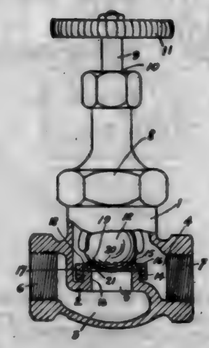


2. In a hand drill a frame, a spindle journaled therein, and a speed changing device comprising a driving gear with two gear-sets, one within the other, a pair of pinions loose on said spindle and meshing with the respective gear-sets, a collar positioned between said pinions and permanently secured to said spindle, a pin slidably

mounted in said collar and adapted to positively engage one of said pinions, and a second pin independent of the first one slidably mounted in said collar and adapted to

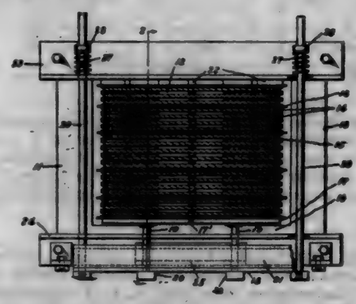
engage the other of said pinions, said pins being independently operable and arranged so that either, neither, or both, may be engaged with the respective pinions, said pins having means for removing the same.

1,536,759. OVERHEAD-TROLLEY SYSTEM. GEORGE W. BOWER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1923. Serial No. 639,064. 16 Claims. (Cl. 191—36.)



1. The combination with a two wire trolley system, of a guard supported by the wires and insulated from the negative wire or wires and extending below the wires leaving the free passage for the trolley wheels but adapted to force the trolley head, of the two wire system, down from the wires and carry it across switches, crossing, or a desired area to prevent engagement with the wires or switches or short circuiting the curent between the wires.

1,536,760. VALVE. THOMAS BOWLES, North Vancouver, British Columbia, Canada. Filed Feb. 4, 1925. Serial No. 6,794. 4 Claims. (Cl. 251—167.)

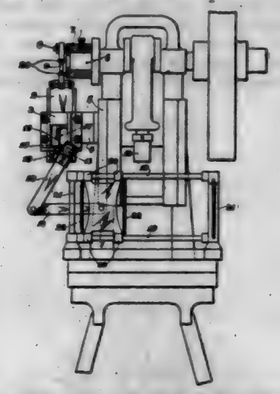


1. The combination with a valve chest having an apertured partition dividing the valve chamber into communicating inlet and outlet chambers, of an upstanding ring integral with the said partition concentric with the partition aperture and free from contact with the surrounding chest body, a valve seat ring seated on the upper end of said upstanding ring, and means for detachably uniting the valve seat ring to the upstanding one.

4. The combination with a valve chest having an apertured partition dividing the valve chamber into communicating inlet and outlet chambers, of an upstanding ring integral with the said partition and concentric with the aperture thereof, said ring being free from contact with the surrounding chest body and exteriorly threaded, a valve seat ring seated on the upper end of said upstanding ring having one end edge formed as a mitred valve seat and reduced exteriorly in diameter intermediate

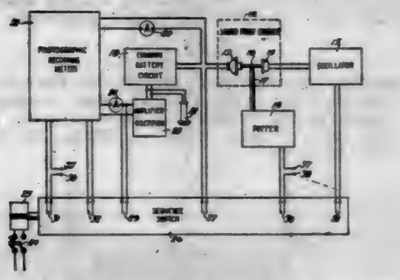
its height to provide a flange at its opposite end the outer face of which forms a disc valve seat adapted to be substituted for the mitred one on reversing the ring, and a collar threaded on to the upstanding ring flanged inwardly at its outer end to bear respectively on the back of said flange or its outer face and detachably unite the valve seat ring to the upstanding one with either the mitred seat or the disc seat uppermost respectively.

1,536,761. STATIONARY INDUCTION APPARATUS. FREDERICK F. BRAND, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1919. Serial No. 282,568. 10 Claims. (Cl. 175—357.)



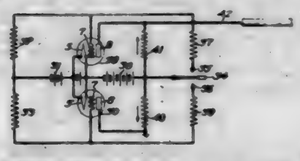
1. In an electrical apparatus, the combination with a base, of windings supported thereon, and a core structure exerting yielding pressure against said windings and movable relatively thereto in the direction of expansion of the windings during a transient, whereby said core structure may be moved by the forces of repulsion in the windings caused by a transient.

1,536,762. GUARD FOR MACHINERY. JOSEPH BROUGHTON, Birmingham, England. Filed Apr. 18, 1923. Serial No. 632,967. 2 Claims. (Cl. 74—105.)



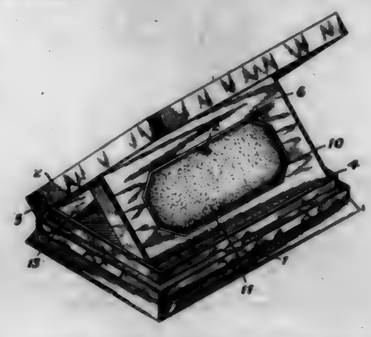
1. Means for operating guards for machinery comprising fixed guides independent of the guides for the ram of the machine, a sliding member separate from the ram of the machine and working within the said guides, said

sliding member having a cam-shaped slot, means for actuating said sliding member for the crank shaft of the machine, and a lever pivoted to a fixed member and



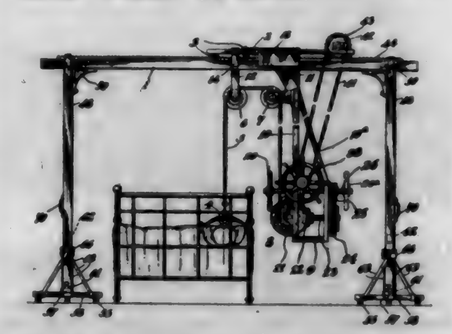
carrying a part engaging the slot in the sliding member, the said lever being connected to the guard so as to impart a reciprocating movement thereto.

1,536,763. TESTING SYSTEM. JOHN T. L. BROWN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1922. Serial No. 591,023. 9 Claims. (Cl. 179—175.)



2. The method of testing a microphonic transmitter which comprises placing the transmitter in a circuit, agitating the modulating element of the transmitter for an interval, and during a succeeding interval permanently recording a function of the burning current.

1,536,764. SIGNALING SYSTEM. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1919. Serial No. 347,773. 20 Claims. (Cl. 178—63.)

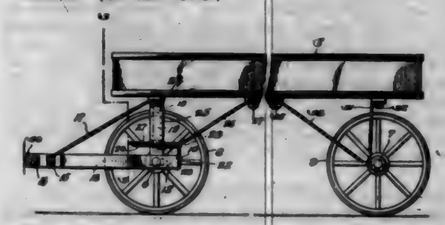


1. Terminal signaling apparatus for a cable or line for impressing upon said cable or line at any instant potential of one of at least two operating values whereby signaling impulses of either polarity and in any desired sequence may be transmitted, said apparatus comprising the combination with a local source of direct signaling potential, of high impedance space discharge means in circuit with said source, control means for said space discharge means, circuit making and breaking means in circuit with said control means for directly associating said signaling potential with said control means, and means including said circuit making and breaking means for impressing at any instant upon said control means potential of one of at least two operating values.

1,536,765. DISPLAY BOX. ADOLPH BULOVA, New York, N. Y., assignor to Bulova Watch Company, Inc., New York, N. Y., a Corporation of New York. Filed May 11, 1923. Serial No. 638,169. 1 Claim. (Cl. 211—28.)

A display box for wrist-watches comprising the combination of a tray body, a cover hinged to the back of the body adapted to stand at a desired angle to constitute an ornamental display back, a removable flat block adapted to fit frictionally in the tray body entirely filling the same and lying substantially flush with the top of the body, said block having a recess in the top thereof, a rim surrounding said recess, a central removable pad fitting frictionally in said rim to receive a wrist-watch with the band thereof passed around the block, and a hinged support on the back of the block for propping the same to stand at a desired inclination in the body when the cover is raised and independent of the position of the latter.

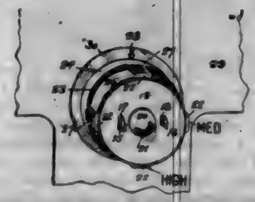
1,536,766. INVALID LIFTER. HERMANN H. CAMMANN, Merrick, N. Y. Filed Mar. 1, 1921. Serial No. 448,795. 9 Claims. (Cl. 212—14.)



1. In an invalid lifter, the combination with a track, a carriage thereon, means on the carriage for holding the patient, and mechanism for moving the carriage along the track, of a member carried by the carriage and movable therewith for controlling the operation of said mechanism.

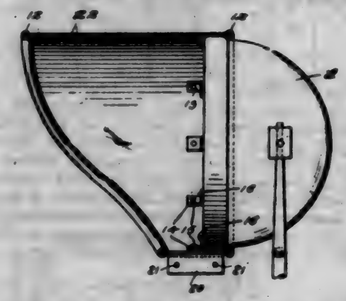
1,536,767. CASTELLATED NUT. GEORGE E. CASTER, Circleville, Ohio, assignor to The Eastern Engineering Corporation, Columbus, Ohio, a Corporation of Delaware. Filed Mar. 2, 1921. Serial No. 449,059. 5 Claims. (Cl. 151—5.)

1. A castellated nut having a side of its slot wall formed on the arc of a circle, the axis of which is substantially parallel to the axis of the nut.



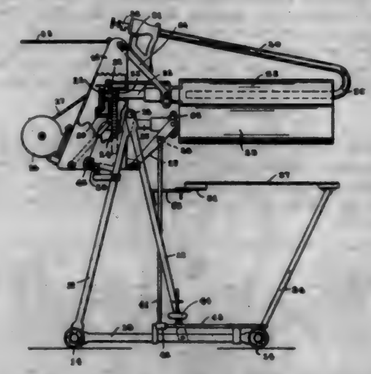
1,536,768. WAGON. HERMAN CABLER, Canastota, N. Y., assignor to Sherwood Bros. Mfg. Co. Inc., Canastota, N. Y. Filed Feb. 11, 1924. Serial No. 692,110. 6 Claims. (Cl. 280—87.5.)

1. A wagon comprising an axle, a substantially V-shaped frame member pierced by and supported upon said axle, a bearing plate secured to said frame member and having notched legs engaging said axle, a bolster connected to the wagon body and resting upon said bearing plate, a front brace extending from the wagon body to the frame member, and a second brace extending from the wagon body to a point between the bearing plate and the bolster and a king bolt connected to the wagon body and passing through the upper end of the first mentioned brace through the bolster and thence through the lower end of the second brace and through the bearing plate.



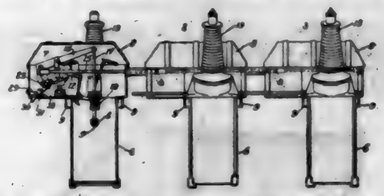
2. A wagon comprising an axle, a frame member supported by said axle, a bearing plate having notched legs and a depending flange, the notched legs engaging over the axle and the flange being secured to the frame member, a bolster secured to the wagon body and resting upon said bearing plate, and means for pivotally connecting the bearing plate to the bolster.

1,536,769. ROTARY SNAP SWITCH. HOYT CAYLOR, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 16, 1921. Serial No. 477,974. 2 Claims. (Cl. 200—167.)



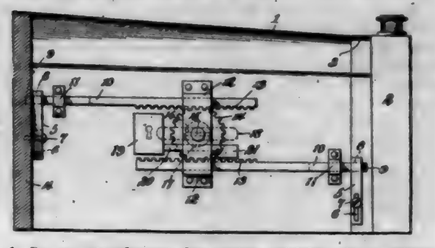
1. A rotary snap switch comprising an insulating base, a switch mechanism mounted thereon and comprising a rotary switch spindle, and a yoke with offset lug on said spindle, in combination with a switch cover pierced to receive said switch spindle and yoke lug, means for securing the cover in lug-engaging position, and means on the cover for indicating the position of the switch mechanism.

1,536,770. HEADLIGHT SHADE. GREEN Y. CHAMBLISS, El Paso, Tex., assignor of one-third to Mary L. Blevins, Anthony, N. Mex. Filed Apr. 10, 1923. Serial No. 631,159. 1 Claim. (Cl. 240—48.4.)



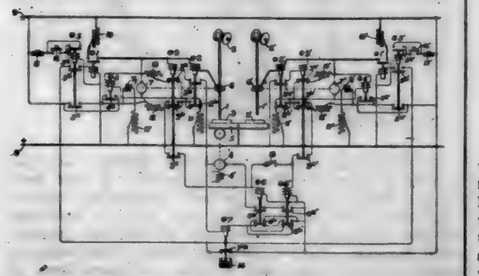
A shade for a headlight in combination with the relatively wide lens-retaining rim of the latter projecting outwardly of the margin of the headlight, the shade consisting of a substantially cylindrical metallic split body having its rear edge substantially vertical and at a right angle to its axis, plates secured to the body on opposite sides of the split, a bolt to draw said plates toward each other, said body being adapted to telescope the lens-retaining rim, lugs independent of each other in spaced relation fastened about the interior of the body and inwardly of said rear edge a distance corresponding to the width of the rim, said body at its rear edge having an inwardly extending bead, and said lugs with said bead being directly engageable with the opposite edges of the rim for the support of the shade.

1,536,771. IRONING MACHINE. FRANK D. CHAPMAN, Berlin, Wis. Filed Sept. 11, 1922. Serial No. 587,493. 3 Claims. (Cl. 68—9.)



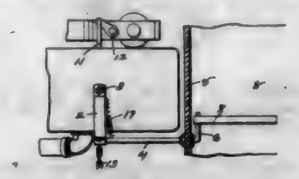
1. An ironing machine comprising a frame; a housing; a pair of pressure rolls rotatably carried by said housing; a motor also carried by said housing for rotating said rolls; means for heating said rolls; a horizontal pivotal connection between said frames and housing, said housing, together with the parts carried thereby, being movable about said pivotal connection from an operative horizontal extended position to an inoperative compact vertical position within said frame; and means engaging said frame and housing to maintain the parts in their operative positons.

1,536,772. ELECTRIC SWITCH. CHRISTEN CHRISTENSEN, Chicago, Ill., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1920. Serial No. 406,961. 7 Claims. (Cl. 200—153.)



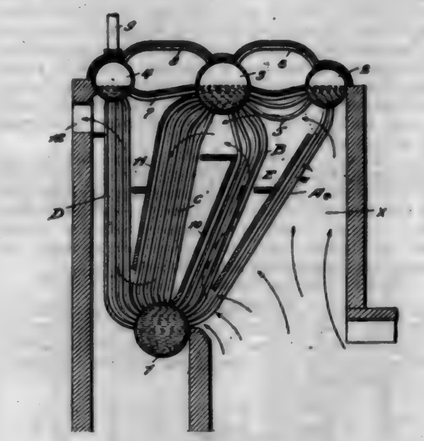
1. In an electric switch, the combination with relatively movable cooperating contacts, of a mechanism for controlling said contacts comprising an operating member, an actuating member, a connection between said members collapsible to cause said actuating member to move to circuit opening position independently of said operating member, restraining means for holding said connection rigid, and adjustable means operative to control the degree of restraint of said restraining means.

1,536,773. HOLDER AND LOCK FOR AUTO HOODS. PETER J. CIACCIO, New Orleans, La. Filed July 5, 1923. Serial No. 649,611. 3 Claims. (Cl. 70—74.)



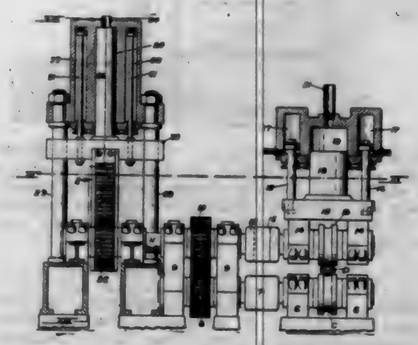
1. In an attachment for motor vehicles the combination of a hood covering, adjustable members secured to the hood at the inner and outer ends thereof, guide plates arranged adjacent the members, rack bars engaged by the members and passing through the guide plates, a toothed gear actuable on the hood and adapted to engage the rack and a block so constructed and arranged that movement of the gear in one direction will force the block between the teeth of the rack and the gear.

1,536,774. AUTOMATIC ARC WELDING. WILLIAM B. CLARKSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 21, 1924. Serial No. 727,146. 9 Claims. (Cl. 219—8.)



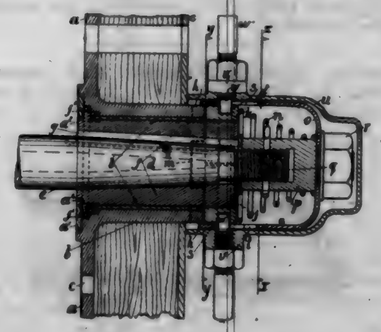
1. An arc welding apparatus of the type wherein there are a plurality of arcs and electrode feeding mechanism for maintaining each arc and wherein a single travel mechanism is provided for producing relative motion between said arcs and the work to be welded, characterized by the fact that means responsive to the condition of each arc is provided for controlling the operation of said travel mechanism arranged to cause operation of the travel mechanism during such time only as all of said arcs are in operation.

1,536,775. EVEN-FEED ACCELERATOR. ELDER P. CONWELL, Allerton, Iowa. Filed July 23, 1924. Serial No. 727,739. 2 Claims. (Cl. 74—39.)



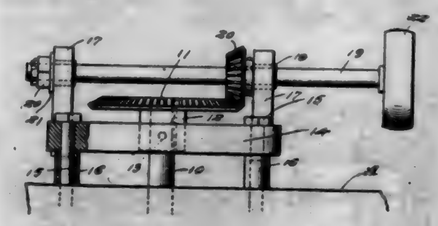
1. An accelerator comprising a bracket member having angularly disposed end portions and provided with an arched intermediate portion, a shaft journalled in the bracket member and having an angularly disposed arm, a foot piece hinge jointed upon the arm, a second arm mounted upon the shaft, a spring connecting the second mentioned arm with the arched portion of the bracket, the last mentioned arm having an angularly disposed extremity, adapted to be pivotally connected with the pull rod of the butterfly valve controlling mechanism of the automobile machine.

1,536,776. WATER-TUBE BOILER. ALFRED COTTON, deceased, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 12, 1920. Serial No. 373,249. 6 Claims. (Cl. 122—302.)



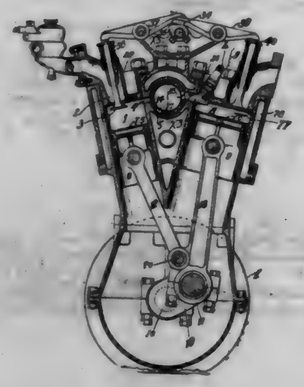
1. A water tube boiler, comprising at least two elevated transverse steam-and-water drums, a transverse mud drum, a radiant heat first bank of upflow tubes leading from the mud drum to the front steam-and-water drum, a convected heat second bank of upflow tubes leading from the mud drum to the second steam-and-water drum, water circulators connecting said elevated steam-and-water drums together, downcomer tubes leading from the second steam-and-water drum to the mud drum, and means for preventing the long flame gases from the front of the fire from coming in contact with the tubes of said convected heat bank before said gases have traveled upwardly through most of the combustion chamber and for causing the short flame gases from the bank of the fire to escape from the lower end of said combustion chamber and come in contact with some of the tubes of the boiler.

1,536,777. APPARATUS FOR MANUFACTURE OF AXLES. CHARLES R. DAY, Edgeworth, Pa. Original application filed July 7, 1921, Serial No. 482,056. Divided and this application filed July 18, 1923. Serial No. 652,303. 7 Claims. (Cl. 80—25.)



1. Apparatus for forming axles or the like from a hot blank comprising an upper and a lower roll having coacting eccentric and concentric faces, means for advancing and withdrawing the upper roll towards and from the lower, a drive shaft for the lower roll, a drive shaft for the upper roll geared therewith, relatively slidable coupling members between the upper roll and its drive shaft providing for raising and lowering of the upper roll when said coupling members are in vertical register, and alternately operable driving mechanism geared with one of said shafts for rotating it in opposite directions.

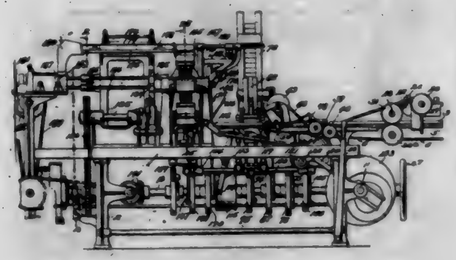
1,536,778. MEANS FOR MOUNTING VEHICLE WHEELS. BERTRAM METCALF DENHAM, Leeds, England. Filed Feb. 14, 1924. Serial No. 692,851. 1 Claim. (Cl. 192—67.)



The combination with a vehicle wheel, a hub thereof provided with clutch teeth and an axle therefor with a tapered end, a sleeve fixed to said tapered end and rotatably carrying said wheel hub, and a collar slidably mounted on said sleeve and provided with clutch teeth for engaging the clutch teeth on said wheel hub of means for effecting the engagement and disengagement of said clutch elements comprising an inner cap screwed upon the end of said axle and provided with slots, a spring within said cap bearing against said slidable collar and an outer cap enclosing said inner cap and carrying pins for operating said clutch elements, said pins operatively engaging with said collar and passing to the exterior through the slots in said inner cap.

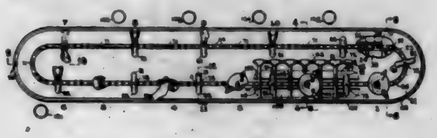
1,536,779. MOTOR-CONTROL MECHANISM. RILEY M. DODD and JOSEPH A. MCVAY, Torrance, Calif. Filed May 8, 1924. Serial No. 711,858. 1 Claim. (Cl. 74—7.)

A motor control mechanism, in combination with a motor having a controlling shaft extending therefrom, a bed plate having an opening accommodating said shaft, a master gear wheel having a hub telescoped onto said shaft and journaled in said bed plate, bolts securing said bed plate to the motor, spacing sleeves surrounding said bolts intermediate the motor and the bed plate, bearings integral with said bed plate, a manually operable controlling shaft journaled in said bearings, a gear wheel carried by said controlling shaft in mesh with said master gear wheel, and a hand operable element for said controlling shaft.



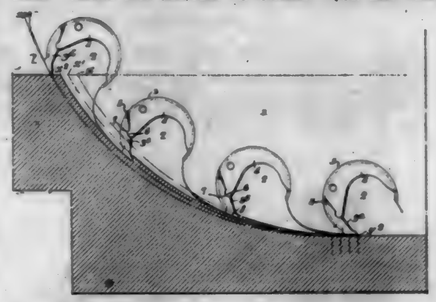
1,536,780. AUTOMOTIVE ENGINE ART. ORVILLE HIRAM ENSIGN, Pasadena, Calif. Filed Aug. 24, 1920. Serial No. 405,720. 23 Claims. (Cl. 123—72.)

4. A two-stroke internal combustion engine comprising a compressor cylinder, and a power cylinder, the piston clearance of which is outside of said cylinders; an oscillating chamber constituting such clearance and provided



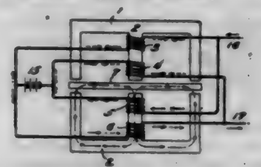
only with lateral ports adapted to alternately open separately to the cylinders at the heads thereof; a crank shaft, a crank on said crank shaft, pistons operating in said cylinders through a common crank pin; means operable through said crank shaft to cause the clearance chamber to close to the compressor cylinder and open to the power cylinder when the clearance of each cylinder is at a minimum and vice versa at the return stroke of the pistons; and ignition means operable at the head stroke of the power piston to ignite a charge in the clearance when said clearance is open to said power piston.

1,536,781. LABELING MACHINE. LOUIS FISCHER, Philadelphia, Pa., assignor to Wright's Automatic Tobacco Packing Machine Company, Durham, N. C., a Corporation of West Virginia. Filed June 3, 1920. Serial No. 386,299. 34 Claims. (Cl. 93—2.)



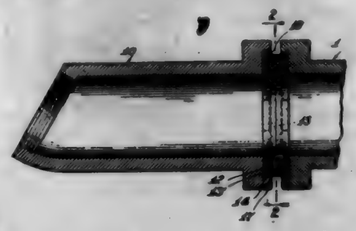
1. In a machine for labeling packages, the combination of means for feeding a label to a predetermined position, means for feeding a package to a label occupying said position, means for gripping the label and package and displacing the package and the gripped portion of the label, pairs of side and end folders cooperative with the portions of the label adjacent to the sides and ends of the package to produce simultaneous folding operations on said portions of the label concurrently with said displacement of the package and label, one of said pairs of folders being withdrawable to permit movement of the package and label in a direction transverse of its movement of displacement.

1,536,782. METHOD OF TRIMMING HEADS AND APPARATUS THEREFOR. WALTER E. FOCKE, Dayton, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 12, 1924. Serial No. 725,615. 16 Claims. (Cl. 17—1.)



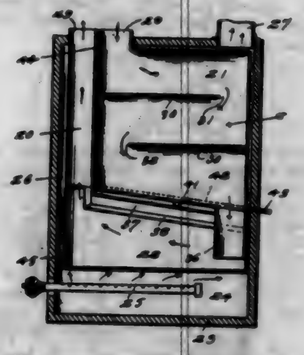
1. The method of trimming meat from heads which consists in causing movement of the head, while the head is held from its inside, past trimming stations at which various meat trimming operations are performed and having the holding means for the head so mounted as to permit rotation and tilting of the head.

1,536,783. ICE SAW. SAMUEL T. FREAS, Trenton, N. J., and WILLIAM E. TRETCH, Philadelphia, Pa., assignors to Henry Disston & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1922. Serial No. 546,725. 2 Claims. (Cl. 262—20.)



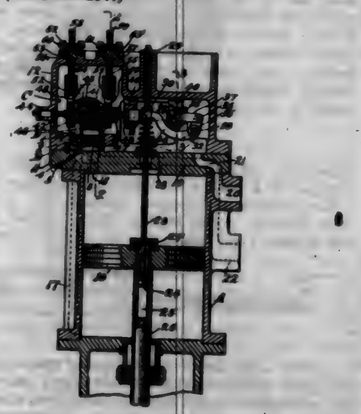
1. A circular ice cutting saw of the self-feeding type having a series of teeth at its periphery, the edge of the saw back of the point of each tooth being convexly curved and conforming approximately to the curvature of the initial part of the kerf cut by the said tooth when the saw is fed at a predetermined rate.

1,536,784. ELECTROMAGNETIC DEVICE. JACOB R. FRY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1921. Serial No. 455,084. 7 Claims. (Cl. 175—335.)



5. A relay comprising two yokes having their poles facing each other, an armature positioned between said poles, windings for each of said yokes, a pair of terminals for the windings connected to a direct current source, and a second pair of terminals for said windings connected to an alternating current source, said windings being so related to said terminals that both direct and alternating current flow through both windings, said terminals connected to the direct current source being conjugate to the terminals connected to the alternating current source.

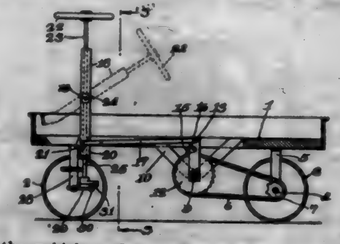
1,536,785. COUPLER. EGBERT H. GOLD, Chicago, Ill. Filed Nov. 9, 1921. Serial No. 513,927. 5 Claims. (Cl. 285—69.)



1. In combination, a coupler having a port extending therethrough, and an annular gasket of non-resilient material adapted to be inserted in said port and to be expanded circumferentially when the coupler is put into service; the coupler face being provided with a recessed gasket seat formed with an edge which penetrates the gasket when the latter is expanded, as set forth.

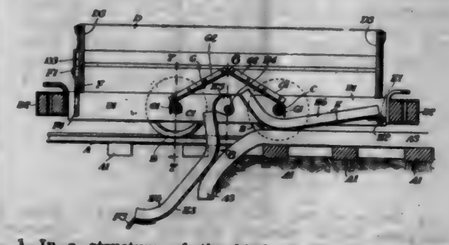
1,536,786. FLUID HEATER. LOUIS L. GOBE, San Jose, Calif. Filed Mar. 11, 1921. Serial No. 451,470. 10 Claims. (Cl. 126—116.)

1. A heating apparatus having a housing, a casing within said housing, said casing including a downleg forming an inlet passage and an upleg forming an outlet passage for the fluid to be heated, said passages being in communication at their lower ends, a source of heat associated with the housing from which the heat passes upwardly from beneath the casing and along the sides thereof, said housing having an outlet at the upper part thereof.



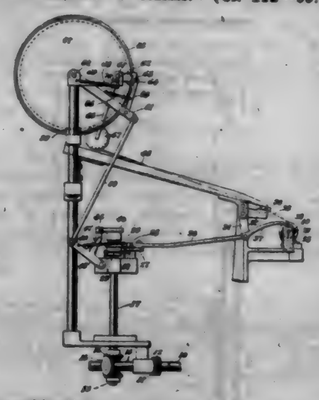
1,536,787. ENGINE VALVE. JOHN F. GRACE, Kearny, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 14, 1921. Serial No. 484,565. 25 Claims. (Cl. 121—157.)

1. In combination a valve chest enclosing a slide valve, a valve actuator, a bell crank lever having arms of unequal length and the long arm thereof connected to the valve actuator, and a lost motion connection between the short arm and the slide valve.



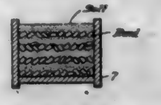
1,536,788. MANUALLY-PROPELLED VEHICLE. THOMAS GRADY, Chicago, Ill. Filed July 5, 1924. Serial No. 724,270. 9 Claims. (Cl. 208—36.)

1. In a manually propelled vehicle, in combination therewith, a manually operated combined propelling and steering apparatus operative by forward and backward rocking motion thereof about a transverse axis through driving means disposed below said axis to



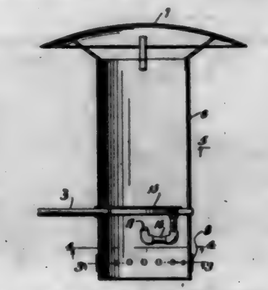
propel the vehicle and operative at the same time and while rocking back and forth to steer the vehicle to the right or the left.

1,536,789. RAILWAY. CHARLES A. GRIFFITH, Knoxville, Tenn. Filed Mar. 17, 1923. Serial No. 625,788. 9 Claims. (Cl. 214—63.)



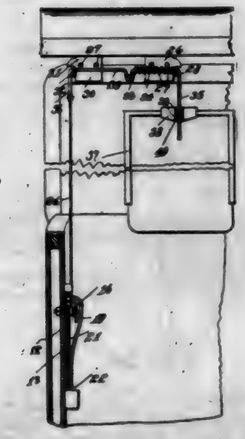
1. In a structure of the kind described, the combination of a car body, two axles carrying said body, wheels carrying said axles, a hinge rod between and parallel to said axles, a bottom door hinged by one edge to said rod and extending thence rearward under the rear axle, and latch mechanism adapted to operate to secure and support the opposite edge of said door when the latter is forced upward into the closed position, substantially as described.

1,536,790. BEAD-SEWING MACHINE. JOSEPH A. GROSSELI, New York, N. Y. Filed Jan. 12, 1924. Serial No. 685,772. 7 Claims. (Cl. 112—99.)



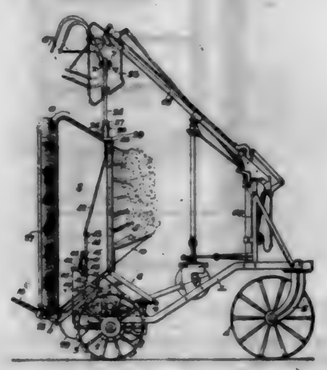
1. The combination, in a bead sewing machine, embodying mechanism for forming stitches employing a bead thread carrying loosely strung beads, of a primary bead thread supply reel, means, other than the thread, for positively driving the reel, and automatic means for governing the operative action of the driving means.

1,536,791. FOOD PRODUCT. ROAS B. HALEY and EDGAR G. ZINN, Los Angeles, Calif.; said Haley assignor to said Zinn. Filed Jan. 2, 1924. Serial No. 683,868. 7 Claims. (Cl. 99—11.)



1. The process of treating melon rind which consists in extracting the natural juices from the cells by osmose, and introducing syrup into said cells.

1,536,792. BURNER FOR ORCHARD HEATERS OR THE LIKE. ARTHUR C. HOWARD, GLENN E. BRITTAN, and JOHN A. COOK, Pharr, Tex. Filed June 4, 1923. Serial No. 643,298. 1 Claim. (Cl. 158—68.)



A device of the class described having a drum, a one-piece hollow member affording a flat cylindrical chamber located in the drum and operating as a spreader and as a generator, a portion integral with and extending from said member and connecting said member to the drum, a fuel supply pipe in communication with the hollow of said member and connected to said member and also connecting said member to said drum, and a burner pipe depending from the bottom of the cylindrical chamber said member having its outlet below the member.

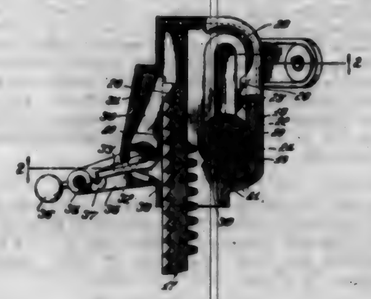
1,536,793. GLARESHIELD FOR AUTOMOBILES. RALPH L. INGEBRIOTSEN, Aberdeen, Wash. Filed Apr. 3, 1924. Serial No. 703,950. 3 Claims. (Cl. 296—97.)

2. An operating means for a glare shield comprising a casing, an arm pivotally mounted at one end in the casing and having its other end operatively connected with a glare shield, a depending link connected with the arm adjacent the pivot thereof, and a bowed flexible spring element secured at one end to the casing above the arm and having its other end secured to the lower end of the said link, and adapted to be flexed to move the link and rock said arm.

1,536,794. GRAIN SHOCKER. GEORGE INNES, Davenport, Iowa. Filed Nov. 17, 1922. Serial No. 601,550. 8 Claims. (Cl. 56—418.)

1. The combination in a machine for shocking grain of a basket, having a rectangular frusto-pyramidal form and including a core of a substantially triangular pyramidal form, whose base lies in a plane coincident with that of the base of the basket frustrum, said basket being mounted in such manner on the frame of the machine that its base extends in a vertical plane therefrom; means for placing individual pairs of bundles in the basket, one bundle of each pair at each side of the core simultaneously; a gate mounted at the uppermost end of the basket designed to close, at an angle coincident therewith, the normally open end of said basket; means for closing the gate after a predetermined number of bundles have been placed within the basket; and means for positively locking the gate against displacement prior to the movement of the basket to discharge its load.

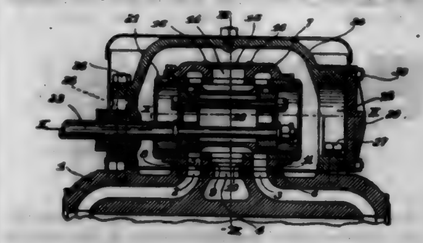
1,536,795. DRAFT DEVICE FOR MINING MACHINES. CHARLES E. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1920. Serial No. 379,237. 5 Claims. (Cl. 262—30.)



1. The combination of a mining machine having an elongated frame movable bodily along the ground and provided with suitable cutting mechanism extending longitudinally from one end thereof, a flexible draft means adapted to be anchored at a distance from the machine and having normal connection with said machine at a predetermined vertical position adjacent one end of said frame, a guide on said machine having detachable engagement with said draft means intermediate the machine and draft anchor to deflect said draft means vertically from its normal point of connection with said machine, and other draft means connected adjacent the opposite end of said frame and adapted to extend and be anchored in the opposite direction from said first named draft means.

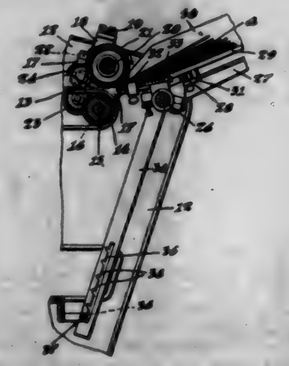
1,536,796. SPRING STRUCTURE AND METHOD OF ASSEMBLING THE SAME. WILLIAM H. KINNEY, Chicago, Ill., assignor to Kinney-Rome Company, Chicago, Ill., a Corporation. Filed Sept. 2, 1919. Serial No. 321,169. 9 Claims. (Cl. 5—269.)

1. In a spring structure the combination of upholstering springs, spiral spacing springs extending between the upholstering springs, and connectors adapted to be inserted through the open end and into the body of the spacing spring, each of said connectors comprising a member looped around a portion of the upholstering spring and having a pair of spaced arms, both bent in the same direction in the plane of the loop and inserted into the end of the spacing spring, the bend in one of the arms forming a hook for engaging between two consecutive coils of the spacing spring.



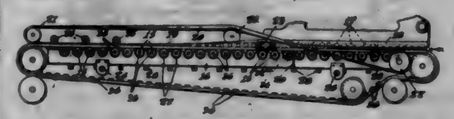
1,536,797. BRAKE-OPERATING MECHANISM. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed Feb. 1, 1922. Serial No. 533,269. 14 Claims. (Cl. 74—119.)

1. In combination with the brakes of a railway car, mechanism for manipulating said brakes comprising a rack, and a mutilated pinion normally out of engagement with the rack but mounted to engage and move the rack when oscillated in one direction, the first tooth of the pinion to engage the rack during its working stroke being shortened so that it will just clear the first rack tooth that would otherwise be engaged but will engage the next succeeding tooth at a favorable working angle, and will remain in operative engagement therewith until after the next pair of engaging teeth are in working engagement at substantially the first engaging position of the first two teeth.



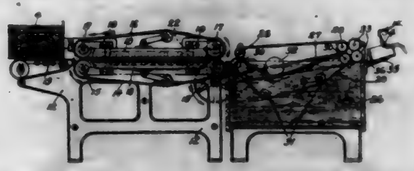
1,536,798. VALVE-CHEST CONSTRUCTION FOR STEAM ENGINES. WILLIAM J. KNOX, Dubois, Pa. Filed Feb. 9, 1924. Serial No. 691,575. 6 Claims. (Cl. 121—193.)

1. The combination with a cast cylinder of metal not readily subject to a welding operation and having ports through one side, of a seat, comprising a sheet of weldable material secured to the cylinder by screw means and surrounding the ports, a valve casing mounted on such seat and welded thereto along its periphery and



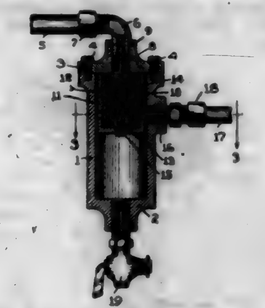
also interiorly along lines lying between the ports, a piston valve mounted in the casing, and a steam chest surrounding the valve casing secured to the cylinder.

1,536,799. COMBINATION FEEDER FOR BLANKS. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed July 27, 1923. Serial No. 654,185. 9 Claims. (Cl. 271—36.)



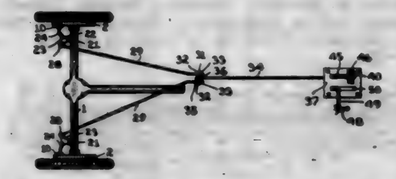
1. A mechanism of the character described having a rotary sheet feeder, means for shifting said feeder to position to act on the top or bottom sheet of a pile, means whereby said feeder may be driven in one direction or the other, and means for supporting sheets to be acted upon by the feeder to act on the top or bottom sheet of a pile.

1,536,800. BLANK-CARRYING MECHANISM FOR PAPER-BOX-FOLDING MACHINES. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1924. Serial No. 687,010. 21 Claims. (Cl. 93—49.)



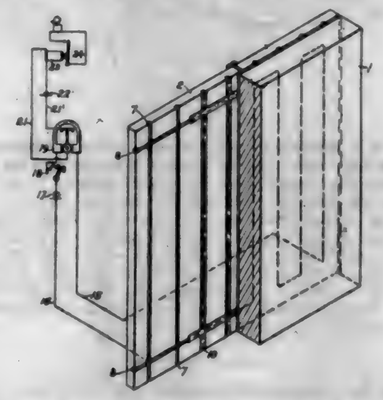
1. A machine for folding blanks having a yieldingly-supported lower carrier belt, unyielding means in position above and coacting with said belt to effect travel of the blanks, and folding instrumentalities for acting on the blanks while travelling.

1,536,801. METHOD AND APPARATUS FOR PREPARING COATED BLANKS FOR CONVERSION INTO BOXES. HAROLD S. LABOMBARDE, Nashua, N. H. Filed Aug. 29, 1924. Serial No. 734,870. 10 Claims. (Cl. 93—36.)



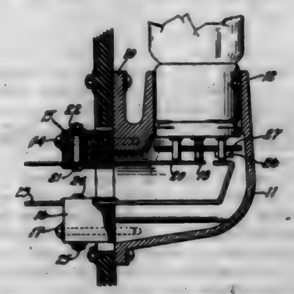
1. The method of preparing paper blanks for conversion into moisture-proof boxes, consisting in first waxing the blanks, then subjecting those portions of the blanks which are to receive glue to the action of heat, and then chilling the blanks before the heat can affect the opposite surfaces of said portions.

1,536,802. GASOLINE STRAINER. FLORINA LADEBAUCHE, Woonsocket, R. I. Filed Mar. 6, 1924. Serial No. 697,283. 2 Claims. (Cl. 210—165.)



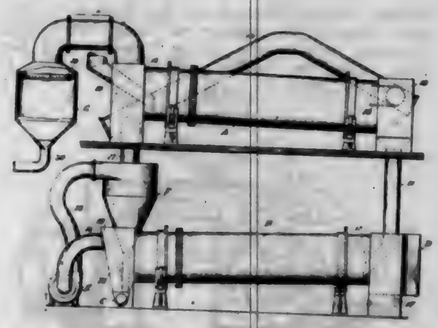
1. A gasoline strainer comprising a casing provided with an inlet at one end and an outlet at right angles to the inlet, a strainer proper in the casing above the bottom thereof between the inlet and the outlet, means at the bottom for drawing off any water, sediment or the like from below the strainer proper, said strainer comprising a perforated basket, a wire fabric strainer in the basket, and a perforated tube connected to the inlet and, in turn, fastened to the bottom of the basket to hold the basket and the wire fabric strainer in position to strain the gasoline before it passes out through the outlet.

1,536,803. SAFETY WHEEL LOCK FOR MOTOR-DRIVEN VEHICLES. CHARLES LEWIS LEHMAN and HENRY CONRAD VAKINER, Edmonton, Canada. Filed Feb. 12, 1924. Serial No. 692,324. 2 Claims. (Cl. 188—30.)



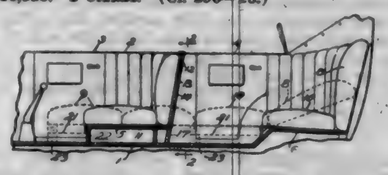
2. In a safety lock for motor-driven vehicles, the combination with a brake drum and axle housing flange, of a co-operating ratchet ring and spring actuated bolt carried respectively by the drum and flange, a foot-actuated lever operatively connected with the bolt, a lock for said lever to retain it in position to dispose the bolt in operative relation with the ratchet ring, and a transmission lever-carried element disposed to release the lock upon movement of said transmission lever into reverse position.

1,536,804. BURGLARY-PROTECTION MEANS. FRANK C. MASON, Los Angeles, Calif. Filed Feb. 9, 1920. Serial No. 357,124. 3 Claims. (Cl. 177—314.)



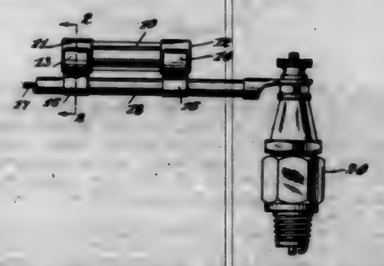
1. In an electrical protective system a wall consisting of a series of similar sections, each section comprising an insulating plate provided with a protective conductor contained therein, and each section having a metallic sheathing secured to and extending over a face thereof, means for rigidly securing said sections together and supporting the same to form a wall structure, means for connecting said protective conductors of successive sections in series relation, means for electrically connecting the metallic sheathing of the several sections and electrical alarm circuit means having closed circuit connections including said protective conductor and open circuit connections including said protective conductor on one side of the circuit and said metallic sheathing on the other side of the circuit.

1,536,805. VACUUM-TUBE SOCKET. LAWRENCE E. MELHUISH, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,266. 8 Claims. (Cl. 173—328.)



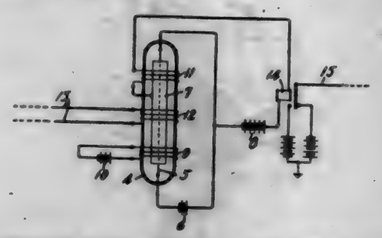
1. In combination, a base plate having an aperture, an elbow extending from said plate and terminating in a shell, a plurality of contact members attached to the rear wall of said base plate, an additional contact member attached to said rear wall and isolated from the other contact members, each of said contact members projecting into said elbow portion, said isolated contact member lying in a plane other than said first contact members and being relatively widely separated therefrom.

1,536,806. METHOD OF AND APPARATUS FOR DRYING MATERIALS. JOSEPH J. MERRILL, Chicago, Ill., assignor, by mesne assignments, to International Patents Development Company, a Corporation of Delaware. Filed Apr. 18, 1924. Serial No. 707,397. 19 Claims. (Cl. 34—6.)



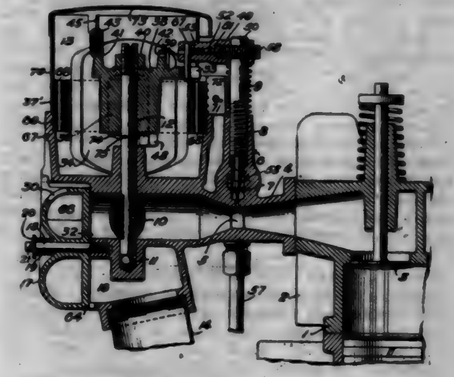
1. In drying apparatus, the combination of two driers, means for causing the material to pass through said driers in succession, means for causing the heated air to pass initially through the second of said driers and then through the first drier, and a cyclone dust collector through which the air passes from the second drier to the first drier.

1,536,807. CONVERTIBLE AUTO BODY. LLOYD G. MEUSER, Chicago, Ill. Filed Feb. 1, 1923. Serial No. 616,328. 2 Claims. (Cl. 296—28.)



1. In an automobile body, a front seat back comprising an arch-shaped upper portion built into the body to form a permanent tie and brace and extending at its ends from the seat to the top of the body, and a removable panel fitted below said arch and extending between the same and the front seat frame.

1,536,808. SPARK-PLUG TESTER. MORTIMER NORDEN, New York, N. Y. Filed Feb. 14, 1924. Serial No. 692,679. 2 Claims. (Cl. 175—183.)

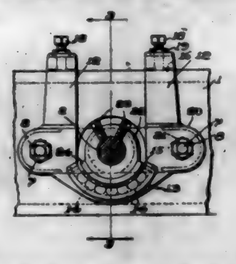


2. A device of the character described, comprising a transparent casing, metallic caps closing the ends thereof, metallic sockets into which said caps are inserted, resilient clips secured to said sockets, and pointed pins secured to said clips for making contact with electric conductors.

1,536,809. SIGNALING SYSTEM. LOUIS M. POTTS, Highwood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1922. Serial No. 586,619. 5 Claims. (Cl. 178—70.)

1. In combination, an elongated glass vessel, a cathode and an anode contained in said vessel, an output circuit, a magnetic coil associated with said electrodes for controlling the flow of current between said electrodes, a second magnetic coil for generating a magnetic field for controlling the effectiveness of the field produced by said other magnetic coil, and means operatively associated with said electrodes and said coils for maintaining said output circuit in one of the conditions following the energization of said first magnetic coil, depending on the character of such energization.

1,536,810. PRIMER AND CHOKE. CHARLES E. REDDIG, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1921. Serial No. 508,771. 5 Claims. (Cl. 123—180.)

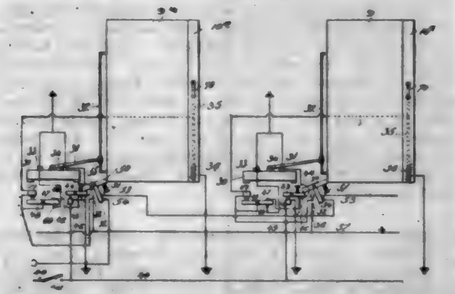


1. In combination with an internal combustion engine, a combined priming cup and choke comprising a hollow receptacle divided into two chambers, a base plate having diametrically opposite orifices therein communicating with one chamber, an intake manifold having an opening in its end adjacent said cup, a crank case, an air passage from said crank case to said priming cup having an opening in its end adjacent said cup, said cup being rotatable so that the openings therein may be placed in registration with the openings in said air passage and said manifold.

1,536,811. LAY ROCKER-SHAFT BEARING FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 16, 1924. Serial No. 686,520. 11 Claims. (Cl. 308—178.)

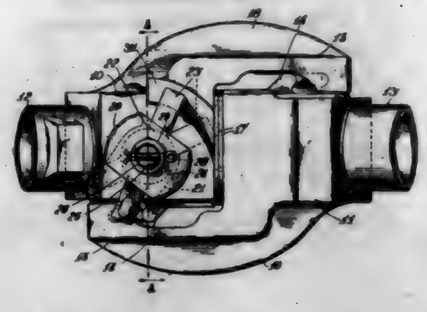
1. In a lay rocker-shaft bearing for looms, the combination of the side frames of the loom, each having a bearing for adjustably positioning the rocker-shaft

towards and from the front of the loom, and an independent anti-friction bearing upon each side frame for supporting the weight of said shaft, consisting of an open



arcuate cage carrying anti-friction devices and applicable to the lay rocker-shaft while the latter and parts carried thereby are in operative position, and means for adjusting the cage to compensate for wear.

1,536,812. SEWING-MACHINE ATTACHMENT FOR HOOK AND EYE TAPE. LOUIS ROCKE, Brooklyn, N. Y. Filed July 22, 1922. Serial No. 576,664. 7 Claims. (Cl. 112—137.)



1. In a sewing machine attachment, a combined folder and binder having a folding section consisting of a piece of sheet metal having its edges bent over to form a channel for guiding a tape through the binder, the entrance end of said folding section lying in a substantially straight vertical plane and curved to allow the tape to be fed from a suitable tape supply, the inner end of said curved portion merging into a reentrant bend increasing gradually toward the delivery end of said folder section, one of said bent over edges being bevelled to form a wedge portion adapted to engage under a hook attached to said tape and cause the same to pass along the outer side of said bent over portion, and permit said hook to swing around into an inclined position as said tape is being folded.

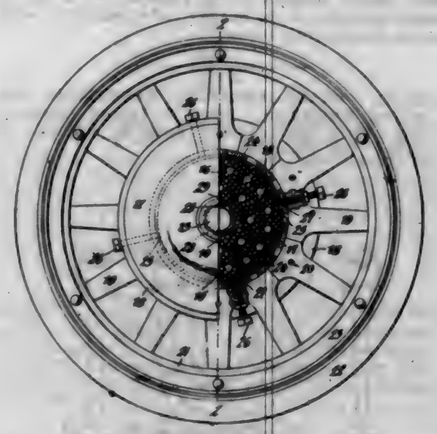
1,536,813. UNIT DOOR-CONTROL SYSTEM. HAROLD ROWNTREE, Pass Christian, Miss., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed June 4, 1921. Serial No. 475,140. 19 Claims. (Cl. 268—8.)

1. The combination with a door, of power means for controlling said door, means for locking said door in closed position, normally open circuits for controlling the door opening and closing movements of said power means, means carried by the door to permit the manual opening thereof when said locking means is in neutral position; and means controlled thereby for closing the door opening circuits.

1,536,814. HOSE-COUPLER LOCK. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Oct. 5, 1923. Serial No. 666,797. 12 Claims. (Cl. 285—68.)

1. A hose coupler lock for preventing disengagement of mating couplers comprising a bolt pivotally mounted on one of the coupler members in position to be moved into engagement with the other coupler member for preventing rocking of one member about a transverse axis with respect to the other member, the portion of the second coupler member with which the bolt is engaged being formed to engage the bolt with a continuously increasing pressure as the bolt is moved to locking position for preventing its displacement from locking position.

1,536,815. FINGER RING. LOUIS E. SADLER, Attleboro, Mass., assignor to The F. H. Sadler Company, Attleboro, Mass. Filed Oct. 6, 1924. Serial No. 741,851. 4 Claims. (Cl. 63—16.)



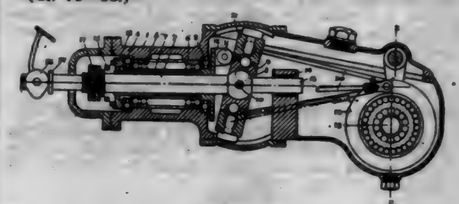
1. In a finger ring, a body composed of a finger loop having integral members at its ends arranged to abut and conjointly form a bezel, the ends of said members having apertures and clamps having prongs arranged to bridge the lines of abutment of the members and having fingers extending through the apertures and clinched to the members in engagement with the inner faces thereof.

1,536,816. ARTICLE OF MANUFACTURE. WILLIAM W. SALE, Seattle, Wash. Filed June 25, 1923. Serial No. 647,521. 1 Claim. (Cl. 46—87.)

In an article of manufacture, a favor comprising an ornamentally decorated toy balloon, a rigid tubular fitting member arranged to have the neck of the balloon passed therethrough and then turned back over the outside thereof and made fast whereby relative twisting movement of the balloon and the fitting member will close the air passageway in the neck of the balloon and a bag like paper receptacle having one end gathered around and secured to said fitting and forming a cap arranged to be worn on the head.

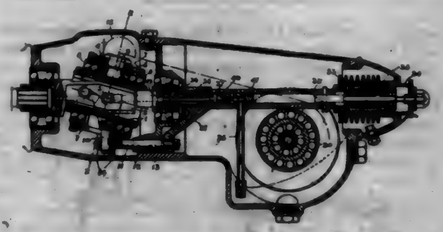
1,536,817. CUSHIONED VEHICLE WHEEL. WILLIAM MOSS DECKER, Buffalo, N. Y. Filed Aug. 20, 1923. Serial No. 658,260. 5 Claims. (Cl. 152—43.)

1. A cushioned wheel, comprising a hub, a cushion surrounding said hub, a rigid annular member surrounding said cushion, an adjustable band interposed between said cushion and said rigid member, and adjusting devices carried by said rigid member and engaging said adjustable band.



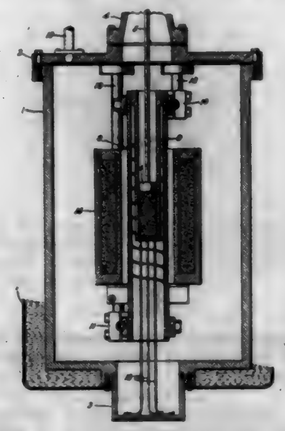
1,536,818. GAS-LIGHT BURNER. FRANCIS DE GRUCHY, Newark, N. J. Filed Feb. 14, 1922. Serial No. 536,462. 2 Claims. (Cl. 67—87.)

1. A gas-light burner including a body portion having a pair of spaced converging burner outlets the flames from which merge together, said body portion being provided at opposite sides thereof between said burner outlets with substantially parallel grooves disposed substantially in the plane bisecting the angle formed by the convergance of said outlets and opening through the top of said body portion, whereby the heat from said flame draws a current of air upwardly through each



of said grooves into the space between said burner outlets where said currents impact with each other and spread into said flames.

1,536,819. AUTOMATIC VARIABLE POWER TRANSMISSION. DIMITRI SENSAUD DE LAVAUD, Paris, France. Filed Jan. 28, 1922. Serial No. 532,463. 5 Claims. (Cl. 74—53.)

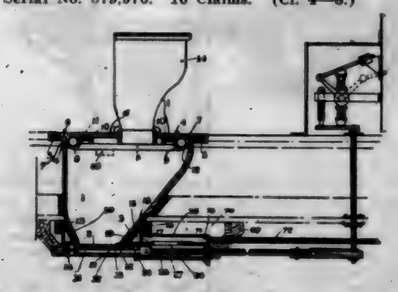


1. In a variable power transmission, a driven shaft, a longitudinally movable driving shaft, an oscillating member rotatable with the driving shaft and operatively connected with the driven shaft, and a spring medium exerting a longitudinal pressure on the driving shaft in opposition to the torque of the driven shaft.

1,536,820. VARIABLE-SPEED TRANSMISSION. DIMITRI SENSAUD DE LAVAUD, Paris, France. Filed July 7, 1924. Serial No. 724,607. 6 Claims. (Cl. 74—53.)

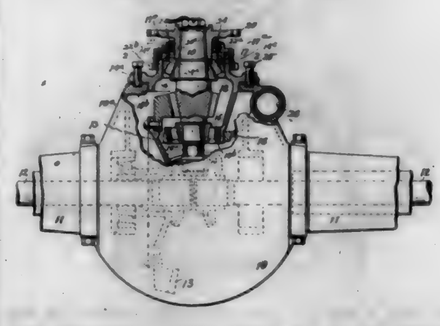
1. In a variable speed transmission, a drive shaft having a crank extension and a sleeve pivotally and slidably mounted upon said extension in such manner that it is caused to pivot when slid, a non-rotatable sleeve mounted on the aforesaid sleeve, anti-friction bearings supporting the latter sleeve, a Cardan ring connected to the outer sleeve and holding it from rotation, longitudinally movable means connected with said Cardan ring, and resilient means for opposing the movement of said Cardan ring.

1,536,821. APPARATUS FOR AND METHOD OF MAKING VITREOUS SILICA. PHILIP K. DEVERS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 27, 1924. Serial No. 740,416. 17 Claims. (Cl. 49—78.1.)



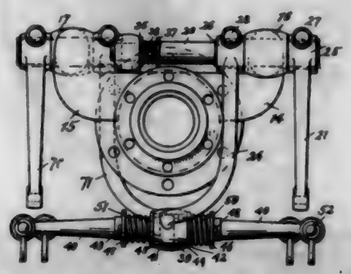
1. The method of making vitreous silica which consists in fusing silica in an enclosed space while maintaining a vacuum in said space and thereupon compressing the fusion at a pressure high enough to substantially eliminate bubbles.

1,536,822. CAR SEAL. EMIL DIETER, Richmond Hill, N. Y., assignor to American Casting and Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 21, 1923. Serial No. 658,566. 11 Claims. (Cl. 292—318.)



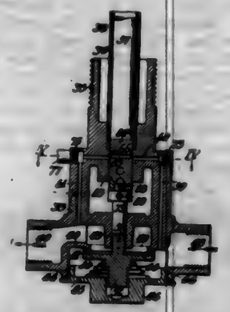
1. In a seal, the combination with a bulb or head, of a channel within the bulb, a shackle having corrugated ends which are adapted to be inserted into the channel, and a free lock within the bulb consisting of a free spring ring for interlocking the parts.

1,536,823. UNDERCAR WASTE BOWL. ALBERT DOBSON, St. Lambert, Quebec, Canada. Filed May 8, 1920. Serial No. 379,976. 16 Claims. (Cl. 4—8.)



1. A bowl in substantially hopper shape having a flushing device, a double wall slide bottom closing the outlet and forming a steam enclosure, means for operating said slide bottom, a steam jacket encircling said bowl at the lower end thereof, a steam chamber forming a receptacle, enclosure and a steam feed pipe connected with said chamber.

1,536,824. REAR-AXLE CENTER. DAVID F. DOMIRI, Cleveland, Ohio. Filed Mar. 19, 1923. Serial No. 626,072. 7 Claims. (Cl. 74—99.)



1. In a rear axle construction, an axle housing adapted to contain a differential, a driving pinion, two bearings for the pinion located on opposite sides thereof, a retainer supporting said bearings, the outer bearing being slidably mounted in the retainer, and a nut arranged externally of the retainer and engaging the outer bearing for adjusting the same.

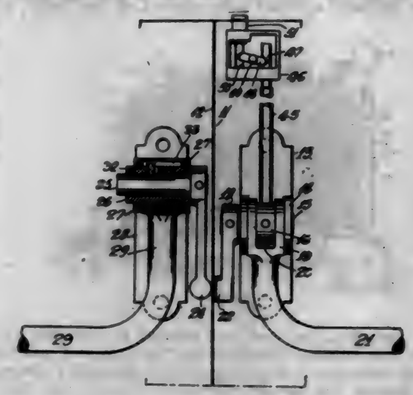
1,536,825. BRAKE-ACTUATING MECHANISM FOR MOTOR VEHICLES. DAVID F. DOMIRI, Cleveland, Ohio. Filed May 14, 1923. Serial No. 638,709. 12 Claims. (Cl. 188—204.)

5. A brake equalizing device comprising a movable actuating arm having a cylindrical sleeve at the end thereof, an equalizing bar having a central ball enlargement fitting within the sleeve, stop members on the bar and sleeve for limiting the endwise movement of the equalizing bar in one direction but permitting the bar to rock about its ball enlargement, a spring for yieldingly pressing the bar against the stop, and brake operating members attached to the outer ends of the bar.

1,536,826. THERMOSTATICALLY-CONTROLLED FUEL VALVE. ROBERT J. DOUGHERTY, Philadelphia, Pa. Filed Aug. 7, 1924. Serial No. 730,772. 15 Claims. (Cl. 236—33.)

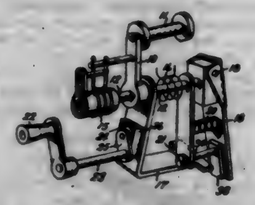
14. The combination with a valve casing; of a main gas valve controlling a main fuel gas conduit; a bypass conduit around said main valve; an auxiliary valve controlling said bypass conduit; and a single thermostat arranged to control both said valves, in succession.

1,536,827. LOOM. CLARE H. DRAPER, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1921. Serial No. 453,077. 3 Claims. (Cl. 139—291.)



1. A loom having, in combination, a breast beam, a lay, heddles and drop wires, and a cloth take-up and let-out consisting of three members, two of which engage one side of the cloth near the breast beam and the third of which engages the cloth between the first two, and means for yieldingly pressing the members toward the cloth so as thereby to take up cloth when the shed is closed and give up cloth as the shed is opened.

1,536,828. METHOD OF MAKING TORIC LENSES AND LENS BLANKS. THEODORE B. DRESCHER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 29, 1921. Serial No. 518,667. 4 Claims. (Cl. 49—85.)

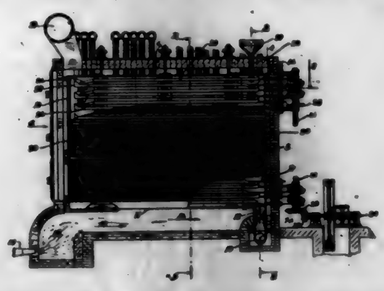


1. A method of forming toric lenses comprising the following steps (1) preparing a glass blank provided with a concave ground and polished spherical surface on one side and a toric convex surface on the other, one of the meridians of said toric surface having approximately the same curve as that of the concave surface (2) placing the concave surface of the blank upon a mold having a convex toric surface, one meridian of which corresponds to the spherical surface of the blank, and (3) heating the blank sufficiently to cause it to drop into contact with the surface of the mold.

1,536,829. EXIT-DOOR LOCK. HARRY W. DYER, New York, N. Y. Filed Apr. 30, 1923. Serial No. 635,571. 11 Claims. (Cl. 292—92.)

1. In a door lock of the class described for double doors, a locking mechanism on one door, a releasing mechanism on the other door, said mechanisms placed on said doors so as not to project beyond the abutting edges thereof and means for moving the releasing mechanism to engage said locking mechanism whereby said locking mechanism is operated to release the door to which it is attached.

1,536,830. SYSTEM AND SWITCH FOR CONTROLLING ELECTRIC TRANSLATING DEVICES. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,552. 6 Claims. (Cl. 200—89.)

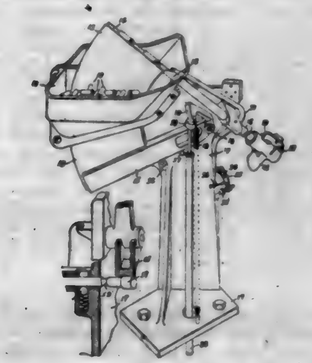


6. The combination in an electric switch of a switch member biased to one position, a shaft on which the switch member is mounted, an electromagnet having a winding disposed on the said shaft, a magnet structure mounted to rotate on the said shaft, an armature hingedly connected with the said shaft and biased to the unattracted position, the said armature when in the attracted position initially forming a mechanical locking connection between the said magnet structure and the said shaft only in the off position of the switch member, the said connection being maintained during movement of said magnet structure while the said winding is energized, whereby operating the said magnet structure moves the switch member from its biased position to an operative position and the switch member is maintained by the said electromagnet in the operative position as long as the said winding is energized.

1,536,831. SHALE-OIL EDUCTION RETORT. GUSTAV A. EKSTEDT and NICHOLAS SCHMUMER, De Beque, Colo. Filed July 28, 1923. Serial No. 654,321. 7 Claims. (Cl. 202—14.)

3. A shale oil eduction retort comprising an elongated retort chamber having a substantially rectangular cross-section, transverse supporting bars within said retort,

a shelf supported from each end of said bars, said shelves forming vertical tiers, roller bearings between the supporting bars and the bottom of the shelves, a vertical shaft rotatably mounted near one end of said retort, a

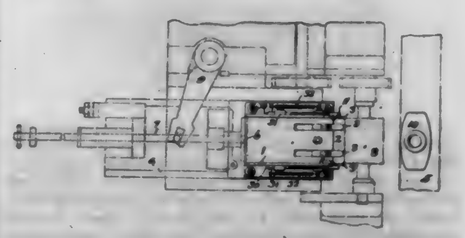


cam secured to the shaft and adapted to positively operate two adjacent layers of shelves, said cam having means cooperating with intermediate connecting means for moving the shelves alternately, slowly and then quickly in opposite directions.

1,536,832. FLUID-COOLED ROLL. ALBERT E. EVANS, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 18, 1924. Serial No. 713,108. 7 Claims. (Cl. 49—38.)

1. In combination in a roll, an outer cylindrical casing, a pipe extending longitudinally through the casing spaced away from the inner wall thereof to provide an annular chamber, partition means intermediate the ends of the roll dividing said chamber and the passage through the pipe each into two sections, communications between the inner end of each of said sections of pipe and the section of the chamber surrounding it, and means for providing a circulation of cooling fluid through each pipe section and the section of the chamber surrounding it.

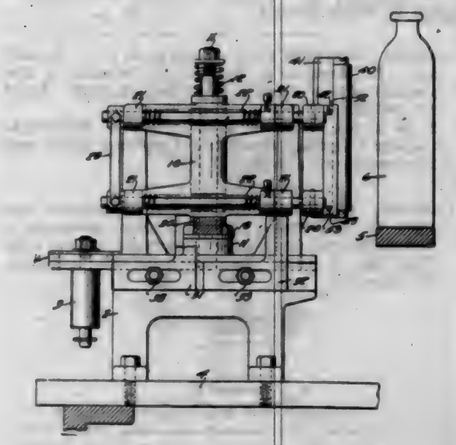
1,536,833. TUBE-FEEDING APPARATUS. JOHN T. FAGAN and FRANCIS J. RIPPL, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Sept. 19, 1922. Serial No. 589,249. 8 Claims. (Cl. 49—14.)



3. An automatic machine for feeding glass tubes comprising a hopper adapted to contain a supply of said tubes, a scoop mounted for reciprocation through said hopper in a substantially vertical plane and so shaped as to cause one or more of said tubes to lodge therein and to feed longitudinally therealong by gravity at the upper extremity of travel of said scoop, a guideway inclined so as to allow tubes to feed longitudinally along it by gravity disposed adjacent to said hopper and so as to be in line with said scoop at the upper extremity of its travel, and automatic means at the opposite end of said guideway for releasing said tubes one by one, said means comprising a finger and an end gate and means for causing the finger to frictionally engage the side of a tube and the end gate to open to release a tube and then causing the finger to release a tube and the end gate to close.

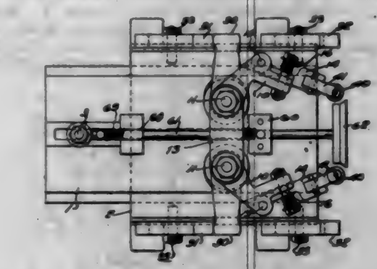
1,536,834. PLUNGER SASH-WEIGHT-MOLDING APPARATUS. GEORGE J. FOX, Frankford, Pa. Filed Mar. 3, 1923. Serial No. 622,496. 5 Claims. (Cl. 22—42.)

1. The herein described method of casting sash weights, which consists in placing a pattern plate having a plurality of radially disposed apertures and a central boss on the top of the sand in the flask, and forming therefrom in the top of the sand a central basin and radial gates, next forcing a plurality of patterns of solid cross section and arranged in circular form having chamfered ends through the apertures in said plate into said sand, next withdrawing said patterns thereby forming molds open at their end, next removing said plate and next positioning slotted wedge shaped cores in said molds to form the sash weight eyes.



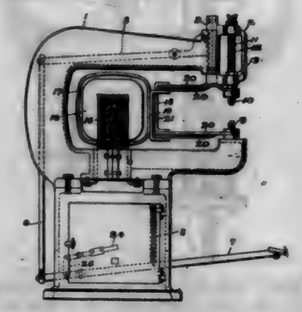
1,536,835. MAGAZINE FOR LABELING MACHINES. CHARLES RAGNAR FREDSELL, Newark, N. J. Filed Mar. 1, 1923. Serial No. 622,145. 12 Claims. (Cl. 216—34.)

1. In a labeling machine, a label carrying magazine movable relatively to the path of articles to be labeled, shaping fingers normally held inoperable by the stack of



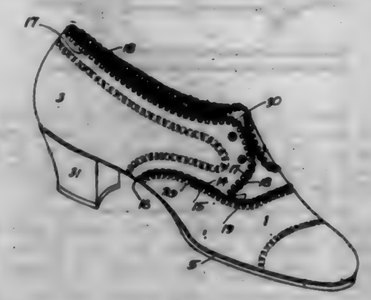
labels, to conform the foremost labels to the contour of the curved surface of the article immediately upon the label coming in contact with the article.

1,536,836. LABEL-WIPING STATION. CHARLES RAGNAR FREDSELL, Newark, N. J. Filed Apr. 5, 1924. Serial No. 704,431. 23 Claims. (Cl. 216—9.)



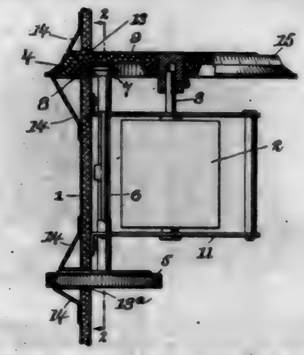
1. In a labeling machine, wiper mechanism comprising a reciprocating slide, a support movably mounted thereon, roll retainers movably mounted on said support, means for holding the roll retainers yieldably at one limit of their movement, and means for controlling the movement of said support.

1,536,837. LABEL-WIPING STATION. CHARLES RAGNAR FREDSELL, Newark, N. J. Filed Apr. 5, 1924. Serial No. 704,432. 13 Claims. (Cl. 216—9.)



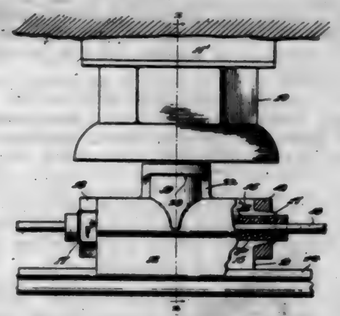
1. In a labeling machine, wiper mechanism comprising a reciprocating slide, supports pivotally mounted thereon, roll retainers pivotally mounted on said supports, means for holding the roll retainers yieldably at one limit of its movement, means for controlling the pivoted movement of said support and means for limiting said movement.

1,536,838. SPOT-WELDING MACHINE. HENRY GEISENHÖNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 20, 1923. Serial No. 669,828. 5 Claims. (Cl. 219—4.)



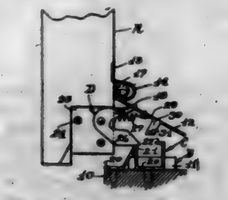
1. A spot welding machine comprising a frame, two pairs of electrodes carried thereby and adapted simultaneously to produce a pair of spaced spot welds, a transformer having a secondary winding for supplying current to said electrodes and pairs of leads for connecting said secondary winding with said two pairs of electrodes in parallel relation, the leads forming each pair being respectively connected to opposite terminals of said secondary winding.

1,536,839. SHOE. GEORGE H. GILLIS, North Abington, Mass. Filed Dec. 15, 1924. Serial No. 756,102. 4 Claims. (Cl. 36—57.)



1. A shoe comprising in combination a plurality of pieces of material forming an upper, one of said pieces overlapping another of said pieces and being connected thereto by a stitching running substantially parallel with the edge of the material thereof, an extended edge portion on one of said pieces, a plurality of slots formed in said edge portion, said slots being disposed in a line substantially parallel with the line of stitching, a lacing looped through said edge portion and means for securing said lacing at opposite ends thereof for imparting strength to said edge portion.

1,536,840. PANEL MOUNTING FOR VARIABLE-CIRCUIT ELEMENTS. ALFRED HENRY GREBE, Hollis, N. Y. Filed Dec. 5, 1924. Serial No. 754,193. 5 Claims. (Cl. 74—7.)

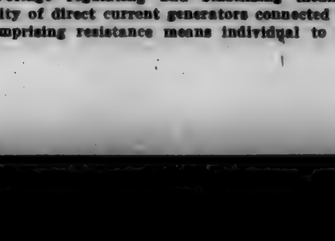


1. A panel mounting for a variable circuit element, comprising two dials operatively connected to control the variable element, said dials presenting segmental portions only for manipulation from the front of the panel.

1,536,841. TROLLEY AND SIGNAL WIRE HANGER. ALBERT J. GURNEY, Canton, Ohio, assignor to The American Mine Door Co., Canton, Ohio, a Corporation of Ohio. Filed Nov. 7, 1923. Serial No. 673,332. 16 Claims. (Cl. 191—43.)

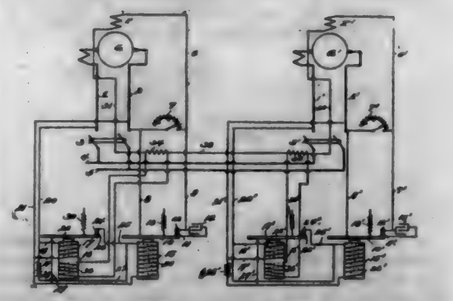
5. A hanger of the character described including companion jaws provided at their ends with nipple portions mating to define nipples at the extremities of the jaws, and nuts screwed upon said nipples and adjustable for clamping the jaws in engagement with a wire.

1,536,842. WEATHER STRIP FOR DOORS AND WINDOWS. MARY P. HALBERT, St. Paul, Minn. Filed Apr. 18, 1922. Serial No. 554,945. 2 Claims. (Cl. 20—67.)



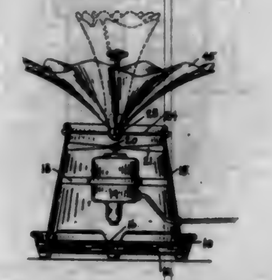
1. In combination with a hinged closure and frame therefor, a guard hinged on said closure, two catches on said guard, a spring operating to yieldingly draw the guard into operative position sealing the joint between said closure and frame, an abutment on the frame, a dog mounted on the closure and comprising a trip-arm, co-operating with the abutment, and a combined guard actuating and latch arm, said dog serving, during the initial stage of the opening swing of the closure, to lift the guard from sealing position, through the guard actuating arm, said arm co-operating with one of said catches to hold the guard elevated, said dog serving, further, during the final stage of the closing swing of the closure, to first release said arm from said catch and then engage said arm with the second catch and thereby lock the guard in sealing position.

1,536,843. DISINFECTANT. THOMAS H. HALL, Swarthmore, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 15, 1920. Serial No. 365,891. 3 Claims. (Cl. 167—3.)



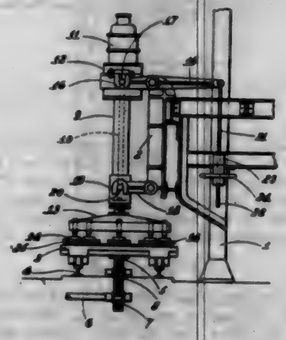
2. As a new article of manufacture, a disinfectant containing a hydroxy derivative of diphenyl mixed with a hydrocarbon oil and soap.

1,536,844. LIGHTING UNIT. WARD HARRISON and JOHN H. WATERBURY, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,415. 4 Claims. (Cl. 24—78.)



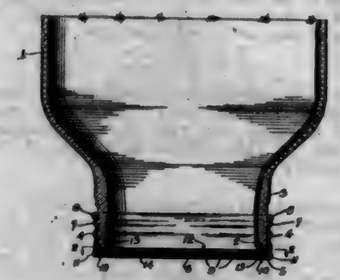
1. In a lighting unit, the combination of a substantially vertically disposed incandescent lamp and a support therefor, a light diffusing globe substantially inclosing said lamp and an opaque reflector positioned over and partially inclosing said globe, said reflector being recessed to allow the transmission of a substantial portion of light in substantially vertical directions through its upper portion, means for supporting said reflector and supporting means engaging said globe through said reflector.

1,536,845. VOLTAGE-REGULATING MEANS FOR DIRECT-CURRENT GENERATORS. JACOB Y. HARTMAN, New Orleans, and ROBERT L. FULLER, Arabi, La., assignors of one-third to Walter H. Cook, New Orleans, La. Filed Sept. 19, 1923. Serial No. 663,639. 5 Claims. (Cl. 171—229.)



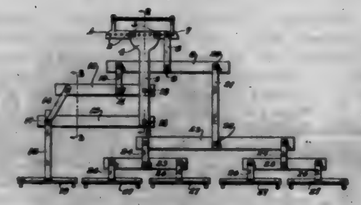
1. Voltage regulating and stabilizing means for a plurality of direct current generators connected in parallel comprising resistance means individual to the field circuit of each generator to be regulated, means for short-circuiting the respective resistance means, a balancing circuit connecting the generators, and controlling means for the respective short-circuiting means responsive to the voltage of its respective generator and also to a flow of current in the balancing circuit for causing the opening or closing of the short-circuit for the respective generator.

1,536,846. VENTILATOR BLOWER FAN. HARRY H. HEATH and AUGUST J. MOTTLAU, Far Rockaway, N. Y. Filed Aug. 17, 1920. Serial No. 404,195. 12 Claims. (Cl. 230—1.)



1. A device comprising a fan to provide an upward draft; a support in the field of said fan; and outwardly inclined deflector leaves adjustably pivoted to said support; and a single rotary spindle operable with a single hand for adjusting all of said leaves in unison.

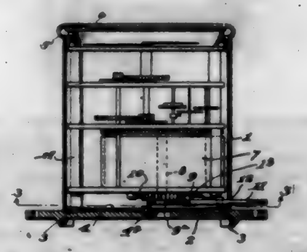
1,536,847. PLATE-GLASS-POLISHING APPARATUS. HERMAN S. HEICHERT, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 5, 1923. Serial No. 643,500. 5 Claims. (Cl. 51—109.)



1. In combination in apparatus for polishing plate glass, a rotatable runner frame mounted for vertical movement, means for raising and lowering said frame, means for rotating that frame, a carrier for the glass mounted for movement transversely of said frame and a plurality of polishing blocks or runners free to rotate about their vertical axes, and mounted on said frame so that they may be swung laterally away from the center of said frame to present their lower surfaces in position for cleaning.

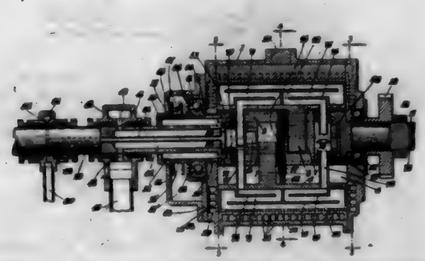
1,536,848. STRAINER. PERRY OSCAR HELLER, Prophetstown, Ill. Filed Feb. 28, 1923. Serial No. 621,827. 1 Claim. (Cl. 210—151.)

In combination with a receptacle having an exteriorly threaded neck, with the open end of the neck flat, a circular gauze disc bearing against the flat end of the neck and extending to the outer edge thereof, a circular layer of absorbent material placed over the gauze disc and extending to the outer edge thereof, and a detachable cap having a peripheral threaded inturned flange for engagement with the neck of the receptacle to clamp the outer edges of both the gauze disc and absorbent material to the flat open end of the neck, said cap having its cover plate perforated except around the margin where it is opposed to the flat end of said neck, whereby the imperforate portion of the cover plate engages and holds the outer edges of the gauze disc and the cotton against the end of the neck, said disk and absorbent material forming a gasket between the neck and the imperforate portion of the cap so as to prevent the liquid contents from passing around the marginal edges of said disk and absorbent material.



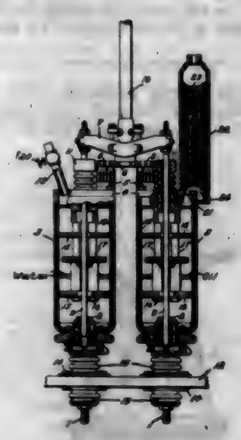
1,536,849. DRAFT EQUALIZER. PERRY OSCAR HELLER, Prophetstown, Ill. Filed Jan. 22, 1924. Serial No. 687,810. 2 Claims. (Cl. 278—6.)

2. In a draft equalizer, the combination of a longitudinal draw bar having means of connection to a clevis, a link connection with the clevis at one side of the draw bar, a rear transverse evener bar intermediately connected to the forward ends of said link connection, the inner end of said bar extending beyond the other side of the draw bar, a second link connection with said inner end and extending forwardly, a transverse equalizer beam pivoted at its inner end to the draw bar in advance of the said evener bar and connected adjacent to its pivoted end to the front end of the second link connection, a transverse spreader bar pivoted at its inner end to the front end of the draw bar and in advance of the equalizer beam and extending outwardly beyond the same, an angularly-disposed, outwardly-extending link connection between the outer end of the equalizer beam and the spreader bar, longitudinal links



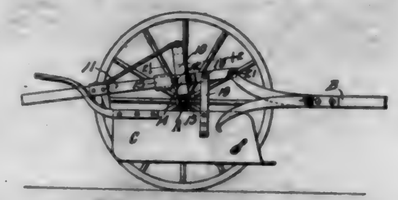
connected to the outer end of the spreader bar and having a singletree connected to their front ends, elongated longitudinal links connected to the outer end of the said evener bar and connected to a four-horse evener bar in advance of the front end of the draw bar, doubletrees connected to the ends of the four-horse evener, and a singletree at each end of each doubletree.

1,536,850. CLOCK-WINDING MECHANISM. JOHN F. HENNESSEY, Flushing, N. Y., assignor to Phinney-Walker Company, New York, N. Y., a Corporation. Filed Oct. 28, 1924. Serial No. 746,323. 3 Claims. (Cl. 58—46.)



1. In a clock, the combination of a supporting plate, a cylindrical casing rotatably mounted at its rear end on said plate, a movement enclosed within the casing and rigidly attached to said plate, a lever projecting between the plate and the movement and operatively connected to the side wall of said casing, and means actuated by the oscillation of the lever to wind the main spring of said movement.

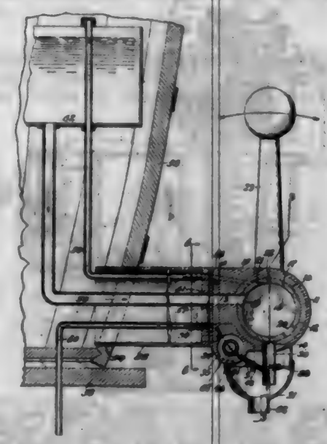
1,536,851. INTERNAL-COMBUSTION ENGINE. PETER COOPER HEWITT, Ringwood Manor, N. J.; The Farmers' Loan and Trust Company executor of said Peter Cooper Hewitt, deceased. Filed July 22, 1919. Serial No. 312,538. 10 Claims. (Cl. 123—16.)



1. The combination of a casing having a fuel inlet and an outlet or exhaust, a rotor mounted therein and having wings rotatable with said rotor and engaging the inner walls of said casing, said wings being movable toward and away from the axis of rotation of said rotor, whereby continuous engagement may be maintained between them and the inner walls of said casing during the rotation of said rotor, means whereby the supply of fuel passing through said inlet is intermittently prevented during a predetermined extent of rotation of said rotor, and means for effecting the ignition of the fuel in said casing to cause the rotation of said rotor, said rotor being provided with means whereby a cooling medium may be passed through said wings.

1,536,852. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 2, 1923. Serial No. 610,099. 5 Claims. (Cl. 200—150.)

3. An electric switch comprising a set of contacts separable in water, and another set of contacts in series therewith separable in oil.



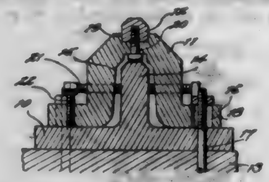
1,536,853. REPAIR PART FOR WHEEL SCRAPERS. EVERETT S. HITCHCOCK, Richmond, Va., assignor of one-half to Angier D. Woods, Hudson, N. C. Filed Dec. 12, 1924. Serial No. 755,516. 2 Claims. (Cl. 37—134.)

1. In a wheel scraper a repair part for the supporting ball for the scraper pan comprising a bar formed on one end with a socket to receive one arm of the ball and having an off-set in line with said socket equal to the thickness of the ball arm and provided with apertures for securing bolts substantially as set forth.

1,536,854. BEVERAGE-DISPENSING DEVICE. FREDERICK W. HOLDERLE and CARL L. HOLDERLE, Rochester, N. Y. Filed June 30, 1923. Serial No. 648,771. 2 Claims. (Cl. 225—26.)

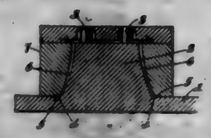
1. A beverage dispensing device comprising a syrup valve casing provided with a circular bore and a syrup inlet passage and a syrup outlet passage opening into different parts of said bore, a rotary valve plug arranged in said bore and having a measuring chamber and inlet and outlet ports in different parts thereof which are adapted to register respectively with said inlet and outlet passages, a water valve casing having a circular bore, a water inlet passage adapted to be connected with a source of supply, a water outlet passage leading into said syrup outlet passage, and a valve seat between said inlet and outlet, a longitudinally movable stem arranged in said water valve casing and having a valve disk movable toward and from said valve seat, a

spring for yieldingly holding the water valve disk against its seat, and a rock handle arranged on said syrup valve plug and provided with a cam adapted to engage said water valve stem for opening the water valve.



1,536,855. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1920. Serial No. 397,764. 24 Claims. (Cl. 250—27.)

1. An electron discharge device comprising a gas tight vessel having a reentrant integral stem, a metallic collar held to said stem solely by friction, and an electrode supported by said collar.



4. An electron discharge device comprising a cathode, a control electrode, an anode surrounding said cathode and control electrode, a pair of supports carried by said anode out of contact with the major portion of said anode, said pair of supports being located at opposite ends of said anode and means for supporting said cathode and control electrode from said pair of supports.

1,536,856. RAIL. BENJAMIN F. HOWES, Cary, Miss. Filed Sept. 23, 1924. Serial No. 739,413. 4 Claims. (Cl. 238—128.)

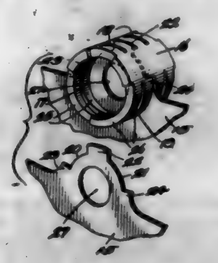
1. An adjustable rail comprising a base section, a ball carrying section mounted thereon, a ball section removably secured to the ball carrying section and means whereby said ball carrying section may be adjusted vertically and horizontally relative to the base section.

1,536,857. MOLD FOR MAKING RUBBER MASKS OR FACE PIECES FOR RESPIRATORS, INHALERS, AND SIMILAR ARTICLES. ALEXANDER M. HUDSON, New York, N. Y., assignor to Melvin A. Rice, New York, N. Y. Original application filed Aug. 22, 1919, Serial No. 319,090. Divided and this application filed May 31, 1922. Serial No. 564,711. 14 Claims. (Cl. 18—34.)

1. A mold for making masks or face-pieces for respirators, inhalers and similar articles, consisting of a base plate, a core extending upward therefrom, a cavity plate fitting loosely over said core, said core and cavity plate having sloping walls which are adapted to leave a graduated opening therebetween, a top plate upon said cavity plate, and means to hold all of said members in combined engagement for the purpose herein set forth.

1,536,858. ELECTRODEPOSITING BRIGHT POLISHED COATS OF CADMIUM. CHAD HERBERT HUMPHRIES, Kokomo, Ind., assignor to The Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed Mar. 2, 1922. Serial No. 540,566. 8 Claims. (Cl. 264—1.)

1. The method of obtaining a bright dense, coherent coating of metallic cadmium on another metal, which consists in electrodepositing cadmium from a cyanide solution in presence of an addition agent in quantity sufficient to produce an appreciable brightening effect but not exceeding .05%.



1,536,859. ELECTROPLATING. CHAD H. HUMPHRIES, Kokomo, Ind., assignor to Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed June 5, 1924. Serial No. 718,079. 6 Claims. (Cl. 204—1.)

1. Method of obtaining bright, dense, coherent deposits of a metal upon another metal which comprises electrodepositing said first named metal from a cyanide solution thereof in the presence of a protein addition agent.

1,536,860. CONDENSER. PETER G. JACOBSON, Chicago, Ill. Filed July 5, 1922. Serial No. 572,789. 7 Claims. (Cl. 250—41.)

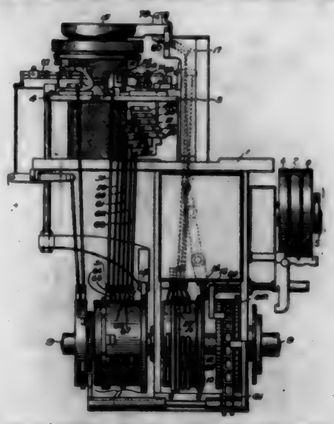
1. A condenser having one side formed of a plurality of leaves and a mounting sleeve having a plurality of sets of arcuate slots distributed along the sleeve, there

being three slots in each set that are arranged circumferentially of the sleeve, said condenser leaves entering said slots and being recessed to receive the unslotted portions of the sleeve, said sleeve being formed with in-

terleaving fingers which margin the end slots of the slot sets and are formed to exert pressure upon one another longitudinally of the sleeve upon contraction of the fingers.

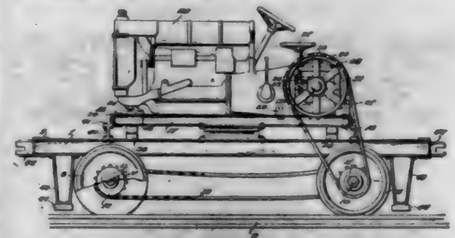
1,536,861. THERMOSTATIC VENT VALVE FOR RADIATORS. EDWARD JACOBUS, Montclair, N. J. Filed Sept. 24, 1924. Serial No. 739,446. 6 Claims. (Cl. 236—52.)

1. A valve of the character described, comprising a casing having an inlet and an outlet, said outlet having an outwardly facing valve seat, a substantially semicircular thermostatic strip having one end fixedly connected to said casing exteriorly thereof at a distance from said outlet and the other end in opposed spaced relation to said valve seat and movable toward and from said valve seat upon influx of hot and cold fluid respectively into said casing, and a valve head carried by the second-mentioned end of said thermostatic strip and actuated by said strip into and out of engagement with said seat to close and open said outlet.



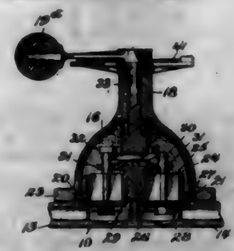
1,536,862. LATHING STRIP. IVAN W. JAMIESON, Palms, Calif. Filed Feb. 5, 1924. Serial No. 690,844. 2 Claims. (Cl. 72—116.)

1. A strip of the class described comprising a backing sheet, a plurality of laths placed thereon and spaced apart, wires on the front and rear faces of the strip and having portions pressed into the laths to hold the laths together and to hold the backing sheet in place.



1,536,863. MACHINE FOR KNITTING GLOVES. FRANK E. JONES, Pawtucket, R. I., assignor to Hemphill Company, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 19, 1920. Serial No. 404,620. 17 Claims. (Cl. 66—24.)

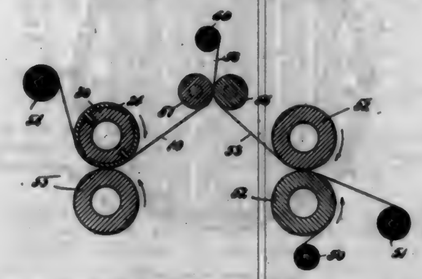
12. In a knitting machine, means to knit a flat web of fabric comprising knitted hand and digit coverings said means including a pattern member having two sets of cams respectively arranged to effect the knitting of alternate right and left glove units and means to co-



operate with certain of the cams of said sets to knit seamless digit coverings to correspond in length with the particular finger of the hand to be covered thereby.

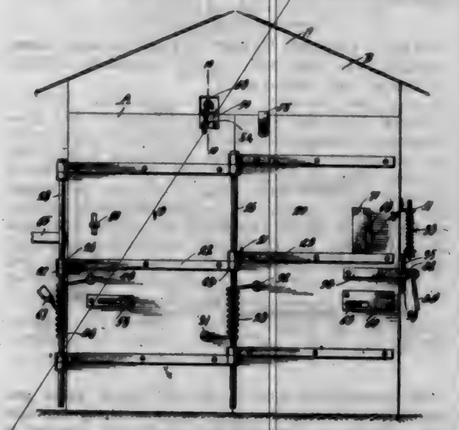
1,536,864. TRACTOR LOCOMOTIVE. SAMUEL G. JONES, Norfolk, Va. Filed Apr. 25, 1924. Serial No. 708,925. 6 Claims. (Cl. 105—62.)

1. An apparatus for the purpose set forth comprising a wheeled-truck, a super-frame mounted upon the truck for pivotal movement about a vertical axis, means for securing a tractor upon the super-frame, means for operatively connecting the rear axle of the tractor with an axle of the truck, and means for vertically adjusting the rear axle of the tractor relative to the super-frame whereby to set the same in working position or bring it into an inoperative position to permit reversal of the tractor and the super-frame.



1,536,865. MIXING VALVE. FERDINAND J. KAHRER, Newark, N. J. Filed June 14, 1924. Serial No. 719,965. 3 Claims. (Cl. 277—18.)

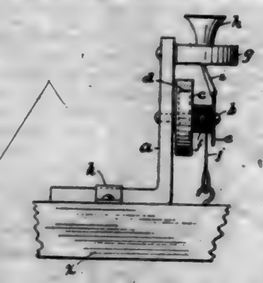
1. A mixing valve comprising a flat base member, a dome like mixing chamber, a valve plate secured between them, valves in the plate and loosely fitting



thereon and acting to seat on the lower face thereof the valve plate including a bracket to act as bearings for the valve stems, and a cam mounted in the dome like chamber and having faces to engage the ends of the stems.

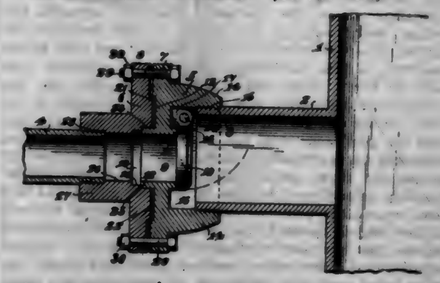
1,536,866. PROCESS OF MAKING RUBBER SHOES. JACOB KAMBORIAN, Watertown, Mass. Filed Feb. 8, 1921. Serial No. 443,439. 5 Claims. (Cl. 18—56.)

2. The improved process of manufacturing rubber footwear, which consists in uniting to the sheet material from which the upper materials are cut, a plurality of layers having formed thereon increased reinforcing thicknesses at the top and bottom marginal portions of the upper to be cut from said layers, thus automatically producing reinforced portions at predetermined parts.



1,536,867. AUTOMATIC FOLDING DOOR. WILLIAM M. KARR, Gothenburg, Nebr. Filed Aug. 28, 1924. Serial No. 734,785. 10 Claims. (Cl. 20—16.)

2. The combination with a door including sections hingedly connected together, and means normally holding the door in a closed position, of a door opening device including means for automatically swinging one door section open at a time upon the manual release of said door holding means.



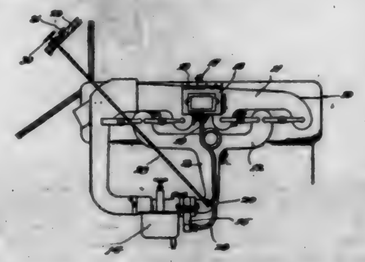
1,536,868. BURGLAR ALARM. AUGUSTUS H. KELLER, Philadelphia, Pa., assignor of one-half to George Hagey, Philadelphia, Pa. Filed Mar. 21, 1924. Serial No. 700,753. 3 Claims. (Cl. 116—86.)

2. The combination with the sashes of a window; of a mechanical burglar alarm comprising a bracket secured to one window sash, a shaft fixed to the bracket, a hollow box and a wheel turnable on the shaft, one wall of the box and the body of the wheel being slotted, a hollow hub enclosing the shaft between the box and wheel, projections on the ends of the hub extending through the slots of the box wall and wheel respectively and bent angularly so as to fixedly connect the box and wheel, a

coiled spring within the box one end of which is secured to the box and the other end of which is secured to the shaft, a cord secured to the other sash and wound about the hub, and audible alarm mechanism operable by the wheel in its turning movement.

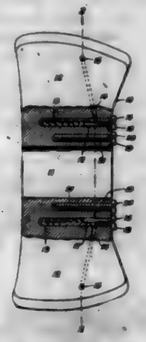
1,536,869. FLANGED UNION CHECK VALVE. WILLIAM H. KIEBE, Beggs, Okla. Filed June 21, 1924. Serial No. 721,557. 2 Claims. (Cl. 137—69.)

1. A union of the character set forth, comprising a pair of centrally apertured abutting plates one having an annular recess in the abutting face thereof, an annular rib on the abutting face of the other plate seating in said recess, a pair of annular aligned collars upon each face of said recessed plate in alignment with the aperture therethrough, that collar upon the abutting face extending into and seating in the aperture in the adjacent plate, a flange upon the outer face of each plate, that flange upon said recessed plate being of materially greater diameter than the flange upon the other plate, a flap valve mounted upon the body of the plate having the flange of greater diameter, within the flange and seating upon the end of the adjacent collar to close the aperture through the plate, and means for securing the plates together.



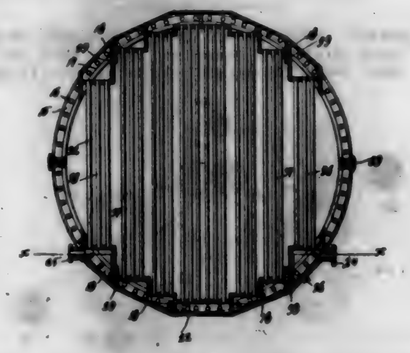
1,536,870. VALVE FOR INFLATED ARTICLES. ALFRED KLOTZ, Munich, Germany. Original application filed June 5, 1922, Serial No. 566,027. Divided and this application filed Apr. 11, 1923. Serial No. 631,308. 1 Claim. (Cl. 152—12.)

In a valve of the type set forth, in combination with a rotatable tool presenting a conically tapered end, a valve case, a valve plug rotatable therein and presenting a concentric tapering depression of a taper complemental



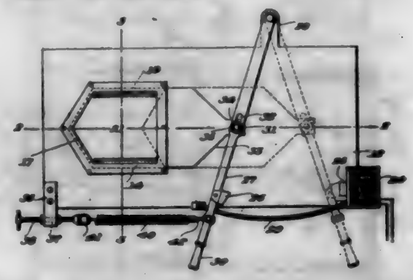
to that of said tool end for frictional cooperation therewith, the friction angle between said complemental taper surfaces being such that upon the plug becoming properly seated, the frictional cooperation between plug and tool is automatically broken.

1,536,871. AIR SUPPLY ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. FRED H. A. KNACKSTEDT, Staunton, Ill. Filed Feb. 12, 1923. Serial No. 618,627. 1 Claim. (Cl. 123—119.)



The combination with an internal combustion engine having intake and exhaust manifolds, and a carbureter connected with the intake manifold, of a casing fitting said exhaust manifold and providing a heating chamber, the casing being provided with screened openings for admitting air to the chamber, manually operable fastening means securing the casing to said manifold, an air box inserted between the carbureter and said intake manifold, a pipe connecting said heating chamber with said air box, a valve casing interposed in said pipe and having a cold air port, and a valve body rotatable in the valve casing and having ports to communicate with said cold air port and with the pipe, the valve body being rotatable to one position exclusively admitting hot air to the box from said chamber, to another position exclusively admitting a mixture of hot and cold air to said box, to another position exclusively admitting cold air to the box, to another position shutting off the flow of air to the box and venting said chamber to the atmosphere, and to another position completely closed, the valve being rotatably adjustable for regulating the quantity of hot air, the quantity of mixed hot and cold air, and the quantity of cold air respectively.

1,536,872. AX. DAVID E. BAILEY, Mechanicsville, N. Y. Filed Feb. 18, 1925. Serial No. 10,094. 6 Claims. (Cl. 145—2.)



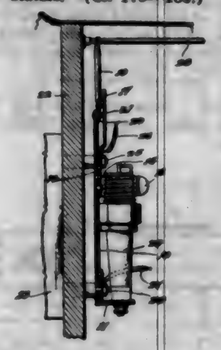
3. An ax blade having a reservoir, an orifice leading from the reservoir and opening on to an externally exposed surface of the blade, and a valve screw threadedly accommodated by the reservoir and having means for closing the reservoir from said orifice.

1,536,878. PREHEATING DEVICE FOR CONCENTRATING EVAPORATORS. LOUIS JOSEPH BARTHELEMY, San Juan, Porto Rico. Filed June 29, 1921. Serial No. 481,300. 1 Claim. (Cl. 159—46.)

The combination with a liquor evaporator comprising a steam belt, a vapor belt and a dome, of a preheating device for the liquor disposed between the vapor belt and dome comprising a cylindrical drum, a set of compartments disposed on one side of the evaporator, a similar set of compartments disposed on the opposite side of the evaporator, the compartments of each set being arranged in stepped relation relative to each other, tubes connecting oppositely disposed compartments, the alternate compartments on the same side communicating, whereby a zig-zag passage is formed, and an inlet and an outlet for the liquor communicating with the end compartments of one set.

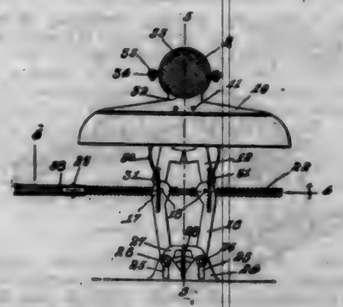
1,536,874. CUT-OFF VALVE. PETER ROYSTER BATES, Graham, Va. Filed Nov. 22, 1921. Serial No. 517,149. 1 Claim. (Cl. 137—139.)

The combination with an inclined square spout provided with a V-shaped projection, of a casing provided with a V-shaped extension and removably secured to said spout, a frame surrounding said casing, a lever pivotally mounted on said frame, a pointed bevelled edge valve slidably mounted in said casing and pivotally connected to said lever, sharp edged guide means for supporting said valve in operative position and to separate material in the spout when the valve is in open position, electrical means for retaining said valve in open position and spring means for seating said valve when the electrical means is deenergized.



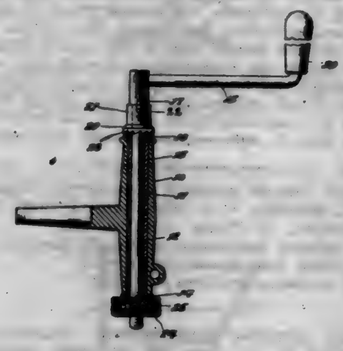
1,536,875. SWIMMING POOL. EDGAR W. BOWEN, Jacksonville, Fla. Filed July 3, 1924. Serial No. 724,157. 8 Claims. (Cl. 4—172.)

4. In combination in a swimming pool a receptacle having a plurality of reservoirs provided with stepped bottom surfaces forming pools of different depths, one of said pools being separate and distinct and the other



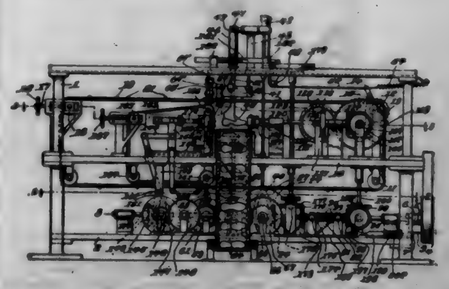
of said pools being joined to provide a continuous water passage but having means for preventing the passage of swimmers, substantially as set forth.

1,536,876. SPARK-PLUG TESTER. ORA L. BURCH, Littleton, Colo. Filed May 22, 1923. Serial No. 640,748. 5 Claims. (Cl. 175—183.)



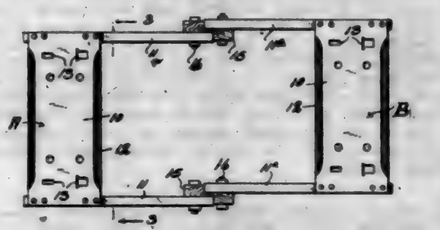
1. The combination with an induction coil, and primary and secondary circuit posts associated therewith, of contact means electrically connected permanently with one of said posts, contact means electrically connected permanently with the other of said posts to engage the shell of a spark plug having one of the coacting electrodes thereof in contact with said first mentioned means, and a switch exposed to be manually fixed for electrically grounding the primary circuit and closing the secondary circuit of the coil through the electrodes of the plug.

1,536,877. VEHICLE JACK. GEORGE W. BURNISTON, Chicago, Ill. Filed Aug. 8, 1924. Serial No. 730,987. 5 Claims. (Cl. 254—96.)



5. In a device of the character described, a casing, means on the casing for effecting securing to a vehicle chassis, a foot member, a channel shaped guide mounted with the foot member, a pair of slides movable within the guide, a pair of arms pivotally connected at their lower ends with the slides, a second pair of arms pivotally connected with the upper ends of the first named arms and pivotally connected with said casing, the opposite sides of the foot member being formed with elongated slots, bolts passing through said slots and through the lower end portions of the first named arms, the upper ends of the second named arms and the lower ends of the first named arms being formed with intermeshing gear teeth, bridge members at opposite sides of the foot member engaged upon said bolts, and springs connected with the foot members and the said bridge members.

1,536,878. FACING TOOL. JOEL FREDERICK BYERS, Kewanna, Ind. Filed June 3, 1922. Serial No. 565,716. 1 Claim. (Cl. 90—12.)



The combination, in a facing tool, of a pilot stem, a milling cutter thereon, an adjusting device comprising a nut threaded on the free end of the stem, a recess of greater diameter than that of the work to be faced being formed in the nut, an anti-friction thrust bearing fitted in the recess, a retaining washer for the thrust bearing fitting loosely around the stem and in the recess, and an annular spring wire fitting in a corresponding groove in the recess adapted to hold the retaining washer in position.

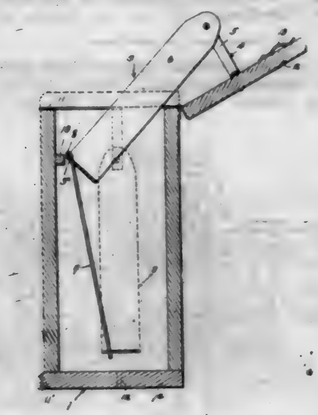
1,536,879. RUBBER-SANDAL-ASSEMBLING MACHINE. THOMAS CARTER, Detroit, Mich. Filed Aug. 29, 1924. Serial No. 735,003. 13 Claims. (Cl. 18—19.)

1. In a rubber sandal assembling machine, of a die, means for raising the vamp of a sandal into the die to form the same into a sandal upper, means for sealing the ends of the vamp, means operating said first mentioned means for lowering the upper from the die, and means for applying and securing the sole of the sandal to the upper when in last mentioned position.

1,536,880. RAIL-INSULATING METALLIC TIE. WILLIAM P. DAY, Cleveland, Ohio. Filed Dec. 9, 1924. Serial No. 754,827. 5 Claims. (Cl. 238—31.)

1. A metallic tie formed in two sections, each section including channel irons, the channel irons of one section extending toward the channel irons of the other section and the channel iron of one section having its channel facing the corresponding channel iron of the other section, an insulating block disposed within the channels of both sections, and fastening devices disposed through the insulating blocks and the two sections and holding them in rigid engagement with each other.

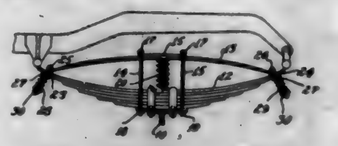
1,536,881. HEAT REACTIVE PLASTIC. CARLETON ELLIS, Montclair, N. J. Filed June 14, 1922. Serial No. 568,251. 18 Claims. (Cl. 106—22.)



1. A molding composition containing dimethylol urea and a phenol formaldehyde fusible resin.

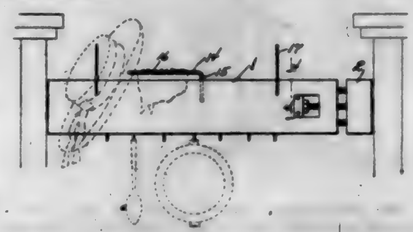
18. A molded methylolurea derivative.

1,536,882. MOLDING COMPOSITION. CARLETON ELLIS, Montclair, N. J. Filed Oct. 18, 1922. Serial No. 595,279. 19 Claims. (Cl. 106—22.)



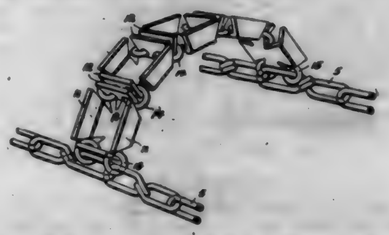
17. A molding composition containing methylolurea and free from alkaline reacting substances.

1,536,883. MILK-BOTTLE RECEIVER AND RETAINER. FRANK J. J. EMMERICH, Salina, Kans. Filed June 16, 1924. Serial No. 720,272. 5 Claims. (Cl. 232—41.)



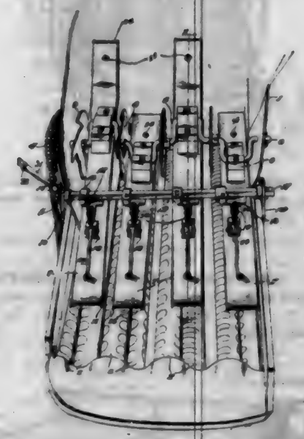
1. A container for milk bottles and the like having a bottle receiving and supporting ledge, and equipped with a hinged lid having a bottle carrier suspended from its inner face, means connecting the carrier with the lid to adapt the carrier to swing into an inclined position when the lid is opened and to kick the bottle carried thereby onto said supporting ledge.

1,536,884. SPRING AND SHOCK ABSORBER. STEVE FIORONI and ANTHONY ZANINELLI, Avella, Pa. Filed Mar. 31, 1922. Serial No. 548,457. 1 Claim. (Cl. 267—28.)



The combination with a leaf spring, of a spring extending longitudinally of the leaf spring, a coiled spring between the middle portions of the first and second named springs, tying devices connected with the second named spring and extending around the spring first named, and means connected with the ends of the tying devices and spacing them with reference to each other and equally with reference to the three springs specified, U shaped devices connected with the ends of the second named spring and passing around the leaf spring near its ends, coiled springs on the legs of each U shaped device, projecting outwardly at an abrupt angle from the leaf spring, and placed under compression by the flexing, under compression, of the first and second named springs.

1,536,885. RACK. GRANVEL FRANKLIN, Flint, Mich. Filed Apr. 10, 1924. Serial No. 705,640. 3 Claims. (Cl. 211—14.)



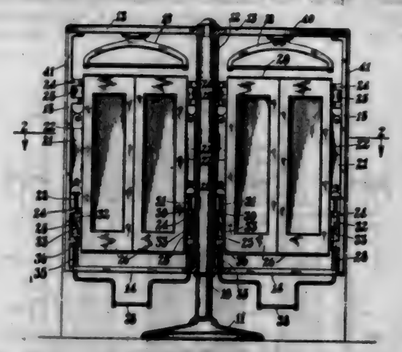
1. A rack of the class described including an elongated body block, and a comparatively short auxiliary block, a pair of bolts projecting from the auxiliary block and slidably piercing one end of the body block, a threaded bolt engaging the auxiliary block and piercing the body block, said body block provided with an opening, a bearing plate in the opening, a nut threaded on the last mentioned bolt within the opening so that said last mentioned bolt may be extended from the body block to force the auxiliary block therefrom, so that both of said blocks may be pressed against the object for supporting the rack all in the manner and for the purpose specified.

1,536,886. ANTISKID DEVICE. WILLIAM E. FREEMAN, Shickshinny, Pa. Filed Aug. 11, 1924. Serial No. 731,427. 1 Claim. (Cl. 152—14.)

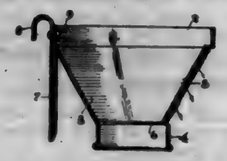
An antiskid device comprising a plurality of antiskid elements, each of which being formed from a blank of cruciform configuration, the blank being formed to provide pairs of flanges which are spaced at the ends thereof, the adjacent end flanges being provided with pairs of alined openings, and rings passing through the openings and disposed between the end flanges, and the adjacent side flanges.

1,536,887. ATTACHMENT FOR CORN PICKERS. PRESTON F. KURTENBACH, Brookings, S. Dak. Filed May 21, 1924. Serial No. 714,928. 5 Claims. (Cl. 130—5.)

1. An apparatus for the purpose set forth comprising feeder arms of shallow channel formation each having both its ends turned upwardly, means on the under sides of the arms to engage ears of corn upon forward movement of the arms and to clear the ears of corn upon rearward movement of the arms, means for mounting the arms over pairs of husking rolls, and means for imparting an oscillatory longitudinal movement to the arms.



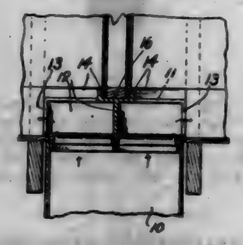
1,536,888. EXTENSION BED. WLADISLAW KWIATKOWSKI and HIPOLIT WIESCHON, Astoria, N. Y. Filed Feb. 9, 1924. Serial No. 691,558. 3 Claims. (Cl. 5—184.)



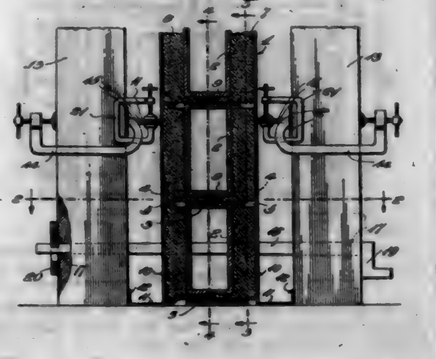
1. A bed comprising end bars each made up of a pair of sections, one of said sections being formed with a guide groove and the other section engaging slidably in said guide, a spring section fixed at its ends to the bars of the first named section, vertically adjustable members extending along the other bars of the other section, and a spring section fixed at its ends to the said vertically adjustable members, said vertically adjustable members resting freely on the bars of the second named section at one end, and cam elements supporting the said members at their other ends.

1,536,889. ROTATABLE CLOTH RACK. WLADYSLAW KWIATKOWSKI and HIPOLIT WIESCHON, Astoria, N. Y. Filed May 6, 1924. Serial No. 711,889. 3 Claims. (Cl. 100—37.)

1. In a garment hanger, a vertical frame, a backing plate fixed thereto, a pair of leaves hinged to said frame at opposite sides of the said plate and adapted to cooperate with the latter in pressing the garment, and elements depending from said frame and adapted to be pressed downward to swing the said leaves away from position co-operating with said plate.

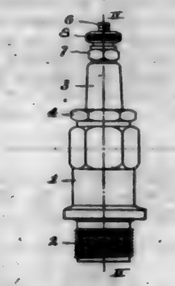


1,536,890. MILK-STRAINER ATTACHMENT. GUSTAV P. LAGEMANN, Laverne, Minn. Filed July 21, 1923. Serial No. 653,049. 2 Claims. (Cl. 210—155.)



1. A device of the class described, comprising a tubular body converging toward the discharge end and with a foraminous closure at said discharge end, a supporting member attached to said body at its larger end and extended upwardly into a hook adapted to engage over the rim of a receptacle and extended downwardly and adapted to bear against the inner face of the adjacent wall of the receptacle, and thereby support the body in vertical position.

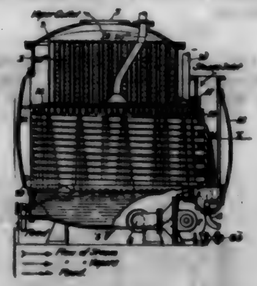
1,536,891. HEAT DISTRIBUTOR. ALBERT P. LANGLOIS, Norwalk, Conn. Filed June 24, 1922. Serial No. 570,628. 1 Claim. (Cl. 98—50.)



A heat distributor for adjacent rooms of building structures, comprising a base of angular outline and adapted to be arranged beneath adjacent walls of the structure, a portion of the base extending into the adjacent rooms, said distributor being arranged above the heat conducting pipe of a furnace, and designed to convey the hot air admitted from said pipe to the said adjacent rooms, flanges rising from the base and arranged to receive said walls and flanges depending from the outer edges of the base to provide a supporting means therefor.

1,536,892. MONOLITHIC WALL AND MOLD THEREFOR. CARL T. LARSON, Moline, Ill. Filed Mar. 27, 1924. Serial No. 702,422. 7 Claims. (Cl. 25—131.)

1. Means for forming air spaces in a poured cement wall, comprising a plurality of superimposed cores permanently disposed between vertical mold walls, and a plurality of transverse strips permanently supporting said cores one upon another, all of said strips being spaced widely apart vertically and being of an infinitesimal vertical dimension with respect to the height of any core.

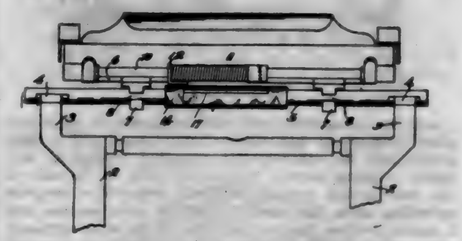


1,536,898. SPARK PLUG. HERBERT LOCKETT, Kansas City, Mo. Filed May 28, 1923. Serial No. 641,916. 1 Claim. (Cl. 123—169.)

In a spark plug, an outer shell, a stem-like electrode extending through and insulated from said shell, and a second electrode cooperatively associated with said first electrode, pendent from interior of outer shell, and consisting of two thin conical tubes joined at their reduced ends.

1,536,894. EVAPORATING APPARATUS. SAMUEL MORRIS LILLIE, Philadelphia, Pa. Filed July 24, 1922. Serial No. 577,054. 7 Claims. (Cl. 159—13.)

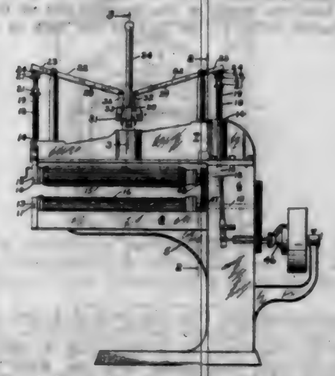
1. In a film evaporator a shell; a nest of tubular heating elements so supported within the shell and having such dimensions and location as to provide spaces within the shell surrounding the nest; vapor baffle walls enclosing the nest and dividing the spaces surrounding the nest into a nest compartment and outer compartments; means for supplying the tubular heating agents internally with a heating agent; distributing means above the nest of tubular heating elements within the enclosing vapor baffle walls; means for delivering a liquid to the distributing means; vapor passages through



the vapor baffle enclosing walls between nest compartment and outer compartments; and vapor escapes for the outer compartments.

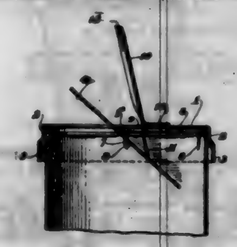
1,536,895. MEANS AND METHOD OF RECONDITIONING DAMAGED STEPS. ROMAN LINDTBERG, Brooklyn, N. Y. Filed Feb. 15, 1924. Serial No. 693,119. 4 Claims. (Cl. 72—96.)

1. A device for use in reconditioning steps comprising a channeled frame member arranged to surround the edging of a step, and a number of hook-bolts fixed to said frame at one end and extending within the confines of the frame, said hook-bolts having their other ends turned downwardly.



1,536,896. TYPEWRITER-FRICTION-RAIL LUBRICATOR. LOUIS M. LLORENS, Los Angeles, Calif. Filed July 30, 1924. Serial No. 729,138. 12 Claims. (Cl. 197—180.)

1. In a typewriting machine, in combination, a friction rail, a platen carriage movable thereon, and a reciprocating oil reservoir having a part wiping on the rail to constantly lubricate the same.



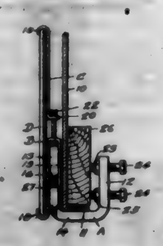
1,536,897. CORRUGATING MACHINE. SAMUEL LOAFER, Oakland, Calif. Filed July 5, 1923. Serial No. 649,483. 10 Claims. (Cl. 153—77.)

1. In a corrugating machine, a frame, a rotatable corrugating roll mounted in said frame, a complementary corrugating roll mounted to move toward and from said first roll, levers fulcrumed on the frame connected to said second roll, means operatively connecting said levers,

and a hand lever fulcrumed on said frame provided with a cam portion adapted to engage said means to rock said first levers.

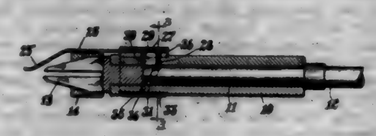
1,536,898. CAN OPENER AND CLOSURE. ROBERT LORENS, Brooklyn, N. Y. Filed Feb. 20, 1924. Serial No. 694,062. 6 Claims. (Cl. 220—51.)

1. A combined can opener and closure, comprising a plate adapted to rest on a can top and having means whereby it may be rotated by hand, a pin and a cutting blade depending from said plate in spaced relation to each other, said plate having an opening, a lid for closing said opening, said lid being hinged to said plate, and means carried by said lid and projecting below said plate so as to engage the top of the can when severed by said plate and tilt the top and cause it to project through said opening.



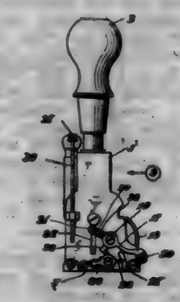
1,536,899. TOBACCO PIPE AND CIGAR AND CIGARETTE HOLDER. FREDERICK ERNEST LOW, London, England, assignor to Bewlay and Company Limited, London, England. Filed Nov. 29, 1921. Serial No. 518,599. 3 Claims. (Cl. 131—12.)

3. In a device of the character described, a cooling and clearing device comprising helical end portions and a flat intermediate portion extended at its sides for providing laterally extending lugs.



1,536,900. LICENSE-CARD BRACKET. ARTHUR L. LOWE, Sioux City, Iowa. Filed Mar. 13, 1924. Serial No. 698,988. 3 Claims. (Cl. 40—10.)

1. A license card bracket comprising a yoke adapted to straddle the lower portion of an automobile instrument board, an inverted channel-shaped plate received over the forward arm of the yoke and fixed thereto, the portion of said plate within the yoke being adapted to rest against the instrument board, a strip of protective material fixed to the plate and arranged to be interposed between the plate and the instrument board, the other



portion of the plate having a jaw formed on its lower end, an upper jaw, an adjustable screw connection between the upper and lower jaws, and a set screw in the rear arm of the yoke adapted to engage the rear of the instrument board.

1,536,901. MANICURING IMPLEMENT. ARTHUR LUTS, West Hoboken, N. J. Filed June 3, 1924. Serial No. 717,665. 3 Claims. (Cl. 132—74.)

1. A manicuring device comprising a barrel, a spindle rotatable therein and formed with an oblique circumferential groove, a chuck on said spindle, a block adapted to be removably mounted on said barrel, a bar slidably mounted in said block, and a pin on said bar engaging in said oblique groove, and spring clips projecting from said block and partially encircling the spindle to hold the block in place thereon.

1,536,902. STAMP-PLACING MACHINE. ALFRED E. MCMILLAN, New York, N. Y. Filed July 14, 1923. Serial No. 651,579. 4 Claims. (Cl. 216—28.)

1. A stamp placing machine comprising a housing, means for supporting a roll of stamps therein, pawl operated means for intermittently feeding said stamps, means for injecting water beneath the stamp to be affixed, means for pressing the stamp in place, and a holding finger for preventing retraction of the strip of stamps.

1,536,903. BAG-HOLDER BRACKET. ROBERT I. MCNAUGHTON, Iron Mountain, Mich. Filed May 2, 1923. Serial No. 636,215. 1 Claim. (Cl. 248—20.)

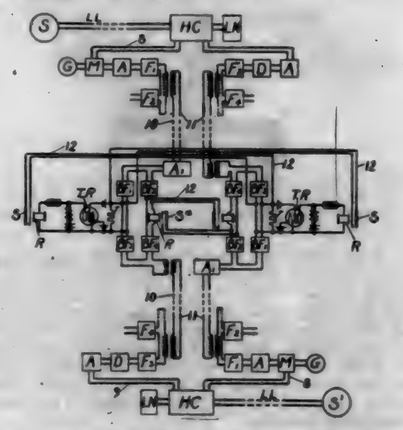
A bracket for the purpose set forth comprising, a substantially elongated relatively wide, flat horizontal portion, a vertical portion depending from the under side and adjacent one end thereof, a reinforcing web extending longitudinally of the center of and connecting the back of said vertical portion with the under face of the rear of said horizontal portion, means to provide an integral longitudinally extending housing upon the rear of said horizontal portion, having a polygonal longitudinally extending passage therethrough open at each end, said housing further having the inner side walls provided with opposed recesses, and a spring secured at one end in each recess and having a curved portion normally projecting into said passage to engage and securely grip the sides of a member extending through the passage.

1,536,904. PROCESS OF CASTING IRON IN METAL MOLDS. DANIEL H. MELOCHE, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed May 8, 1922. Serial No. 559,463. 8 Claims. (Cl. 22—189.)

1. The process of casting gray iron in permanent molds, consisting of pouring the metal while above 2200 deg. F. into a permanent mold having a semi-permanent lining of a metallic oxide which is of low thermal conductivity, and which vaporizes at a temperature greater than the white heat of the iron cast therein.

1,536,905. PROCESS OF PRODUCING SELF-ANNEALED CAST-IRON CASTINGS IN PERMANENT MOLDS BY THE HEAT OF THE METAL CAST. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Dec. 26, 1922. Serial No. 609,145. 15 Claims. (Cl. 22—189.)

1. The process of producing self-annealed gray iron castings, which consists in casting the metal in molds coated with a smooth adherent inert insulating refractory material and having a superimposed layer of amorphous carbon sufficiently thick to considerably prolong the cooling period of the casting.

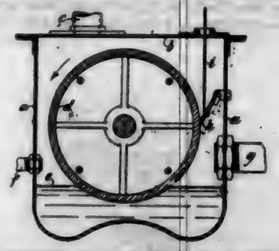


1,536,906. ARTICLE OF MANUFACTURE. HERBERT N. MILLER, Peoria, Ill. Filed Sept. 30, 1922. Serial No. 591,645. 1 Claim. (Cl. 45—28.)

An attachment for the backs of sinks to equip the latter with soap holding means, including a receptacle-like body having an open front and having a vertically extending flange extending across the top and bottom sides and ends of the front, said body being formed for engagement through an opening cut in a sink back to accommodate the attachment and having its said flange formed for engagement with the front face of a sink back, means to attach the flange at one side of the body to the front face of a sink back, a member extending outwardly from the body adjacent to and spaced from the flange at the opposite side of the body and disposed to lie to the rear of the back of a sink,

and means accessible from the back of a sink and engaged with said member and formed to be operable against the rear face of a sink back to draw said flange into tight engagement with the front face of a sink back.

1,536,907. CARRIER-CURRENT SYSTEM. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1920. Serial No. 361,911. 20 Claims. (Cl. 179—13.)

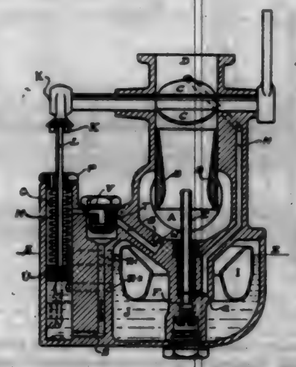


1. A system for duplex-multiplex transmission comprising pairs of stations, means for accomplishing a plurality of two-way transmissions on different frequency-selective channels between pairs of communicating stations, and means associated with said system whereby one-way transmission between one of said pairs of stations renders transmission in the opposite direction impossible, said last mentioned means functioning without interfering with transmission between others of said pairs of stations.

1,536,908. METHOD OF IMMERSING SUBDIVIDED SOLIDS OR LIQUIDS IN LIQUIDS. JOHN STANLEY MORGAN, London, England, assignor to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England, a British Company. Filed Aug. 8, 1921. Serial No. 490,650. 3 Claims. (Cl. 196—92.)

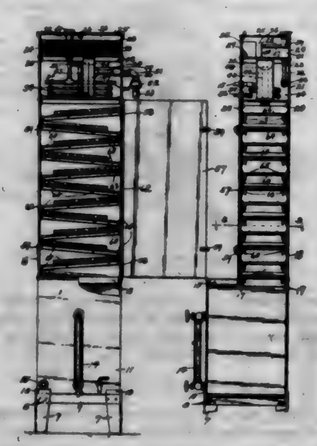
1. A process of subjecting material to heat treatment by bringing it into contact with molten metal, which process consists in carrying the material in the form of a continuous layer on a continuous surface not capable

of being wetted by said molten metal into and through the metal whereby the whole of the material to be



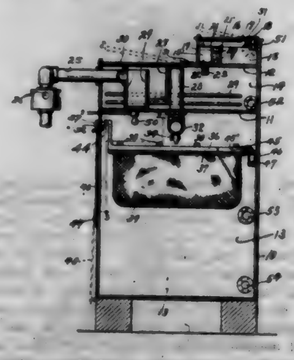
treated is subjected to the said heat treatment, in the form of a film between the molten metal and that portion of the surface which is immersed in the molten metal.

1,536,909. HOLDING DEVICE. ANDREW W. NELSON, Terre Haute, Ind., assignor to Columbian Enameling & Stamping Co., Terre Haute, Ind., a Corporation of Indiana. Filed Nov. 13, 1923. Serial No. 674,492. 4 Claims. (Cl. 220—56.)



1. In combination, a pail having perforated lugs, a handle connected to said lugs and having loop-like ends passing through the perforations in said lugs, a holding member connected to said handle adjacent said lugs, the said holding member and said handle being of such contour that said handle contacts with said member when it is moved to the upright position to force said holding member in a direction towards the bottom of said pail, each end of said member being free from and spaced from the perforations in said lugs.

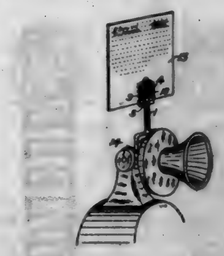
1,536,910. ACCELERATING DEVICE. OLIVER G. NORTON, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Apr. 12, 1924. Serial No. 706,008. 2 Claims. (Cl. 261—37.)



1. In combination with a throttle controlled carbureter, an accelerating device comprising spring operated fuel pumping means and means actuated by the throttle for storing energy in the spring during the closure of the throttle, and means for disconnecting the pumping means from the throttle valve on opening the throttle, whereby fuel is gradually discharged from the pumping means to the carbureter immediately after the throttle is opened.

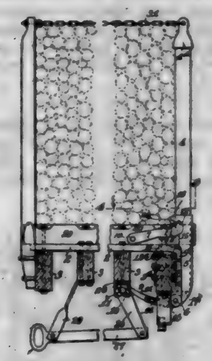
1,536,911. COMBINED FILTER AND WATER SEPARATOR. WILLIAM W. NUGENT, Chicago, Ill. Original application filed June 23, 1916, Serial No. 105,350. Divided and this application filed July 2, 1920. Serial No. 393,576. 11 Claims. (Cl. 210—43.)

1. In filtering apparatus, the combination with an upright receptacle having an opening on one vertical side thereof, of a plurality of superposed spaced-apart filtering elements each having overflow means, and means for supporting said filtering elements in said receptacle to cause the oil to filter by gravity serially through said elements and to overflow from one element to the next below.



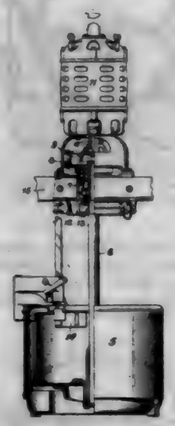
1,536,912. OIL-PURIFYING MECHANISM. WILLIAM W. NUGENT, Chicago, Ill. Original application filed Feb. 23, 1918, Serial No. 218,643. Divided and this application filed Nov. 29, 1920. Serial No. 426,970. 27 Claims. (Cl. 210—43.)

1. A casing enclosing a reservoir, a water separating chamber and a dirt separating chamber with the latter elevated above the other chamber; two spaced screens having their top edges spaced from the top of the reservoir and dividing the elevated dirt separating chamber into two compartments, there being a filling



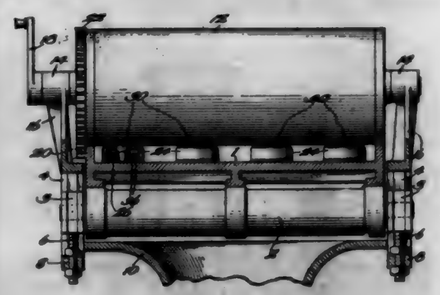
opening in one of said compartments and a discharge opening leading from the other of said compartments downwardly into the water separating chamber; and filtering material substantially filling the space between said screens.

1,536,913. INDEX-CARD HOLDER FOR TELEPHONES. PIERCE OCKENDEN, Edmonton, Alberta, Canada, assignor of one-half to Jesse Ward Tredway, Edmonton, Alberta, Canada. Filed Oct. 30, 1924. Serial No. 746,787. 1 Claim. (Cl. 40—10.5.)



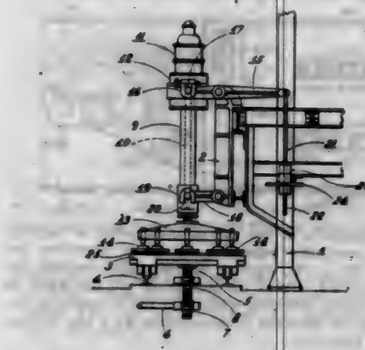
The combination of a forked rod with clamp thereto and having one end grooved, a double spring clip fitting within said groove with back in the form of a holder, as and for the purpose specified.

1,536,914. RELEASABLE STAKE POCKET FOR RAILWAY CARS. JAMES O'HALLORAN, Iroquois Falls, Ontario, Canada. Filed Oct. 13, 1923. Serial No. 668,849. 7 Claims. (Cl. 105—383.)



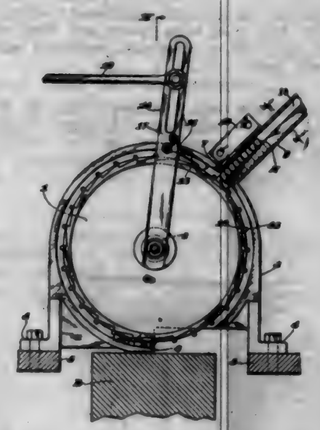
1. In a car the combination with longitudinal frame members and a pair of transverse load supporting members carried by and projecting beyond the longitudinal members, of a releasable stake holding device comprising a pocket member the lower end of which is offset to permit pivotal connection with one of said longitudinal members and the upper free end of which is formed for engagement by a latch when in stake-holding position; a latch adapted to engage the free end of said pocket member, and means carried by the longitudinal members for operating the latch; the arrangement being such that all parts of the device, when the pocket member has been released and swung down to its lowermost position, are entirely beneath the load bearing surface and inwardly away from the ends of said transverse members.

1,536,915. CENTRIFUGAL MACHINE. CHARLES A. OLCOTT, New York, N. Y., assignor to S. S. Hepworth Company, New York, N. Y., a Corporation of New York. Filed June 3, 1921. Serial No. 474,842. 13 Claims. (Cl. 270—72.)



2. A centrifugal machine installation, comprising a centrifugal basket or the like for the reception of material to be treated, an electric motor which under no load has a substantially constant speed at various voltages, a centrifugal slip clutch connection between the motor and the basket, and master controlled means for impressing different selected voltages upon the motor to cause it to exert a predetermined torque upon the basket through the slip clutch, depending upon the character of the material fed to the basket and the desired rate of acceleration of the basket for the treatment of said material.

1,536,916. PRESSURE BLOCK. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1923. Serial No. 642,486. 4 Claims. (Cl. 33—174.)



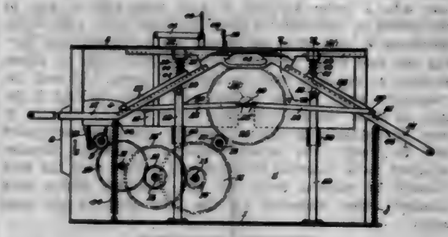
1. A pressure block having a housing, a plunger slidable in said housing and a circular dished spring surrounding the plunger and encased within the housing for exerting a predetermined resistance when compressed a predetermined amount.

1,536,917. PLATE-GLASS-POLISHING APPARATUS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 5, 1923. Serial No. 643,540. 3 Claims. (Cl. 51—109.)

1. In apparatus for polishing plate glass, a rotatable runner frame, a carrier for the glass mounted for movement beneath said frame, and a plurality of polishing blocks or runners releasably mounted on the frame for free rotation about their vertical axes, and removable laterally from said frame without lifting said frame from operative position.

1,536,918. APPARATUS FOR FEEDING GLASS BLANKS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 13, 1924. Serial No. 713,082. 3 Claims. (Cl. 198—30.)

1. In combination with a tunnel heating chamber and a carrier mounted for movement through the chamber, a wheel mounted for rotation transversely of the carrier thereabove and provided around its periphery with projecting spaced feeding members, an inclined blank carrying chute leading to the periphery of the wheel and adapted to feed the blanks therein against the periphery of the wheel, a retaining flange extending around the wheel outward of the blanks to a point above the carrier and means for giving the wheel an intermittent step by step movement.



1,536,919. ABSORPTION GLASS AND METHOD OF MAKING IT. JOSEPH CARL PARKINSON, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 15, 1922. Serial No. 601,144. 3 Claims. (Cl. 106—36.1.)

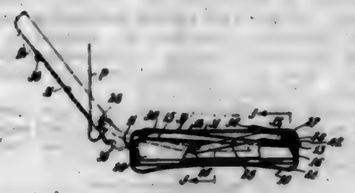
2. The method of producing glass of high ultra violet ray absorbing properties which consists in fusing a substantially pure cerium compound in a reducing batch.

1,536,920. GLASS AND BATCH THEREFOR. JOSEPH CARL PARKINSON, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 15, 1922. Serial No. 601,145. 5 Claims. (Cl. 106—36.1.)

1. A glass for absorbing ultra-violet rays containing cadmium, such glass having a yellow tint, and being substantially free from coloring matter other than the cadmium.

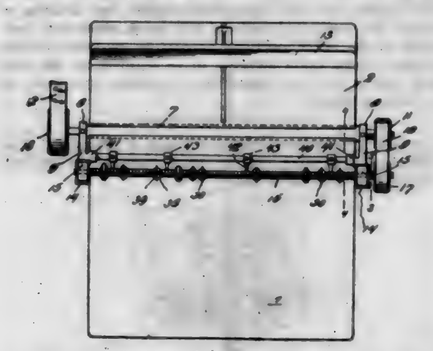
1,536,921. WIND MOTOR. ADOLPH PELSCH, Hallettsville, Tex. Filed Nov. 29, 1922. Serial No. 604,036. 5 Claims. (Cl. 74—14.)

1. A motor of the type described, including a housing, a pair of drive shafts journaled within said housing and having their opposite end portions projecting externally therefrom, a crank shaft rearwardly of the said drive shafts and also journaled within the housing, a rocking bar upon each side of the crank shaft and connected to the crank portions thereof by connecting rods, the said crank shaft adapted to be rotated by the said drive shafts and for imparting a rocking movement to the rocking levers.



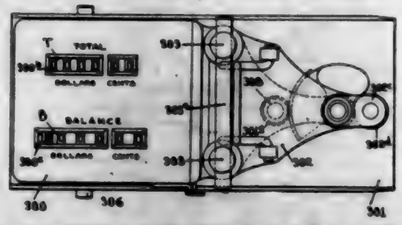
1,536,922. TRAFFIC SIGNAL. JOHN C. PENNELL, Fort Wayne, Ind. Filed July 28, 1921. Serial No. 488,148. 11 Claims. (Cl. 177—337.)

7. In signaling apparatus, an oscillating member having major signal arms fixed thereon; a vertically movable member having minor signal arms fixed thereon concealed by the major arms when the vertically movable



member is in one of its positions and exposed to view when in its opposite position; and means for actuating the vertically movable member to expose the minor signal arms to view momentarily in advance of the movement of the major signal arms.

1,536,923. POCKET CIGARETTE-ROLLING DEVICE. JOHAN PETE, Monterey, Mexico. Filed June 9, 1923. Serial No. 644,466. 3 Claims. (Cl. 131—5.)

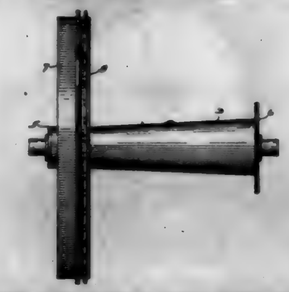


1. A device of the class described comprising a casing, a cover hinged thereto and formed with a pair of slots one near the hinged side and one near the opposite side, a roller adapted to pass from side to side of the cover as the latter swings between open and closed positions, a pair of arms hinged to the casing and having the said roller attached to their free ends, an apron secured at opposite ends to the said cover adjacent the respective slots in the latter, said apron having a degree of slack therein when the cover is open whereby it may be partially projected through the first mentioned slot to receive the tobacco, and a removable member adapted to be inserted into the said pocket over the said tobacco to form a guide for the cigarette paper, said member being mounted on the free ends of the said arms.

1,536,924. ROTARY PERFORATING MACHINE. JOHN N. PIERCE, Jacksonville, Fla. Filed Mar. 19, 1924. Serial No. 700,354. 2 Claims. (Cl. 164—90.)

1. A perforating machine including a table, a pair of bearing members mounted on opposite sides of the table, said bearing members being provided with slidable bearing blocks, a rotary cutter shaft mounted in said slidable bearing blocks, means for rotating the said cutter shaft, a plurality of removable and adjustable cutter elements mounted on said cutter shaft, a cushion roller mounted for rotation in said bearing members and extending through a slot in said table, and means for moving said slide bearings for projecting said cutter elements into engagement with said cushioning roller for effecting perforation of a sheet material fed between said cutter elements and said roller, a rod mounted in said bearings and extending transversely of the table above the same, and a plurality of fingers adjustably mounted on said rods having the end portions extending into proximity to the cushion roller for holding the sheet material in contact with said rollers.

1,536,925. CHANGEABLE DIE METER FOR POSTAGE-METER MACHINES. ARTHUR H. PITNEY, Stamford, Conn., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed Mar. 14, 1923. Serial No. 624,997. 33 Claims. (Cl. 235—101.)

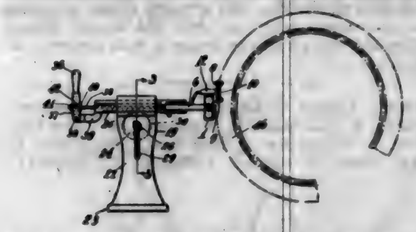


1. In mechanism of the character specified, a register, means for removably supporting a die in operative position relative to the register a removable rotatable interchangeable die, means for actuating the die when in place, and means whereby when said die is operated the register will be operated in accordance with the denomination of such die.

1,536,926. ELECTRIC HEATING UNIT. EMIL PROBST, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 22, 1923. Serial No. 626,970. 2 Claims. (Cl. 201—63.)

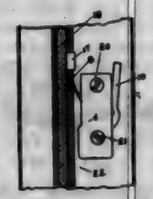
1. An electric heating unit comprising a spirally bent quartz tube, said tube being closed and filled with an indifferent gas, and a resistance conductor extending through said tube.

1,536,927. CALF-WHEEL SHAFT. RAY L. REHART, Glendale, Calif. Filed Mar. 12, 1923. Serial No. 624,441. 1 Claim. (Cl. 242—117.)



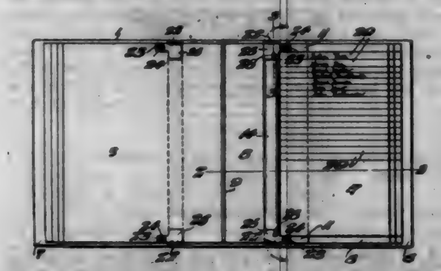
In a drilling rig having a crown pulley centrally disposed, a calf wheel disposed to one side of said crown pulley, said calf wheel comprising a tapered shaft having a drive wheel mounted on the smaller end thereof, said drive wheel having its plane disposed normal to the axis of said shaft.

1,536,928. TIRE-BUFFING MACHINE. JOSEPH REETS and FREDERIC THOMASSEN, Jr., Jeannette, Pa. Filed Dec. 11, 1923. Serial No. 679,964. 8 Claims. (Cl. 51—67.)



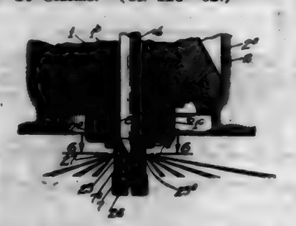
1. In a buffing machine of the character described, a standard; a reciprocable member mounted thereon; means

to reciprocate said member; a plurality of arms hingedly and symmetrically mounted on said reciprocable member; brush-holders carried by said arms; brushes mount-



ed in said holders; a plurality of finishing pads, supports therefor adjustably mounted upon said arms, and hand operated means for converging said arms.

1,536,929. ANTIRATTLING MECHANISM FOR WINDOWS. EDWARD EDWARD RICHARDSON, Maumee, Ohio. Filed Apr. 26, 1922. Serial No. 556,595. 5 Claims. (Cl. 292—83.)

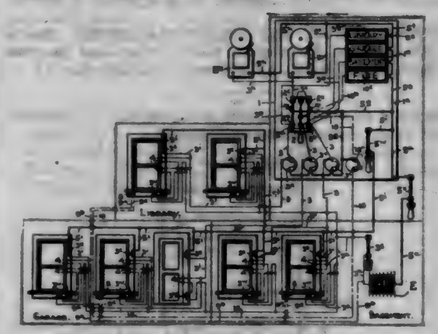


1. In a device of the class described, a substantially open ended rectangular box shaped base member, opposite sides of said box member having openings therein, a flat leaf spring secured at one of its ends within the said base member near an end thereof, and having its other end projecting through one of the said side openings, a camming lever journalled in the said box member and having a handle portion projecting through the other said opening, means whereby said base member may be secured to the frame of a window with its open end in contact with the said frame and the end of the said leaf spring adjacent the window pane; said camming lever adapted to press the end of the said spring firmly against the window pane when the said handle is operated, and a pad of resilient material carried by the said spring end pressed against the window pane.

1,536,930. LOOSE-LEAF LEDGER WITH VISUALIZED ARRANGEMENT OF ACCOUNT SHEETS. WILLIAM A. RINGLER, Philadelphia, Pa. Filed Apr. 28, 1924. Serial No. 709,552. 19 Claims. (Cl. 129—19.)

1. A sheet holder comprising a sheet of material having on one side intermediate its ends a piece of material formed with a plurality of folds, and means to secure said folds in their folded position.

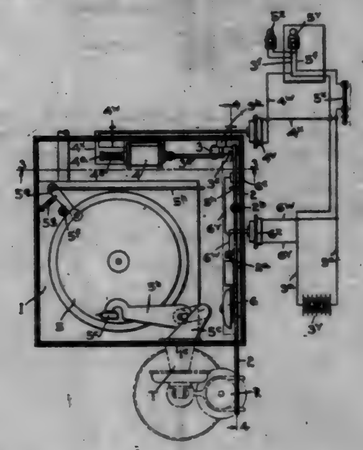
1,536,931. FUEL-SPRAYING NOZZLE FOR INTERNAL-COMBUSTION ENGINES. ARCHIE R. ROBBINS, San Diego, Calif. Filed May 17, 1923. Serial No. 639,718. 10 Claims. (Cl. 123—32.)



1. A means of the class described, including a nozzle member support, adapted to be supported within an engine cylinder, and a nozzle member adjustably supported by said nozzle member support and provided with a plurality of outwardly directed slots in its upper face and communicating with a fuel oil supply line.

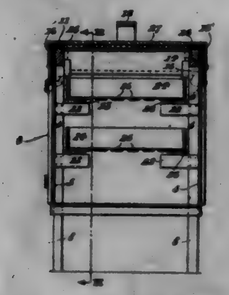
1,536,932. KEYED INSULATING BOARD. CHARLES A. ROLFS, St. Paul, Minn. Filed Aug. 17, 1921. Serial No. 493,153. 4 Claims. (Cl. 72—116.)

1. As an article of manufacture an insulating board having the front portion thereof of strong texture and having incorporated therein plaster keying means and having the integral back portion thereof of comparatively great thickness and of loose texture and high insulating qualities.



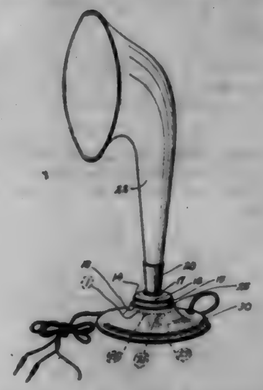
1,536,933. BURGLAR AND FIRE ALARM APPARATUS. RALPH H. ROSE, Detroit, Mich. Filed July 25, 1921. Serial No. 487,250. 4 Claims. (Cl. 197—314.)

2. In an alarm apparatus for a structure having a plurality of openings; an alarm at each opening; a circuit for each alarm including means at the respective opening operable by an attack at said opening for closing its respective circuit; a source of electricity common to all of said circuits; a switch comprising a plurality of blades and a plurality of cooperating contacts; means electrically connecting all of said blades together; and means connecting each of said alarms re-



spectively to one contact on said switch, whereby when the switch is closed an attack at any opening will operate the alarms at all openings, and when the switch is opened the alarm only at the opening attacked will be operated.

1,536,934. BURGLAR AND FIRE ALARM SIGNAL FOR TELEPHONES. RALPH H. ROSS, Detroit, Mich. Filed Aug. 25, 1921. Serial No. 495,225. 6 Claims. (Cl. 179—5.)

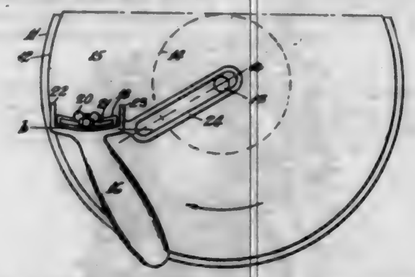


1. In apparatus of the character specified, a casing adjacent an ordinary telephone receiving and transmitting apparatus and having an opening therein registering with the transmitting apparatus; a lever pivoted in the casing and having a portion projecting out of the casing and underlying the hook of the receiving apparatus; an audible signal apparatus within the casing; and means in the casing for normally holding the outer end of said lever depressed, said means being connected in a normally open electric alarm circuit, whereby when said circuit is closed said means is released permitting the receiver hook to raise, and causing an audible signal to be transmitted through the opening in the casing directly into the transmitter apparatus.

1,536,935. FRUIT AND VEGETABLE DRIER. BENJAMIN P. ROSS, Sacramento, Calif. Filed June 28, 1923. Serial No. 648,380. 2 Claims. (Cl. 34—41.)

2. In a fruit drier, a rectangular frame having corner posts, brackets projecting laterally from said posts, shelves removably supported on said brackets, and trays having bottoms provided with longitudinal slots and resting on said shelves, said trays being adapted to rest directly on the brackets upon removal of the shelves, certain of the slots being closed by the shelves when the trays are supported in said shelves, a casing carried by the posts and spaced from the shelves and trays at one end to form an air flue, and a water trough extending across the casing over said flue and spaced slightly from the end and top of the casing to form a narrow air passage.

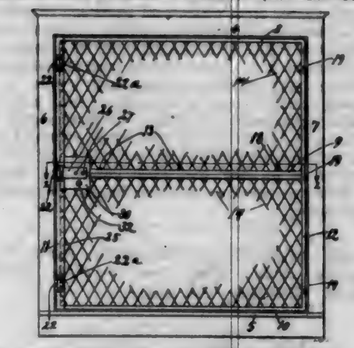
1,536,936. TABLE TALKER. MAURICE C. RYPINSKI, Yonkers, N. Y., assignor to C. Brandes, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1924. Serial No. 699,090. 2 Claims. (Cl. 179—147.)



1. An electromagnetic sound reproducer comprising a sound reproducer unit having a substantially cup shaped casing, an electromagnetic operating mechanism contained therein, a screw threaded cap engaging the upper portion of said casing having a flat annular flange substantially above the plane of the lower extremity of said casing, an acoustic horn supported in said cap, a supporting base having a flat central apertured portion of a size slightly greater than the diameter of said casing, a flat annular flange surrounding said apertured portion a wall extending outwardly from said flange forming a continuation thereof and comprising said supporting base and means for securing said unit within said apertured portion by a vertically downward movement in which said flat annular flange on said cap contacts with said flat annular flange on said base forminging a substantial support for said electromagnetic operating mechanism.

1,536,937. PAPER-PAD HOLDER AND PENCIL RETAINER. JOHN C. F. SCHAFER, Mount Pulaski, Ill. Filed Apr. 17, 1924. Serial No. 707,107. 7 Claims. (Cl. 281—30.)

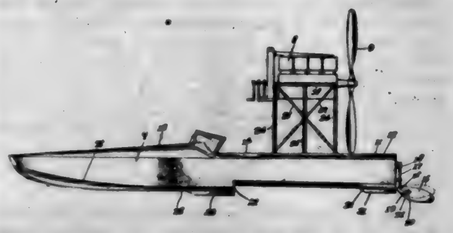
1. A paper pad holder and pencil retainer, comprising a body portion having a pad holder connected therewith, a movably connected cover portion having a pencil retainer therewith, together with cooperating means to prevent removal of the pencil while the two portions are in closed position.



1,536,938. SHAVING DEVICE FOR PHONOGRAPH RECORDS. CHARLES SCHIFFL, Montclair, N. J., assignor of one-half to John A. M'Vickar, New York, N. Y. Filed Jan. 15, 1923. Serial No. 612,624. 11 Claims. (Cl. 82—1.1.)

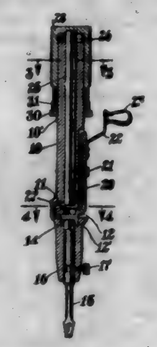
1. A record shaving device of the class described comprising a handle with a head, a flat elongated cutter supported by said head and arched on its longitudinal axis.

6. A record shaving device of the class described comprising a handle with a head, a cutter supported by said head in a position inclined to the vertical, wings projecting from said head and arranged to engage the surface to be shaved when the vertical angle of said cutter is changed.



1,536,939. WINDOW GUARD. HENRY J. SCHULDT, St. Paul, Minn. Filed Jan. 17, 1923, Serial No. 613,815. Renewed Jan. 9, 1925. 1 Claim. (Cl. 189—79.)

The combination with a window frame of a wire netting guard covering the window opening, primary hinges holding one of the vertical edges of the guard to the frame, secondary hinges secured in the frame opposite from the primary hinges and having each one member formed with a stop regulating the closing of the guard, a vertical lock bar secured to the swinging members of said hinges to engage the guard and hold it closed, one of said swinging members being extended as a hasp and having a staple, a lock inserted in the guard in a position to engage the staple of the hasp and thus hold the guard locked.



1,536,940. SPEED BOAT. HENRY NEWTON SHERBURNE, Plaquemine, La. Filed July 14, 1924. Serial No. 725,932. 4 Claims. (Cl. 114—66.5.)

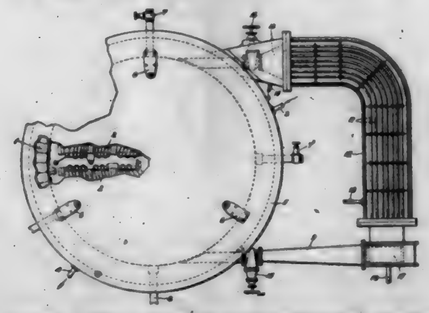
2. A speed boat comprising a hull of relatively short yet wide surface area made up in two sections, the rear section being stepped above the plane of the front section, each section composed of half portions inclined from the keel line outwardly and upwardly in lateral directions and both said sections inclining from their forward ends downwardly toward the rear ends, said front section being curved from the high point at the bow downwardly toward the rear portion and having convergent and curved forward edges, longitudinal timbers to opposite sides of the longitudinal center line of the

boat above the bottom sections, an engine frame mounted on said timbers substantially midway of the bottom section, and an air propeller driven by said engine.

1,536,941. BORING AND SCREW-DRIVING TOOL. ALFONSO E. SILLER, Monterey, Mexico. Filed May 6, 1924. Serial No. 711,306. 2 Claims. (Cl. 145—66.)

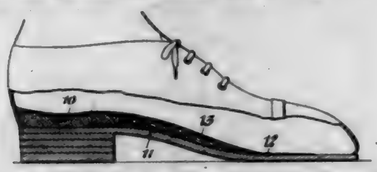
1. A tool of the type described comprising an elongated body member formed between its ends with a recess entered thereinto from one side thereof, a pinion seated in said recess, a gear mounted on the side of the said body member and meshing with said pinion, a handle fixed to said gear, a square rod extending rearwardly through a complementary passage in said body member from said recess, a flanged cap seated on the rear end of said body member to which said rod is fixed at its rear end, and a ring-nut threaded on the said body member against which the forward end of the said cap bears.

1,536,942. COLUMN-HEAD FRAME. ARTHUR P. SKARR, Buffalo, N. Y., assignor, by mesne assignments, to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 13, 1923. Serial No. 668,276. 8 Claims. (Cl. 72—76.)



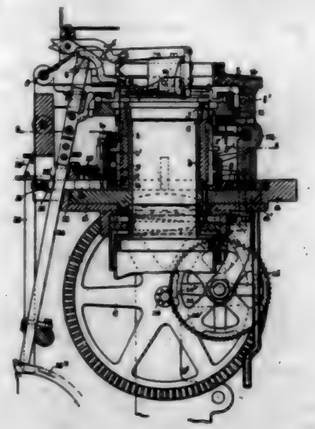
8. A frame for a column head comprising inner and outer truncated conical shells connected together by radial arms integral therewith.

1,536,948. MACHINE FOR COATING SWEETMEATS. ASBJORN SONSTHAGEN, Leytonstone, England. Filed Mar. 15, 1923. Serial No. 625,298. 12 Claims. (Cl. 91—3.)



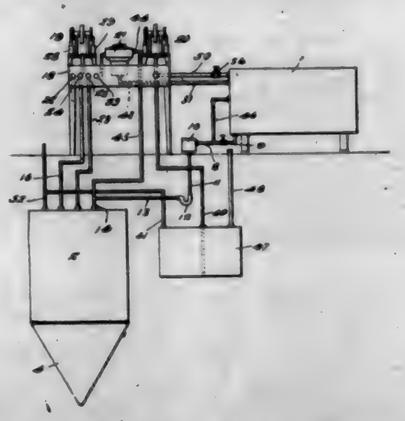
1. In a machine for coating sweetmeats the combination of, an elongate trough for the coating material having a discharge opening extending lengthwise thereof; and a bar positioned in said opening and spaced away from each side of the opening extending the full length of the opening and movable laterally thereof for thereby providing double-stream flow of material through the opening.

1,536,944. METHOD OF CARRYING OUT METALLURGICAL OPERATIONS. CHRISTIAN STRENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Sept. 23, 1922, Serial No. 590,007. Divided and this application filed Aug. 13, 1924. Serial No. 731,861. 7 Claims. (Cl. 75—17.)



1. The method of carrying out metallurgical operations in an enclosed space which consists in heating a charge in said space in a non-oxidizing atmosphere to a working temperature, and then cooling the charge rapidly while still closed off from the outside atmosphere.

1,536,945. ARCH SUPPORT FOR SHOES. JOHN STROOTMAN, Buffalo, N. Y. Filed July 12, 1924. Serial No. 725,535. 3 Claims. (Cl. 36—71.)

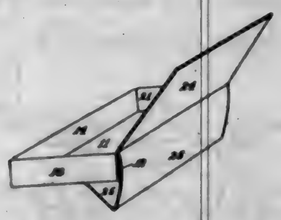


1. A self-adjusting arch support, comprising a cushion conforming to the heel and shank portions of a shoe, and a rigid brace applied to the underside of the cushion, said brace consisting of a comparatively short strip extending lengthwise of the cushion and terminating short of the heel and ball portions of the shoe, the brace being secured to the cushion intermediate the ends of the brace and said ends being disconnected from the cushion, permitting the cushion, when flexed, to slide freely on the detached end portions of the brace.

1,536,946. TUCKING MEANS FOR KNITTING MACHINES. CHARLES J. SUTPHEN, Paterson, N. J. Filed Dec. 13, 1922. Serial No. 606,609. 3 Claims. (Cl. 66—21.)

1. In combination, a cam cylinder having laterally open parallel grooves each formed with an arch, the apex part of that portion of the cylinder which is contained within each arch being removed, latch-clearing cams substantially conforming in shape to the parts thus removed and respectively movable up into and down out of the places from which said parts are removed, two series of knitting instruments having latches and also having butts respectively engaged in said grooves and being arranged in a circular group and alternating with each other, said cylinder having cam means to cause downward stitch-forming movements of said instruments and said cylinder and group of instruments being revoluble one relatively to the other around the axis of the cylinder, and means to move one of the latch-clearing cams up and the other down and then vice versa during rotation as between the cylinder and group of instruments.

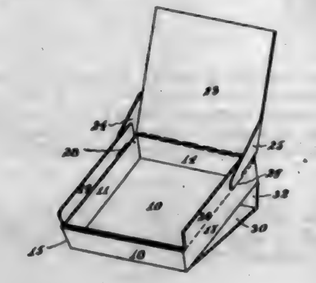
1,536,947. CLEANING APPARATUS. EARLE THOMAS, Pocatello, Idaho. Filed June 29, 1923. Serial No. 648,689. 4 Claims. (Cl. 8—8.)



1. In a dry process clothes cleaning apparatus, a washer in which the clothes to be cleaned are placed, a gasoline and sediment tank, a pump for drawing gasoline from the top of the sediment tank and for directing the same into the washer at the top thereof, means for filtering the gasoline before entering the washer, an overflow for the filtering means connected with the sediment tank, an outlet pipe for the bottom of the washer entering and terminating adjacent to the bottom of the sediment tank, and a strainer in said outlet.

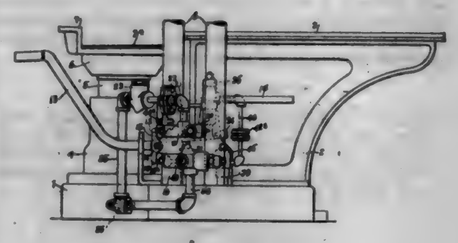
1,536,948. ELECTRIC CONDENSER. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 24, 1921. Serial No. 472,155. 11 Claims. (Cl. 240—41.)

1. The combination of a casing an insulating liquid therein, a filling tube passing into said casing and condenser elements mounted upon said tube and submerged in the liquid in said casing.



1,536,949. EASEL CARTON. EDWARD O. TINSLEY, Brooklyn, N. Y., assignor to Robert Gair Company, Brooklyn, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 393,862. 5 Claims. (Cl. 206—44.)

1. A container formed by folding comprising outer and inner bottoms, the outer bottom having a slit therein lengthwise thereof, end and side walls, and a permanently attached cover adapted to cover the entire top and having a flap end; the cover being foldably connected to one of said outer side walls along the upper line of the side wall, and the flap end thereof, when the cover is not in covering position, being insertible in said slit of the outer bottom for providing an easel rest for the container for displaying the contents thereof.

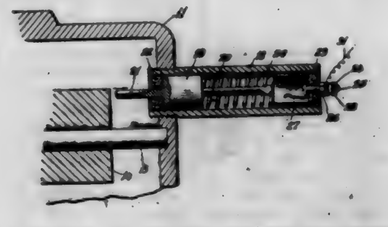


1,536,950. FOLDING DISPLAY CONTAINER. EDWARD O. TINSLEY, Brooklyn, N. Y., assignor to Robert Gair Company, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1922. Serial No. 539,885. 4 Claims. (Cl. 206—46.)

1. A container formed by separate foldable blanks, one of said blanks forming the receptacle portion of the container and the other blank forming a tensioning band for the receptacle portion, the first blank having a bottom section, front and rear wall sections foldably connected to the bottom section along the ends thereof, side wall sections foldably connected to the bottom section along the sides thereof, and a cover section foldably connected along one end to the rear wall section and spaced away from the bottom section by the rear wall section and having foldably connected thereto on each side of one end portion of the cover section locking tabs having lock ends, the second blank having side sections and a front section between the side sections,

the side and front sections being the same width as the side and front wall sections of the first blank and in length being substantially the same as the side wall and front wall sections of the first blank, said side sections having alined side extensions foldably connected to the side sections and having slits in the line of said foldable connections, said side sections having tabs at their outer ends for attachment to the rear wall section of the first blank, said lock ends when said tab ends are so secured being engageable in said slits and said front and side sections then enclosing the receptacle portion on the front and two sides.

1,536,951. CAKE-FORMING MACHINE. RUSSELL A. TRACE, Dayton, Ohio, assignor to Buckeye Iron & Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed July 30, 1924. Serial No. 729,070. 10 Claims. (Cl. 136—17.)



1. In a former, the combination with a ram, a low pressure accumulator and a high pressure accumulator, with pipe line connections between them and the ram, of a low pressure valve between the low pressure accumulator and the ram, a high pressure valve between the high pressure accumulator and the ram, a low pressure actuator adapted to open the high pressure valve, and a high pressure actuator adapted to permit the high-pressure valve to close.

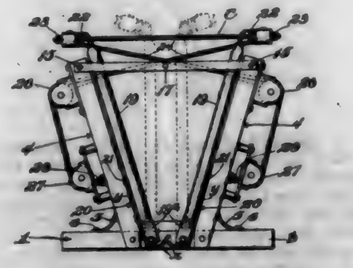
1,536,952. METHOD OF PROTECTING THE SURFACES OF METAL MOLDS. STANLEY M. UDALE AND DANIEL H. MELOCHE, Detroit, Mich., assignors to George M. Holley, Detroit, Mich. Filed May 6, 1922. Serial No. 559,076. 4 Claims. (Cl. 22—189.)

1. The means for protecting the surface of permanent metal molds in which metals are cast, having a casting temperature in excess of 2000° F., which consists in subjecting the surface of the mold to the action of a blow torch, to the flame of which a refractory powder is fed.

1,536,953. SWITCH. MARION C. WATERS, Brookfield, Mo. Filed Apr. 22, 1921. Serial No. 463,442. 1 Claim. (Cl. 200—159.)

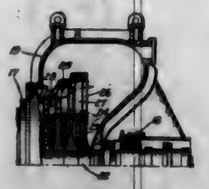
In a device of the character described, the combination of an outer tubular switch casing, a tubular insulating plug closed at one end and removably engaged in one end of the casing closing the casing at said end thereof, a switch member mounted upon the closed end of said plug and housed within the lines thereof, a closure plug removably engaged in the opposite end of the casing, a plunger conforming to the internal diameter of the casing and slidable in said casing, the plunger being provided at one end with a reduced plunger rod projecting freely through the latter plug and at its opposite end with a reduced alined contact rod to cooperate with said switch member, and a spring bearing between the inner end of said first mentioned plug and the plunger normally holding the plunger retracted.

1,536,954. ELECTRIC CONDENSER. BERTEL R. WESTERN, Chicago, Ill., assignor to Reliance Die & Stamping Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1924. Serial No. 709,515. 4 Claims. (Cl. 250—41.)



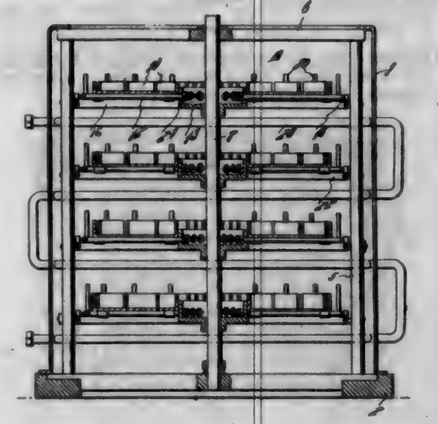
1. An electric condenser whose sides are formed of plates and a plate support having a plate receiving groove whose sides inwardly converge.

1,536,955. CHURN-OPERATING MECHANISM. WILLIAM J. WEST, El Paso, Ark. Filed Oct. 30, 1924. Serial No. 746,905. 2 Claims. (Cl. 74—14.)



1. In an apparatus of the class described, a stationary support, a drive wheel mounted on said support and having a plurality of apertures, spaced at varying distances from the center of the wheel, a crank pin alternately insertible in the apertures of said drive wheel spaced brackets extending from said support and each including a bearing, a rod movable through said bearings and adapted to be coupled to the device to be reciprocated, a cross head member adjustably coupled to said rod and having studs extending from its opposite ends, and connecting rods journalled at one end respectively upon said studs and journalled at their other ends to said crank pin.

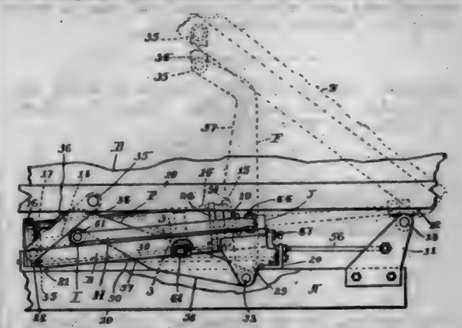
1,536,956. RESTRAINING DEVICE. ALGIE WIDRELS, Wolbach, Nebr. Filed Oct. 14, 1924. Serial No. 743,582. 1 Claim. (Cl. 119—99.)



A restraining device of the class described comprising a trough open at its opposite ends and top, a pair of upstanding holding arms pivotally supported by the bottom of the trough at one end thereof, springs carried by the pivoted end portions of the arms for moving said arms in a direction one away from the other, said springs having inwardly disposed extensions coacting one with the other to limit the inward movement of the arms, and means for moving said arms inwardly one with respect to the other.

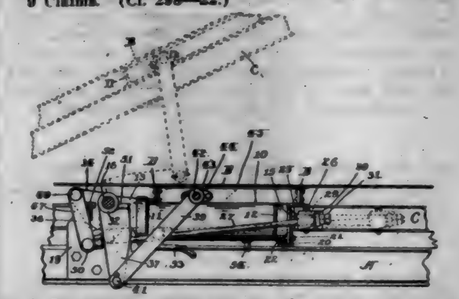
1,536,957. ELASTIC-FLUID-TURBINE NOZZLE STRUCTURE. JAMES WILKINSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 27, 1923. Serial No. 654,234. 6 Claims. (Cl. 253—69.)

1. The combination with an elastic fluid prime mover having alternate nozzles and buckets forming a working passage through which an elastic fluid stream is constrained to flow, of means in said working passage including certain of said nozzles for effecting a division of said elastic fluid stream and transposition of the divided portions thereof.



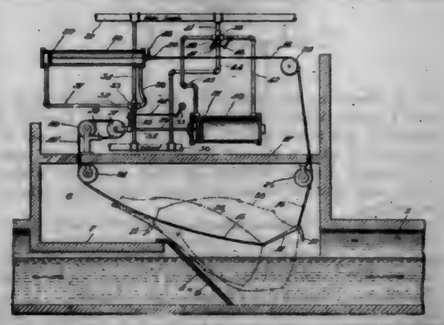
1,536,958. COTTON DRIER. EMIL WUNDERLICH, Yorktown, Tex. Filed July 22, 1924. Serial No. 727,570. 3 Claims. (Cl. 34—15.)

1. A device of the class described comprising a casing, a vertically arranged shaft therein, a plurality of trays attached to the shaft, a track associated with each tray, each track being of annular construction with its ends spaced apart and with one end being arranged at an incline, each tray being composed of tiltable sections, a roller connected with each section and engaging the track and means for tilting each section as the roller leaves one end of the track and each section being returned to horisontal position by its roller running up the inclined portion of the track.



1,536,959. HOIST FOR VEHICLE DUMP BODIES. MELVIN SWARTOUT MARTIN, Minneapolis, Minn., assignor to Grant Waldref, St. Paul, Minn. Filed Apr. 12, 1921. Serial No. 460,759. Renewed Feb. 2, 1925. 16 Claims. (Cl. 298—22.)

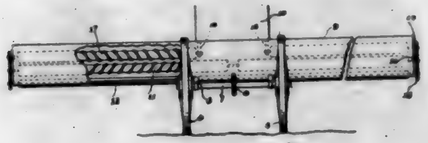
1. In combination with a vehicle chassis having hinge elements near its opposite sides, a body mounted upon said hinge elements to tilt upwardly, a ram having its piston movably connected with the body to tilt the body upwardly, and having the outermost end of its cylinder movably mounted upon said chassis to turn, and tie rods coupled to the innermost end of the cylinder and to



said hinge elements adapted to support a portion of the effort of the cylinder and relieve strain upon the chassis during the upward tilting movement of the body.

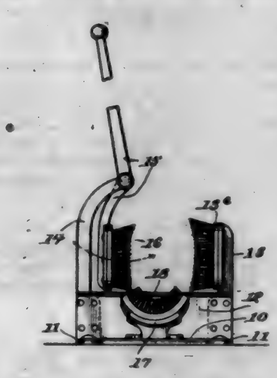
1,536,960. HOISTING MECHANISM FOR TILTING BODIES OF DUMP VEHICLES. MELVIN S. MARTIN, Minneapolis, Minn., assignor to Grant Waldref, St. Paul, Minn. Filed Mar. 26, 1923. Serial No. 627,562. 9 Claims. (Cl. 298—22.)

1. In a machine of the class set forth, a chassis frame, a dump body movably mounted thereon to tilt, a rocker member on said frame connected with said body to tilt the latter upwardly when turned in one direction and lever means for turning said rocker element having a shifting movement from a long lever to a shorter one after the body is partially tilted.



1,536,961. AUTOMATIC SEWAGE-SCREEN RAKE. HENRY L. MCMILLAN, Chicago, Ill. Filed Apr. 28, 1923. Serial No. 635,249. 11 Claims. (Cl. 210—176.)

7. In an apparatus of the character described, the combination of a sewer rake, a plurality of cables attached thereto near the opposite ends thereof and en-



tirely supporting the rake, pulleys over which said cables are trained, and hydraulic means for automatically manipulating said cables to cause said rake to travel bodily in a generally horizontal orbit.

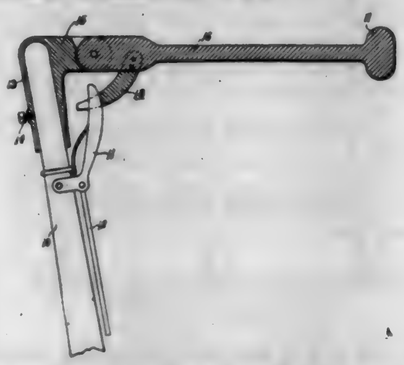
1,536,962. SEED PLANTER. CHARLES B. MOORE, Mattoon, Ill. Filed Apr. 9, 1924. Serial No. 705,401. 1 Claim. (Cl. 275—2.)

An apparatus for the purpose set forth comprising a frame, an axle and wheels supporting the frame, a stub tongue projecting from the front side of the frame at the center thereof, means for detachably coupling the tongue to the rear end of a vehicle, a distributing hopper secured transversely upon the frame and extending laterally beyond the sides of the same, a receiving hopper mounted centrally upon the distributing hopper, a dropping shaft extending laterally from the frame in the bottom of the distributing hopper, distributing augers mounted in the distributing hopper immediately above the dropping shaft and parallel therewith, evener augers mounted in the lateral portions of the distributing hopper immediately above the distributing augers, trains of gearing connecting the ends of the dropping shaft with the outer ends of said augers, and gearing connecting the dropping shaft with the frame-supporting wheels.

1,536,963. SHOE-CLEANING DEVICE. HENRY H. MOORE, Floodwood, Minn. Filed Feb. 5, 1924. Serial No. 690,842. 3 Claims. (Cl. 15—112.)

1. A device of the character described comprising a base, a brush rigidly secured upon one end thereof, a bracket on the other end of the base, a lever pivoted on said bracket, and a second brush carried by said lever and movable thereby toward or from the first named brush, said brushes being arranged with their bristles confronting.

1,536,964. COMPOUND FOR TREATING STEEL. FRITZ NETZ, Marysville, Kans. Filed Aug. 5, 1924. Serial No. 730,245. 2 Claims. (Cl. 148—29.)

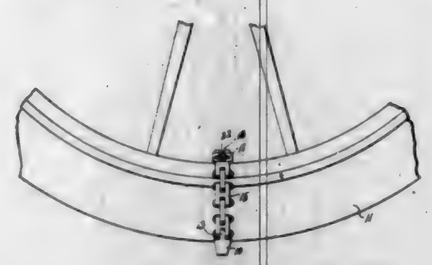


1. A metal treating compound of the character set forth, comprising a mixture of laundry soap, brown sugar, old style cut tobacco, potassium cyanide, beef tallow and water, substantially as set forth.

1,536,965. MONEY BELT. BENJAMIN H. OCKER, Marion, Pa. Filed Nov. 9, 1923. Serial No. 673,832. 10 Claims. (Cl. 224—26.)

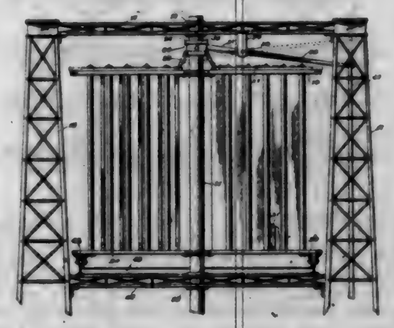
1. A belt of the class described comprising a receptacle adapted to be carried around a person's body, metallic reinforcing bands along the entire length of the receptacle, clasps for the receptacle, and means adapted to secure valuables in the receptacle.

1,536,966. BRAKE EXTENSION. THOMAS J. O'LEARY, St. Paul, Minn. Filed Nov. 2, 1923. Serial No. 672,385. 2 Claims. (Cl. 74—39.)



1. The combination with a brake control lever including a pivotally mounted release element, of an extension attachment comprising a sleeve like member adapted to be slipped over the upper end of the lever, a threaded element carried by the sleeve and adapted to engage said lever to hold the parts fixed relatively, a projection on said sleeve, an extension rod pivoted on said projection and arranged substantially at a right angle to said lever, and a yoke depending from said rod and embracing said release element, to support the rod in its normal position and to actuate the release element when pressure is exerted upon the rod.

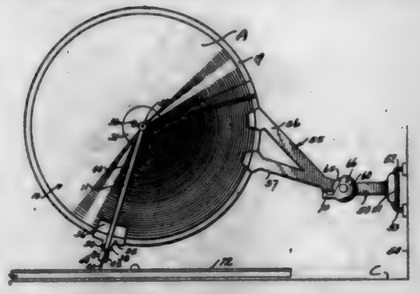
1,536,967. EXTRICATING DEVICE. FELIX PALAO, New Orleans, La. Filed Nov. 8, 1924. Serial No. 747,504. 1 Claim. (Cl. 152—14.)



An automobile extricating device comprising a block adapted to be arranged transversely of the tire, chains pivoted on said block adjacent the ends thereof and adapted to embrace the tire and felly of the vehicle,

a substantially H-shaped link pivoted on the free end of one of the said chains, and having aligned grooves, a substantially U-shaped element adapted to embrace said link and having its transverse portion received by said

grooves, said portion having a central opening, a threaded shank carried by the free end of the other chain and adapted to pass through said opening, and a nut adapted to be threaded on said element for holding certain parts associated.

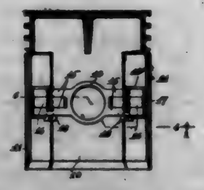


1,536,968. WIND MOTOR. PER W. PALM, Baudette, Minn. Filed June 12, 1924. Serial No. 719,593. 2 Claims. (Cl. 170—26.)

2. In a wind motor, a vertical shaft, upper and lower arms secured to and projecting laterally from the shaft, a series of connecting bars secured rigidly to and extending between the arms, a plurality of pivots mounted in and between the arms and extending beyond one of the arms, blades secured to the pivots and having their free edge portions arranged to abut the connecting bars, lateral projections on the extended ends of the pivots, a slide mounted on the adjacent arm between the same and the projections on the pivots, said slide having longitudinal slots receiving the extended ends of the pivots, stops on the slide to be engaged by the respectively adjacent projections, and means for operating the slide.

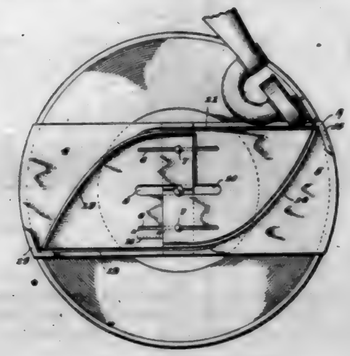
1,536,969. PHONOGRAPH REPRODUCER. JERRY PAVER, Chicago, Ill. Filed Feb. 19, 1924. Serial No. 693,875. 4 Claims. (Cl. 274—25.)

1. A reproducer comprising a pair of substantially conical shaped diaphragms each formed of a segmental sheet of material centrally bulged into a conical shape with the side edge portions of the same in meeting and



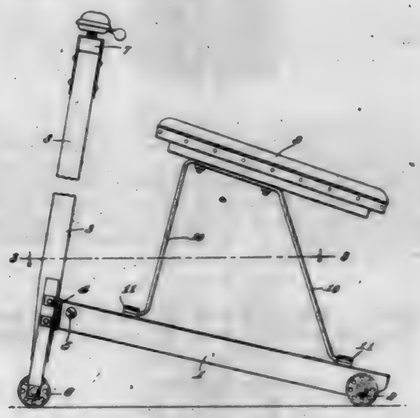
secured relation, said diaphragms being peripherally connected to provide a closed compartment therebetween, and stylus means supported by said diaphragms.

1,536,970. BUNDLING YARN AND DYEING SAME. BENJAMIN S. PHETTEPLACE, Greenville, S. C. Filed Dec. 22, 1924. Serial No. 757,439. 4 Claims. (Cl. 8—19.)



3. The combination with an open body core for a yarn bunch, of an impervious sheet of paper completely enveloping said core and having the ends thereof overlapping, said sheet provided throughout with spaced perforations, the marginal portion of one face at one of said ends provided with an adhesive substance for securing said ends together in overlapped position to maintain the cover on the core.

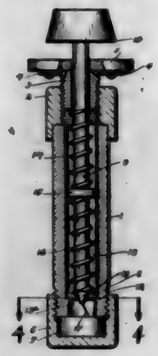
1,536,971. PISTON. HOWARD W. PIERCE, Butte, Mont. Filed Apr. 29, 1924. Serial No. 709,856. 3 Claims. (Cl. 74—108.)



1. A piston including sections combining to form a body portion having an open end, one of said sections being provided with aligned bearings and each bearing having spaced lateral extensions, the other section also having a lateral extension interposed between the extensions of each bearing, and means capable of being introduced through the open end of said body portion and projected through said extensions to secure the sections of the piston together.

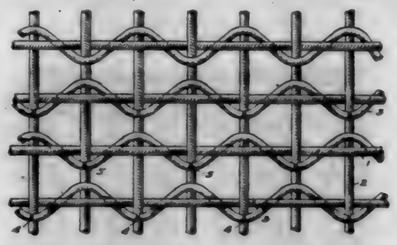
1,536,972. PHONOGRAPH-RECORD REPLAYER. B JEAN RALEIGH, Washington, D. C. Filed July 20, 1922. Serial No. 576,307. 7 Claims. (Cl. 274—15.)

2. An adjustable record replayer comprising two members having slots therein permitting longitudinal adjustment of said members, and there being a longitudinal stylus slot in each of said members, and raised portions on each of said members adapted to guide the stylus from the slot on one member to the slot in the other member.



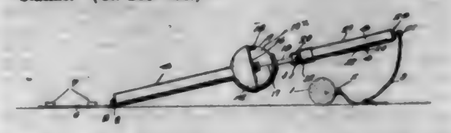
1,536,973. CHILD'S VEHICLE. MONDEST C. RICHARDS, Flint, Mich. Filed May 18, 1923. Serial No. 639,918. 1 Claim. (Cl. 208—165.)

A device of the class described comprising a base, wheels at the rear end thereof, a steering post, a vertically arranged hinge connected with the post and pivoted to the front end of the base, a wheel at the lower end of the post, a handle at the upper end thereof, a seat, a spring member for supporting the same and clips on the base for receiving the extremities of the supporting member.



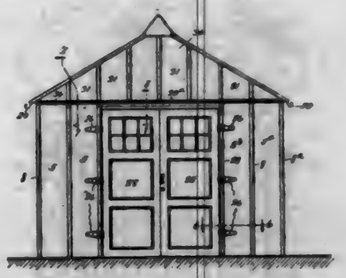
1,536,974. CRYSTAL DETECTOR. GEORGE A. ROSENFELDER, Pittsburgh, Pa. Filed Mar. 3, 1924. Serial No. 696,608. 4 Claims. (Cl. 250—31.)

1. In a device of the character described, a barrel of electrical insulating material, a rod of electrical conducting material extending through the barrel, a crystal supported at one end of the barrel, said rod being provided with a member disposed to contact with the crystal, resilient means for forcing the rod in one direction, resilient means for forcing the rod in the other



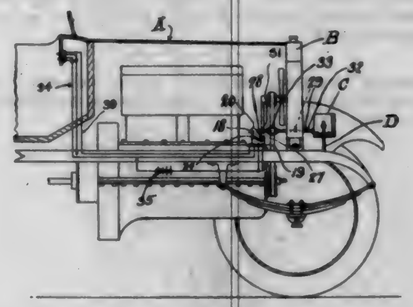
direction, and positively acting means for exerting pressure on the resilient means for forcing the rod in said other direction.

1,536,975. PILE FABRIC. HENRY RUEGG, Jr., Weehawken, N. J. Filed Jan. 12, 1923. Serial No. 612,304. 1 Claim. (Cl. 139—402.)



A pile fabric, comprising a fabric body having warp and weft threads, and a pile thread for each warp thread, said pile threads being arranged in pairs and passing over each second weft thread at adjacent points and intermediate weft threads at spaced points with the two warp threads therebetween, said pile threads being severed at each alternate weft thread, one pile thread being severed adjacent one weft thread and the next pile thread being severed at the next weft thread so that the point of severing of the respective pile threads will be offset.

1,536,976. GOLF APPARATUS. ANTON SAGL, Adams, Nebr. Filed Apr. 7, 1924. Serial No. 704,846. 3 Claims. (Cl. 285—21.)

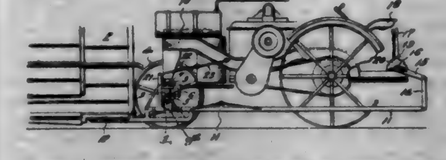


1. In a golf apparatus, means including a cup and adapted to be anchored to the ground or to an appropriate surface, a ball in said cup, a retractile spring connected with said ball and said means, a cup receiving the ball and interposed between the ball and the first-named cup, and a captive golf ball connected with the second-named cup.

1,536,977. SHEET-METAL BUILDING. WALTER SKIPWORTH, Cleveland, Ohio, assignor, by mesne assignments, to Marion Machine, Foundry & Supply Company, Marion, Ind., a Corporation of Indiana. Filed Dec. 23, 1921. Serial No. 524,518. 10 Claims. (Cl. 189—2.)

1. In a sheet metal building of the character set forth, the combination with a sill, of a sheet metal sill cover fastened thereto, said cover being provided with a vertically disposed sheet metal fin projecting upwardly therefrom, said fin being formed by bending the metal of said cover upon itself and wall panels engaging said fin and secured thereto.

1,536,978. HEADLAMP-CONTROL DEVICE. GEORGE H. SOLDANI, Ponca City, Okla. Filed May 8, 1924. Serial No. 710,848. 2 Claims. (Cl. 240—41.)



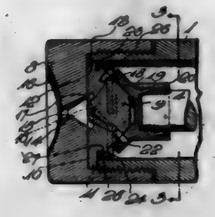
1. In an apparatus of the character described, headlamps mounted upon a vehicle, vertically tiltably mounted reflectors within the headlamps, depending arms extending from the reflectors, a casing located beneath the hood of the vehicle, a rock shaft journaled through said casing and having crank arms connected with said first named arms, an arm on the rock shaft located within the casing and carrying an armature, a spring within the casing, and a pair of electromagnets mounted within said frame in vertically spaced relation and having cores located above and below the armature whereby upon energization of a selected electromagnet the last named arm will be swung to rock the shaft and tilt the reflectors.

1,536,979. PANEL-BOARD INSTALLATION. WILLIAM A. STACEY, Chicago, Ill., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 25, 1922. Serial No. 563,052. 6 Claims. (Cl. 147—10.)

1. In a multi-unit panel installation, a casing, a plurality of juxtaposed cut-out units mounted within the casing, a protective cover for each unit, an extension for the cover of the end unit, and means adjustably securing said extension to said cover in a plane substantially parallel with the latter and in extension thereof to overlie conductors extending beyond the end of the installation.

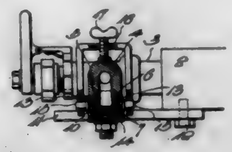
1,536,980. TRACTOR ATTACHMENT. AUGUST STOLTENBERG, Holyrood, Kans. Filed Sept. 13, 1922. Serial No. 588,013. 3 Claims. (Cl. 56—22.)

1. The combination in a tractor, of a frame, a front axle connected with the tractor frame and equipped with steering wheels, longitudinal levers carried by the said axle and extending in front and rear thereof, manually-controlled means mounted on the tractor frame and connected with the rear arms of the levers for the adjustment and adjustable fixing of the levers, means extending upwardly from and fixed to the forward arm of one lever, and cushioning means interposed between and connected to the said upwardly extending means and the tractor frame.



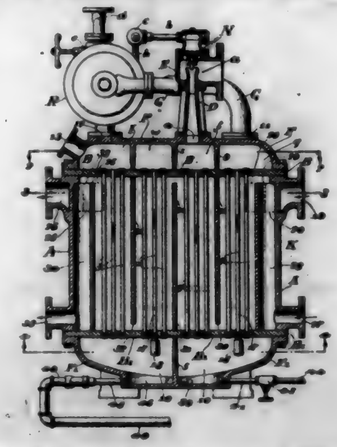
1,536,981. SPRING CONNECTION. ELVIN W. STOSSEL, Asbury Park, N. J. Filed Sept. 15, 1924. Serial No. 737,872. 2 Claims. (Cl. 267—54.)

1. A spring, and means to secure the same, said means comprising sockets, balls in said sockets and capable of universal movement therein, shanks rigid with the balls disposed at the sides toward the ends of the spring forks on the outer ends of the shanks, said forks presenting one arm longer than the other, shackles securing the ends of the main leaf of the spring to the



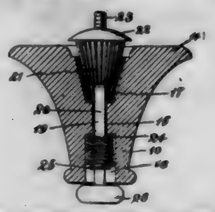
longer arm of the fork, said ends of said leaf extending between the members of the fork and each end disposed in line with the axis of the adjacent shank and ball, and bolts fastening both the longer and shorter arms of the forks and the respective ends of said spring together.

1,536,982. FLUID ATOMIZER. CHRISTOPHER STRACHAN, South Orange, N. J., and DAVID J. IRISH, St. George, Staten Island, N. Y., assignors to Morse Dry Dock & Repair Co., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,704. 4 Claims. (Cl. 299—113.)



1. An atomizer comprising a tubular body having a fluid inlet, a head for the front end of said body provided with a rearwardly projecting peripherally circular rear end, said head having a chamber between its ends, an outlet orifice from the front end of said chamber and tangential ports leading to said chamber from circumferentially spaced points on the periphery of said rear end, a valve member within said tubular body having an annular portion surrounding said peripherally circular rear end of said head and contacting with the peripheral surface thereof, said annular portion of said valve member having ports from its outer to its inner side adapted for registration with said tangential ports, swivel-forming means connecting said annular portion of the valve member directly with the peripheral portion of said rear end of said head and holding said annular portion and head against relative axial movement, and a stem extending into the aforesaid tubular body and operatively connected with said valve member for rotating the latter.

1,536,983. OIL PIPE AND BURNER COUPLING. CHRISTOPHER STRACHAN, South Orange, N. J., and DAVID J. IRISH, St. George, Staten Island, N. Y., assignors to Morse Dry Dock & Repair Co., New York, N. Y., a Corporation of New York. Filed Jan. 5, 1923. Serial No. 610,883. 4 Claims. (Cl. 158—73.)

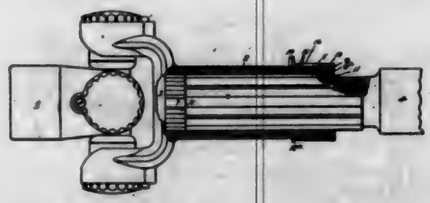


3. In combination, a burner having a coupling member offset from the longitudinal axis of said burner, an inner bracket section adapted to be rigidly secured to a support through which the burner may be adjusted, said bracket section having a slot parallel with the burner axis, an outer bracket section having a shoe and a clamping bolt passing adjustably through said slot, an oil pipe having a coupling member carried by said outer bracket section, and a clamp releasably securing the two coupling members together.

1,536,984. FLUID-COMPRESSING APPARATUS. ROBERT SUCHER, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1923. Serial No. 614,364. 52 Claims. (Cl. 230—13.)

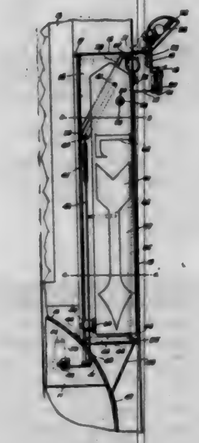
1. Combined ejector-condenser structure comprising an ejector, a condenser comprising a series of groups of tubes through which said ejector discharges in succession, a condenser shell common to and enclosing said groups of tubes, means for passing a cooling medium through said shell counter-current to a part of said groups of tubes, and means for passing a second cooling medium through said shell independently of said first named medium counter-current to another part of said groups of tubes.

1,536,985. CAMERA TRIPOD. RALPH SWINFORD, Los Angeles, Calif. Filed Nov. 7, 1923. Serial No. 673,321. 2 Claims. (Cl. 248—46.)



1. A camera supporting tripod comprising a body formed with a bore and chambers at the ends of the bore, legs connected with the body, a stem slidable through the bore and terminating in a threaded extension adapted to engage within a socket in a camera, a spring located within the lower chamber and connected with the stem for normally urging the same downwardly, and a clutching head on the stem fitting within the upper chamber; the uper chamber being frusto-conical and toothed, said head being correspondingly shaped and having a toothed periphery.

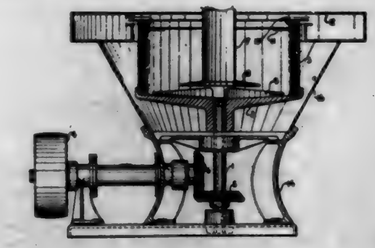
1,536,986. PACKING FOR SPLINE CONNECTIONS OF UNIVERSAL JOINTS AND THE LIKE. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to himself, Frederick W. Peters, and J. H. Wills, all of Cleveland, Ohio. Filed May 12, 1921. Serial No. 468,816. 4 Claims. (Cl. 286—5.)



1. The combination, with a shaft having a plurality of ribs extending longitudinally thereof and recesses between such ribs, of a hub surrounding the said shaft

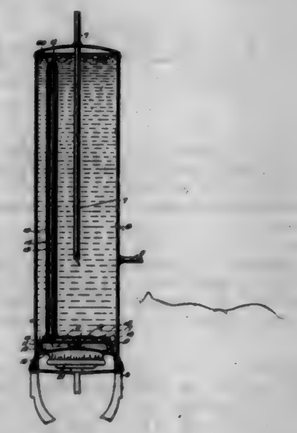
and having ribs and recesses complementary to those upon the shaft, a washer of compressible material upon the shaft and shaped to fit the ribs and recesses thereof,

and means connected to said hub and contacting with the said washer and the projections thereof within the recesses on the shaft, for compressing the said washer against the end of said hub.



1,536,987. AUTO SIGNAL DEVICE. GEORGE E. THIMMES, Mechanicsville, Iowa. Filed Oct. 14, 1924. Serial No. 743,529. 3 Claims. (Cl. 116—53.)

1. An auto signaling device comprising a casing open at one side, a plurality of indicating arms pivoted in the top of the casing and adapted to normally hang down within the casing; and a combined guard and spacing member pivotally secured to the lower end of the casing and adapted to be swung upwardly into the casing, said member having slots therein adapted to receive the indicating arms and through which said arms may be operated, and a cover for the casing arranged to overhang the upper end portion of said member for holding said member in raised position in the casing.

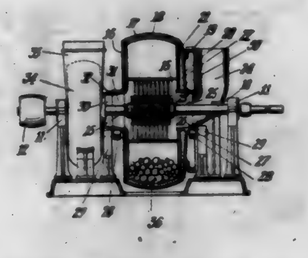


1,536,988. PROCESS FOR FREEING PAPER PULP FROM IMPURITIES. HERMANUS THOMASSEN, Heelsum, Netherlands. Filed Feb. 16, 1924. Serial No. 693,270. 3 Claims. (Cl. 92—28.)

2. In a process for removing impurities and knots or the like from paper pulp and other fibrous material, supplying the pulp continuously to a centrifugal separator, rotating the separator at a speed sufficient to cause the pulp to accumulate in a cylindrical layer and to cause the knots or the like and the heavy impurities to accumulate at the outer surface of the layer, retaining the said knots and impurities in the separator, retaining the lighter impurities at the internal surface

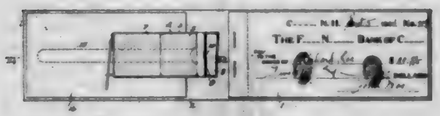
of the layer of pulp, and discharging from between the outer and inner surfaces of the said layer purified pulp free from impurities and knots or the like.

1,536,989. STAND BOILER AND WATER HEATER. ALBERT H. TRAGESER and LOUIS HASSINGER, New York, N. Y. Filed Sept. 15, 1923. Serial No. 662,955. 1 Claim. (Cl. 122—18.)



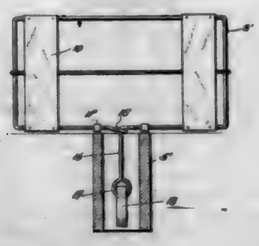
An attachment for stand boilers comprising an inverted dome-shaped member mounted upon the bottom wall of the boiler with its side walls provided with openings and spaced with respect to the side walls of the boiler, a circulating pipe propecting upwardly from said inverted dome-shaped member, a wall supported upon the top of said dome-shaped member and in spaced relation thereto to provide an intervening chamber, a tubular extension projecting from said wall and surrounding said circulating pipe, the tubular extension being secured to the circulating pipe at the upper end thereof, the space between the circulating pipe and the tubular extension and the wall and the inverted dome-shaped member being filled with a heat-insulating material.

1,536,990. MACHINE FOR GRINDING AND PULVERIZING FRIABLE SUBSTANCES. JOHANNES PIETER VAN GELDER, Granville, near Sydney, New South Wales, Australia. Filed May 24, 1924. Serial No. 715,610. 4 Claims. (Cl. 83—9.)



1. In a grinding mill of the type set forth, an outer mill chamber, a central beater chamber in the mill, and

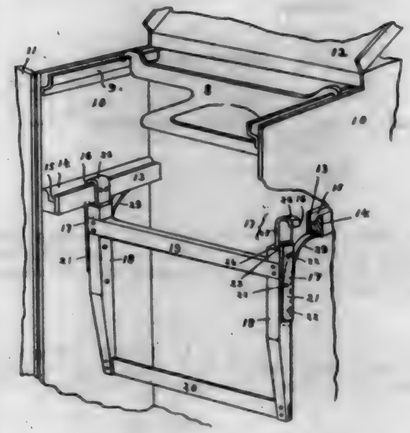
cellular pockets in one head of the mill body, the inner wall of said pockets being perforated with holes splayed



outwardly and the said inner wall being vented into the said central beater chamber.

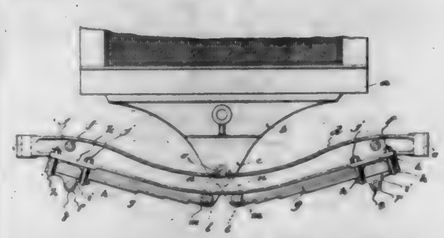
1,536,991. CHECK PROTECTOR. ARRIGO VARETONI, Clifton, N. J. Filed Oct. 9, 1924. Serial No. 742,697. 8 Claims. (Cl. 91—54.5.)

2. An attachment of the character described comprising a casing, an inking pad in one end of the casings, and a perforated compressible receptacle adapted to contain cleansing material in the other end of the casing.



1,536,992. AUTOMATIC GATE. JOSEPH R. WALLACE, San Angelo, Tex., assignor of one-half to James F. Price, San Angelo, Tex. Filed Nov. 3, 1923. Serial No. 672,536. 1 Claim. (Cl. 39—5.)

An automatic gate including a movably mounted gate frame composed of a single strand of wire one end of which depends below the plane of the gate frame and is equipped with a weight to normally hold the gate in a vertical position.



1,536,993. CLOTHES-RETAINING RACK. ALBERT W. WINSHIP, Utica, N. Y., assignor to W. W. Winship & Sons, Inc., Utica, N. Y., a Corporation. Filed Aug. 28, 1924. Serial No. 734,576. 3 Claims. (Cl. 190—36.)

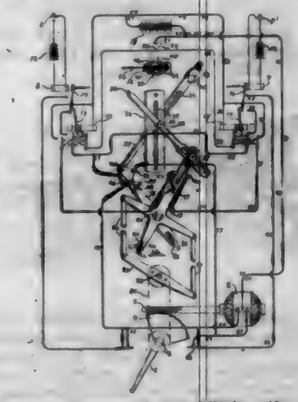
1. The combination with a wardrobe trunk of a pair of horizontally arranged slideways spaced from the inner sides of the trunk, a clothes retaining rack, clutches secured to the rack and slidingly mounted on said slideways, said clutches being adapted to bindingly engage

the slideways when the bottom of the rack is swung outwardly relative to its top, and springs mounted on said rack tensioned to swing its bottom outwardly.

1,536,994. VEHICLE SPRING. JAMES G. WINSOR, Detroit, and SEIZO HATASHITA, Ann Arbor, Mich. Filed June 30, 1923. Serial No. 648,645. 7 Claims. (Cl. 280—112.)

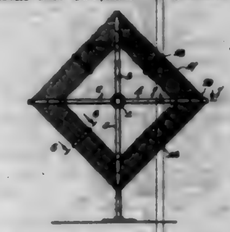
1. In a vehicle spring suspension, the combination of a chassis frame provided at the front with a supporting bracket depending below the centers of the front wheels, an axle having its central portion bowed outwardly, a pair of spring members anchored to the under side of the axle near the ends thereof and extending inwardly substantially perpendicular to the axis of the chassis frame and below the level of the axle, and means for connecting the inner end of each spring member to the depending bracket carried by the chassis frame in the space made by the bowing of the axle.

1,536,995. VEHICLE SPRING SUSPENSION. JAMES G. WINSOR and SEIZO HATASHITA, Detroit, Mich. Filed Aug. 3, 1923. Serial No. 655,405. 4 Claims. (Cl. 280—112.)



1. In a vehicle spring suspension, the combination of a chassis frame, an axle, a pair of inwardly and downwardly extending leaf spring members, each having one

end secured to the axle near the end thereof, and a fixture rigidly secured to the chassis frame, the free

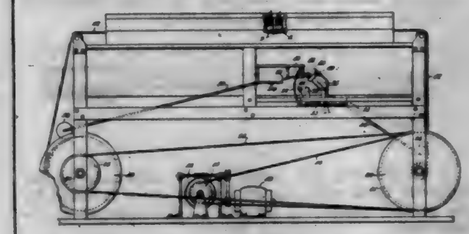


end of one of the spring members pivotally secured to said fixture and the free end of the other spring member slidably secured to said fixture.

1,536,996. AUTOMATIC STEERING SYSTEM FOR SHIPS. OSKAR EDVIN WIBERG, Stockholm, Sweden, assignor of one-half to Knut Steinmetz, London, England. Filed July 7, 1922. Serial No. 573,430. 12 Claims. (Cl. 172—8.)

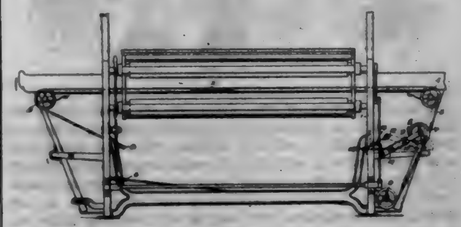
1. A control system for stabilising the course of a ship upon a change of the course comprising a steering machine, means for causing the steering machine to shift the rudder to one or the other side, means for causing a return movement of the rudder beyond its middle position before it is finally restored to the middle position, and means under the control of the rudder for limiting said return movement in proportion to the shifting angle of the rudder.

1,536,997. LOOP-ANTENNA-FRAME CONSTRUCTION. ALBERT E. WYATT, Jersey City, N. J. Filed Mar. 13, 1924. Serial No. 699,064. 6 Claims. (Cl. 250—33.)



1. A loop antenna frame construction, which comprises a plate, a plurality of antenna supporting arms radiating from said plate and pivoted thereto, and means on the arms adapted to automatically lock the arms to the plate when the arms are moved to normal expanded position.

1,536,998. SWEATBAND FOR HATS. HOWARD ERNEST ALDRICH, Middletown, N. Y. Filed May 11, 1922. Serial No. 638,900. 3 Claims. (Cl. 2—181.)

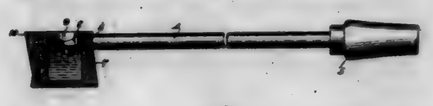


1. As a new article of manufacture, a sweat band for hats comprising a strip of semi-flexible material, initially of flat arcuate formation, and a relatively stiff resilient element secured to the outer edge of the strip for securement in substantially ring form within the head receiving opening to produce in the strip an annular inwardly projecting bulged head engaging portion substantially at its point of juncture of the sweat band with the hat.

1,536,999. CONTROLLING SWITCH. FEDERICO ZORRILLA BARRUNDIA, Guanajuato, Mexico. Filed Apr. 25, 1924. Serial No. 708,996. 8 Claims. (Cl. 200—46.)

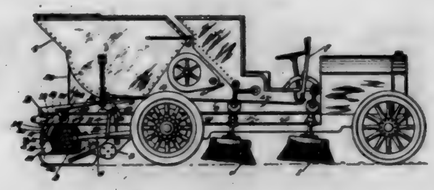
1. The combination with an apparatus including a pair of reels, a tape or strip connected at its opposite ends for alternate winding of the same from one to the other and reversible driving mechanism, of means operable by the amount of tape left on that one of the reels from which the same is being unwound, for reversing the driving mechanism.

1,537,000. PLUSH-LOOM-CUTTER STOP. WILLIAM BELLMAR, Astoria, N. Y., assignor to Astoria Silk Works, Long Island City, N. Y., a Corporation of New York. Filed May 25, 1923. Serial No. 641,474. 2 Claims. (Cl. 139—336.)



1. The combination with a plush loom provided with a cutting mechanism formed with a cable or ligament and a stop motion for the loom provided with a number of connectors for closing the electrical circuit used in stopping the loom, of a member normally supported by said ligament, and a plurality of means connected with said member and operated and with one of said connectors thereby when said ligament permits said member to move downwardly, said downward movement resulting in a sufficient operation for said members to move one of said connectors into operative position.

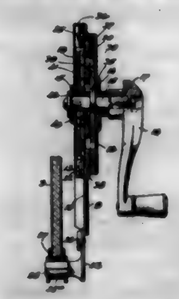
1,537,001. SAFETY VALVE FOR GAS JETS AND THE LIKE. HERBERT BENVIE, Meriden, Conn., assignor of one-half to Russell H. White, Meriden, Conn. Filed Jan. 6, 1922. Serial No. 527,526. 3 Claims. (Cl. 284—13.)



1. A safety valve comprising a casing having a passage therethrough, one end of the casing being constructed for receiving a hose, a valve seat mounted in the casing, a spring-controlled plunger movably mounted in the casing normally coacting with the valve seat to close the casing passage, means carried by the plunger for engaging the casing to retain the plunger in an inactive position, and means movably mounted on the casing capable of operation by the movement of the hose for releasing the plunger.

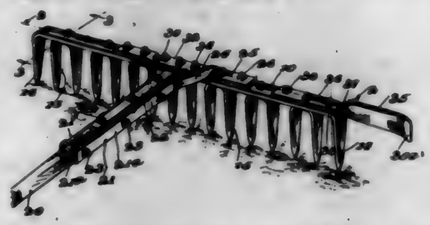
1,537,002. SOLDERING POT. GEORGE WILLIAM BRADLEY, St. Louis, Mo. Filed May 26, 1924. Serial No. 716,039. 5 Claims. (Cl. 22—86.)

1. A soldering pot comprising a receptacle having relatively thick walls and an opening which is round for the greater portion of its depth and elliptical at its outer end.



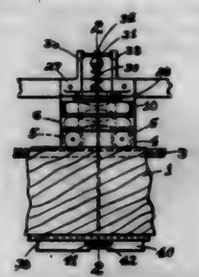
1,537,003. STREET SWEEPER. LLEWELLYN F. BRYANT, Lynn, Mass., assignor to The Springfield Motor Sweeper Company, Springfield, Ohio, a Corporation of Ohio. Filed Jan. 8, 1923. Serial No. 611,482. 5 Claims. (Cl. 15—83.)

4. In a sweeper of the character described, the combination with a horizontally-disposed sweeping broom, a casing arranged in yielding relation with the bristles of said broom at the rear thereof, said casing being formed in hinged sections, a hand lever and connections therefrom to said broom for elevating the same, and an additional connection to said casing for elevating said casing simultaneously with said broom.



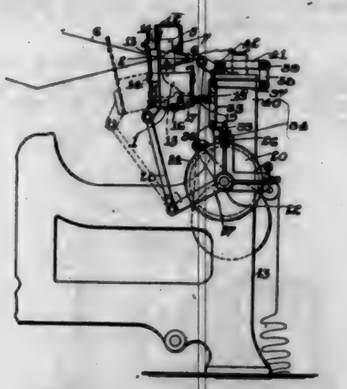
1,537,004. SASH-REGULATING DEVICE. GUSTAVE A. CARLSON, Detroit, Mich. Filed Jan. 14, 1924. Serial No. 685,978. 9 Claims. (Cl. 192—15.)

1. A clutch for a sash regulating device including an arbor, a wheel, and a flexible member adapted for raising and lowering a sash:—said clutch being adapted for holding the sash and flexible member in an adjusted position, said clutch comprising a fixed outer clutch member, an arbor actuated inner clutch member normally engaging said fixed outer clutch member, and locking members interposed between said wheel and said inner clutch



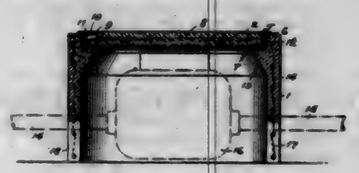
member normally establishing a driving relation for said wheel by said arbor and precluding any driving of said arbor by said wheel.

1,537,005. RAKE ATTACHMENT. HARRY CLAY CARSON, Cheviot, Ohio. Filed Feb. 24, 1923. Serial No. 620,995. 1 Claim. (Cl. 55—10.)



A hoe attachment adapted to be attached to a rake head comprising a flat blade having a shank twisted at right angles to the blade to provide an attaching portion, said attaching portion being adapted to be secured to the rake head to dispose the blade in the plane of the teeth of the rake head so that the hoe attachment projects beyond the rake head laterally of the line of draft whereby it is adapted to be brought into use when the rake head is rotated 90°.

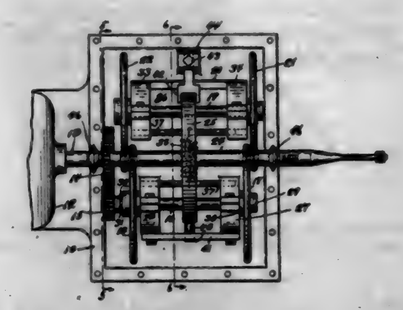
1,537,006. SHUTTLE-CHANGING MECHANISM FOR LOOMS. GEORGE CROMPTON, Jr., Worcester, Mass., assignor to Robert G. Pratt, Worcester, Mass. Filed Oct. 3, 1921. Serial No. 504,869. 21 Claims. (Cl. 139—238.)



1. In a shuttle changing mechanism for looms, the combination with a lay, and a shuttle holder containing a shuttle and a shuttle carrier mounted on said lay, of a transferrer adapted to move a shuttle from said holder to said carrier, and means operated by the movement of said lay for actuating said transferrer.

1,537,007. SHUTTLE-CHANGING MECHANISM FOR LOOMS. GEORGE CROMPTON, Jr., Worcester, Mass., assignor to Robert G. Pratt, Worcester, Mass. Filed June 12, 1922. Serial No. 567,719. 12 Claims. (Cl. 139—238.)

1. In a shuttle changing mechanism for looms, the combination with a lay, a shuttle holder and a shuttle carrier mounted on said lay, a transferrer adapted to move a shuttle from said holder to said carrier, and an actuating member for said transferrer, adapted to move with the lay, of means for automatically interposing a stop in the path of movement of said actuating member to operate the latter.



1,537,008. WATER-METER BOX. NATALE FORNI, Oakland, Calif. Filed Jan. 18, 1923. Serial No. 613,522. 3 Claims. (Cl. 72—13.)

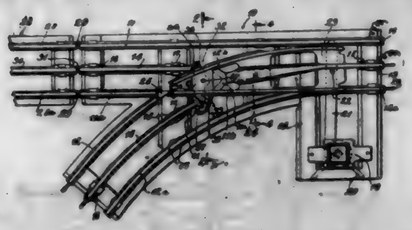
1. A water meter protecting box, comprising a concrete casing open at the top and bottom and at the top provided with an annular inwardly extending shoulder spaced a short distance from the top, a reinforcing metallic ring seat fitted on said shoulder, said ring seat being substantially L-shaped in cross section, and a lid having an annular ring provided with a vertical section, a horizontal outwardly extending upper flange and a horizontal inwardly extending lower flange, said flanges extending in opposite directions whereby the lower flange and the vertical section may fit against said ring seat.

1,537,009. SPEED-INCREASING DEVICE. EDWIN V. HAGMAN, Watertown, Mass. Filed Apr. 12, 1921. Serial No. 460,793. 20 Claims. (Cl. 74—26.)

3. Speed-changing mechanism comprising the combination of a driving shaft, a driven shaft, means to support the driving shaft for rotation about a fixed axis, and driving means connecting said shafts comprising spaced discs carried by the driving shaft arranged in frictional driving engagement with the driven shaft and rotatable

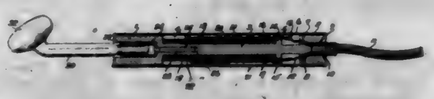
means including a yielding member arranged to support and hold the driven shaft in fixed position and in driving engagement with said discs.

1,537,010. COLLAPSIBLE TUBE. FREDERICK HIRSCHMANN, New York, N. Y. Filed May 27, 1924. Serial No. 716,186. 3 Claims. (Cl. 221—60.)



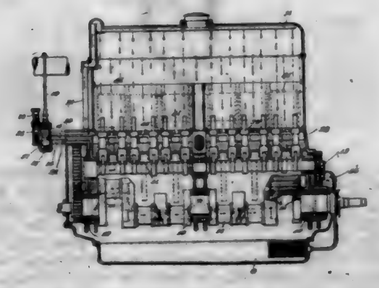
3. As a new article of manufacture, a collapsible dispensing tube having a neck at one end, said neck having an opening in its wall, a sleeve movable on said neck and having an opening adapted to register with the opening in the neck or moved to a position to close said opening, a nozzle removably secured in the opening of the sleeve and constituting a form or die to shape the material expressed from the tube, means on the end of the neck for supporting the tube, and a key secured to the end of the tube for collapsing the same.

1,537,011. TOY ELECTRIC-RAILWAY CONSTRUCTION. ARTHUR N. HOFFMAN, New York, N. Y., assignor to The Lionel Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 709,956. 18 Claims. (Cl. 191—29.)



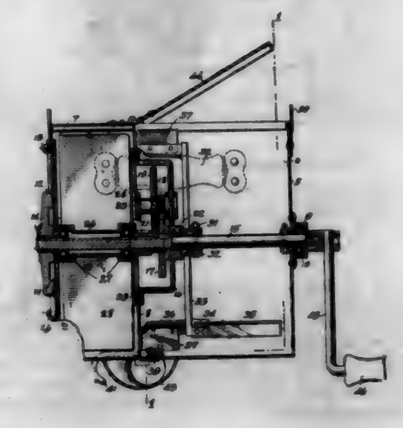
1. In a toy electric railway having a switching section, the combination of a track switch, a power rail running

lengthwise the said section and means including an interconnection with the said switch for disconnecting



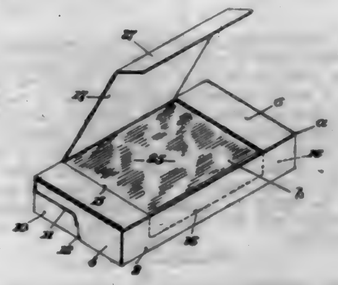
the power from the portion of the rail at the exit end of the said section against which the switch is closed.

1,537,012. COIL SUPPORT FOR HIGH-TENSION DEVICES. BENNO FREDERIC JANCKE, Brooklyn, N. Y. Filed Feb. 13, 1922. Serial No. 536,235. 5 Claims. (Cl. 174—39.)



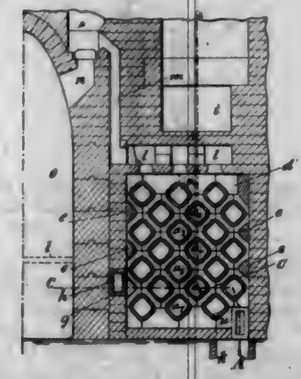
1. A handle portion for therapeutic devices, which comprises a spindle having a plurality of portions of reduced diameter to form chambers, a transformer coil mounted on one portion of reduced diameter, another portion of reduced diameter forming a chamber in which cylindrical connections to said coil can be made, said spindle at one end having a bore, a socket disposed in said bore, and a connection between the end of said socket and said transformer.

1,537,013. OILING SYSTEM. CLARENCE E. JEFFERS, Indianapolis, Ind., assignor to Howard C. Marmon, Indianapolis, Ind. Filed Feb. 2, 1921. Serial No. 441,907. 22 Claims. (Cl. 123—196.)



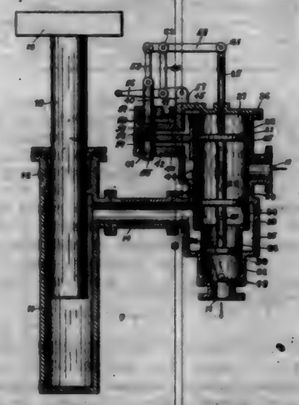
11. The combination with an internal combustion engine having bearings requiring oil varying in amount with load conditions, secondary bearings requiring oil, oil conduits leading to both of said sets of bearings and arranged in series, the conduit for said first mentioned bearings delivering the oil thereto in seriatim, an oil pump having a source of supply and a discharge conduit leading to said first mentioned bearings, means in said oil conduits beyond the first-mentioned bearings and in advance of the secondary bearings for maintaining a predetermined pressure in the conduit leading to said first-mentioned bearings without affecting the volume of oil passing to the conduit for said secondary bearings, a by-pass valve associated with the oil conduit beyond said first-mentioned bearings and arranged when opened to relieve the pressure in said conduit without affecting the volume of oil passing into the conduits leading to the secondary bearings, and means subject to the varying vacuum conditions in the engine for controlling the position of the by-pass valve.

1,537,014. CROP DUSTER. EDGAR KNAPP and CARL GODFREY ALLGAUER, Middleport, N. Y. Filed Apr. 17, 1923. Serial No. 632,751. 5 Claims. (Cl. 43—148.)



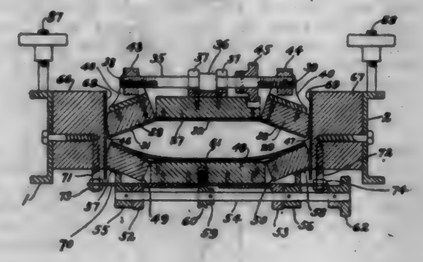
1. A device of the character described comprising a housing, a partition dividing said housing into a blower compartment and an insecticide compartment, a fan mounted in the blower compartment, a shaft extending longitudinally of said housing, a gearing adapted to be driven by said shaft for the purpose of driving the fan in the blower compartment, and a gear housing for supporting said gearing, said gear housing being removably carried by the partition of the first-mentioned housing.

1,537,015. PACKAGE FOR FRAGILE OR SENSITIVE ARTICLES. SIMON KNOTOSCHIN, Leipsig, Germany. Filed Nov. 18, 1924. Serial No. 750,688. 1 Claim. (Cl. 206—44.)



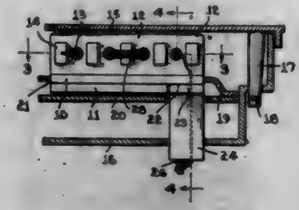
A package of the character described comprising an inner box having an aperture provided in one wall thereof, a wrapper completely enclosing said inner box in a substantially air tight manner and including a transparent portion covering the aperture therein, an outer box corresponding substantially in shape to the inner box and tightly fitted to the same and including a main cover having an aperture adjacent the aperture of the said inner box, a flap carried with the cover and adapted to fasten the cover in closed position, and a secondary flap and cover struck out from the main cover and flap and providing the aperture in the cover.

1,537,016. RECUPERATOR. SIGURD HJALMAR KRØYER, Hellerup, near Copenhagen, Denmark. Filed Nov. 5, 1924. Serial No. 747,949. 3 Claims. (Cl. 257—240.)



1. A recuperator of the natural draught type including a plurality of horisontal series of tubes, spaced vertical walls, said tubes being approximately square in cross section and so arranged that the plane portions of their walls are inclined to the vertical and that the tubes of each series extend into the spaces of the tubes of the adjacent series, having means for conducting combustion gases into the upper series of tubes, means for causing the combustion gases to traverse the several series of tubes from the upper series to the lower series, and means admitting air to the lower portion of the spaces between the vertical walls externally of the tubes whereby, incident to heating of the air, the latter rises in the spaces.

1,537,017. HYDRAULIC VALVE. THURE LARSSON, Worcester, Mass. Filed Mar. 10, 1923. Serial No. 624,202. 16 Claims. (Cl. 188—14.)

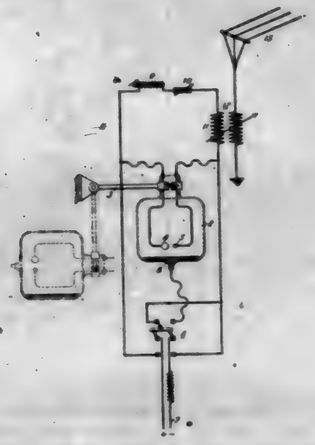


1. In combination with a hydraulic motor, a three way valve comprising a casing having an inlet port, an outlet port and a port to the motor and a piston valve device so constructed and arranged relative to said ports that the back pressure from the motor is the sole motive power to effect closing movement of the inlet valve.

1,537,018. DOUGH-MOLDING MACHINE. FRANK X. LAUTERBUR, Sidney, Ohio. Filed Jan. 15, 1923. Serial No. 612,702. 9 Claims. (Cl. 107—9.)

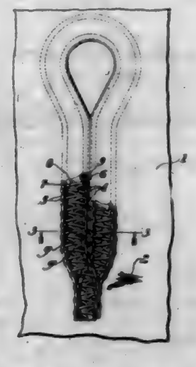
1. In a loaf molding machine the combination with a conveyor belt or the like, of a pair of boards or the like facing each other between which the conveyor passes, both of said boards having desired areas at the sides thereof, adjustable away from the parallel, whereby a mass of dough carried along by the belt will be formed into a cylindrical body with tapered ends.

1,537,019. ELECTRIC-STOVE INSULATING SUPPORT. ROBERT H. MACINNES, Hamilton, Ontario, Canada, assignor to D. Moore Company, Limited, Hamilton, Canada. Filed Aug. 18, 1924. Serial No. 732,748. 4 Claims. (Cl. 219—37.)



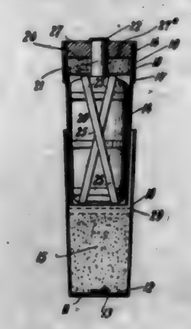
1. A supporting bar for electric heating devices formed of refractory insulating material and having a base and a web extending longitudinally of the base, said web being provided on its sides with spaced lugs, and having openings for resistance coils between said lugs.

1,537,020. BRIGHTENING AGENT. ARTHUR WHITE YOUNG, Kokomo, Ind., assignor to Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed June 12, 1924. Serial No. 719,684. 4 Claims. (Cl. 204—1.)



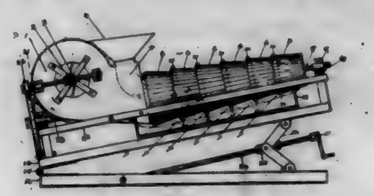
1. Method of obtaining bright, dense, coherent deposits of cadmium upon another metal, which comprises electro-depositing cadmium from a solution thereof to which a relatively small amount of concentrated milk has been added.

1,537,021. OSCILLATION GENERATOR OF THE ARC TYPE. HARVEY C. RENTSCHLER, Wilkinsburg, Pa., assignor, by mesne assignments, to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 9, 1918. Serial No. 261,910. 6 Claims. (Cl. 250—36.)



1. An oscillator comprising an arc between solid electrodes in an atmosphere of a mixture of hydrogen and mercury vapor at a relatively high pressure, whereby a fine-stream discharge is secured.

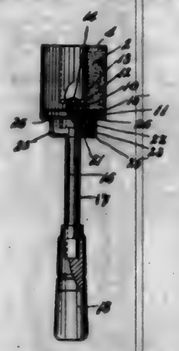
1,537,022. STITCHED BUTTONHOLE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 4, 1924. Serial No. 747,723. 2 Claims. (Cl. 112—264.)



1. In a stitched buttonhole, the combination with a knitted body-fabric having a buttonhole-slit, of a buttonhole overseam including a zigzag needle thread formed alternately into depth-stitch and slit-stitch loops which pass through the body-fabric, and a pair of looper-threads formed alternately into loops, the loops of one looper-thread entering and keying the depth-stitch needle-thread loops and being entered and keyed by the subsequently formed slit-stitch needle-thread loops, and the loops of the other looper-thread entering and keying the slit-stitch needle-thread loops and being entered and keyed by the subsequently formed depth-stitch loops, the interlinked loops forming inner and outer purls along the rows of depth- and slit-stitch needle-loops, and a soft yarn strand substantially filling the space between said purls and held flattened by the overlying looper-thread loops.

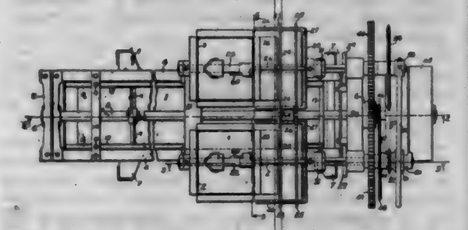
1,537,023. GALVANIC CELL. SERGE APOSTOLOFF, New York, N. Y., assignor to Union Dry Battery Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Aug. 22, 1918, Serial No. 250,974. Renewed June 15, 1921. Serial No. 477,865. 16 Claims. (Cl. 136—38.)

14. In a dry cell of the type adapted to remain inactive until it is desired to put the same into use, a bobbin consisting of a carbon electrode and a depolarizing mass, a tubular element connected to the bobbin and spaced therefrom, a zinc electrode cup fitting said tubular element, and means whereby the cell is put into activity upon the addition of water to the zinc cup and subsequent movement of the tubular element into said zinc cup.



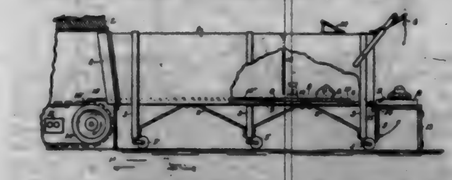
1,537,024. PNEUMATIC ORE SEPARATOR. CHARLES E. S. BUNCH, Devore, Calif. Filed Mar. 27, 1923. Serial No. 628,160. 3 Claims. (Cl. 83—54.)

2. In a device of the class described, a main supporting and driving shaft, a blast tube composed of units adjustably secured on the said main supporting driving shaft, means such as main bearings supporting said main shaft in operative alignment with the outlet of the blast fan, means to transmit motive power to the said main shaft and the blast tube assembly, a catch basin rigidly supported longitudinally of and adjacent to the bottom of said blast tube assembly, means to control the angle of elevation of the said blast tube, substantially as shown.



1,537,025. APPARATUS FOR DRESSING GRINDERS. ARTHUR L. CURRIER, New Ipswich, N. H., assignor to J. W. Moore Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1920. Serial No. 359,869. 1 Claim. (Cl. 125—37.)

A dressing apparatus of the kind described, comprising a tubular member, a handle secured to one end thereof, an anti-friction bearing mounted on the end of the tube remote from the handle, and a cylindrical abrasive dressing tool secured to the outer end of the



anti-friction bearing, the axes of the cylindrical dressing tool, tubular member, and handle being in alignment with each other.

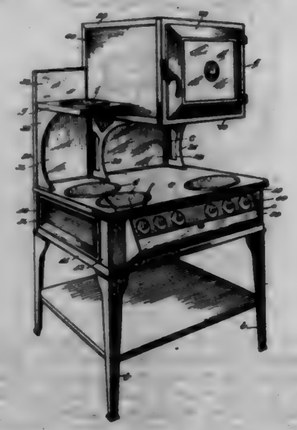
1,537,026. CONCRETE-MIXING APPARATUS. CHARLES M. EBERLING, Cleveland, Ohio, assignor to The Eberling Machines Sales Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 20, 1920. Serial No. 431,908. 17 Claims. (Cl. 83—73.)

1. In a concrete mixer, the combination of a trough having pugging means therein, of a pair of fixed sheives overhanging said trough opposite to each other, rotatable pushing devices adapted and arranged to sweep across the top of said sheives, means for maintaining a uniform supply of cement and aggregate on the respective sheives, means for rotating the pushing devices whereby the same may sweep simultaneously across said sheives toward each other, and means for varying the effective length of said pushing devices.

1,537,027. GLASS LEER. MARSHALL W. GLEASON and CLARENCE G. MILLER, Brooklyn, N. Y., assignors to Gleason-Tiebout Glass Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 752,014. 4 Claims. (Cl. 49—53.)

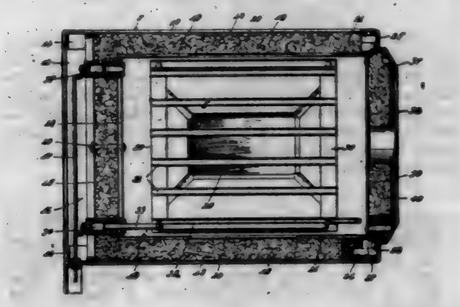
1. A removable attachment to leers, composed of a body forming a chamber, one end of which is adapted to connect with the mouth of a leer, means of closing the free end of said chamber and of interlocking pans adapted for transitory passage through said chamber.

1,537,028. BRAKE-BEAM SUPPORT. BRODERICK HASKELL, Franklin, Pa. Filed May 15, 1924. Serial No. 713,487. 7 Claims. (Cl. 188—218.)



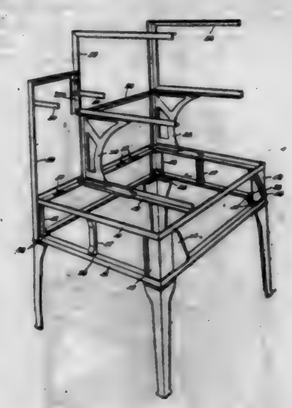
5. The combination of a flanged spring plank of a car truck having holes through the web portion thereof, and brake beam supporting rails provided with toes adapted to be passed through the plank and engage the underside thereof, and having shoulders adapted to bear on the flanges of the truck and prevent such movements of the rails as will permit the disengagement of the toes from the plank.

1,537,029. SECURING BRAKE-BEAM SUPPORTS TO SPRING PLANKS. BRODERICK HASKELL, Franklin, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed July 8, 1924. Serial No. 724,802. 4 Claims. (Cl. 188—218.)



3. The combination of the spring plank of a car truck, brake beam supporting rails, provided at their inner ends with eyes, pockets on the underside of the spring plank for the reception of the inner ends of the rails and removable pins passing through the sides of the pockets and the eyes in the supporting rails.

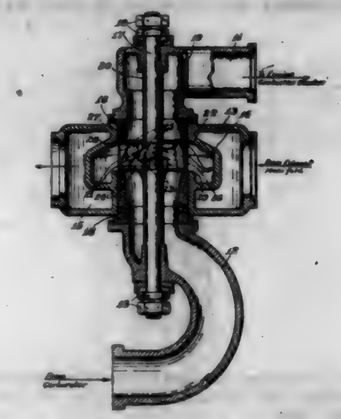
1,537,030. RANGE. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britian, Conn., a Corporation of Connecticut. Filed Apr. 2, 1921. Serial No. 458,105. 7 Claims. (Cl. 219—35.)



1. In a device of the character described, a body frame, a back frame and an oven extending forwardly from the latter, said body frame and back frame being formed, in part, of irons angular in cross section, panels carried by said back frame, a plate covering the rear of said back frame and oven, insulators carried by the angle irons of said frames, and conducting wires passing through said bushings and the space provided between said panels and oven and said plate.

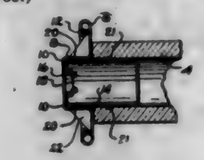
1,537,031. OVEN. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Original application filed Apr. 2, 1921, Serial No. 458,105. Divided and this application filed Aug. 1, 1922. Serial No. 578,980. 5 Claims. (Cl. 126—275.)

1. An oven including an outer shell, an inner shell, heat insulating material therebetween, corner irons on the corners of said outer shell, a front piece covering the forward ends of said inner and outer shells and said insulating material, and means for securing said front piece to said corner irons.



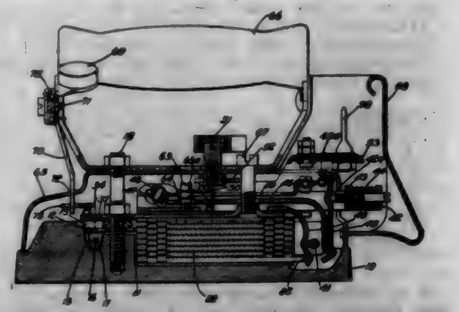
1,537,032. RANGE. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Original application filed Apr. 2, 1921, Serial No. 458,105. Divided and this application filed Aug. 1, 1922. Serial No. 578,982. 5 Claims. (Cl. 126—39.)

1. In a device of the character described, a pair of frame members, brackets supporting said members in spaced relation and having their opposite ends notched to provide grooves, and a panel provided with edge flanges snugly fitting within said grooves.



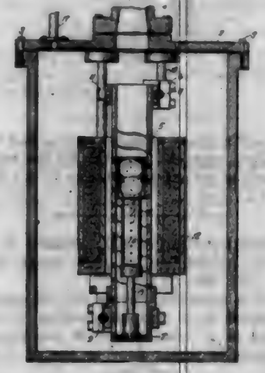
1,537,033. SEPARATOR AND VAPORIZER ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. RICHARD B. SARGENT, Rock Island, Ill., assignor to Charles E. Sargent, Rock Island, Ill. Filed May 5, 1922. Serial No. 558,660. 10 Claims. (Cl. 48—180.)

1. In combination, a conduit for carrying a mixture of liquid and gas, a wind-wheel rotatably mounted in said conduit and having outwardly projecting blades, said blades being partly oblique and partly parallel to the direction of stream-flow, a chamber opening into



said conduit in position to have liquid from said blades thrown outwardly into it, and a ring encircling said blades and reinforcing them against centrifugal force.

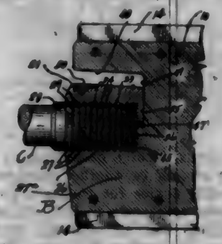
1,537,034. SPOOL. WILLIAM M. SAUNDERS, Waterbury, Conn., assignor to The Mattatuck Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 2, 1925. Serial No. 12,619. 6 Claims. (Cl. 242—69.)



1. In a music roll having a core with openings in its ends, a flanged sheet metal member having a cylindrical socket portion protruding therefrom and integral therewith, a separately formed rigid cylindrical shell member fitting and inserted within said socket portion and having a portion protruding therefrom, one of said members having a spindle engaging portion, one of said protruding portions entering said core.

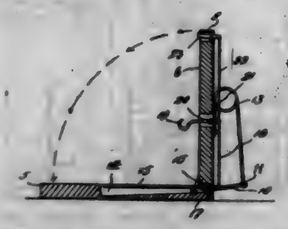
1,537,035. ELECTRIC HEATER. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,481. 20 Claims. (Cl. 219—25.)

1. Thermostatic control means for electric heaters and the like, comprising a thermostat, circuit control means, a plurality of members forming an operating connection between said control means and said thermostat, and a common means for holding said members in their various cooperating relations and for moving said control means from one position to another upon movement of said thermostat.



1,537,036. QUARTZ WORKING. LEVI B. MILLER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 25, 1924. Serial No. 688,602. 7 Claims. (Cl. 49—78.1.)

1. An apparatus for preparing fused or vitreous silica comprising the combination of a refractory container, one part of which has a greater diameter than the adjoining part and having a tapered throat connecting said parts, means for heating said container, and means for evacuating the space within said container.

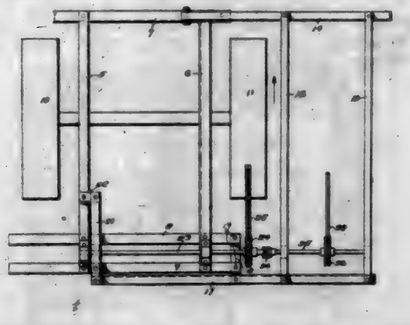


7. The method of preparing fused or vitreous silica which consists in heating crystalline silica to a temperature of plasticity, subjecting said plastic silica to advancing constrictive pressure to eliminate cavities in said silica, and causing said silica to congeal while substantially preserving the cross-section thereof.

1,537,037. COUPLING ARRANGEMENT FOR PISTON RODS AND CROSSHEADS. RAYMOND A. MOCK, Amarillo, Tex. Filed Oct. 7, 1922. Serial No. 593,025. 8 Claims. (Cl. 308—3.)

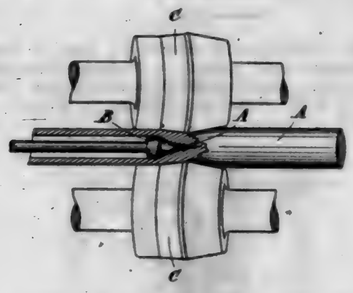
1. In a structure of the character described, a cross head provided with a pocket leading from one end thereof and having a wall provided with a recess extending longitudinally of the pocket, side arms positioned at opposite sides of the body, a clamping block resting upon said side arms and having an intermediate portion positioned in said pocket and provided with a recess cooperating with the recess of the pocket to provide a piston rod receiving socket open at the said end of said cross head, a piston rod having one end fitting within said socket, the walls of the socket and the end portion of the rod fitting within the socket being provided with means interlocking to hold the rod within the socket when said block is secured in place and fastener means for securing said block to the side arms of said cross head.

1,537,038. RAT TRAP. HOVANNESS DORAKDJAIN, East Watertown, Mass. Filed July 25, 1925. Serial No. 653,685. 1 Claim. (Cl. 43—81.)



A trap including in combination a base board, a back board fixed to the base board at an angle thereto, a jaw member pivoted to the lower end portion of the back board and at points between the opposite side surfaces thereof, spring means mounted upon the back board for normally maintaining said jaw closed upon the base board, a platform pivoted to the back board at a point between the opposite side surfaces thereof and disposed over the base board, a bait hook pivoted upon the back board at a point between the opposite side surfaces thereof and passing transversely therethrough, a latch member pivoted upon the lower end of said back board at a point between the opposite surfaces thereof and adapted to engage the jaw to hold the same open, and a rod disposed along the back board and pivotally connected with the platform, the bait hook, and the latching member.

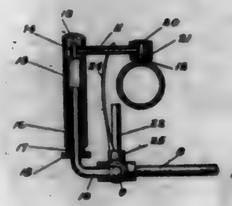
1,537,039. ADJUSTABLE SUPPORT. RUEL I. SHORT, Los Angeles, Calif., assignor to Escondee Corporation, Los Angeles, Calif., a Corporation of California. Filed June 2, 1920. Serial No. 386,185. 7 Claims. (Cl. 45—97.)



1. A device of the character described comprising a yieldable clip, a socket member carried thereby, a ball member seated within said socket and being formed with a cavity in the back thereof, the walls of which are concentric with the outer walls of the ball, a hemispherical washer seated within the cavity and conforming to the contour thereof, a bolt passing through the ball and socket members and the washer, a helical spring mounted on the bolt and resting against the washer and an adjusting nut carried by the bolt, and adapted to bear against the washer to produce a desired frictional engagement between the joint members, and a plurality of arms emanating from the ball member to afford a mounting for an article to be supported.

1,537,040. POWER-UNIT ATTACHMENT FOR AGRICULTURAL MACHINES. HERMAN J. VIEGENS, Welcome, Minn. Filed Jan. 10, 1924. Serial No. 685,427. 4 Claims. (Cl. 180—53.)

1. The combination with a horse drawn machine, comprising a pair of bull wheels, a supporting frame between said bull wheels, an auxiliary power unit, means for mounting said power unit outwardly of the right hand bull wheel, a driven element upon the supporting frame and driving connections between said element and the auxiliary power unit, whereby said driven element may be driven independently of the bull wheel and from a point outwardly of said bull wheel.

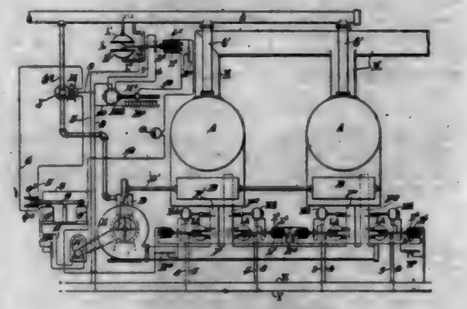


1,537,041. METHOD FOR MANUFACTURING HOLLOW BODIES OF STEEL, ALLOYS, OR OTHER METALS. THEODOR BECKER, Dusseldorf, Germany. Filed Aug. 30, 1921. Serial No. 496,833. 5 Claims. (Cl. 207—8.)

1. A method of producing hollow bodies from weldable metal, such as steel, consisting in first casting an ingot from molten weldable metal; then allowing it to cool until substantially the core retains a plastic, weldable state; and driving a mandrel through the core so as to produce a hole and to simultaneously weld together into a flawless mass the substance of the body that is rent and creviced in the hollowing operation.

1,537,042. TOY GAS ENGINE. HUGH E. BROWN, Chicago, Ill., assignor to W. M. Welch Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1920. Serial No. 373,853. 7 Claims. (Cl. 123—75.)

1. The combination with a gas engine; of a fuel supply pipe feeding horizontally and having a vertically extended end, a mixing chamber mounted over said end and provided with side openings, a connection between the upper portion of the mixing chamber and the cylinder of the engine, the connection between the mixing chamber and the cylinder communicating with a passage leading from the atmosphere to the cylinder and freely open to the

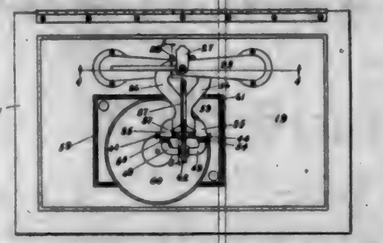


atmosphere, and a sleeve movable on the fuel supply pipe and co-operating with the openings in the mixing chamber to regulate or cut off the passage of air through the same.

1,537,043. BREAD COMPOUND. JOSEPH W. DUBBAKS, Houston, Tex. Filed Dec. 27, 1923. Serial No. 682,909. 3 Claims. (Cl. 99—10.)

1. A bread composition having for its cereal ingredients white wheat flour and an emulsion of cooked rice grains treated in a homogenizer in the proportions of about two parts of wheat flour to one of rice emulsion by weight.

1,537,044. FLOW-PROPORTIONING APPARATUS. GEORGE HERBERT GIBSON, Montclair, N. J. Filed Sept. 22, 1916. Serial No. 121,547. 69 Claims. (Cl. 236—14.)



1. Means for automatically proportioning the rate of flow of one fluid stream to another comprising in combination a balancing device for each stream including a fluid pressure motor responsive to the rate of flow of the corresponding stream and an opposing electro-magnetic motor, means for connecting the two electro-magnetic motors in series in the same energizing circuit, and means actuated by each balance for regulating the ratio between the rate of flow of the stream to which the balance pertains and the strength of the electric current passing through the electric motor of the balance.

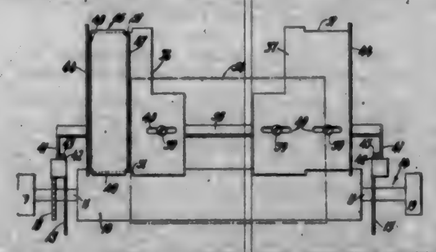
1,537,045. TALKING MACHINE. CARL F. EJERPE, Jamestown, N. Y. Filed Aug. 11, 1922. Serial No. 581,215. 11 Claims. (Cl. 274—28.)

11. In a talking machine, an assembly board having separated passages therethrough, an integral block

mounted upon said board, separate conduits formed in said block connecting with said passages, separate tone

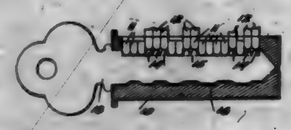
arms and means connecting one of said arms with one of said conduits and the other of said arms with the other of said conduits.

1,537,046. ANODE. MAURICE E. LOUTH, Kokomo, Ind., assignor to Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed May 21, 1924. Serial No. 714,908. 13 Claims. (Cl. 204—4.)



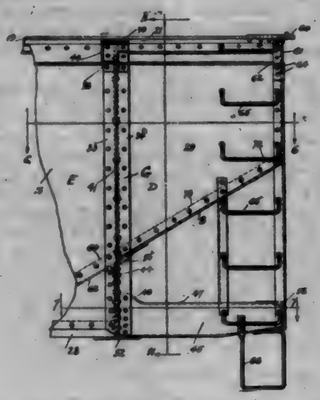
1. An anode for use in electroplating, comprising a plurality of bodies of active material and a support of inactive conductive material including a plurality of studs of inactive conductive material each having one end embedded in one of said bodies of active material.

1,537,047. CADMIUM PLATING. MAURICE E. LOUTH and ARTHUR WHITE YOUNG, Kokomo, Ind., assignors to Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed June 5, 1924. Serial No. 718,155. 11 Claims. (Cl. 204—1.)



1. Process of electroplating with cadium which comprises electro-depositing cadmium from a sodium cadmium cyanide bath containing from ¼ to 8 ounces of cadmium and from ½ to 10 ounces of free sodium cyanide per gallon of bath.

1,537,048. TYPEWRITING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 3, 1923. Serial No. 616,654. 10 Claims. (Cl. 197—127.)

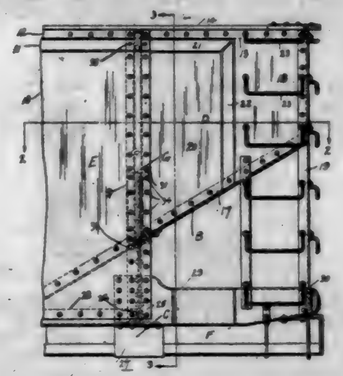


1. In a combined typewriting and computing machine comprising a platen and computing mechanism effective for certain zones along the platen, the combination with a collating table having fixed side-edge gages for use separately to position computing columns on work-sheets in coincidence with said computing zones, of a detachable side gage so constructed that, when placed on the collating table adjacent one of the fixed gages and pressed thereagainst, it may be used to position, relatively to said computing zones, a special work-sheet which cannot be properly positioned by the fixed gages.

1,537,049. KEY. EDWARD B. VIVES, New York, N. Y., assignor to Vesdal Creations, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 6, 1923. Serial No. 661,219. 7 Claims. (Cl. 70—9.)

1. A key blank consisting of a shank or blade provided along the upper edge thereof with a plurality of detachable teeth of uniform length, the ends of said teeth defining a line substantially parallel with said edge.

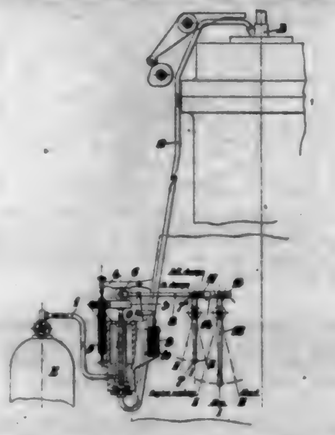
1,537,050. CAR CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1923. Serial No. 629,760. 13 Claims. (Cl. 105—249.)



10. In a car having the ends formed of lesser width than the central portion thereof, said ends having substantially vertically disposed straight corner posts, the combination with side top rail members extending longitudinally of the car and substantially in alinement with the aforesaid corner posts and secured thereto; of a plate secured respectively to the top rail member and corner post, said plate having horizontal and vertical offsets formed therein whereby the main section of the plate is disposed outwardly of the rest of the plate to secure increased width of the car; and ladder rungs mounted on the car between the aforesaid vertical offset and the end of the car and within the plane of said widened portion of the car.

1,537,051. RAILWAY-CAR CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1923, Serial No. 641,121. Renewed Jan. 31, 1925. 9 Claims. (Cl. 105—247.)

1. In a dump car having a sloping floor, the combination with a side wall; of a body bolster extending trans-



versely of the car beneath the sloping floor; and a plurality of angles arranged in pairs at each end of the bolster, said angles intersecting the sloping floor, each angle of each of said pairs having one of its flanges inwardly dis-

posed and secured to the bolster, the remaining flanges of each pair of angles being disposed in substantial alinement, in the plane of the side wall of the car and secured thereto.

1,537,052. INJECTION AIR REGULATOR ESPECIALLY FOR MARINE OIL ENGINES. GUSTAV PIELSTICK, Augsburg, Germany, assignor to the Firm: Maschinenfabrik Augsburg-Nuernburg, Aktiengesellschaft, Augsburg, Germany, a German Corporation. Filed Aug. 24,1921. Serial No. 494,863. 8 Claims. (Cl. 123—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an oil engine, the combination of a supply of air under pressure for injection, a connection between the supply and the engine cylinder, a pressure control valve in the connection, a fuel charge regulating lever, means for controlling the action of the pressure control valve, and a connection between the fuel charge regulating lever and the control means, operable to cause the control valve to decrease the injection pressure directly with

a movement of the lever producing a decrease in the fuel charge and operable to cause a gradual movement of the control valve to increase the pressure when the regulating lever is moved to increase the fuel charge.

1,537,053. PROCESS OF COLORING CADMIUM. ARTHUR WHITE YOUNG, Kokomo, Ind., assignor to Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed Apr. 2, 1924. Serial No. 703,781. 3 Claims. (Cl. 204—1.)

1. Process of coloring cadmium and cadmium coated articles which comprises contacting an article to be colored with an ammoniacal solution of ammonium molybdate maintained at a temperature of from 100° F. to 180° F. in an electrical circuit in which said article serves as the cathode.

Patents Nos. 1,537,054 to 1,537,930.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 334—No. 2. TUESDAY, MAY 12, 1925. Price—$5 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

The Brighton Chemical Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Agnes C. Graves, of 425 East Water Street, Milwaukee, Wis., for registration of a trade-mark and trade-mark registered July 16, 1905, No. 70,066, to The Brighton Chemical Co., 232 East Fourth Street, Cincinnati, Ohio, and a notice of such declaration sent by registered mail to The Brighton Chemical Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless The Brighton Chemical Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

Arnold Zweekly, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Arnold Zweekly, 289 Fourteenth Avenue, Astoria, Long Island, N. Y., and applications for patents filed by Kimball H. Stark, 1707 University Avenue, New York, N. Y.; William A. Ready, 112 Winthrop Road, Brookline, Mass.; and Walter W. Wood, R. F. D. No. 5, Canton, Ohio, and the Office having failed to secure service on the said Zweekly, notice is hereby given that unless said Zweekly, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

Arnold Zweekly, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Arnold Zweekly, 289 Fourteenth Avenue, Astoria, Long Island, N. Y., and applications for patents filed by Kimball H. Stark, 1707 University Avenue, New York, N. Y.; William A. Ready, 112 Winthrop Road, Brookline, Mass.; and William A. Ready, 112 Winthrop Road, Brookline, Mass., and the Office having failed to secure service on the said Zweekly, notice is hereby given that unless said Zweekly, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, May 1, 1925.*

Westerly Shirt Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Orent's Department Store, Inc., 1225 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered October 22, 1912, No. 88,814, to Westerly Shirt Co., of Westerly, R. I., and 23–25 East Twenty-first Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Westerly Shirt Co., at Westerly, R. I., as well as letters forwarded by the attorney of record to both of the above addresses having been returned to the respective senders by the post-office authorities as undeliverable, notice is hereby given that unless said Westerly Shirt Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Oreg.) The Warren patent, No. 727,505, for street pavement, claims 3, 5, 6, and 11 *Held* valid and infringed. *Cookingham* v. *Warren Bros. Co.*, 3 F. (2d) 890.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,441,401, Duncan and Hubbard, Automatic releasing device, decided April 23, 1925, claims 2 and 3.

Pat. 1,503,096, Currier and Eaton, Call-distributing system, decided April 3, 1925, claims 9 and 10.

Condition of Applications Under Examination at Close of Business May 1, 1925.

Items No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 43,634; Trade-Mark Division, 2,342. Oldest new case, Nov. 1, 1924; oldest amended, Nov. 3, 1924. The dates given are 1924 except where † indicates 1925.) Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting officer action. Nov.	Amended.	Number of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

WATERS *v.* HOLSLAG.

No. 1,969. Decided December 1, 1924.

1. INTERFERENCE—CONCURRENCE OF PATENT OFFICE TRIBUNALS IN AWARDING PRIORITY.

Where the three tribunals of the Patent Office concurred in awarding priority to H., and a careful examination of the evidence and review of the analysis thereof in the opinions of the tribunals below convinced the court that a proper conclusion had been reached, the decision of the Commissioner was affirmed.

2. SAME—ORIGINALITY—PRIORITY.

Where it was established that H. and W. had discussions relative to the invention, but it did not appear that W. had disclosed the invention to H.; where the construction most favorable to W. that could be put upon H.'s letters placed in evidence by W. was that they constituted an admission by H. of joint inventorship, but both parties disclaimed joint inventorship and W. testified positively that he was the sole inventor; where W. failed to establish that he was in possession of the invention prior to H.'s reduction to practice, and where W., in an application filed after H.'s reduction to practice, made only limited claims although the disclosure would support the broader claims of the issue, and only copied the broader claims after H.'s patents had issued, the decision of the Examiner of Interferences awarding priority to H. was affirmed.

APPEAL from Patent Office. Affirmed.

Mr. Eugene C. Brown for Waters.

Mr. Chas. L. Sturdevant and *Mr. E. G. Mason* for Holslag.

PER CURIAM:

[1] This appeal is from the decision of the Commissioner of Patents awarding priority of invention to appellee Holslag for an apparatus and method of arc welding with alternating current.

The case turns entirely upon questions of fact. The record consists of about 1,850 printed pages. The three tribunals of the Patent Office, in most elaborate opinions, have concurred in awarding priority to Holslag. After a careful examination of the evidence, and review of the analysis thereof in the opinions of the tribunals below, we are convinced that a proper conclusion has been reached.

The decision of the Commissioner of Patents is, therefore, affirmed.

The decision of Assistant Commissioner Fenning, rendered in this case, June 23, 1923, is as follows:

The party Waters appeals from the decision of the Examiners in Chief affirming the decision of the Examiner of Interferences awarding priority of invention to Holslag.

The invention relates to an apparatus for and a method of arc welding with alternating current, and particularly to a transformer having a special arrangement of primary and secondary coils and a so-called flux diverter.

Counts 1 to 33, which constituted the issue of this interference as originally declared, are claims appearing in Holslag's Patents Nos. 1,305,360, 1,305,361, and 1,305,362, issued June 3, 1919, on applications filed October 24, 1917, January 14, and April 30, 1918, respectively, and three applications of Waters filed September 25, 1919, in which he copied the claims of the previously issued patents to Holslag.

Claims 34 to 40 constituted the issue of interference No. 43,749, which was consolidated with the present interference, and are claims of Holslag's Patent No. 1,305,363, issued June 3, 1919, on an application filed September 21, 1918, and were introduced by amendment in Waters's application filed June 2, 1918.

The invention in its broadest aspects is set forth in counts 1 to 5, 9 to 14, and 20 to 33, inclusive. Counts 6, 7, 8, and 15 to 19, inclusive, specify that a part of the secondary winding is intermingled with the primary winding and count 8 is further limited to the screw mechanism for adjusting the flux diverter. Counts 34 to 40 include the so-called "steadying windings".

The several groups are illustrated by the following counts:

1. Apparatus utilizing alternating current for metallic arc welding, cutting and repairing including a transformer having a closed circuit core unit, a primary winding on one leg thereof, a secondary having a main section on the same leg of the core alongside the primary and an auxiliary section on another leg of the core remote from the primary and said main section whereby the two sections act to direct the flux in said core unit to meet the conditions of the welding or cutting are formed between metal electrodes connected to the secondary terminals of said core unit.

6. Apparatus utilizing alternating current for electric arc welding, cutting and repairing, including a transformer having a closed circuit core with primary and secondary windings thereon, a part of the secondary being intermingled with the primary, while the balance of the secondary is located on the core remote from the primary and said first part, whereby the magnetic flux is directed in paths to meet very rapidly the varying conditions of the welding, cutting or repairing operations.

8. Apparatus utilizing alternating current for electric arc welding, cutting and repairing, including a transformer having a closed circuit core with primary and secondary windings thereon, a part of the secondary being intermingled with the primary, while the balance of the secondary is located on the core remote from the primary; whereby the magnetic flux is directed in paths to meet very rapidly the varying conditions of the welding, cutting or repairing operations, and a flux controller to assist in controlling the amount of flux passing through the said remote secondary portion, said flux controller being adjusted by a screw mechanism supported by a frame preferably attached to the core.

22. The method of electric arc cutting, welding and repairing by alternating current energy, which consists in supplying alternating current energy, transforming said alternating current energy directly into another form in which the voltage factor is a composite one, and operating a movable electrode in close proximity to the material to be cut, welded or repaired, said material constituting an opposite electrode, and passing the transformed energy through said electrodes, whereby a persistent arc is formed and the heat thereof maintained substantially constant by reason of said composite voltage factor.

34. Apparatus for electric arc cutting and welding, including a transformer having primary and secondary windings in inductive relation to each other, a portion of the secondary being in intimate relation with the primary while the balance of the secondary is remote

therefrom, a steadying winding in series with both portions of the secondary and disposed in inductive relation to both primary and secondary windings and an adjustable flux controller for varying the inductive effects of said windings.

Waters is the junior party as to counts 1 to 33, but the senior party as to counts 34 to 40, inclusive.

In his brief Waters contends, though no reference to this is made in his reasons for appeal, that the decision as to counts 34 to 40 should be in his favor, since Holslag did not take testimony with reference thereto within the time set by the Examiner of Interferences, and that Waters, even after this testimony was taken, was, by the manner in which the Examiner of Interferences' statement of the times for taking testimony was made, deprived of his right to take rebuttal testimony with respect to these counts.

It appears, however, that Holslag took testimony as to these counts at the same time he took testimony as to the other counts in accordance with the permission given him by Commissioner Newton, and that this whole matter has been fully reviewed by the present Commissioner, who, in a decision of October 5, 1922, denied Waters's motion to suspend the appeal to the Examiners in Chief and to restore the jurisdiction of the Examiner of Interferences to permit Waters to take further testimony with reference to these counts.

For the reasons fully stated in the decision of the Commissioner, the fact that Holslag did not take testimony as to counts 34 to 40 within the time originally set affords no ground for the award of priority to Waters.

The question involved, so far as counts 1 to 33 are concerned, is one of originality of invention, Waters claiming that he fully disclosed the invention to Holslag and that—

> I arranged with Mr. Holslag that I would do all of the design work on the forthcoming welding machine and that he would build what I had designed. (Q. 30.)

Holslag denies both the disclosure by Waters to him and the making of any such agreement. He alleges that he was the sole inventor of the invention and that he endeavored to get Waters, who at the time was his intimate friend, to go with him into the commercial development of alternating current welding, but that Waters refused to do so.

The Examiner of Interferences made an exhaustive analysis of the very voluminous record and found that Waters, on whom as the junior party rested the burden of proof with respect to the broadest claims, counts 1 to 33, inclusive, had not established a disclosure of the invention to Holslag; that Holslag had established a conception and a reduction to practice of the invention of all the counts, except count 8, at the latest, in December, 1915, and had embodied the invention in a machine which was publicly used in June, 1917; that he had established a conception and reduction to practice of the invention of count 8 in the late fall of 1917 and that Waters had failed to establish that he was in possession of the invention of any count of the issue prior to Holslag's reduction to practice thereof and putting it into actual use.

The Examiners in Chief agreed with this conclusion except as to count 8, as to which they found corroboration of Holslag's testimony of a reduction to practice at an earlier date in 1917 than that assigned to him by the Examiner of Interferences.

It may be noted, as to counts 34 to 40, that although Waters alleged in his preliminary statement and testified (Q. 94) that he conceived this invention in the latter part of 1916, he offered no corroborating testimony to show that he was in possession of the invention until 1918.

The controversy centers around certain events which occurred in 1915, and particularly certain tests made at the plant of the American Transformer Company in Newark, N. J., and certain work done at the shop of one Steinbock at Peekskill, N. Y.

Waters testified (Q. 28) that in the spring of 1915—

> Mr. Holslag, Mr. Siebenmorgen and myself arranged with Mr. Schermerhorn, of the American Transformer Company of Newark, New Jersey, to allow us to make some tests at his plant—

to determine the feasibility of welding with alternating current, and at that time he told Holslag why the arc would not keep going when a straight resistance was used and would keep going when a reactance was used, and (Q. 29) sketched out a design of a transformer—

> showing two legs, the top and bottom yoke, a primary winding on one leg and a secondary winding on the other leg, various taps on the secondary winding, a few potential taps on the primary winding, an electrode holder connected to the secondary winding and the work to be welded connected to the secondary winding,

and (Q. 30) arranged with Holslag that he (Waters) would do all of the design work and Holslag would build what he had designed. He further testified (Qs. 42 and 46) that in October, 1915, he and Miss Klein, who afterwards became his wife, visited Holslag at his residence in Peekskill, N. Y., and that on this visit he told Holslag he knew the causes of the trouble they were having with the experiments they were making and said:

> • • • You ought to use a real Thomson transformer with a movable core inserted between the two outer legs, a top and bottom yoke, a primary winding on one leg, a secondary winding closely associated with the above primary winding on the same leg, a secondary winding on the other leg, the two secondary windings being connected in series in such a direction as to both act the same in regard to raising or lowering the voltage, taps on the secondary winding to obtain various welding currents, and electrode holder connected to one tap on the secondary winding and the work to be welded connected to the free end of the secondary winding associated with the primary.

He then states that Holslag said this transformer would not work and after some discussion he suggested that they go to Steinbock's shop and adapt one of the earlier machines to "what I say" and—

> we thereupon went to Mr. Steinbock's house and Mr. Steinbock, Mr. Holslag and myself rode to Mr. Steinbock's shop. We took the circular core machine which was still there, wound a few turns of heavy wire around the primary winding, connected this additional winding to the existing secondary winding and took some laminated iron, the length of which was slightly less than the inside diameter of the iron core and we placed these laminations inside of the core on a diameter of the core between the secondary and primary windings so that the flux produced by the primary could be made to enter either the leg having only a secondary winding or the laminations which we inserted.

There is no corroboration of Waters's alleged disclosures of the invention to Holslag, or of his testimony that he and Holslag, in connection with Steinbock, ever rewound a circular core transformer at Steinbock's shop.

Waters's statement as to the visit to the American Transformer Company gives the impression that it was made at his suggestion, but Siebenmorgen, who was called as a witness by Waters, testifies that Waters and Holslag were sent at his suggesion by Mr. Currie, who was their superior officer in the New York Central Railway Company. Siebenmorgen states (Q. 7) that he told Currie that it was possible to weld successfully directly from an alternating current line without the interposition of any cumbersome generating apparatus, and that—

> Mr. Currie doubted my statements and was plain in stating so. I then prevailed on Mr. Currie to send Mr. Waters and Mr. Holslag with me for the demonstration of the facts. I arranged with the American Transformer Company to allow me to use some of their apparatus and the demonstration was eventually made as originally conceived.

The scheme tried out at the American Transformer Company was not within the issue since it did not involve the specified arrangement of coils on the core, but was a scheme for using both a reactance and resistance in the secondary circuit, such as is disclosed in the patent to Arendt, and the design which Waters says, in his answer to Q. 29, that he sketched out following the test at the American Transformer Company, does not fall within the issue, not having the secondary winding on both legs.

There is much testimony and controversy as to the dates on which these tests took place but it is established by the records of the Amreican Transformer Company that tests were made on July 13, 1915 (see Hunter's testimony, Qs. 4 to 7, Holslag's record, p. 615, and Holslag's Exhibits 63 and 64).

The only importance of the date of this test is as showing whether a certain experiment, hereafter to be referred to, in which a U-shaped strap of iron was used, was done on Labor Day or on Memorial Day, 1915.

It is the claim of Waters that, following these tests in Newark, Holslag went with him repeatedly to Steinbock's garage in Peekskill, N. Y., and made a number of tests or experiments during the summer of 1915.

Steinbock testifies as to work done at his shop, but he does not state that a circular core was used which was rewound, as testified to by Waters in his answer to Q. 46. Furthermore, he states expressly that the tests made with the transformer having a circular core made of laminations, brought to the shop by Holslag, were unsuccessful and they could not hold the arc or weld to any extent (Qs. 43 to 51, Water's record, p. 132, 133).

Holslag testifies (Q. 41) that on Labor Day, 1915, he was in Steinbock's garage and that he improvised a welding apparatus, using a U-shaped piece of iron upon which primary and secondary coils were wound and that after some difficulties, due to the kind of wire used, he welded a broken tire-retaining ring which had been brought to the shop by a chauffeur. He is corroborated as to the making of this apparatus and the test by Steinbock, who testified for Waters, although Steinbock says that he learned afterwards the weld did not hold.

Steinbock testifies that this experiment was made on Labor Day, 1915, fixing the date by a bill for wire, which he says was the wire used, which bill is dated September 8, 1915, (Qs. 10–18), but afterwards he says (Q. 33) that he is sure the U experiment was made on a holiday, and that his recollection had always been that that holiday was Decoration Day until he saw the bill for the wire; but, however, after reading over Mr. Holslag's letter (referring to the letter which is in evidence as Waters's Exhibit B) he is positive that the experiment was made on Decoration Day.

There are many reasons for concluding that Holslag is right as to the date when this U experiment was made and that Steinbock was in error in fixing it as on Decoration Day.

In the first place it is not probable that Holslag would have said nothing about this experiment to Waters, with whom he was then on the most intimate terms, if, as a matter of fact, that experiment had been made before the tests at the American Transformer Company, which has been pointed out were made as late as July 13, 1915.

In the second place Harry Steinacker, who had stated, when testifying as a witness for Waters, that he saw this experiment and that it took place in the spring of 1915, is shown to have been clearly mistaken by his subsequent testimony when called as a witness for Holslag.

When testifying for Waters, he stated that he had been employed by Steinbock since the latter went into business for himself in 1915 (Q. 4) and that he had previously been employed by the Winchester Repeating Arms Company, of New Haven (XQ. 31) and that he fixes the date of the experiment as being in the spring because he can remember that it was in the spring and that he knew it was a holiday (XQ. 46), and that he knew it was a holiday because no one of the other men was working in the shop and the only time "we" shut down was Sundays and holidays (XQ. 47) and that he did not return to the shop until the next day (XQ. 52).

Steinbock, however, testifies that Harry Steinacker began to work for him a week before September 11, 1915 (Holslag's record, p. 1011, Q. 39), and Harry Steinacker, when called as a witness for Holslag, admits that he worked for the Winchester Repeating Arms Company until September 8, 1915 (Holslag's record, p. 1055, Q. 19), and that he came to his home in Peekskill on Decoration Day of that year and returned to New Haven on May 31st (Qs. 32 to 37). It thus would have been impossible for him to have seen the U experiment

on Memorial Day if, as he states, it occurred at a time when he was working for Steinbock and he returned to the shop on the day after the holiday.

It further appears that the meter of the Peekskill Lighting and Railroad Company was not installed in Steinbock's shop until August 23, 1915 (Bagley, Q. 8), and that therefore the disturbance on the line and the blowing out of fuses, which several of the witnesses testified took place as a result of Holslag's experiments made with the U-shape bar of iron, could not have taken place as early as Memorial Day of 1915.

Bagley, a witness called on behalf of Holslag, testifies, on cross-examination, that there was a two-phase power circuit in the building in which Steinbock's shop was located, supplying current to the Anderson Machine Works, and that he believes that Steinbock hooked on to the Anderson service wires for temporary power (XQ. 33 and 34).

Waters contends that this testimony shows that Holslag was working in Steinbock's shop prior to Labor Day, 1915; but Bagley does not testify that he knew that Steinbock had hooked onto the Anderson service wires and, moreover, he testifies that he can not fix, with any definiteness, the time when Holslag and Steinbock told him they were working on the development of an electrical device (XQ. 22, 24 and 25), but that he thinks it was about a month or a month and a half before the meter was installed in Steinbock's shop on August 23, 1915.

This testimony clearly does not show that the U experiment was made as early as Memorial Day, 1915, and Bagley's statement as to his general recollection of the time when Holslag and Steinbock told him they were working together, given more than five years later, can not be taken to establish that they were working together prior to Labor Day, 1915.

The testimony with respect to Holslag's Exhibit 3, which is a transformer having a circular core, has been fully analyzed by the Examiner of Interferences and it is not deemed necessary to repeat that analysis, but it is sufficient to say that all the testimony with reference thereto and the brief for Waters have been fully considered, but that no error is found in the holding of the Examiner of Interferences that this exhibit, as rewound in the latter part of 1915 at West Albany, N. Y., by McAllister and Gustafson, embodies the invention of all the counts except count 8 and that welding was successfully done with it at that time. (See the testimony of McAllister, Q. 8; Messer, Q. 22 and XQ. 189; and Gustafson, Q. 15 et seq.)

The further development of Holslag's work is also fully set forth in the decision of the Examiner of Interferences, and it appears that a transformer embodying the invention of all the counts, except count 8, was used on what is known in the record as the "Putnam bridge job" and on the pole-welding job for the New York Central Railway in 1917, the "Putnam bridge job," which was the welding of a boiler, having been done in June, 1917, and the pole-welding job in the latter part of 1917. The record shows that the invention of count 8 was reduced to practice by Holslag at least as early as December 1, 1917.

There are inconsistencies in Holslag's testimony in this case when compared with his testimony in interference No. 43,739 as to his working at Steinbock's shop in the summer of 1915 prior to Labor Day, and he gives a rather disingenuous explanation of the use of the pronoun "we" in a letter which he wrote in reference to the alternating-current welding scheme, in which he makes reference to Woticky (Waters's name at that time), which letter is in evidence as Waters's Exhibit H and will be hereafter further referred to; but these are not regarded as such as to warrant a refusal to believe Holslag's story as to the conception and development of the invention in view of the corroboration by others.

That Holslag and Waters had had discussions as to electric welding with an alternating current seems to be established, but it does not appear from the testimony with reference thereto that Waters at any time had disclosed the invention in issue to Holslag, nor can the conclusion be drawn from the fact of these discussions that such disclosures had been made.

Waters relies strongly upon the letters which are in evidence as Waters's Exhibits B, D, E, G, H, and Z as showing that he had disclosed the invention of counts 1 to 33 to Holslag. The first of these letters is a letter dated December 30, 1916, (Waters' Exhibit B), written by Holslag to Schuetz, asking for his opinion as to its patentability. In this letter occurs the following:

> This scheme was brought to a workable state by C. B. Woticky and myself between the 4th of July and Labor Day, 1915, at the Steinbock Machine Works, Peekskill, N. Y., and the original apparatus has been and still is in use at that place.

This letter was accompanied by a memorandum and drawing showing a core with the primary coil and one coil of the secondary on one leg and another coil of the secondary on the other leg and a movable flux diverter.

Waters's Exhibits D and E are, respectively, a letter from Holslag to Woticky (Waters) and a sheet of sketches, in which is shown a circular core transformer. This sheet of sketches, which is a carbon copy, bears Holslag's name in carbon and the name, C. B. Woticky, written in pencil.

Waters's Exhibits G and H are letters signed by Holslag and addressed to the Siemund-Wenzel Welding Company and the Quasi-Arc Company, which Holslag sent to Woticky with a letter dated September 28, 1916 (in evidence as Waters's Exhibit F), in which he asked Woticky to sign and mail them. These letters are the ones which use the plural pronoun "we", the first sentence of exhibit H reading: "We have recently developed and tried out", etc.

Exhibit Z is a letter dated April 7, 1916, written to Mr. Rumney, of the Siemund-Wenzel Company of New York, describing the alternating-current welding. The first paragraph of this letter reads as follows:

> As per our conversation of two days ago, I talked with Mr. C. B. Woticky, my partner in this AC welding scheme, who says he would be glad to let you have our developments to date in this line if they are worth anything. With our developments we arrived at the point where we were able to weld from a simple small transformer direct from the terminals of the 1. e., no reactance or resistance in the welding circuit.

Holslag states in his testimony that these letters merely showed that Waters was regarded by him as his partner in the alternating-current-welding scheme (XQ 1164) and that the words in the letter, Waters's Exhibit B, "was brought to a workable state by C. B. Woticky and myself between the 4th of July and Labor Day, 1915," refer to the work that Waters and he did in the summer of 1915 at the American Transformer Company and that on December 30, 1916, he was still trying to get Waters to go in with him on the alternating-current-welding scheme in general, but that Waters constantly belittled it and did absolutely nothing except to go over to the American Transformer Company with him.

While, as above stated, Holslag's explanation of the use of the pronoun "we" is disingenuous, these letters do not show that Waters and not Holslag was the inventor of the invention in issue nor do they show that Holslag was working on that invention at Steinbock's shop prior to Labor Day, 1915. The most favorable construction to Waters that could be put upon them is that they constitute an admission by Holslag of joint inventorship, but both parties disclaim joint inventorship and Waters testifies positively that he was the sole inventor.

There is in evidence as Holslag's Exhibit No. 24 a letter from Waters to Holslag, dated December 31, 1916, in which occurs the following:

> Concerning the electric welding: it looks as if I will be unable to devote much time to it for the next six months. I have been sick with an attack of grippe since Christmas so I am way behind in my work and I don't like to go into something in a half-hearted manner. You can therefore consider this as a release on your part.

Obviously a man can not release his inventorship, and this letter is more consistent with Holslag's claim that he and Waters were partners than with any claim of Waters as now made that he was the inventor.

In the brief for Waters (p. 39) it is stated that this release "might as a matter of fact, and doubtless does, refer to anything that Holslag might develop after the letter was written". This does not seem to be a logical construction to put upon the letter and it is significant that Waters nowhere testifies that that was his intent when he wrote that letter.

There is a very significant sentence in this letter—namely, the one following the matter above quoted, in which Waters says:

> However, if you want my idea of something good, here it is—an efficient and cheap lightning arrester.

This is followed by a drawing and a description of a lightning arrester.

There is another significant fact with respect to Water's present claim of inventorship of the broader invention—namely, that when he filed his application No. 243,002, on July 2, 1918, which shows a core having a third leg with a part of the secondary winding thereon, only limited claims were made therein, although the disclosure of this application will support the broader claims of the issue, and it was not until after Holslag's patents had issued on June 3, 1919, that Waters copied the broad claims therefrom.

As to counts 34 to 40, Waters testifies that in 1916 he conceived the means for eliminating the movable core—that is, the so-called flux diverter, and that he made sketches showing the three-legged core with one of the secondary windings thereon. This is one of the constructions shown in his first application. He claims to have disclosed this to Klein late in 1916 and also to have disclosed it to Sindeband, Feldman, Rohman, and Coburn, but he does not specifically state at what time it was disclosed to these parties.

Klein, who is Waters's father-in-law, was one of Waters's witnesses, but he was not asked as to any disclosure to him in 1916, and he does not testify as to any disclosure prior to 1918.

Sindeband testifies to nothing with reference to this invention which took place prior to 1918, and the other parties named by Waters were not called. This date of 1918 was long subsequent to the time when Holslag had actually reduced the invention of all the counts to practice.

It may be noted here that the welding of the boiler at the Putnam bridge which was done in June, 1917, was apparently a public use of the invention and that this date is more than two years prior to the filing of the three later Waters's applications and would therefore be a bar to the grant of any claims to Waters, even if he had been the first inventor, unless they are supported by the disclosure of his 1918 application.

[2] The decision of the Examiners in Chief awarding priority to Holslag is affirmed.

Supreme Court of the United States.

WILLIAM R. WARNER & COMPANY *v.* ELI LILLY & COMPANY.

Decided June 9, 1924.

[265 U. S. 526.]

1. TRADE-MARKS—DESCRIPTIVE NAMES.
   Names which are merely descriptive of the ingredients, qualities, or characteristics of an article of trade, such as the names "Coco-Quinine" and "Quin-Coco" applied to a liquid preparation of quinine in combination with chocolate and other things, can not be appropriated as trade-marks.

2. SAME—SAME.
   The use of a name similar to that already employed by another, truthfully to describe one's own product, is not a legal or moral wrong, even if its effect be to cause the public to mistake the origin or ownership of that product.

3. UNFAIR COMPETITION.

A. first made and marketed a liquid preparation containing quinine and other drugs compounded with chocolate to give it color and flavor and to aid in suspending the quinine. B. then, using chocolate, produced an article of the same taste and appearance, but sold cheaper, and to reap A.'s trade suggested to retail druggists the feasibility and economy of passing off the one for the other, when dispensed out of the bottle, which was done in many and divers instances.

Held: (a) That B. was guilty of unfair competition.

(b) He who induces another to commit a fraud and furnishes the means is equally guilty.

(c) When several acts of unfair competition are shown, there is warrant for concluding that they will continue, and equity will afford adequate relief by injunction.

(d) The injunction in this case should forbid B. and his agents from directly or indirectly representing or suggesting to his customers the feasibility or possibility of passing off B.'s product for A.'s, and may well require that his original packages sold to druggists shall bear labels not only distinguishing B.'s bottled product from A.'s, but also stating affirmatively that B.'s preparation is not to be sold or dispensed as A.'s or be used in filling prescriptions or orders calling for the latter.

(e) But the use by B. of chocolate as an ingredient of his preparation should not be forbidden.

275 Fed. 752 reversed.

APPEAL from a decree of the circuit court of appeals which reversed a decree of the district court dismissing on the merits a suit brought by the above-named respondent to enjoin the petitioner from continuing to manufacture a medicinal preparation called Quin-Coco, if flavored with chocolate, and from continuing the use of that name.

Mr. George W. Wickersham and *Mr. Francis Rawle*, with whom *Mr. Roger S. Baldwin* and *Mr. Joseph W. Henderson* were on the briefs, for the petitioner.

Mr. E. W. Bradford for the respondent.

Mr. Justice SUTHERLAND delivered the opinion of the Court.

Respondent is a corporation engaged in the manufacture and sale of pharmaceutical and chemical products. In 1899 it began and has ever since continued to make and sell a liquid preparation of quinine, in combination with other substances, including yerba santa and chocolate, under the name of Coco-Quinine.

Petitioner also is a pharmaceutical and chemical manufacturer. The Pfeiffer Chemical Company, Searle & Hereth Company, and petitioner are under the same ownership and control. The first-named company in 1906 began the manufacture of a liquid preparation which is substantially the same as respondent's preparation and which was put upon the market under the name of Quin-Coco. Two years later the Searle & Hereth Company engaged in the manufacture of the preparation, which ever since has been sold and distributed by petitioner.

This suit was brought in the Federal District Court for the Eastern District of Pennsylvania by respondent to enjoin petitioner from continuing to manufacture and sell the preparation if flavored or colored with chocolate; and also from using the name Quin-Coco, on the ground that it was an infringement of the name Coco-Quinine, to the use of which respondent had acquired an exclusive right. The district court decided against respondent upon both grounds. 268 Fed. 156. On appeal the court of appeals ruled with the district court upon the issue of infringement but reversed the decree upon that of unfair competition. 275 Fed. 752.

The entire record is here and both questions are open for consideration.

[1, 2] First. We agree with the courts below that the charge of infringement was not sustained. The name Coco-Quinine is descriptive of the ingredients which enter into the preparation. The same is equally true of the name Quin-Coco. A name which is merely descriptive of the ingredients, qualities, or characteristics of an article of trade can not be appropriated as a trade-mark and the exclusive use of it afforded legal protection. The use of a similar name by another to truthfully describe his own product does not constitute a legal or moral wrong, even if its effect be to cause the public to mistake the origin or ownership of the product. *Canal Co.* v. *Clark*, 13 Wall. 311, 323, 327; *Standard Paint Co.* v. *Trinidad Asphalt Co.*, 165 O. G. 971; 1911 C. D. 530; 220 U. S. 446, 453; *Howe Scale Co.* v. *Wyckoff, Seamans & Benedict*, 116 O. G. 209; 1905 C. D. 717; 198 U. S. 118, 140.

Second. The issue of unfair competition, on which the courts below differed, presents a question of more difficulty. The testimony is voluminous, more than 200 witnesses having been examined; but, since the question with which we are now dealing is primarily one of fact, we have found it necessary to examine and consider it. Nothing is to be gained by reviewing the evidence at length, and we shall do no more than summarize the facts upon which we have reached our conclusions.

[3a, 3b] The use of chocolate as an ingredient has a threefold effect: It imparts to the preparation a distinctive color and a distinctive flavor, and, to some extent, operates as a medium to suspend the quinine and prevent its precipitation. It has no therapeutic value; but it supplies the mixture with a quality of palatability for which there is no equally satisfactory substitute. Respondent, by laboratory experiments, first developed the idea of the addition of chocolate to the preparation for the purpose of giving it a characteristic color and an agreeable flavor. There was at the time no liquid preparation of quinine on the market containing chocolate, though there is evidence that it was sometimes so made up by druggists when called for. There is some evidence that petitioner endeavored by experiments to produce a preparation of the exact color and taste of that produced by respondent; and there is evidence in contradiction. We do not, however, regard it as important to determine upon which side lies the greater weight. Petitioner, in fact, did produce

a preparation by the use of chocolate so exactly like that of respondent that they were incapable of being distinguished by ordinary sight or taste. By various trade methods an extensive and valuable market for the sale of respondent's preparation already had been established when the preparation of petitioner was put on the market. It is apparent, from a consideration of the testimony, that the efforts of petitioner to create a market for Quin-Coco were directed not so much to showing the merits of that preparation as they were to demonstrating its practical identity with Coco-Quinine, and, since it was sold at a lower price, inducing the purchasing druggist, in his own interest, to substitute, as far as he could, the former for the latter. In other words, petitioner sought to avail itself of the favorable repute which had been established for respondent's preparation in order to sell its own. Petitioner's salesmen appeared more anxious to convince the druggists with whom they were dealing that Quin-Coco was a good substitute for Coco-Quinine and was cheaper, than they were to independently demonstrate its merits. The evidence establishes by a fair preponderance that some of petitioner's salesmen suggested that, without danger of detection, prescriptions and orders for Coco-Quinine could be filled by substituting Quin-Coco. More often, however, the feasibility of such a course was brought to the mind of the druggist by pointing out the identity of the two preparations and the enhanced profit to be made by selling Quin-Coco because of its lower price. There is much conflict in the testimony, but on the whole it fairly appears that petitioner's agents induced the substitution, either in direct terms or by suggestion or insinuation. Sales to druggists are in original bottles bearing clearly distinguishing labels and there is no suggestion of deception in those transactions; but sales to the ultimate purchasers are of the product in its naked form out of the bottle; and the testimony discloses many instances of passing off by retail druggists of petitioner's preparation when respondent's preparation was called for. That no deception was practiced on the retail dealers, and that they knew exactly what they were getting is of no consequence. The wrong was in designedly enabling the dealers to palm off the preparation as that of the respondent. *Coca Cola Co.* v. *Gay-Ola Co.*, 200 Fed. 720; *N. K. Fairbank Co.* v. *R. W. Bell Manuf'g. Co.*, 77 Fed. 869, 875, 877–878; *Lever* v. *Goodwin*, L. R. 36 Ch. Div. 1, 3; *Enoch Morgan's Sons* v. *Whittier-Coburn Co.*, 118 Fed. 657, 661. One who induces another to commit a fraud and furnishes the means of consummating it is equally guilty and liable for the injury. *Hostetter Co.* v. *Brueggeman-Reinert Distilling Co.*, 56 O. G. 590; 1891 C. D. 460; 46 Fed. 188, 189.

[3c] The charge of unfair competition being established, it follows that equity will afford relief by injunction to prevent such unfair competition for the future. Several acts of unfair competition having been shown, we are warranted in concluding that petitioner is willing to continue that course of conduct, unless restrained. *Hennessy* v. *Wine Growers' Ass'n*, 212 Fed. 308, 311. It remains to consider the character and extent of this relief.

Respondent has no exclusive right to the use of its formula. Chocolate is used as an ingredient not alone for the purpose of imparting a distinctive color, but for the purpose also of making the preparation peculiarly agreeable to the palate, to say nothing of its effect as a suspending medium. While it is not a medicinal element in the preparation, it serves a substantial and desirable use, which prevents it from being a mere matter of dress. It does not merely serve the incidental use of identifying the respondent's preparation, *Coca Cola Co.* v. *Gay-Ola Co.*, *supra*, p. 724, and it is doubtful whether it should be called a non-essential. The petitioner or anyone else is at liberty under the law to manufacture and market an exactly similar preparation containing chocolate and to notify the public that it is being done. *Saxlehner* v. *Wagner*, 152 O. G. 490; 1910 C. D. 509; 216 U. S. 375, 380; *Chadwick* v. *Covell*, 151 Mass. 190. But the imitator of another's goods must sell them as his own production. He can not lawfully palm them off on the public as the goods of his competitor. The manufacturer or vendor is entitled to the reputation which his goods have acquired and the public to the means of distinguishing between them and other goods; and protection is accorded against unfair dealing whether there be a technical trade-mark or not. The wrong is in the sale of the goods of one manufacturer or vendor as those of another. *Elgin National Watch Co.* v. *Illinois Watch Case Co.*, 94 O. G. 755; 1901 C. D. 273; 179 U. S. 665, 674. If petitioner had been content to manufacture the preparation and let it make its own way in the field of open and fair competition, there would be nothing more to be said. It was not thus content, however, but availed itself of unfair means, either expressly or tacitly, to impose its preparation on the ultimate purchaser as and for the product of respondent.

[3d, 3e] Nevertheless, the right to which respondent is entitled is that of being protected against unfair competition, not of having the aid of a decree to create or support, or assist in creating or supporting, a monopoly of the sale of a preparation which everyone, including petitioner, is free to make and vend. The legal wrong does not consist in the mere use of chocolate as an ingredient, but in the unfair and fraudulent advantage which is taken of such use to pass off the product as that of respondent. The use dissociated from the fraud is entirely lawful, and it is against the fraud that the injunction lies. But respondent being entitled to relief, is entitled to effective relief; and any doubt in respect of the extent thereof must be resolved in its favor as the innocent producer and against the petitioner, which has shown by

its conduct that it is not to be trusted. Clearly, the relief should extend far enough to enjoin petitioner, and its various agents, from, directly or indirectly, representing or suggesting to its customers the feasibility or possibility of passing off Quin-Coco for Coco-Quinine. The court of appeals held that petitioner should be unconditionally enjoined from the use of chocolate. We think this goes too far; but, having regard to the past conduct of petitioner, the practices of some druggists to which it has led, and the right of respondent to an effective remedy, we think the decree fairly may require that the original packages sold to druggists shall not only bear labels clearly distinguishing petitioner's bottled product from the bottled product of respondent, but that these labels shall state affirmatively that the preparation is not to be sold or dispensed as Coco-Quinine or to be used in filling prescriptions or orders calling for the latter. With these general suggestions, the details and form of the injunction can be more satisfactorily determined by the district court. The decree of the court of appeals is reversed and the cause remanded to the district court for further proceedings in conformity with this opinion.

Reversed.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 12, 1925.

[VOL. 334. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 172,143. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) FRANCIS H. BURRACOTT, Chicago, Ill. Filed Nov. 17, 1922.

RADIO-PSYCHO-TECTOR

Particular description of goods.—Sex Detectors.
Claims use since Sept. 10, 1922.

Ser. No. 172,452. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) UNITED & GLOBE RUBBER COMPANY, Trenton, N. J. Filed Nov. 23, 1922. Under ten-year proviso.

SAFETY

Particular description of goods.—Inner Tubes.
Claims use since September, 1887.

Ser. No. 178,877. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) SAMUEL S. STALEY, Reading, Pa. Filed Apr. 9, 1923.

MASTER-METALS

No claim is made to the word "Metals" apart from the mark as shown.

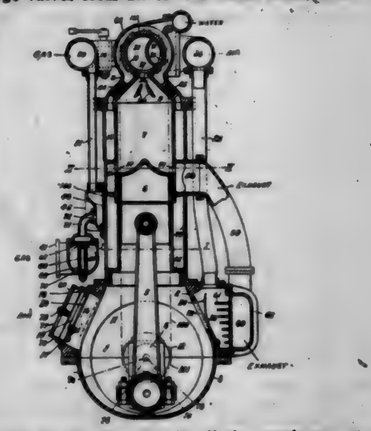
REISSUES

MAY 12, 1925.

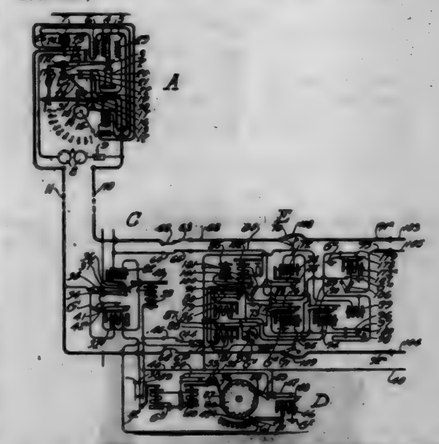
16,067. MOTOR-DRIVEN VEHICLE. CHARLES F. FELTS, St. Louis, Mo., assignor, by direct and mesne assignments, to Stonay L. Langdale, trustee, St. Louis, Mo. Filed Sept. 11, 1920. Serial No. 409,708. Original No. 1,193,182, dated Aug 1, 1916, Serial No. 810,873, filed Jan. 5, 1914. 8 Claims. (Cl. 180—70.)

5. In a motor vehicle having an engine and traction wheels, driving connections from said engine to said wheels, comprising, a shiftable clutch leading from said engine, differential gearing leading to said wheels, transmission gearing intermediate said clutch and said differential gearing, and a clutch device between said clutch and said transmission gearing adapted to effect driving of said wheels by said engine but preclude driving of said engine by said wheels.



16,068. ARCH SUPPORT. WILLIAM N. SECHLER, Fort Scott, Kans. Filed Apr. 8, 1922. Serial No. 550,908. Original No. 1,391,584, dated Sept. 20, 1921, Serial No. 442,770, filed Feb. 5, 1921. 12 Claims. (Cl. 36—76.)

1. An arch support formed of separate sections and spaced tongues extending from the adjacent edges of the sections, the tongues of one section fitting within the spaces between the tongues of the other section and overlying said adjacent edges, to connect the sections in a manner to permit of relative pivotal and longitudinal movement.



16,069. INTERNAL-COMBUSTION ENGINE. WALTER W. MACFARREN, Pittsburgh, Pa. Filed Mar. 30, 1923. Serial No. 628,869. Original No. 1,325,305, dated Dec. 16, 1919, Serial No. 803,185, filed Nov. 26, 1913. 25 Claims. (Cl. 123—59.)

1. In an internal combustion engine, a plurality of cylinders, a piston and an independent closed crank case for each cylinder, separate air inlet and discharge valves for each of said crank cases, a manifold connecting the discharge valves from all of said crank cases, means

for distributing the air pumped in all the crank cases to the several cylinders, and separate means for supplying fuel to the cylinders.

16,070. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. OMER KIRBY, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1920. Serial No. 400,257. Original No. 1,172,366, dated Feb. 22, 1916, Serial No. 503,100, filed June 19, 1909. 50 Claims. (Cl. 179—18.)

11. In a telephone system, means controllable by the calling subscriber for automatically extending connection from the calling line to the called line, said means being controlled exclusively over the two sides of the calling line in series to select the called line, and means for releasing the connection controllable only by the subscriber who hangs up his receiver last.

DESIGNS

MAY 12, 1925.

67,254. BOOT OR SIMILAR ARTICLE. DONALD B. ABBOTT, Yarmouth, Me. Filed May 1, 1924. Serial No. 9,460. Term of patent 3½ years.

The ornamental design for a boot or similar article as shown.

67,255. GOLF TEE. ANDREW P. ALVORD, New York, N. Y. Filed Dec. 19, 1924. Serial No. 11,751. Term of patent 7 years.

The ornamental design for a golf tee as shown.

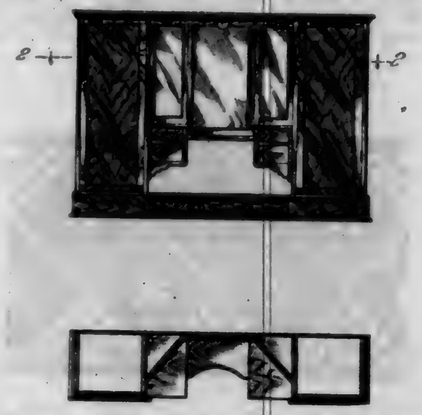
The ornamental design for a combined tellurion and clock case, as shown.

67,258. BATTERY CONTAINER. MARINO BELLO, Highland Park, Ill. Filed Mar. 11, 1925. Serial No. 12,680. Term of patent 7 years.



The ornamental design for a battery container, as shown.

67,259. HEADLIGHT. OLAF BERGSON, Red Wing, Minn. Filed Apr. 21, 1924. Serial No. 9,340. Term of patent 14 years.

The ornamental design for a headlight, as shown.

67,260. COMBINATION DRESSING TABLE AND WARDROBE. GUY H. BLACKSTONE, Zanesville, and ROBERT E. SILVEY, Columbus, Ohio. Filed Oct. 27, 1924. Serial No. 11,197. Term of patent 3½ years.

The ornamental design for a combination dressing table and wardrobe, as shown.

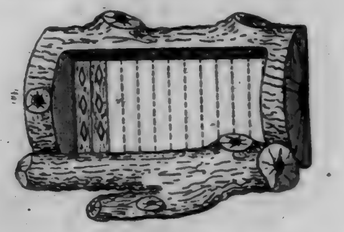
67,261. LAMP. RICHARD W. BOCK, River Forest, Ill. Filed Feb. 2, 1925. Serial No. 12,238. Term of patent 3½ years.

The ornamental design for a lamp, as shown.

67,262. PLATE OR SIMILAR ARTICLE. LEWIS H. BOWN, East Aurora, N. Y., assignor to Buffalo Pottery, Buffalo, N. Y. Filed June 27, 1924. Serial No. 9,982. Term of patent 3½ years.

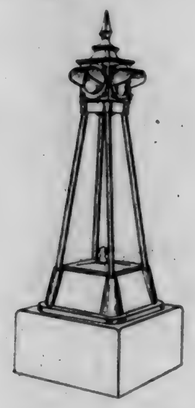
The ornamental design for a plate or similar article, as shown.

67,263. CRUMB SCRAPER. HAROLD L. BRIGGS, Canastota, N. Y. Filed Feb. 18, 1925. Serial No. 12,407. Term of patent 3½ years.



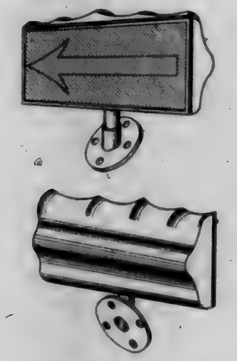
The ornamental design for a crumb scraper, as shown.

67,264. GLASS CONDIMENT JAR. RAYMOND V. BROMLEY, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Feb. 16, 1924. Serial No. 8,652. Term of patent 14 years.



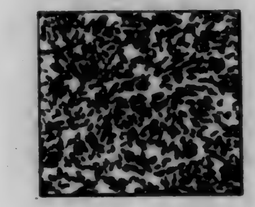
The ornamental design for a glass condiment jar, as shown.

67,265. GAS HEATER. EUGENE S. BROWN, Oak Station, Pa. Filed Mar. 30, 1923. Serial No. 5,652. Term of patent 14 years.



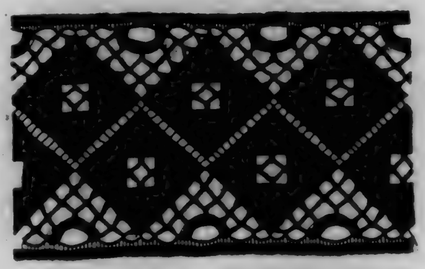
The ornamental design for a gas heater, as shown.

67,266. STREET TRAFFIC SIGNAL. FRANK BUCHANAN, Syracuse, N. Y. Filed Mar. 12, 1925. Serial No. 12,699. Term of patent 14 years.



The ornamental design for a street traffic signal, substantially as shown.

67,267. SIGNAL LIGHT. WILLIAM EDWARD BUSCH, JR., Akron, Ohio. Filed Nov. 13, 1924. Serial No. 11,866. Term of patent 14 years.



The ornamental design for a signal light, as shown.

67,268. PAPER. ALLAN M. CHALMERS, Holyoke, Mass., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1925. Serial No. 12,020. Term of patent 14 years.

The ornamental design for paper as shown.

67,269. LACE. MARC H. DAUDY, Philadelphia, Pa., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 22, 1924. Serial No. 10,218. Term of patent 3½ years.

The ornamental design for lace, substantially as shown.

67,270. LACE. MARC H. DAUDY, Philadelphia, Pa., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 23, 1924. Serial No. 10,241. Term of patent 3½ years.

The ornamental design for lace, substantially as shown and described.

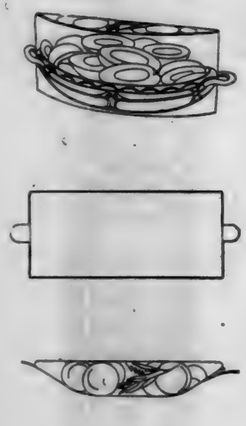
67,271. DRESS. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1925. Serial No. 12,328. Term of patent 3½ years.

The ornamental design for a dress substantially as shown and described.

67,272. SHOE. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1925. Serial No. 12,331. Term of patent 3½ years.

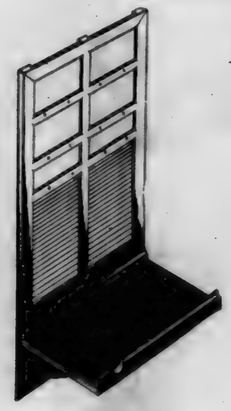
The ornamental design for a shoe substantially as shown and described.

67,273. COAT. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 16, 1925. Serial No. 12,391. Term of patent 3½ years.



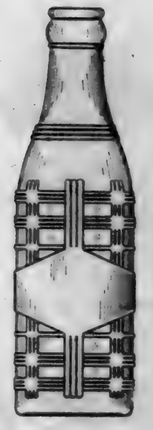
The ornamental design for a coat, substantially as shown.

67,274. COMBINED CLOCK CASE AND STAND. PETER DEMETROPOULOS, Chicago, Ill. Filed Feb. 9, 1924. Serial No. 8,580. Term of patent 3½ years.



The ornamental design for a combined clock case and stand or a similar device, as shown.

67,275. CARTON. JOSEPH BLOWER DRING, Boston, England. Filed Oct. 29, 1923. Serial No. 7,612. Term of patent 14 years.

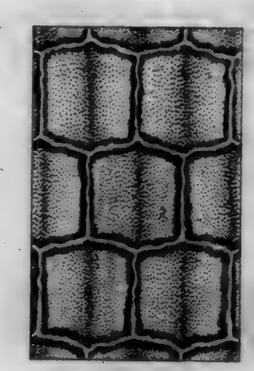


The ornamental design for a carton as shown.

67,276. WALL TABLE. CHARLES GERHARDS, Chicago, Ill. Filed Mar. 14, 1924. Serial No. 8,929. Term of patent 7 years.

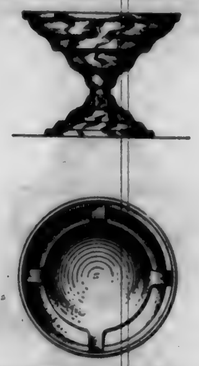
The ornamental design for a wall table, as shown.

67,277. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,508. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,278. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,511. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,279. PILE FABRIC. JAMES GOWANS, Leonia, N. J., assignor to Sidney Blumenthal & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 25, 1925. Serial No. 12,483. Term of patent 7 years.

The ornamental design for a pile fabric, as shown.

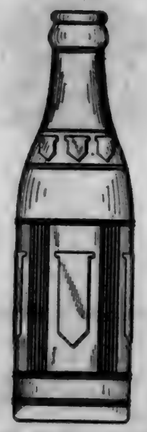
67,280. LOUD SPEAKER. STEPHEN HAJDUKOVITCH, Richmond Hill, N. Y. Filed Mar. 16, 1925. Serial No. 12,735. Term of patent 3½ years.

The ornamental design for a loud speaker, as shown.

67,281. PLATE OR SIMILAR ARTICLE. SAMUEL HASLAM, Attleboro, Mass. Filed Dec. 23, 1924. Serial No. 11,775. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

67,282. HEADDRESS. HENRY B. HEYMAN, New York, N. Y., assignor to The Simone Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 11, 1925. Serial No. 12,679. Term of patent 7 years.

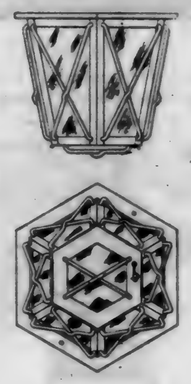


The ornamental design for a headdress, as shown.

67,283. WALL PAPER. ROBERT F. HOBBS, Delanco, N. J., assignor to Robert F. Hobbs, Inc., a Corporation of New Jersey. Filed Feb. 2, 1925. Serial No. 12,235. Term of patent 3½ years.

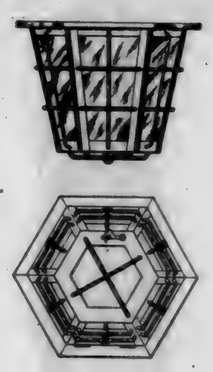
The ornamental design for wall paper as shown.

67,284. BOTTLE. SIGFRID W. JOHNSON, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,517. Term of patent 14 years.



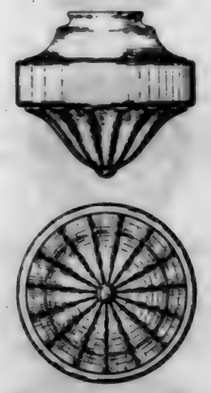
The ornamental design for a bottle, substantially as shown.

67,285. BOTTLE. SIGFRID W. JOHNSON, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,520. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,286. CEILING LAMP. GEORGE J. KLEIN, Cleveland, Ohio. Filed July 12, 1924. Serial No. 10,123. Term of patent 3½ years.



The ornamental design for a ceiling lamp, as shown.

67,287. CEILING LAMP. GEORGE J. KLEIN, Cleveland, Ohio. Filed July 12, 1924. Serial No. 10,126. Term of patent 3½ years.

The ornamental design for a ceiling lamp, as shown.

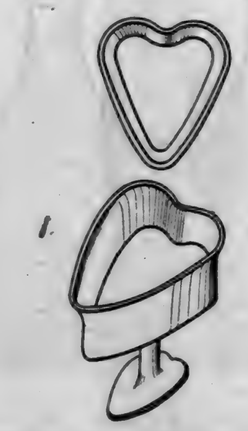
67,288. ILLUMINATING GLOBE. NICHOLAS KOPP, Pittsburgh, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 26, 1924. Serial No. 11,803. Term of patent 14 years.

The ornamental design for an illuminating globe, as shown.

67,289. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio, assignor to McBee-Ladewich Company, Mansfield, Ohio, a Partnership. Filed Mar. 30, 1925. Serial No. 12,954. Term of patent 7 years.

The ornamental design for a monument as shown.

67,290. DOLL. ESTHER L. LINDER, Washington, D. C. Filed Aug. 25, 1924. Serial No. 10,548. Term of patent 3½ years.

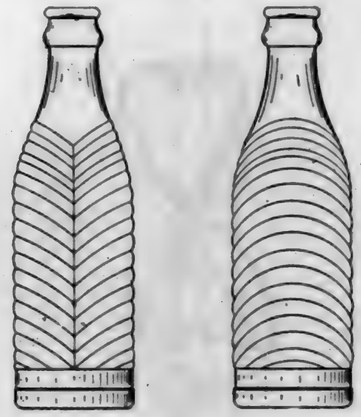


The ornamental design for a doll, as shown.

67,291. PILASTER. FRANK E. LITCHFIELD, Montgomery, Ala., assignor to The Georgia Show Case Company, Montgomery, Ala., a Corporation of Georgia. Filed May 14, 1923. Serial No. 6,152. Term of patent 14 years.

The ornamental design for a pilaster, substantially as shown.

67,292. GLASS SERVING DISH. JOHN MANOS, Toronto, Ohio. Filed Mar. 12, 1925. Serial No. 12,606. Term of patent 14 years.



The ornamental design for a glass serving dish, as shown.

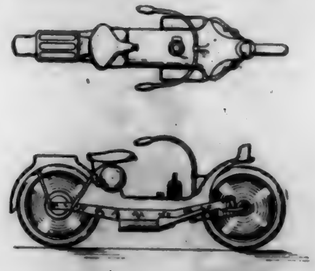
67,293. CONDUCTOR PIPE STRAP END. PARKER H. MCKEE, Woodbury, N. J., assignor to Berger Bros. Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 9, 1925. Serial No. 12,312. Term of patent 14 years.

The ornamental design for a conductor pipe strap end, as shown.

67,294. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 1, 1924. Serial No. 11,529. Term of patent 14 years.

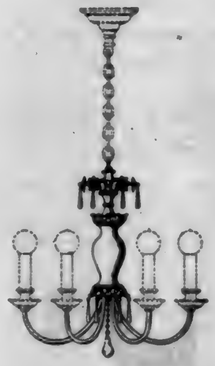
The ornamental design for a bottle, substantially as shown.

67,295. GARTER. CHARLES B. NAMIOT, New York, N. Y. Filed Mar. 21, 1925. Serial No. 12,813. Term of patent 3½ years.



The ornamental design for a garter as shown.

67,296. SALT CELLAR OR SIMILAR ARTICLE. HARRY NEGRAUR, New York, N. Y., assignor to E. & J. Bass, Inc., a Corporation of New York. Filed Jan. 21, 1924. Serial No. 8,359. Term of patent 3½ years.



The ornamental design for a salt cellar or similar article, substantially as shown.

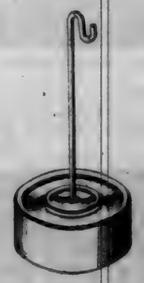
67,297. MOTOR CYCLE. CARL A. NEBACHER, Syracuse, N. Y., assignor, by mesne assignments, to Ner-A-Car Corporation, a Corporation of New York. Filed Mar. 26, 1920. Serial No. 369,109. Term of patent 14 years.

The ornamental design for a motor-cycle as shown.

67,298. CHANDELIER. JOSEPH NOVIX, New York, N. Y., assignor to The Centre Lighting Fixture Mfg. Co., a Partnership composed of the said Novin and Samuel Ribak, New York, N. Y. Filed Feb. 4, 1925. Serial No. 12,260. Term of patent 3½ years.

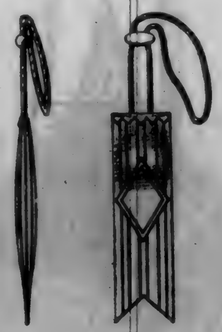
The ornamental design for a chandelier substantially as shown.

67,299. CHARM. IRVING ORNSTEIN and JOSEPH MEVORAH, New York, N. Y. Filed Jan. 10, 1925. Serial No. 11,989. Term of patent 7 years.



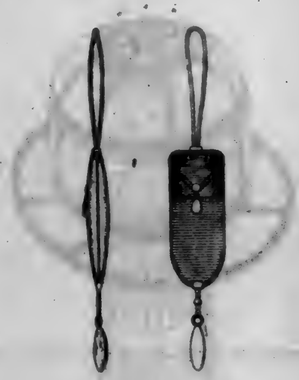
The ornamental design for a charm, as shown.

67,300. RING. IRVING ORNSTEIN and JOSEPH MEVORAH, New York, N. Y. Filed Jan. 10, 1925. Serial No. 11,990. Term of patent 7 years.



The ornamental design for a ring, as shown.

67,301. WATCH HOLDER. FRANK M. PEARSON, Manchester-in-the-Mountains, Vt. Filed Oct. 9, 1923. Serial No. 7,435. Term of patent 14 years.



The ornamental design for a watch holder as shown.

67,302. BAG. FLORENCE LOUISE PENGLASE, New York, N. Y. Filed Nov. 14, 1924. Serial No. 11,870. Term of patent 3½ years.

The ornamental design for a bag as shown.

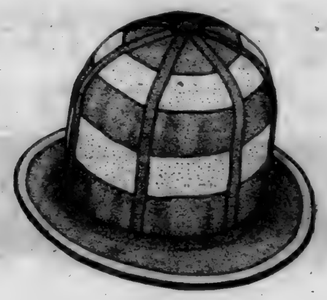
67,303. BAG. FLORENCE LOUISE PENGLASE, New York, N. Y. Filed Nov. 14, 1924. Serial No. 11,871. Term of patent 3½ years.

The ornamental design for a bag as shown.

67,304. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Jan. 12, 1925. Serial No. 12,009. Term of patent 14 years.

The ornamental design for lace as shown.

67,305. LADY'S HAT. GEORGE RAWAK, New York, N. Y. Filed Feb. 28, 1925. Serial No. 12,523. Term of patent 7 years.

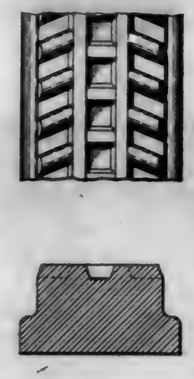


The ornamental design for a lady's hat as shown.

67,306. LADY'S HAT. GEORGE RAWAK, New York, N. Y. Filed Mar. 5, 1925. Serial No. 12,591. Term of patent 7 years.

The ornamental design for a lady's hat as shown.

67,307. LADY'S HAT. GEORGE RAWAK, New York, N. Y. Filed Mar. 7, 1925. Serial No. 12,631. Term of patent 7 years.



The ornamental design for a lady's hat as shown.

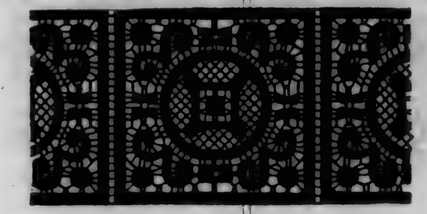
67,308. LADY'S HAT. GEORGE RAWAK, New York, N. Y. Filed Mar. 9, 1925. Serial No. 12,663. Term of patent 7 years.

The ornamental design for a lady's hat as shown.

67,309. TIRE TREAD. JOHN A. SCHEID, Roxborough, Pa. Filed June 26, 1922. Serial No. 2,880. Term of patent 14 years.

The ornamental design for a tire tread as shown.

67,310. HAND BAG. JOSEPH M. SCHOERBEL, Slayton, Minn. Filed Mar. 19, 1924. Serial No. 8,989. Term of patent 3½ years.

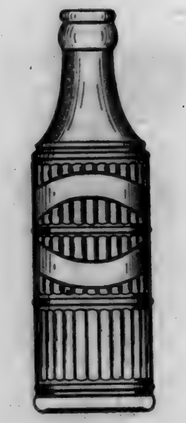


The ornamental design for a handbag, as shown.

67,311. BOTTLE. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Feb. 16, 1925. Serial No. 12,399. Term of patent 3½ years.

The ornamental design for a bottle, as shown.

67,312. LACE. HANS SEEL, Hopkinton, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Feb. 5, 1925. Serial No. 12,271. Term of patent 14 years.



The ornamental design for lace as shown.

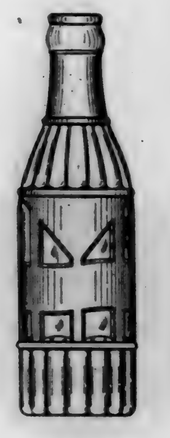
67,313. LACE. BERTHA C. SELIGMAN, Providence, R. I., assignor to Seekonk Lace Company, a Corporation of Rhode Island. Filed Mar. 17, 1925. Serial No. 12,750. Term of patent 3½ years.

The ornamental design for lace, as shown.

67,314. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,518. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

67,315. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,514. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

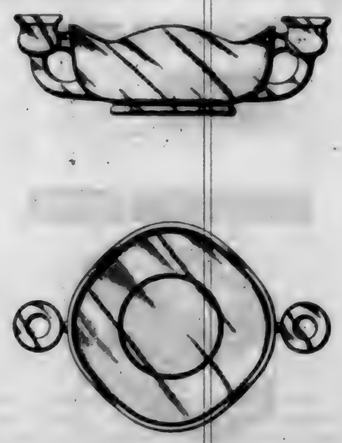
67,316. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,515. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

67,317. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 11,797. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

67,318. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 11,799. Term of patent 14 years.

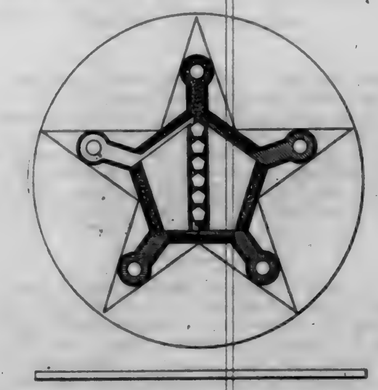


The ornamental design for a bottle, substantially as shown.

67,319. BOWL OR SIMILAR ARTICLE. HARRY WALLACE THOMAS, Indiana, Pa. Filed Mar. 21, 1924. Serial No. 9,016. Term of patent 7 years.

The ornamental design for a bowl or similar article, as shown.

67,320. BOWL OR SIMILAR ARTICLE. HARRY WALLACE THOMAS, Indiana, Pa. Filed Mar. 21, 1924. Serial No. 9,017. Term of patent 7 years.



The ornamental design for a bowl or similar article, as shown.

67,321. BUMPER FOR VEHICLES. HERBERT W. TINKER, Milwaukee, Wis., assignor to Federal Pressed Steel Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 15, 1924. Serial No. 8,640. Term of patent 14 years.

The ornamental design for a bumper for vehicles, as shown.

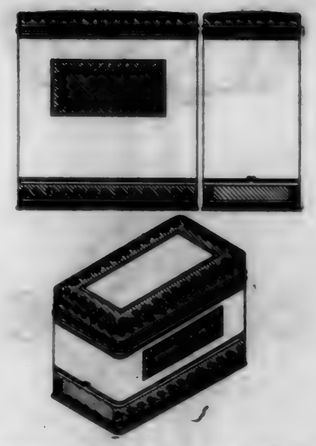
67,322. BUTTON. SAMUEL P. WETHERILL, Jr., Philadelphia, Pa. Filed Oct. 26, 1922. Serial No. 4,108. Term of patent 7 years.

The ornamental design for a button as shown.

67,323. CANOPY. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 8,755. Term of patent 3½ years.

The ornamental design for a canopy as shown.

67,324. STAND FOR BRIDGE LAMPS. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Mar. 5, 1924. Serial No. 8,883. Term of patent 3½ years.

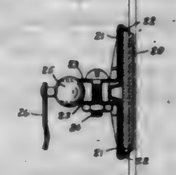


The ornamental design for a stand for bridge lamps as shown.

67,325. TABLE LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Mar. 5, 1924. Serial No. 8,834. Term of patent 3½ years.

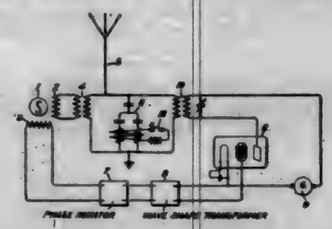
The ornamental design for a table lamp, as shown.

67,326. BOX OR SIMILAR ARTICLE. WESTON GREEN, Dayton, Ohio, assignor to The Green & Green Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 28, 1925. Serial No. 12,856. Term of patent 14 years.



The ornamental design for a box or similar article, as shown.

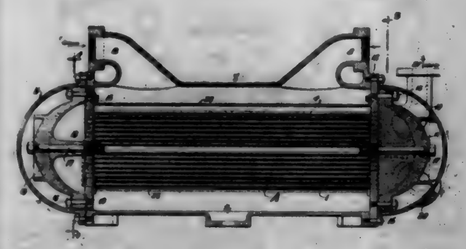
PATENTS



GRANTED MAY 12, 1925.

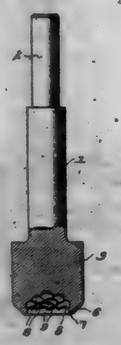
1,537,054. PROTECTING PLATE FOR MIRROR BACKS. NEIL T. ALBRIGHT, Kokomo, Ind. Filed Mar. 5, 1923. Serial No. 622,917. 4 Claims. (Cl. 45—97.)

4. The combination with a mirror having a treated back for covering the silver thereon, of means for protecting said back, comprising a protecting plate having the surrounding edge adapted to engage the back of the mirror, said plate being dished toward the center so as to be spaced therefrom, a rib formed in said plate, a ridge extending from the center outwardly, and means for forcing the body portion of the plate toward the mirror for forcibly holding only the outer edge of said plate in contact therewith.



1,537,055. SYSTEM OF DISTRIBUTION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 28, 1921. Serial No. 511,128. 10 Claims. (Cl. 178—2.)

1. The combination in a system of electrical distribution of an alternating current dynamo electric machine, a distribution circuit, an electron discharge device having input and output circuits, means for supplying current from said dynamo electric machine to the input circuit of said device, and means for supplying to said distribution circuit currents of like phase and frequency derived from said dynamo electric machine and from the output circuit of said device.

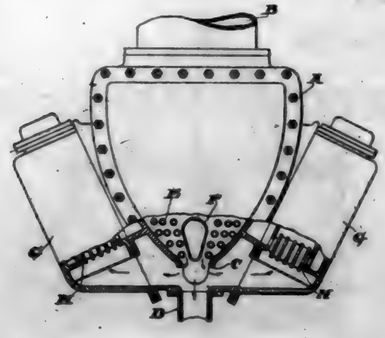


1,537,056. FEED-WATER HEATER. EARL A. AVERILL, Mount Vernon, N. Y., assignor to Locomotive Feed Water Heater Company, a Corporation of Delaware. Filed Nov. 4, 1920. Serial No. 421,642. 3 Claims. (Cl. 257—236.)

1. In a feed water heater, the combination of a heater casing, and a heat transfer member removable as a unit and comprising a pair of tube plates and a plurality of tubes secured in said plates, means for detachably securing the said member to the casing, and guard means

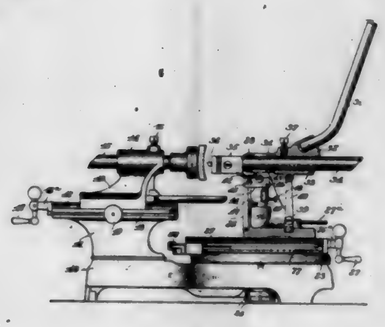
extending longitudinally of and beneath the tubes for protecting the same upon insertion and removal of said member from the casing.

1,537,057. RIVET-SCALING TOOL. GEORGE ANNESLEY, Philadelphia, Pa. Filed July 26, 1924. Serial No. 728,517. 3 Claims. (Cl. 29—81.)



8. An implement for the purpose described comprising a stem, adapted to be engaged with the reciprocating element of a riveting tool, and a head provided in its end face with a recess adapted to receive the head of a rivet, and having a peripheral cutting edge, the wall of said recess being provided with a series of cells or depressions, each surrounded by a cutting edge, extending throughout the area within said peripheral edge.

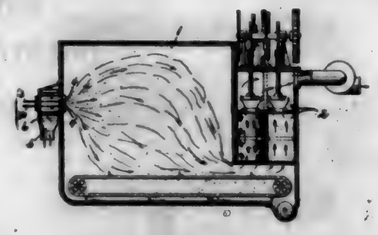
1,537,058. CONDENSER UNIT. PAUL A. BANCEL, Nutley, and JOHN F. KIRGAN, Phillipsburg, N. J., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 10, 1923. Serial No. 631,096. 1 Claim. (Cl. 257—43.)



A surface condenser comprising a casing larger at the top and smaller at the bottom, an inlet at the top for steam and gases and a discharge opening at the bottom, cooling elements in the casing in the form of rows of

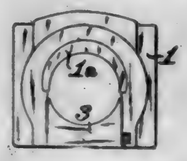
tubes, and an uncooled dummy in the form of a tubular member extending longitudinally of the casing and bodily located wholly within the confines of the extreme lower

portion of the casing in proximity to the discharge opening for contracting the outlet portion of the casing and increasing the velocity of the steam and gases around the lower condenser tubes.



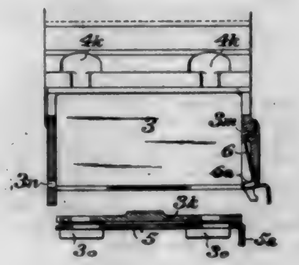
1,537,059. APPARATUS FOR FORMING LENS-GRINDING TOOLS. CARL L. BAUSCH, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 18, 1922. Serial No. 595,242. 12 Claims. (Cl. 90—24.)

1. In a machine of the class described, the combination of a frame, supporting means thereon, a pair of cooperating holding members carried by said supporting means, one of said members having a swinging movement on said supporting means about each of a pair of axes, mechanism actuated by movement of said latter member about one axis for automatically moving the same about the other of said axes, and a tool carried by one of said holding members for cooperation with a work piece carried by the other.



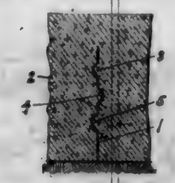
1,537,060. METHOD OF COMBINING AND DESICCATING SUBSTANCES. ARTHUR CARL BEARDSLEE, Arcade, N. Y., assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 24, 1922. Serial No. 538,888. 6 Claims. (Cl. 99—5.)

1. The process consisting in atomizing two liquid substances in such a manner as to forcibly intermingle and combine the substances and simultaneously subjecting the intermingled combining substances to the action of



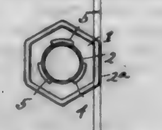
a current of moisture-absorbing air to reduce the combined substance to a powder.

1,537,061. LOCOMOTIVE DRIVING BOX. JAMES G. BLUNT, Schenectady, N. Y. Filed Aug. 11, 1923. Serial No. 656,957. 3 Claims. (Cl. 308—83.)



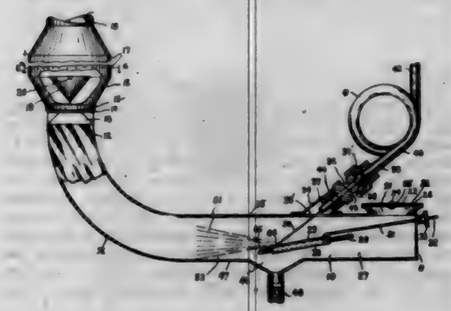
1. The combination of a locomotive driving box, having a longitudinal groove, adjacent to its bottom; a crown brass in said driving box; a lubricant cellar, fitted in the driving box, below the crown brass, and having a longitudinal groove, facing the groove of the driving box; wedging mechanism, located in said grooves; and means for adjusting said wedging mechanism.

1,537,062. LOCOMOTIVE DRIVING BOX. JAMES G. BLUNT, Schenectady, N. Y. Filed May 14, 1924. Serial No. 713,212. 2 Claims. (Cl. 308—83.)



1. The combination of a locomotive driving box; a bottomless lubricant cellar, connected thereto; a bottom plate, insertible from below in said cellar; a latch, adapted to engage the body of said cellar and support one end of the bottom plate therein; and a spring, movable into and out of position to support the opposite end of the plate, and maintain the latch in engagement with the cellar.

1,537,063. ROADWAY JOINT. BERNARD BRIODY, Chicago, Ill., assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed July 21, 1919. Serial No. 312,164. 3 Claims. (Cl. 94—18.)

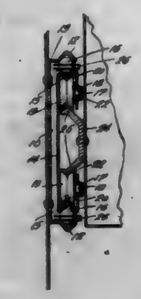


2. A divider for use in concrete and similar roadways consisting of a strip of metal having a straight portion at its top edge and being corrugated intermediate its top and bottom edges and having both of its sides in contact with the concrete.

1,537,064. NUT. ADELBERT E. BRONSON, Cleveland, Ohio. Filed June 4, 1923. Serial No. 643,218. 3 Claims. (Cl. 85—32.)

1. A nut comprising a base portion having an opening formed therein, said opening being provided with recesses at the periphery thereof, and a cylindrical tubular member having screw threads formed on a surface thereof, said tubular member being provided with extensions which are of form and size complementary to the recesses formed in the base member and said extensions being adapted to project through the opening and to occupy said recesses, said extensions having portions thereof pushed outwardly to firmly engage with portions of the base thereby to secure the two parts together as a unitary structure.

1,537,065. HUMIDIFIER. ADELBERT E. BURDIN, Omaha, Nebr., assignor to Eva D. Burdin, Omaha, Nebr. Filed Oct. 23, 1922. Serial No. 596,336. 2 Claims. (Cl. 261—116.)

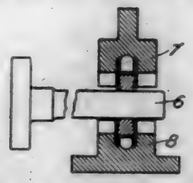


1. A humidifier comprising a mixing chamber having an air inlet and an air outlet and also having a water drain, a nozzle in communication with a source of water supply, said nozzle projecting angularly into said chamber, means to regulate the amount of air entering said inlet, and an angularly disposed adjustable target plate in said chamber in the path of the water jet issuing from said nozzle.

1,537,066. BATTERY-TERMINAL CONNECTION. CHARLES E. CALLENDAR and JOHN V. GITTINGER, Tiffin, Ohio. Filed Jan. 11, 1924. Serial No. 685,675. 1 Claim. (Cl. 173—259.)

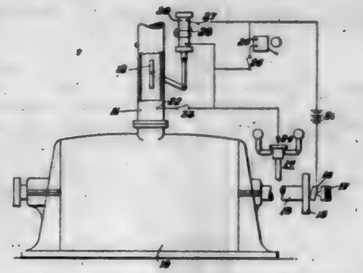
A battery terminal connection comprising a collar provided at one side with a lateral extension having a threaded bore disposed parallel to and communicating with the opening in the collar and a screw threaded in said bore and engageable with the terminal to bind the collar thereon, said screw having a flattened side portion disposed in alignment with the wall of the opening in the collar in engaging the latter with the terminal and a head disposed over said lateral extension.

1,537,067. DRAWER SUSPENSION. EARL J. CARD, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y. Filed Sept. 19, 1921. Serial No. 501,677. 7 Claims. (Cl. 45—77.)



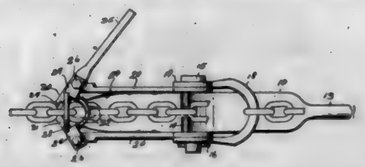
1. In a suspension for drawers and the like, the combination of a channel member adapted to be attached to a drawer case and having upper and lower facing grooves, a floating member slidable within said channel member and having outwardly facing grooves cooperating with the grooves of said channel member to provide ball raceways, balls in said raceways, an inner supporting member adapted to be attached to a drawer or the like, rollers between said floating member and said inner supporting member, said rollers having peripheral grooves, and inwardly facing tracks on said floating member fitting into the peripheral grooves of said rollers.

1,537,068. RING AND METHOD OF MAKING SAME. FREDERICK A. CROSELMIRE, Newark, N. J., assignor, by mesne assignments, to R & H Platinum Works, Inc., New York, N. Y., a Corporation of New Jersey. Filed Mar. 23, 1921. Serial No. 454,709. 8 Claims. (Cl. 29—160.6.)



1. A seamless ring comprising a band of one metal and a much thinner peripheral band of a dissimilar metal molecularly united, pressed into the first-named band and of substantially uniform thickness, the top and bottom faces in the plane of the ring being of the first mentioned metal except along their peripheries.

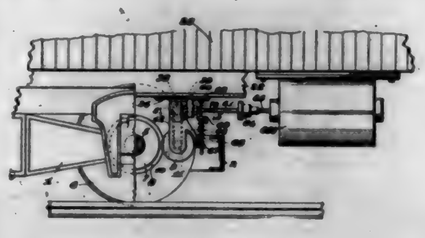
2. The process of shaping rings, which consists in bevelling the inner edges of the ring sufficiently to allow the flow of said ring under pressure, mounting the ring



upon a mandrel, and forcing the ring into dies by pressure exerted in the plane of the ring while the same is on said mandrel.

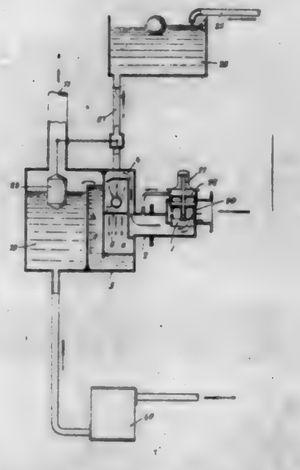
1,537,069. AUTOSTOP MECHANISM. DAVID C. DAVIS, Chester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1921. Serial No. 496,546. 5 Claims. (Cl. 192—129.)

1. The combination with a bearing structure embodying an oil film, of an electric circuit including a translating device, and means depending upon the insulating properties of said film for modifying said circuit.



1,537,070. CHAIN TIGHTENER OR STUMP PULLER. HENRY M. DIXON, Westpoint, Tenn. Filed July 31, 1924. Serial No. 729,333. 5 Claims. (Cl. 254—74.)

1. A chain tightener of the character described comprising a lever having a claw at one end, a pivot pin passing through the lever adjacent the claw, a shackle connected to said pivot pin, arms pivoted upon the pivot pin and disposed on each side of the lever and extending forward therefrom, the claw of said lever extending down between the arms, and a chain clutch mounted upon the extremities of the arms.



1,537,071. MECHANICAL DRIVE FOR AXLE GENERATORS. LAWRENCE M. FARLEY, Washington, D. C. Filed Dec. 23, 1922. Serial No. 608,547. 12 Claims. (Cl. 105—110.)

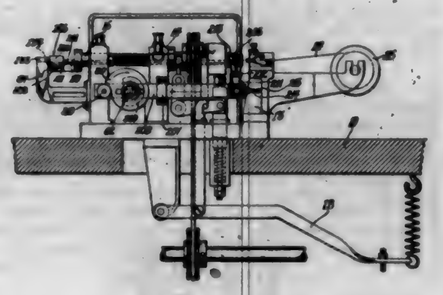
1. In a drive for electric generators carried on cars, the combination of curved means rotating with the car axle; curved means driven by said first named means; oscillating means comprising a pair of lug members supported from the car body for supporting said driven means; rotating means comprising a shaft disposed in the axis of oscillation of said third named means driven from said second named means and movable with the

car body; generator operating means comprising a shaft and connections driven by said fourth named means; and means to support said last named means from the car body.

1,537,072. FEED-WATER HEATER. SÉBASTIEN OTTO ALFRED FIEDLER, Paris, France, assignor to l'Auxiliaire des Chemins de Fer et de l'Industrie, Paris, France. Filed Nov. 22, 1923. Serial No. 676,219. 3 Claims. (Cl. 261—35.)

1. A feed water heater with steam in contact comprising a plurality of chambers successively connected to each other and through which the liquid is caused to flow, a number of said chambers being in communication with the atmosphere, and a regulator for admission of the heating steam into one mixing chamber preceding the first chamber in communication with the atmosphere, said regulator being adapted to maintain in said mixing chamber a constant steam pressure corresponding to the height of the column of hot liquid within said first chamber in communication with the atmosphere.

1,537,073. TIE SPOOL. HERBERT E. FISK, New York, N. Y. Filed Sept. 11, 1924. Serial No. 737,179. 1 Claim. (Cl. 223—19.)



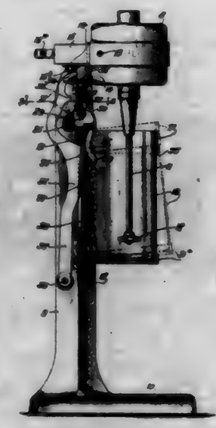
A holder for scarfs and the like comprising a bifurcated member having substantially parallel blades presenting toward each other broad surfaces, one of said blades being arched in the direction of its length, and adapted

to receive therebetween a portion of a scarf or similar article, the remainder of which is wound peripherally about said blades in such a manner as to place the same

under tension, and in combination therewith means to maintain said tension and to prevent slippage of the portions of said article upon each other under the expansive strain of the aforesaid blades.

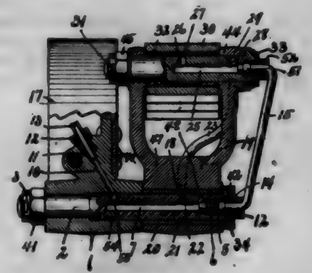
1,537,074. APPARATUS FOR WHIPPING CORES WITH STRAND MATERIAL. BEN KING FORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,807. 9 Claims. (Cl. 242—7.)

1. In a mechanism for whipping a core with a strand, a whipping finger provided with means for causing the strand to be whipped spirally around the core.



1,537,075. FAN BELT. ABRAHAM L. FREEDLANDER and WILLIAM G. GOODWIN, Dayton, Ohio, assignors to The Rubber Development Company, Dayton, Ohio, a Trust Estate. Filed Apr. 2, 1923. Serial No. 629,255. 7 Claims. (Cl. 74—63.)

1. In a belt, a plurality of units triangular in section, assembled with their side walls adjacent to one another, the point of one section being interposed between the basis of the sections on either side thereof.

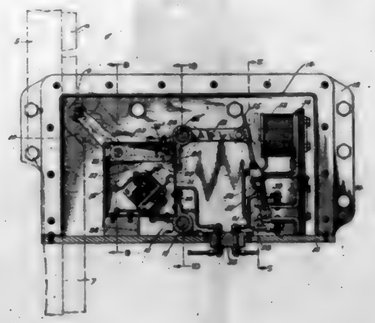


1,537,076. DRINK MIXER. RAYMOND B. GILCHRIST, Newark, N. J., assignor to The Gilchrist Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 8, 1922. Serial No. 541,909. 25 Claims. (Cl. 259—13.)

1. In a machine of the character described, the combination of a motor, an agitator driven thereby and supported from above with sufficient clearance to permit a receptacle with an open top to be placed into opera-

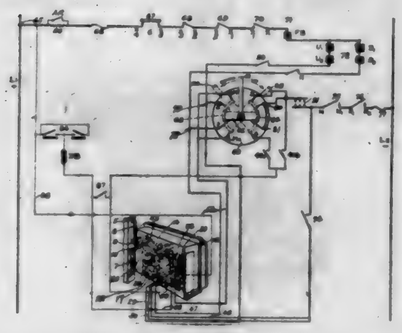
tive position around the agitator, and means to grip the upper portion of the receptacle to secure it in operative position.

1,537,077. MEANS FOR LUBRICATING TENSION SHACKLES OF AUTOMOBILES. FREDERICK H. GLEASON, Auburn, N. Y. Filed July 18, 1923. Serial No. 652,373. 6 Claims. (Cl. 267—54.)



1. In a structure of the class described, a hanger bracket, a bolt having one end mounted in said hanger-bracket, a shackle mounted on said bolt, said bolt formed with a longitudinal bore, means for supplying lubricant to the longitudinal bore in said bolt, an upper shackle-bolt mounted in said shackle and having a longitudinal bore, a tube connecting the longitudinal bores in said bolts for carrying lubricant from the longitudinal bore in the lower bolt to the longitudinal bore in the upper bolt, and means of communication between the longitudinal bore in the upper bolt and the bearing surface of the lower bolt for supplying lubricant to the latter from the former.

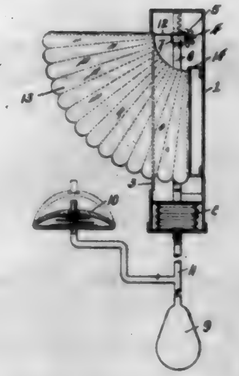
1,537,078. ELEVATOR-CONTROLLING APPARATUS. HARRY B. GOLDMAN, Pittsburgh, Pa., assignor of one-half to Marshall Brothers Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 26, 1923. Serial No. 641,728. 9 Claims. (Cl. 187—29.)



5. A leveling device for elevators comprising in combination an elevator hatchway, a pair of adjustable cams adjacent each floor along said hatchway, a pair of inde-

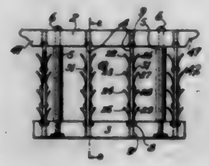
pendent switches carried by said elevator, means adapted to contact with said cams for closing said switches, a weight normally tending to hold said means in align-

ment with said cams, and additional means for withdrawing said first mentioned means out of alignment with said cams.



1,537,079. ELEVATOR SYSTEM. HARRY BENJAMIN GOLDMAN, Pittsburgh, Pa., assignor of one-half to Marshall Brothers Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 26, 1923. Serial No. 641,727. 4 Claims. (Cl. 187—29.)

2. In an elevator system, the combination of a controller, a plurality of circuits arranged to be energized when said controller is moved to various positions, a leveling device, and electromagnetic means whereby said leveling device is rendered inoperative when said controller is moved to certain of said positions and operative when said controller is moved to another of said positions and a separate circuit adapted to be closed when said leveling device is rendered inoperative.

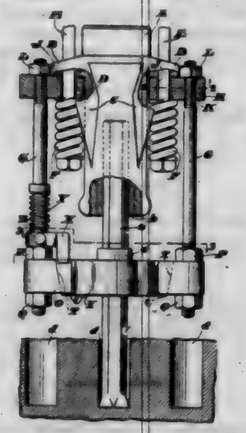


1,537,080. SIGNAL MEANS. WILLIAM GRAH, Waterville, Ohio. Filed Dec. 1, 1924. Serial No. 753,361. 2 Claims. (Cl. 116—39.)

1. In a signal device of the class described, a case having an opening in the outer side thereof, a shaft, means yieldably urging rotation of said shaft in one direction, a pinion on the shaft, a rack in engagement with the pinion and movable lengthwise of the case, a bellows connected to the rack and operable to rock the shaft in one direction against the tension of said yielding means when the bellows is expanded, a fan-like signal member connected at one end to the shaft and at its other end to the interior of the case and operable to open up to signalling position outside the case through

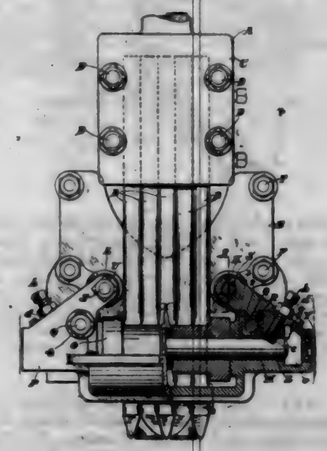
the opening therein when the shaft is rotated by expansion of the bellows, and a hand bulb communicating with the bellows for operation thereof.

1,537,081. MULTIPLE PLUG. FRANK H. GRAHAM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1923. Serial No. 680,786. 11 Claims. (Cl. 179—91.)



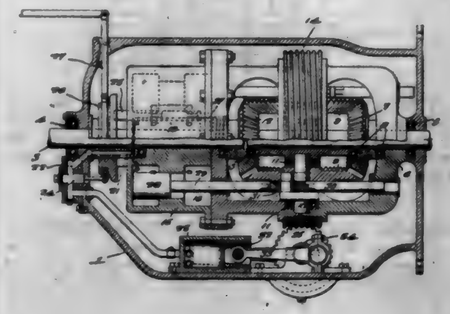
1. In a multiple plug, a frame comprising bars parallelly disposed and spacing members, contact supporting members extending between said bars and supported therein, and spring contacts carried by said supporting members.

1,537,082. METHOD OF MAKING SPRING-HEEL SHOE SOLES. JULIUS F. G'SELL, Jerseyville, Ill., assignor to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Filed July 16, 1923. Serial No. 651,733. 7 Claims. (Cl. 12—146.)



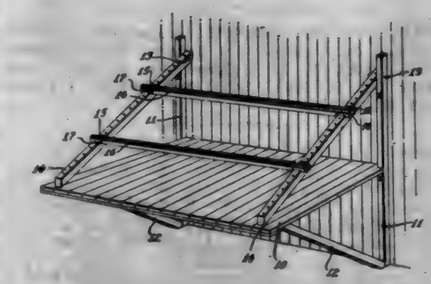
5. The method of making spring heel soles, which consists in placing in a base section of a mold having a shape forming cavity a heel lift in inverted position, said heel lift having a glue surface on the face thereof, placing a shoe sole blank on said lift, and clamping the parts in position and then applying pressure uniformly to the heel area of the sole effectively to bend the lift to the sole and to shape the sole.

1,537,083. COMBINED CENTRALIZER AND RETAINER FOR ROCK-DRILL STEELS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 24, 1924. Serial No. 715,717. 6 Claims. (Cl. 121—32.)



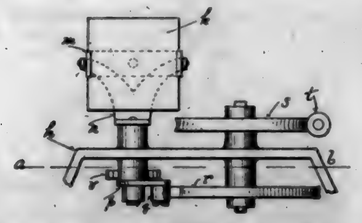
4. A combined centralizer and retainer for rock drill steels comprising a pair of blocks adapted to be held yieldingly under the through bolt springs of a rock drill, a pair of forwardly extending bolts mounted on said blocks, a guide mounted on the forward ends of said bolts provided with tapered slots and formed to receive a drill steel and to limit its forward motion, and a guide plate having tapered sides cooperating with said tapered slots to hold said guide plate in position in the guide and shaped with said guide to encircle the steel.

1,537,084. ROLLER GUIDE FOR CHANNELING STEELS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 1, 1924. Serial No. 747,146. 8 Claims. (Cl. 262—16.)



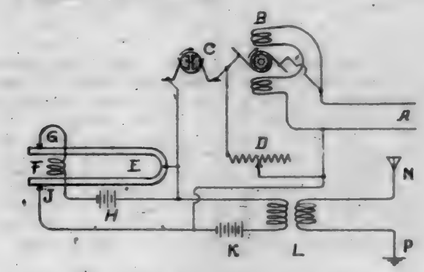
1. A guide for channeler steels comprising a base adapted to be mounted on a channeler, a supplementary portion removable from said base, a plurality of anti-friction rollers adapted to encircle a channeler steel, one of said rollers being flanged and formed in two parts to permit adjustment of the spacing of said flanges.

1,537,085. FLUID-PRESSURE TRANSMISSION AND CLUTCH. FRANC INGEMARSON, Tulsa, Okla. Filed May 29, 1924. Serial No. 716,714. 3 Claims. (Cl. 74—34.)



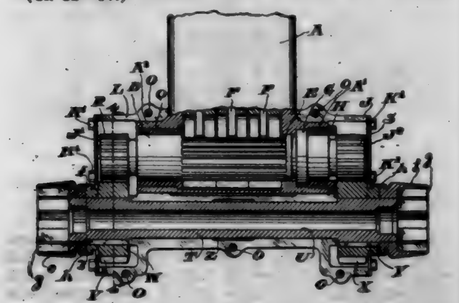
1. A fluid pressure transmission and clutch device comprising aligned driving and driven shafts a yoke mounted upon the shafts, a gear fixed upon the driving shaft, angularly disposed gear wheels carried by the yoke, a gear wheel fixed upon the driven shaft and meshing with the gear wheels which are carried by the yoke, a block carried by the yoke and having chambers, pistons slidably mounted in the chambers of the block and connected with the gear wheels carried by the yoke, a pump for supplying fluid to the block chambers and means operatively connecting the pump with the yoke.

1,537,086. COMBINED PERCH AND TRAP. GUST ISCHENHOUSER, Clifford, Mass. Filed Mar. 13, 1922. Serial No. 543,420. 2 Claims. (Cl. 119—25.)



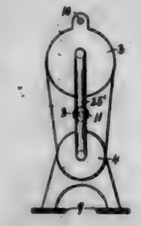
1. A knock-down poultry roost construction comprising a pair of uprights, a plurality of perch supporting strips detachably secured to said uprights and having seats extending transversely of said strips, perch bars said bars having pins adapted to engage the sides of the strips and prevent both longitudinal movement of the bars relatively to said strips and accidental detachment of the supporting strips from said uprights.

1,537,087. TWO-WAY OSCILLATING MIRROR. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to Jenkins Laboratories, Washington, D. C., a Corporation. Filed Oct. 20, 1922. Serial No. 595,819. 3 Claims. (Cl. 178—6.)



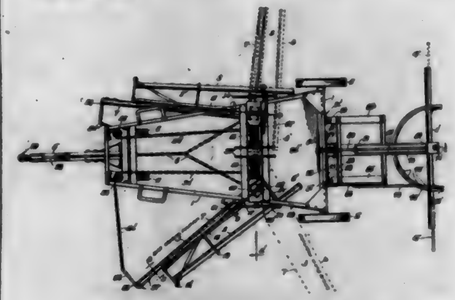
1. In a mechanism for oscillating a mirror, the combination of a screw for giving the mirror an oscillation in one plane, and a cam for simultaneously giving the mirror a plurality of oscillations in a plane at right angles to the first plane.

1,537,088. DEVICE FOR DETECTING SYNCHRONISM. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to Jenkins Laboratories, Washington, D. C., a Corporation. Filed Feb. 19, 1923. Serial No. 619,905. 3 Claims. (Cl. 178—58.)



1. The combination of a motor, means for transmitting to a distance signals having a definite relation to the revolutions of said motor, a distant second motor, a visible marker on the rotor of said second motor, a lamp for illuminating said marker, and means for lighting said lamp in synchronism with the incoming signals.

1,537,089. TRACK WRENCH. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 11, 1923. Serial No. 667,792. 4 Claims. (Cl. 81—57.)

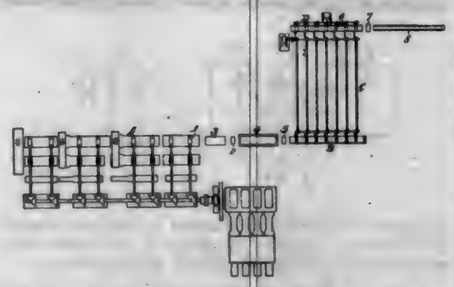


1. In a track wrench, the combination of a holder, a fluid operated motor freely pivoted in said holder and capable of being rocked about the axis of said holder through a limited arc while the machine is in operation, a driving spindle carried by the motor and connected to be operated by said motor, a thrust bearing for said spindle, a gear mounted on each end of said driving spindle, a driven spindle having a bearing in said holder, a gear mounted on each end of the driven spindle meshing with the corresponding gears on the driving spindle, a chuck removably secured to each end of the driven spindle, and a rod carried by the casing for holding the wrench in operative position relative to the work.

1,537,090. HUMIDOR. ALVA T. SMITH, Winsted, Conn. Filed Apr. 6, 1923. Serial No. 630,217. 3 Claims. (Cl. 131—30.)

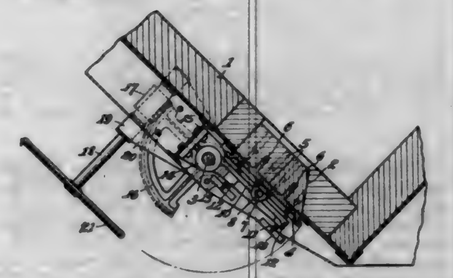
1. In a humidifier, a closed water container and a hollow porous body having interior and exterior surfaces, and means for supplying water from said container to one of said surfaces to be conducted by capillary force through the pores of said body to vaporize at the other surface.

1,537,091. ROAD GRADER. JOHN SNYDER, LE ROY CRAIG, LEE A. SULLIVAN, and WILLIAM E. SULLIVAN, Jacksonville, Ill., assignors to Success Road Machine Company, Jacksonville, Ill., a Corporation of Illinois. Filed May 12, 1924. Serial No. 712,665. 16 Claims. (Cl. 37—108.)



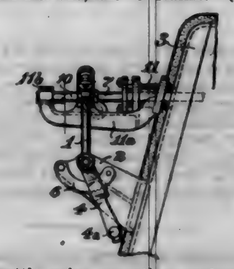
1. A road grader having diagonal double scraping means on both sides, said scraping means being formed and arranged for mutual neutralization of side draft when the device is in effective normal operation, and the double means on each side including a pair of blades spaced apart somewhat one behind and effectually somewhat lower than the other and inclined somewhat relative thereto in substantially a horizontal plane.

1,537,092. APPARATUS FOR AND METHOD OF FORMING AND HANDLING SHEET BARS AND THE LIKE. WILLIAM J. STOOP, Wheeling, W. Va. Filed Dec. 13, 1922. Serial No. 606,598. 15 Claims. (Cl. 80—60.)



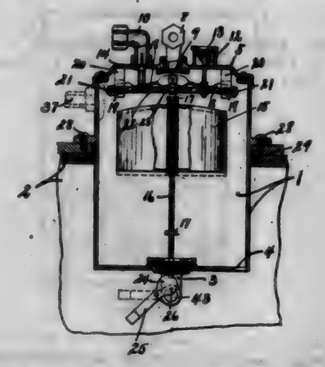
9. The method of producing and automatically handling sheet bars, which consists in cutting the metal into

bar lengths as it passes from the reducing rolls, passing the bars individually through a boshing tank, delivering



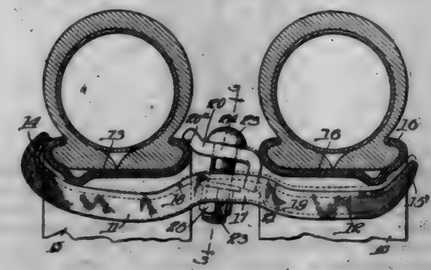
said bars to transporting devices, advancing said bars on said devices for separately air-cooling the same, and finally piling the cooled bars.

1,537,093. ASH GATE FOR THE FIRE BOXES OF BOILERS. WILLIAM J. STOOP, Wheeling, W. Va. Filed Dec. 5, 1923. Serial No. 678,773. 5 Claims. (Cl. 110—165.)



1. An ash gate for furnaces and the fire-boxes of boilers, comprising in combination with an inclined bottom wall of the furnace, said wall having an ash-removal opening therein, of a shaft journaled adjacent to the upper outer edge of said opening, arms fixed to said shaft, a metallic gate body pivotally carried by said arms, a refractory lining carried by said body, adjustable means for effecting angular adjustment of said body with respect to said arms, and means for imparting rotary movements to said shaft for swinging said gate body into and out of closing relation to said opening.

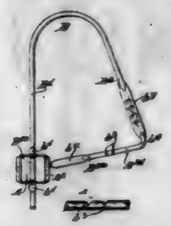
1,537,094. THROTTLE-VALVE OPERATING MECHANISM. HARRY SWOYER, Dunkirk, N. Y. Filed Dec. 12, 1924. Serial No. 755,882. 5 Claims. (Cl. 74—89.)



1. In a throttle valve operating mechanism, the combination of a longitudinally movable throttle rod; a transmission shaft, journalled transversely thereto; a cam, fixed on said shaft; a member, fixed on the throttle rod and engaging said cam; and means for rocking the transmission shaft in its bearings.

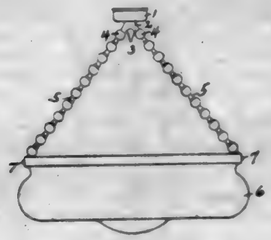
1,537,095. APPARATUS FOR WITHDRAWING AND RECLAIMING THE LIQUID CONTENTS OF THE CRANK CASE OF AN INTERNAL-COMBUSTION ENGINE. EUGENE A. THOMPSON, Syracuse, N. Y. Filed June 20, 1921, Serial No. 479,157. Renewed Mar. 18, 1925. 8 Claims. (Cl. 123—196.)

1. The combination with an engine and its crankcase having an opening therethrough, of a chambered device having a part extending through the opening of the crankcase, a conduit exterior of the crankcase and connecting the crankcase to the chamber of said device, means for heating liquid flowing through said conduit, means for connecting said chamber to a source of suction, a discharge from said chamber directly into the crankcase and a valve within the crankcase controlling such discharge.



1,537,096. TIRE HOLDER. PARKER C. THOMPSON, Chicago, Ill., assignor to Thompson-Neaylon Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1923. Serial No. 656,768. 2 Claims. (Cl. 224—29.)

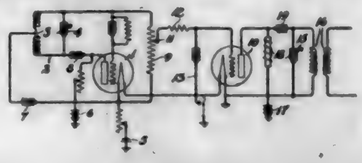
1. In a tire clamp device of the character described, the combination of a relatively long and narrow rigid body having an outstanding hook-like part at one end for holding engagement with a side of a relatively fixed tire rim and for ready application to and releasement therefrom, said body including a normally free-end part formed to accommodate a second tire rim and being formed to hold such second rim against a material amount of movement in a direction away from such relatively fixed rim when both rims are side by side and held by said clamp device, a clamping lever fulcrumed on said body and overlying the normally outer surface of said body about midway of its ends and extending longitudinally with the body and having a free end portion normally adjacent to and adapted to engage the relatively fixed rim at the side thereof opposite the side engaged by said hook-like part to bind the tire clamp as a whole upon the relatively fixed rim, and a bolt extending transversely through the body and said clamping lever and being posi-



tioned between the place where the clamping lever is fulcrumed and its free end for drawing the body toward said clamping lever for clamping the device upon the relatively fixed rim and for moving the free end portion of the body radially outward with respect to the axis of the second rim when normally held by the device.

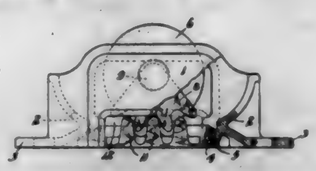
1,537,097. SEAL. EMIL TYDEN, Evanston, Ill. Filed May 2, 1923. Serial No. 636,075. 9 Claims. (Cl. 292—315.)

1. A seal comprising a body member having walls encompassing an open space, said walls having two pairs of opposed apertures in two planes transverse to each other and to the plane in which said walls encompass the open space; in combination with a flexible rod, one end of which is inserted through one pair of said apertures across said open space and locked in said apertures by distortion of the rod at opposite sides of the two walls respectively, the other end of the rod being adapted for insertion through the other pair of apertures, and at a point far enough back from the end to form a hook, being weakened so as to insure breaking by being folded into hook form and subsequently straightened.



1,537,098. LIGHTING-FIXTURE SUPPORT. JOHN VELCIO, Youngstown, Ohio. Filed Feb. 21, 1921. Serial No. 446,801. 2 Claims. (Cl. 247—30.)

1. In a device of the class described, two hollow half sections formed with a ball-shaped portion at each end, one ball end being smaller than the other ball end in order that the smaller ball end formed by placing the said two half sections together will loosely fit within opening within larger ball end so as to form a universal joint, a circular recess formed on the exterior of said two half sections, a snap ring formed to snap into said circular recess, substantially as described for the purpose set forth.



1,537,099. CARRIER-CURRENT SYSTEM. HARALD J. VENNES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1920. Serial No. 432,316. 17 Claims. (Cl. 178—51.)

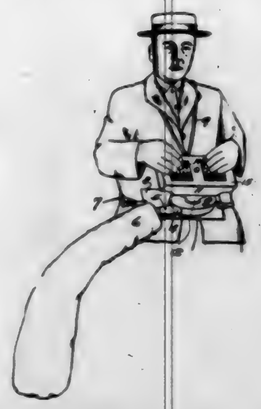
1. A signal system comprising a source for continuously generating a current of carrier frequency, said source including a tuned frequency determining circuit, a work circuit connected thereto including an amplifier, means to shunt the carrier current from said amplifier in

accordance with signals and means to maintain substantially constant impedance conditions in said work circuit irrespective of the operation of said shunting means.

1,537,100. ROLLER SIDE BEARING. EDWIN W. WEBB, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 2, 1922. Serial No. 598,526. 9 Claims. (Cl. 308—226.)

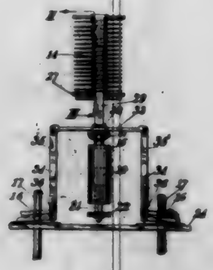
1. A side bearing for railway cars having in combination, a housing, a bearing plate, a roller supported on and movable on said plate, a counterweight member supported by and directly engaging said roller disposed adjacent the side thereof and swingable relatively thereto, and a fixed rack with which said counterweight engages, said counterweight depending from said roller and said rack being formed on said bearing plate.

1,537,101. MEANS FOR CONNECTING DEVICES OF DIFFERENT IMPEDANCE. DONALD F. WHITING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 3, 1921. Serial No. 474,650. 9 Claims. (Cl. 178—44.)



1. A translating device and a circuit having an impedance different from that of the device, said circuit and device being connected for the interchange of energy of a given frequency therebetween, said device being included in a parallel-resonant circuit to the terminals of which the said first mentioned circuit is connected, the impedance of said parallel-resonant circuit as viewed from the terminals of said first mentioned circuit being conjugate to the impedance of the first mentioned circuit.

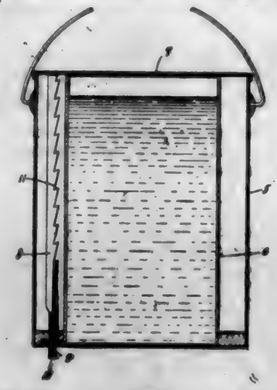
1,537,102. COTTON-PICKING MACHINE. OSCAR B. WINSTON, Memphis, Tenn. Filed June 22, 1921. Serial No. 479,541. 7 Claims. (Cl. 56—31.)



1. In a cotton picking machine, a receptacle for the cotton, a housing; picking means, an exhaust fan for transferring the cotton from the picking means to the said receptacle, and a motor driving said picking means

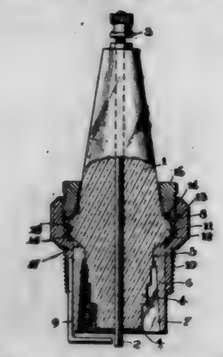
and fan, all within said housing; current wires leading to the said motor, and means attaching said housing means rigidly to the body of the operator whereby the

direction of the machine will be controlled solely by the movement of the operator and the hands of the operator be left free to bring the cotton bolls into contact with the picking head.



1,537,103. FEEDING MECHANISM FOR ARC LAMPS. MAURICE J. WOHL, New York, N. Y., assignor to M. J. Wohl & Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed June 15, 1921. Serial No. 477,780. 6 Claims. (Cl. 176—59.)

1. In an arc lamp a pair of electrodes, lifting means therefor, a cross-bar connecting said lifting means to each other, magnetic means, a dash pot having a fixed and a movable member in axial alinement with said magnetic means, a joint including resilient means permitting longitudinal movement between said dash pot and said magnetic means and other resilient means on said joint holding the substantially equal lever arms of said bar balanced and yieldingly connected to said magnetic means.

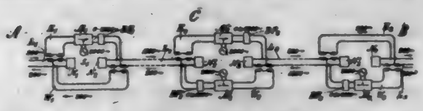


1,537,104. LIQUID DISPENSER. GAY WELLENWEBER, Savannah, Ga. Filed Aug. 10, 1922. Serial No. 580,964. 1 Claim. (Cl. 299—22.)

In a fluid dispensing device, a container having an opening, a vertically disposed bar having a discharge tube formed at one end thereof supported within the container, said discharge tube being positioned in the opening, said bar having shoulders arranged in spaced relation with each other, a wick having one end thereof positioned in the container and having its intermediate

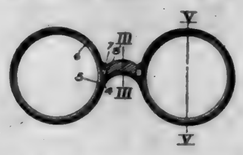
portion adapted to be positioned on the shoulders to adjust the length of the wick, and the opposite end of said wick being positioned in the discharge tube.

1,537,105. SPARK PLUG. WILLIAM WALTON WOODROOF, Auburn, Ala. Filed Apr. 6, 1923. Serial No. 630,301. 1 Claim. (Cl. 123—169.)



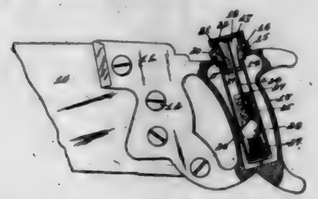
A spark plug comprising a base having an externally threaded portion and having a recess partially threaded and merging into a rounded portion, a porcelain petticoat fitted in the base having the internal surface sloping outwardly and being beveled at the upper end which is thickest, the upper edge extending slightly above the rounded portion to provide a chamber, a porcelain core mounted in the base having an enlargement situated in said recess and having a portion engaging the bevel of said petticoat to produce a tight joint, said core having a series of concentric steps reducing the core outwardly of the spark plug, a gasket occupying said chamber and being engaged by said enlargement, a jamb nut screwed into the threaded recess and pressing upon said enlargement, a gasket interposed between the jamb nut and said enlargement, and electrodes carried both by the core and by the base.

1,537,106. MEANS FOR AND METHOD OF EQUALIZING ATTENUATION. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 2, 1921, Serial No. 474,402. Renewed Aug. 6, 1924. 9 Claims. (Cl. 178—44.)



1. The method of equalizing the attenuation of a band of frequencies transmitted over a transmission sys-

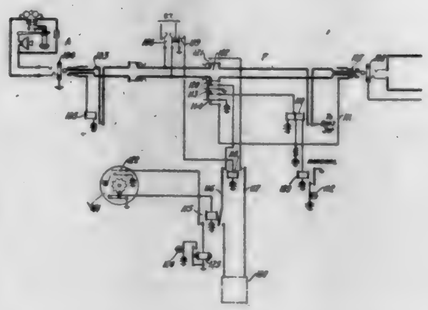
tem which consists in subjecting the band to attenuation variable with frequency in a given manner during transmission over a part of the system, and subjecting



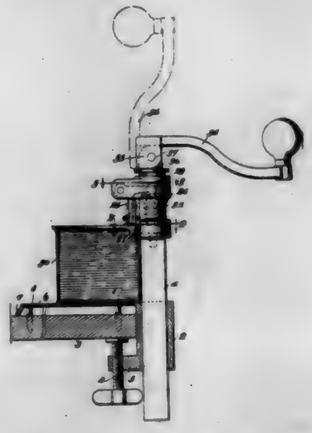
the band to attenuation varying with frequency in a complementary manner during transmission over the remainder of the system.

1,537,107. OPHTHALMIC MOUNTING. WILLIAM H. BOUTELLE, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 17, 1921. Serial No. 437,918. 3 Claims. (Cl. 88—47.)

3. The process of forming a reinforced composition frame consisting in forming a one-piece bridge and eye wire, interiorly grooving the eye wire, introducing a reinforcement to the eye wire by way of the bridge, and embedding the reinforcement within the groove, substantially as described.



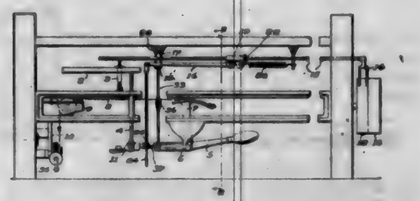
1,537,108. HANDLE FOR SAWS. GEORGE B. COPLEY, Des Moines, Iowa. Filed Feb. 27, 1923. Serial No. 621,525. 1 Claim. (Cl. 145—35.)



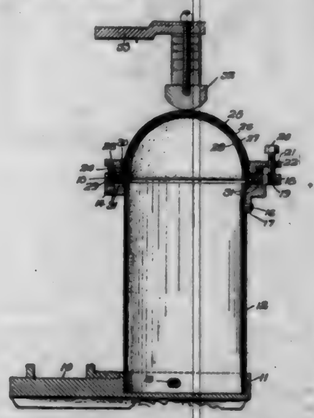
A container having a screw threaded opening, a hollow lug having its upper and lower ends externally screw threaded, a shoulder portion between the screw threaded portions, the lower end of said lug being provided with a pair of downwardly extending wire loops, one of which is arranged at right angles to the other to form a cage, an extensible coil spring on the lower end of said loops, a ball on the upper end of said coil spring, a cap for the upper screw threaded portion of said lug, a pin extending downwardly from the central portion of said cap, a swab on the lower end of said pin designed to be drawn upwardly through the opening of said lug as the cap member is removed, the lower end of said lug being provided with a valve seat designed to be engaged by the said ball when the swab is removed.

1,537,109. TELEPHONE SYSTEM. JOHN DAVIDSON, Jr., Trenton, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 10, 1920. Serial No. 402,632. 29 Claims. (Cl. 179—27.)

1. In a telephone system, in combination, an originating office, a distant office, a plurality of trunk lines and a signaling path common thereto extending between said offices, automatic switching mechanisms at said distant office in which said trunk lines terminate, means at said originating office for controlling said mechanisms over said trunk lines, means at one of said offices for transmitting over the signaling path code signals individual to the different runk lines, a normally inactive switching device common to the trunk lines for determining the codes of the signals to be transmitted, and means controlled by a change in condition on any one of the trunk lines for rendering the switching device active.

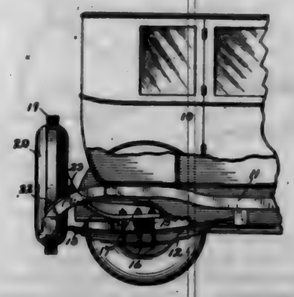


1,537,110. CAN OPENER. HENRY J. EDLUND, Burlington, Vt. Filed May 24, 1924. Serial No. 715,631. 4 Claims. (Cl. 30—3.)



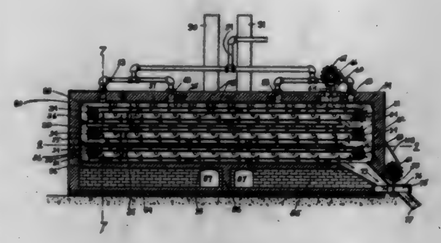
1. In a can opening device, a vertically adjustable post, a horizontal support at one side of said post and adjacent thereto on which a can may be disposed, a blade, means carried by said post for adjustably supporting said blade above said horizontal support and in position to penetrate the top of the can on said horizontal support, a rotor supported on said post for engaging with said can to feed the latter to said blade, sleeve movable on said post in engagement with said blade supporting means for actuating the latter to move the blade radially of the can top, and a handle pivoted to the post for turning the latter and having a cam for actuating said sleeve.

1,537,111. SPINNING MACHINE. CHARLES H. FORSAITH, Nashua, N. H., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1923. Serial No. 634,759. 11 Claims. (Cl. 118—5.)



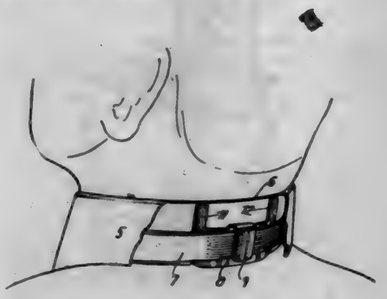
1. In a spinning machine, mechanism arranged to be brought into operation by the winding down the ring rail for automatically stopping the machine.

1,537,112. AIR CUSHION. EDWARD J. GLACKIN, Chicago, Ill. Filed Dec. 1, 1922. Serial No. 604,311. 3 Claims. (Cl. 267—65.)



1. In an air cushion, a dome having its exterior formed of reinforced rubber, and a rim integral therewith formed of substantially softer rubber.

1,537,113. PNEUMATIC TIRED VEHICLE. EDWARD J. GLACKIN, Chicago, Ill. Filed Oct. 23, 1924. Serial No. 745,845. 6 Claims. (Cl. 267—31.)

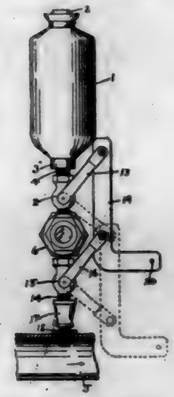


1. In a pneumatic-tired vehicle, the combination with a chassis member, of a body member mounted thereon and movable relative thereto, a tire support carried by one member, a spare tire mounted on said support, and an abutment carried by the other member adapted to cooperate with the tire, substantially as and for the purpose described.

1,537,114. GAS-EXTRACTING APPARATUS. EMANUEL W. HARTMAN, Miami, Fla. Filed July 20, 1921. Serial No. 486,318. 5 Claims. (Cl. 202—14.)

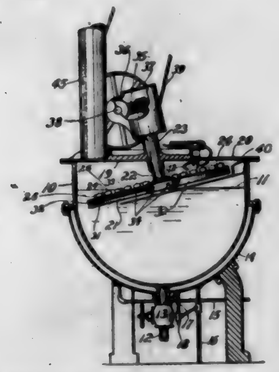
1. In an apparatus for extracting gas from bitumen containing material, a retort consisting of two compartments in which the material is treated, means for heating said retort, a third compartment between the first two situated directly over said heating means into which the gas extracted from the material in both said first named compartments escapes, said third compartment having a solid bottom and an outlet at the top for said gas.

1,537,115. NECKTIE SLIP. ADOLPH HOFSTETTER, Ridgefield Park, N. J. Filed May 29, 1923. Serial No. 642,308. 1 Claim. (Cl. 2—156.)



A device of the class described comprising a curved plate adapted to be positioned between the folds of a collar, a tongue formed integral with the plate and disposed intermediate the sides thereof, said tongue being bent over but spaced from the outer face thereof and terminating adjacent the lower edge of the said plate and projections extending upwardly from the sides of the plate for spacing the top edge thereof from the folded edge or crease of a collar.

1,537,116. GRAPHITE LUBRICATOR FOR STEAM LINES. HARRY HOWLETT, Houston, Tex. Filed June 25, 1923. Serial No. 647,481. 2 Claims. (Cl. 184—83.)

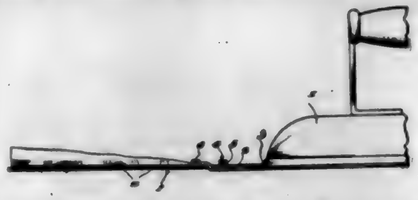


1. A lubricator comprising a container for graphite, a steam line, a connecting pipe between said lubricator and

said steam line, a measuring chamber in said connecting pipe, means to permit the filling of said chamber with a charge of graphite from said container and to thereafter

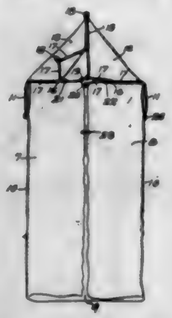
close connection between said container and said chamber and to permit the discharge of said charge of graphite to said steam line.

1,537,117. APPARATUS FOR TREATING ARTICLES OF MANUFACTURE. WILLIAM R. HURD, 2d, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 22, 1920. Serial No. 425,816. 22 Claims. (Cl. 91—42.)



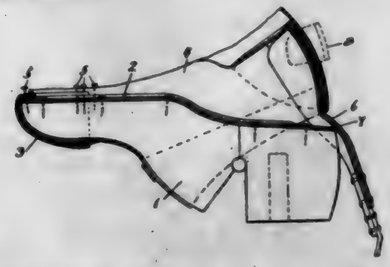
1. An apparatus comprising a covered container for a body of treating substance, means for emitting a jet of fluid under pressure in said container but above the level of said body of treating substance, and means constructed and arranged to transfer an article immersed in said body of treating substance from the latter to said jet.

22. An apparatus comprising a container adapted to hold a body of coating substance, a rotary shaft extending downwardly into the top of said container and one or more carrying elements carried by said shaft and movable through an endless path in said container such as to immerse the work in said body and thereafter carry the work out of said body.



1,537,118. CLOTH-FOLDING DEVICE. CHARLOTTE ELIZABETH KENT, Osgood, Mo. Filed June 14, 1924. Serial No. 720,143. 3 Claims. (Cl. 270—93.)

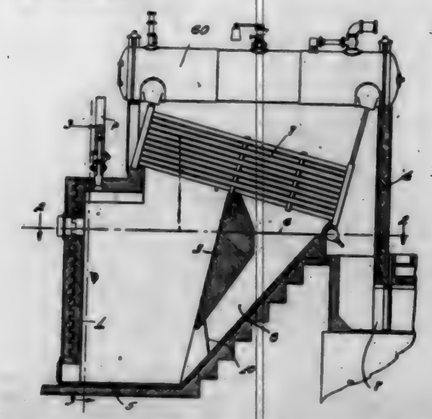
1. A cloth folding device comprising a plate formed with a transverse slot, and cloth guiding and folding fingers having shank portions projecting upwardly from the plate and terminal portions projecting inwardly toward each other, the said fingers being arranged in



spaced relation and in advance of opposite ends of the slot, the inwardly presented sides of the shanks of the fingers being located in alinement with the respective end walls of the said slot.

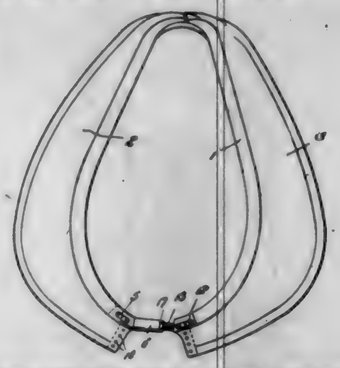
1,537,119. TRAVEL ROBE AND METHOD OF MAKING SAME. MARTHA Q. KEPLINGER, San Francisco, Calif. Filed Oct. 25, 1922. Serial No. 596,785. 7 Claims. (Cl. 2—24.)

2. A travel robe comprising a body covering having front and back portions with parts only of the top edges of the front stitched to adjacent portions of the back leaving a neck opening between the front and back portions, and a head covering made up of a substantially rectangular portion of cloth with triangular corner portions folded over on the central portion and stitched along parts of its edges providing a face opening in said head covering.



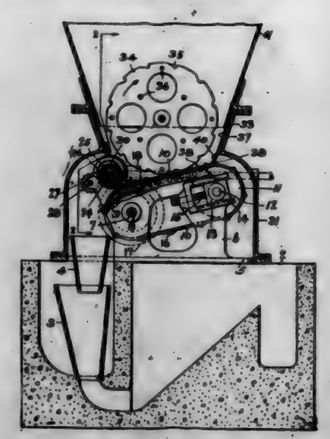
1,537,120. METHOD OF LASTING BOOTS AND SHOES. EUCLID I. LA CHAPELLE, Brockton, Mass. Filed Jan. 17, 1924. Serial No. 686,789. 2 Claims. (Cl. 12—14.5.)

1. That method of lasting boots and shoes, which consists in applying to a last a moulded box-toe and an upper having its toe part unmoulded and a tip portion, in pulling over on the said last the said upper, preliminary to placing the heel part of the said upper over



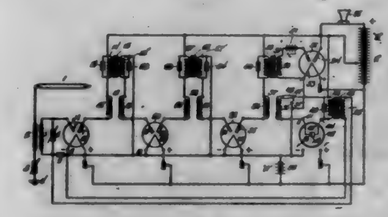
the heel end of the said last, for the purposes described, in stretching the said pulled-over upper lengthwise of the said last from toe to heel and in thereafter placing the heel part of the said pulled-over upper over the heel end of the said last.

1,537,121. FURNACE. JOHN W. LAUREN, Sterling, Ill., assignor, by mesne assignments, to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed July 26, 1922. Serial No. 577,519. 3 Claims. (Cl. 110—165.)



1. In a furnace, a fire-box, and a water-tube boiler supported above the rear portion thereof, the fire-box having a rear wall which slopes upwardly and rearwardly to direct the products of combustion toward and between the boiler tubes, this rear wall having upwardly flaring open ended passages therein, the upper ends of which receive cinders and ash from the stream of gases passing thereover, and the lower ends of which open into the bottom of the fire-box, and discharge the cinders thereinto.

1,537,122. ADJUSTABLE HORSE COLLAR. JOSEF HECTOR LEEMANS and SIEBE LOUWS GROENEWOUD, Edam, Saskatchewan, Canada. Filed May 1, 1924. Serial No. 710,827. 1 Claim. (Cl. 54—19.)

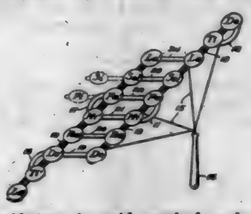


A horse collar comprising a pair of co-operating sections secured together at their upper ends, a tubular member secured in the rim of the lower end of one of said sections and having an internally threaded sleeve extending outwardly therefrom, a rod secured in the rim portion of the lower end of the other section and having its outer end extending beyond the lower end of the aforementioned section and being externally threaded, said threaded sleeve adapted to receive the threaded shank and depending plates carried by the tubular member and said rod respectively and adapted to be secured in the after-wale of each of said sections.

1,537,123. DRY-FEED MACHINE. FREDERICK B. LEOPOLD, Pittsburgh, Pa. Filed June 28, 1923. Serial No. 648,405. 6 Claims. (Cl. 83—44.)

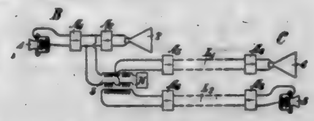
1. In a machine of the character described the combination with a suitable hopper, of an endless belt below said hopper, means for driving said belt, a measuring device at the discharge end of said belt, plates engaging said hopper and contiguous to said belt, and means for adjusting said plates to and from said belt.

1,537,124. RADIO RECEIVING DEVICE. WALTER LYTTON, Chicago, Ill., assignor to Lytton Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1923. Serial No. 618,790. 1 Claim. (Cl. 250—20.)



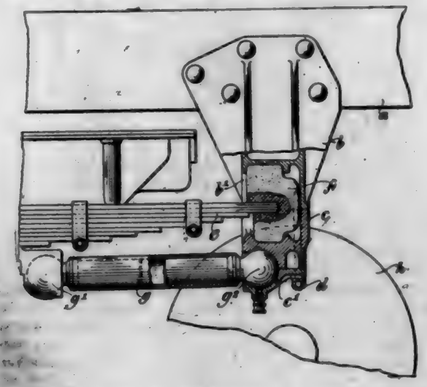
In a radio receiving system, the combination of a four terminal socket adapted to receive either an ordinary vacuum tube or a crystal detector interchangeably, a radiofrequency transformer, an audiofrequency transformer, and a switch arranged to connect one side of the radiofrequency secondary to one side of the audiofrequency primary, and the opposite sides of said secondary and primary being connected to appropriate terminals of said socket respectively.

1,537,125. APPLIANCE FOR MUSICAL INSTRUCTION. JESSIE F. MANN, Long Lake, N. Y. Filed June 30, 1921. Serial No. 481,031. 23 Claims. (Cl. 84—472.)



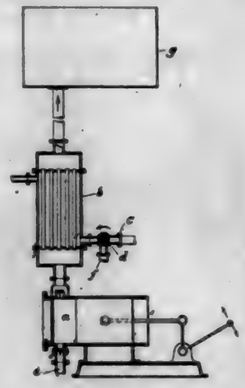
5. A unitary appliance for musical instruction, comprising a frame having representations of the tones

a major musical scale positioned thereon to show their position on a staff, certain of said tone representations being joined together by elements which represent the



location of half-steps in said musical scale, and means for supporting said frame whereby the same may be superimposed upon or removed from a staff.

1,537,126. LOUD-SPEAKER CIRCUIT. WILLIAM H. MARTIN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 24, 1922. Serial No. 570,552. 5 Claims. (Cl. 179—1.)

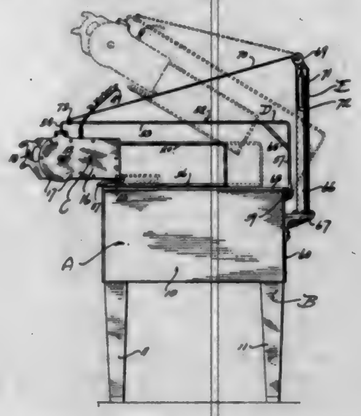


1. A communication system comprising a station, a circuit at said first station including a transmitter and a loud speaking receiver; a second circuit associated with said first circuit and extending to a second station, a loud speaking receiver associated with said second circuit at said second station; a transmitter at said second station, and a circuit for said transmitter, said circuit being operatively associated with said first circuit and neutral with respect to said second circuit.

1,537,127. HOUSING FOR RUBBER-BLOCK CONNECTIONS. ALFRED F. MASURY, New York, and AUGUST H. LEIPERT, College Point, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1921. Serial No. 507,402. 3 Claims. (Cl. 267—54.)

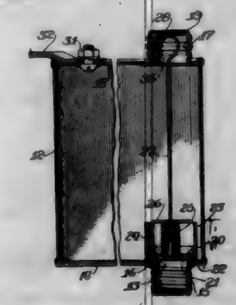
1. As an article of manufacture, a separable housing to retain means comprising a yielding non-metallic connection between a vehicle spring and chassis frame formed with a cap detachably secured thereto, a sub-cap secured to said first named cap and unyielding means carried with the cap and the sub-cap to retain the end of a radius rod of a motor vehicle.

1,537,128. METHOD OF STARTING INTERNAL-COMBUSTION ENGINES. RUDOLF MAYER, Goldschmieden Kreis, Breslau, Germany, assignor to the Firm of Maschinenfabrik Augsburg-Nuernburg, Aktiengesellschaft, Augsburg, Germany, a German Corporation. Filed Aug. 24, 1921. Serial No. 494,930. 6 Claims. (Cl. 123—65.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



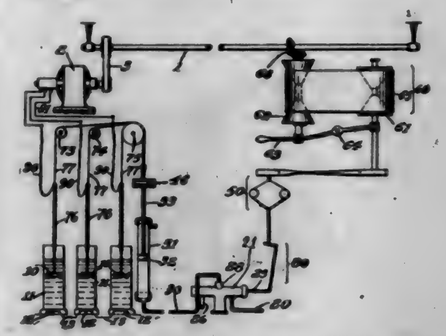
1. In the operation of Diesel engines of the two-cycle type, in which air under pressure is introduced into the cylinder to scavenge the cylinder and to furnish the charge of air for combustion, the method which comprises the steps of heating the scavenging air before admission to the engine cylinder, and subsequently cooling said air after the engine begins to operate under its own power.

1,537,129. WIRE-ATTACHING CLIP. JOHN W. MEAKER, Chicago, Ill., assignor to American Steel & Wire Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Sept. 20, 1923. Serial No. 663,828. 4 Claims. (Cl. 39—57.)



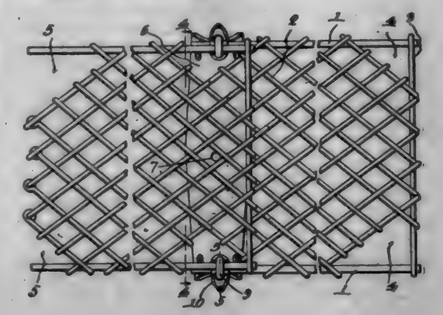
1. A wire attaching clip for use with fence posts having a wire engaging flange, the clip having a hook adapted to engage an edge of a post flange, a portion adapted to extend across the flange to retain wire against the flange, and an end portion adapted to be bent around another portion of a post, the wire retaining portion having its central portion formed with a relatively short wire retaining arc formed therein, the parts of the wire retaining portion upon either side of the arc being formed to lie approximately parallel to a post flange.

1,537,130. POWER-OPERATED SAWING MECHANISM. EARL NIXON, Bolivar, Pa. Filed Sept. 15, 1922. Serial No. 588,426. 2 Claims. (Cl. 143—68.)



1. A device of the class described comprising a supporting arrangement having a handle thereon, a saw blade, a frame having upper and lower strips slidably extending through said supporting arrangement, the upper strip being provided with a down-turned forward portion and adapted for connection with a saw blade, the lower strip having its forward end portion carried downwardly and then rearwardly and having its free end portion extending downwardly and adapted for connection with a saw blade, whereby a relatively long blade may be used which is adapted for exterior overlapping relation with respect to said supporting arrangement when in rearward position with respect thereto, and means carried by said supporting arrangement for reciprocation of said saw.

1,537,131. LUBRICANT-HOLDER ATTACHMENT FOR ENGINES. HENRY G. OBERREICHER, Chicago, Ill. Filed Oct. 23, 1922. Serial No. 596,255. 7 Claims. Cl. 184—105.)

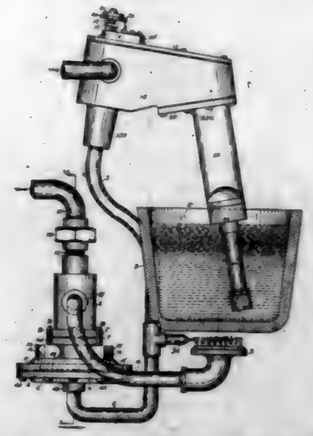


1. A lubricant container embodying a closed receptacle having a fill opening and a discharge opening disposed in alinement, a valve for controlling the discharge opening, a flexible element connected with the said valve mechanism for operating it, said flexible member extending through the said fill opening and adapted to be folded or twisted to assume a position entirely within the fill opening for storage or shipment purposes, and removable closures individual to the said openings.

1,537,132. SPEED CONTROL FOR MOTOR-DRIVEN SYSTEMS. FREDERICK B. OLSON, Berlin, N. H. Filed Jan. 2, 1920. Serial No. 348,978. 1 Claim. (Cl. 172—274.)

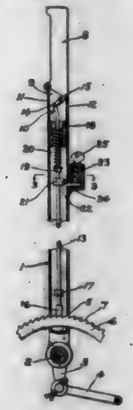
The combination with a driven element and an electric motor having a polyphase winding, of a secondary liquid rheostat comprising a relatively movable and a relatively stationary electrode for each winding, a common support for the movable electrodes, a governor, a variable speed mechanism interposed between said governor and the driven element, and motion transmitting connections dominated by said governor and dominant upon said common support for the movable electrodes of the rheostat whereby to simultaneously vary the position of all of said movable electrodes upon a variation of the surface speed of said driven element.

1,537,133. TROLLEY GUARD. WILSON KINGMAN PAGE, Olean, N. Y. Filed Dec. 9, 1924. Serial No. 754,861. 6 Claims. (Cl. 191—35.)



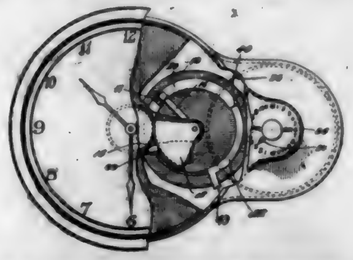
1. A trolley wire guard comprising detachably connected sections adapted to nest, said sections having lapping ends, and means engaging the end portions of the sections for binding them together.

1,537,134. GAS-HEATER GOVERNOR. HOWARD WEBSTER PARTLOW, Utica, N. Y. Filed Nov. 26, 1923. Serial No. 676,960. 2 Claims. (Cl. 236—80.)



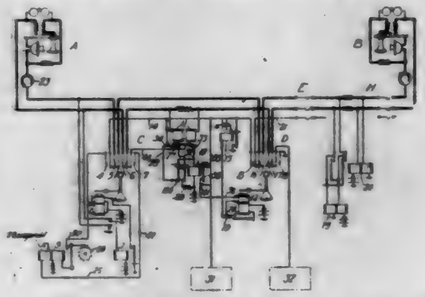
1. The combination with a melting-pot, of a gas-burner for heating said pot, a thermostat, a valve adapted to dispense fluid-pressure operated by the thermostat, a

fuel-gas valve comprising a diaphragm, a plunger for operating said diaphragm, a second and larger diaphragm for actuating said plunger, said second diaphragm



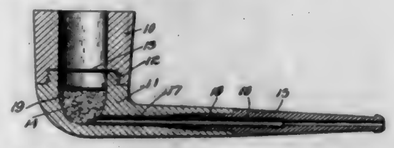
adapted to be moved in one direction by the fluid pressure, and adjustable means for limiting the movement of the second diaphragm to vary the flow of gas to the burner.

1,537,135. LEVER. DONALD WESLEY PECK and ROBERT DANFORD MCALLISTER, Vancouver, British Columbia, Canada. Filed May 28, 1924. Serial No. 716,515. 2 Claims. (Cl. 74—39.)



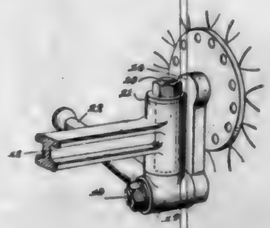
1. A device of the character described comprising a hollow lever pivoted at its lower end, a rack bar passing transversely through the lever above the pivot, a latch slidable in the lever for engaging the teeth of the rack bar to hold the lever in a set position, a rod extending upwardly from the latch, a handle pivoted to the upper end of the lever and provided with a segment shaped portion, adapted to be received wherein the lever when the handle and lever are in aligned position, said segment shaped portion being formed with a curved slot in which is engaged a pin carried at the upper end of said rod, a spring encircling said rod, an abutment carried by the rod for engaging one end of the spring and a second abutment carried by the lever for engaging the opposite end of the spring, and means for locking said rod against movement when the latch is engaged with the teeth of the rack bar.

1,537,136. ELECTRIC TIME SWITCH. THOMAS J. H. PEIRCE, Cranston, R. I. Filed Dec. 29, 1921. Serial No. 525,631. 4 Claims. (Cl. 200—35.)



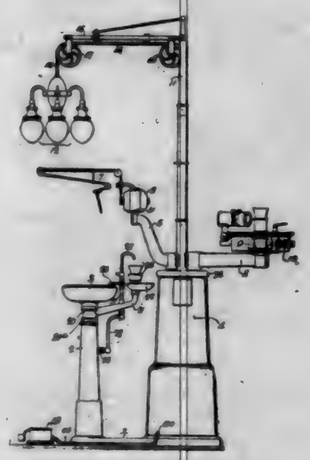
2. In an electric time switch the combination with a clock mechanism, of a rotatable disc of insulating material, a hollow segmental contact strip carried by said disc, a slidable contact segment adapted to be housed in said hollow segment, means for securing the slidable segment in adjusted position, and a contact arm rotated by said motor to contact with said segments, said arm and segments being in an electric circuit.

1,537,137. MEASURED-SERVICE TELEPHONE SYSTEM. RALPH L. QUASS, Hawthorne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1922. Serial No. 566,287. 12 Claims. (Cl. 179—9.)



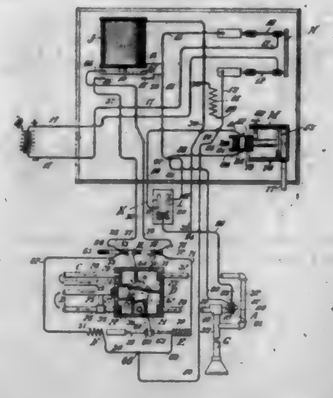
1. In a telephone system, a calling line, a meter associated with said line, a circuit for extending said line, meter operating means associated with said circuit said means including a relay responsive to unidirectional current flow in said circuit and means for preventing momentary operations of said relay from becoming effective to render said first means operable.

1,537,138. TOBACCO PIPE. NORMAN N. RANKOW, New York, N. Y. Filed Feb. 14, 1921. Serial No. 444,760. 2 Claims. (Cl. 131—12.)



2. In a tobacco pipe, a lower bowl member, filtering material in said bowl member, a perforated plate on said filtering material, an upper bowl member and a second perforated plate clamped between said upper and lower bowl members, said second perforated plate being adapted to be removed in order to accommodate a larger charge of tobacco, substantially as set forth.

1,537,139. MOUNTING OF THE WHEELS OF VEHICLES. WALTER JOSEPH RIDDELL, North Sydney, New South Wales, Australia. Original application filed June 14, 1920, Serial No. 388,976. Divided and this application filed Oct. 18, 1921. Serial No. 508,557. 1 Claim. (Cl. 280—96.1.)



In an automobile, a front axle having a steering knuckle the bore of which is vertical, a vertical swivel pin in the bore of the knuckle, a bearing member on the lower end of said swivel pin and the bore of which is horizontal, a crank having a horizontal pivot pin at its lower end mounted in the bore of the bearing member for swinging movement of said crank, a stub axle extending horizontally from the upper portion of the crank and arranged for the mounting of a vehicle wheel thereon, and a steering arm extending from the socket member of the vertical pivot pin.

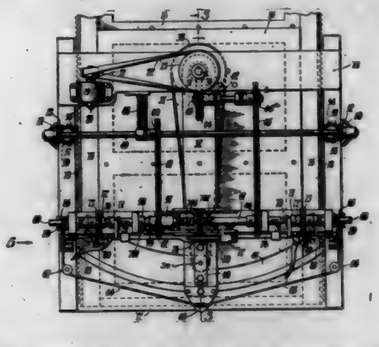
1,537,140. DENTAL UNIT. PERCY RUSSELL, Swarthmore, Pa., ADOLPH W. SCHRAMM, Riverton, N. J., and ROBERT S. WOODWARD, Jr., Haverford, Pa., assignors to Electro Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 18, 1922. Serial No. 582,716. 3 Claims. (Cl. 32—5.)

1. The combination of a base structure having an opening therein; a standard substantially concentric with said opening; means for clamping said standard to the base structure formed to permit adjustment of the standard about its vertical axis; a water receptacle mounted on the standard; and water conductors for said receptacle extending through the standard and the opening in the base.

1,537,141. AUTOMATIC CAR-HEATING SYSTEM. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed May 1, 1922, Serial No. 557,551. Renewed Nov. 26, 1924. 14 Claims. (Cl. 237—6.)

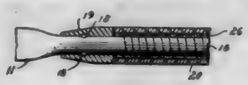
7. In a steam heating system for a railway car provided with a steam train pipe, heating means connected with the train pipe to receive steam therefrom, a valve to close communication between the train pipe and heating means provided with a drainage outlet in communication with the heating means which is open when the valve is closed, and electrically operated mechanism for opening and closing said valve comprising a relay which is energized and deenergized to open and close the valve, a circuit making and breaking thermostat in the car which controls a circuit that when made diverts current from the relay circuit to deenergize the relay, and a circuit making and breaking thermostat associated with the train pipe which controls a circuit that when made, diverts current from the relay to deenergize the same.

1,537,142. POST BINDER FOR LOOSE-LEAF SHEETS. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed June 11, 1924. Serial No. 719,284. 1 Claim. (Cl. 129—12.)



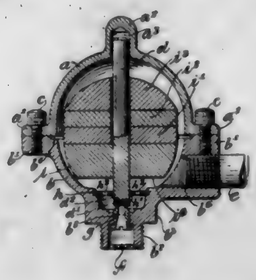
The method of forming the tubular members of post binders for loose leaf sheets with hinge lugs, which consists in forming a rectangular blank and simultaneously cutting elongated openings therein parallel of its length and midway between its sides, bending said blank on a line with said openings with the bent portions diverging, inserting in said openings hinge lugs, welding the free ends of said lugs to the inside of the partially completed tube, and finally bending said portions into completed form with their edges in close abutment.

1,537,143. PLANING MACHINE. FRANZ SCHULDES, New York, N. Y. Filed Aug. 20, 1924. Serial No. 733,101. 10 Claims. (Cl. 144—119.)



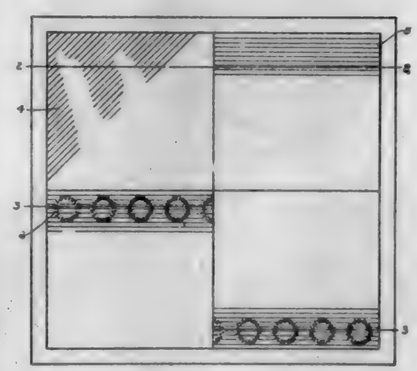
1. In a planing machine, a carriage for the workpiece, a means for imparting a timed step by step

movement to said carriage, an oscillating tool carrier, means for effecting a temporary stopping of said carrier



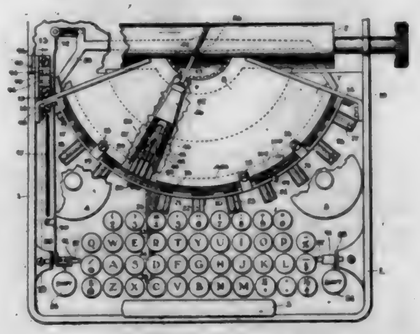
at the stroke-terminals at which time the carriage movement takes place, and means for regulating the length of the sweep of the tool.

1,537,144. TEMPLE. ELMER L. SCHUMACHER and LAWRENCE POSTON, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 12, 1923. Serial No. 631,517. 4 Claims. (Cl. 88—52.)



1. A spectacle temple, comprising a straight metal side piece, a flexible cable secured to the rear end thereof, a spirally wound composition cover on said cable, the material of said cover having overlapping edges, and means for securing the cover to the cable and side piece.

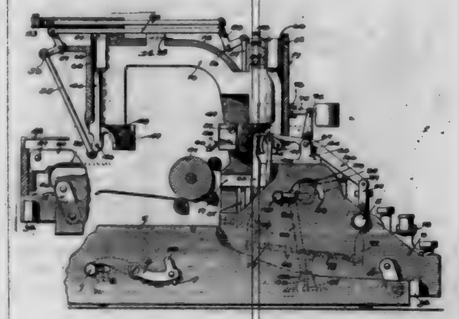
1,537,145. RELIEF VALVE. HARRY EDWARD SHENTON, Philadelphia, Pa., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 12, 1923. Serial No. 612,297. 1 Claim. (Cl. 137—53.)



A relief valve comprising a substantially spherical two-part casing, divided horizontally at its middle, the lower part adapted to be connected to the supply line and provided with a waste outlet and a guide for the valve stem and the other part provided with a guide for the valve stem, one of said parts being formed in its edge with shallow relief slots, a valve seat carried by the casing, a valve stem guided with the casing for co-operation with the valve seat, and a weight applied directly to the valve stem.

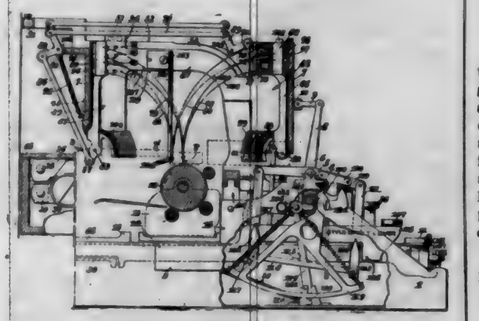
1,537,146. REDECORATION PROCESS. CHARLES S. SINCLAIR, Cincinnati, Ohio, assignor to The R. P. Johnston Paint Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 9, 1923. Serial No. 650,220. 1 Claim. (Cl. 91—67.9.)

The process of renovating linoleum and the like comprising applying a ground covering to the wearing surface of the linoleum, stippling over the ground color, and varnishing over the ground color and stippling.



1,537,147. TYPEWRITER. JOEL SMITH, Moran, Mich. Filed Dec. 18, 1920. Serial No. 431,698. 33 Claims. (Cl. 197—26.)

1. A typewriter, including a type bar with a series of characters, a plurality of bar carriers pivoted to each other but progressively nearer the printing point, and a plurality of printing keys respectively in connection with the various carriers, for moving the type bar on any of the pivots accordingly as the keys are depressed causing corresponding characters to strike the printing point.

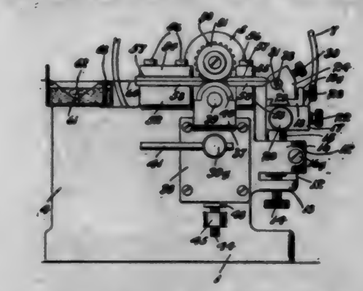


1,537,148. TYPEWRITER. JOEL SMITH, Moran, Mich. Filed Apr. 13, 1922. Serial No. 552,116. 29 Claims. (Cl. 197—26.)

1. A typewriter comprising a frame having type bars with capital and small letters in a plurality of type styles, a shoe having a platen, means to bodily shift the frame in respect to the shoe and platen so as to bring any one of the various type styles into registration

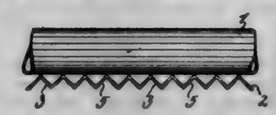
with the printing point, and means on the frame to shift the type bars for capital and small letter printing at each shifted position of the frame.

1,537,149. TYPEWRITER. JOEL SMITH, Moran, Mich. Filed Dec. 19, 1922. Serial No. 607,854. 14 Claims. (Cl. 197—26.)



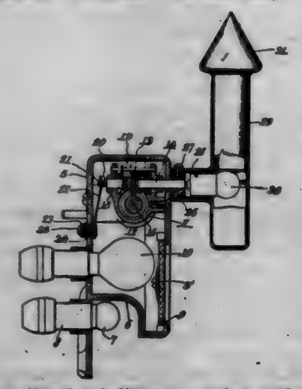
1. A typewriter having a platen, a type bar, upper and lower case printing characters in a plurality of type styles carried by the bar, means in which the type bar is mounted to operate to normally print lower case characters of one type style, a frame supporting said mounting means, means to shift said mounting means in respect to the frame to accordingly change the normal position of the type bar and move another one of said type styles in the position of registration with the printing point on the platen, and means to shift the platen in either condition of the mounting means and type bar to permit upper case character printing.

1,537,150. SPRING-WINDING MACHINE. FOSTER K. SOLLIDAY, Grand Rapids, Mich. Filed Sept. 5, 1922. Serial No. 586,105. 8 Claims. (Cl. 153—65.)



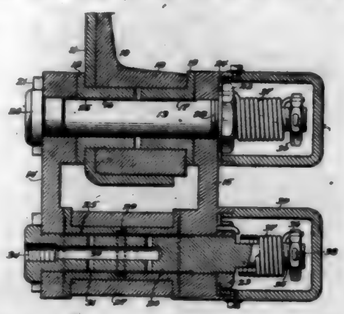
1. In a machine of the class described, a die comprising a horisontally positioned sleeve having a portion at one end cut away for a part of the length of the sleeve whereby there is formed a flat horisontal surface tangent to the inner curved surface of the sleeve and joining therewith, and a rod extending through the sleeve, said rod having a reduced portion of less diameter at the

said cut-away end of the sleeve and provided with an annular outwardly projecting rib spaced a short distance from the end of the larger part of the rod with an annu-



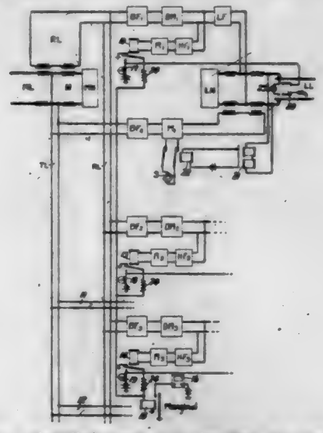
lar groove between said rib and the end of the larger portion of the rod, said groove being located immediately within the end of the sleeve at said cut-away portion thereof.

1,537,151. ILLUMINATING DEVICE FOR RELATIVELY LONG AND NARROW OBJECTS OR SURFACES. SAMUEL ANTON SØLLING, Aarhus, Denmark. Filed Sept. 12, 1924. Serial No. 737,314. 1 Claim. (Cl. 88—1.)



A railway gate or similar traffic preventing device in the form of a horizontally-pivoted arm of comparatively great length to extend across a roadway, provided with a strip of thin metal which is secured to and extends continuously along its length and is bent into zig-zag shape to form a continuous series of oblique facets, the individual facets being disposed transversely of the strip and substantially vertical to the roadway and having light-reflecting faces adapted to be illuminated by light projected against them from a light-source placed at an end of the strip.

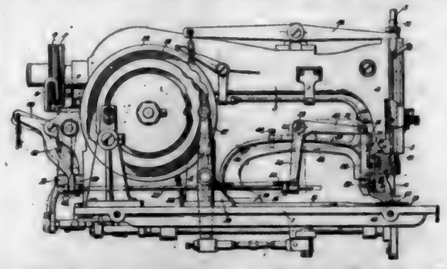
1,537,152. DIRECTION INDICATOR. HOWARD W. SPUNG, Marietta, Ohio. Filed Aug. 11, 1924. Serial No. 731,414. 3 Claims. (Cl. 116—39.)



1. In a direction indicator, a casing, said casing having its lower wall curved upwardly and inwardly to provide a compartment, a lamp supported within the compartment, and an indicating member supported by the casing and adapted to be moved to indicate direction.

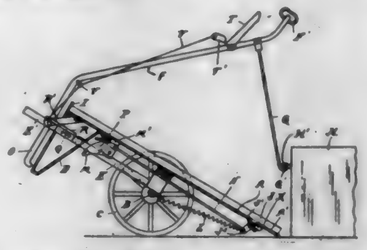
1,537,153. SELF-ADJUSTING SHACKLE. HENRY IVAN STRENGEL, New York, N. Y., assignor, by mesne assignments, to Uppercu Cadillac Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1922. Serial No. 537,145. 5 Claims. (Cl. 267—64.)

1. In a spring shackle, the combination of mechanism for pivotally connecting an eye and link, said mechanism including clamping means acting rigidly for securing the eye and link against a separating movement in one direction and including an automatically acting adjustment tending constantly to act in the opposite direction to maintain the clamping effect of the mechanism and means for supplying lubricant to said mechanism.



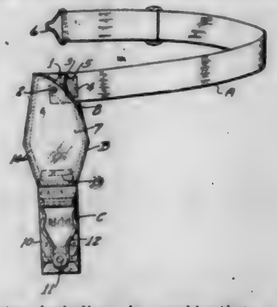
1,537,154. MULTIPLEX SIGNALING SYSTEM. WALLACE V. WOLFE, Corona, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1922. Serial No. 603,907. 9 Claims. (Cl. 179—15.)

1. In a signaling system a plurality of carrier wave transmission channels, means to transmit signals through the respective channels comprising means for withdrawing the respective carrier waves from transmission, and a signal device actuated only in response to the condition of withdrawal of the carrier wave existing simultaneously in a plurality of said channels.



1,537,155. TACKING AND BARRING MACHINE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 20, 1923. Serial No. 613,828. 8 Claims. (Cl. 112—76.)

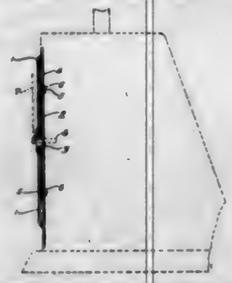
1. A tacking and barring machine having, in combination, stitch-forming mechanism, a stop-motion device, manually operated means for throwing the stop-motion device to running position, a contractible work-clamp adapted to full in the work adjacent the sewing point,



and means connected to be operated by the manually operated means for throwing the stop-motion device to running position, for contracting the work-clamp prior to sewing.

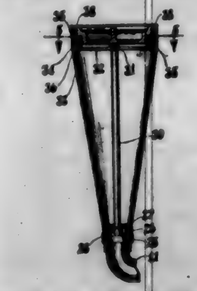
1,537,156. TRUCK. WALTER B. BAXTER, Detroit, Mich. Filed Jan. 29, 1923. Serial No. 615,599. 11 Claims. (Cl. 214—65.4.)

1. A truck comprising a pair of wheels, a tilting platform centrally mounted on said wheels so as to be substantially in balance, a draft handle pivotally mounted on said platform, and a member pivotally secured to said handle and adapted to engage the load for drawing the same upon the platform when the latter is in tilted position.



1,537,157. GARTER. JULIUS J. BLAIR, St. Louis, Mo., assignor to Blek Company, Manufacturers, St. Louis, Mo., a Corporation of Missouri. Filed July 26, 1923. Serial No. 653,939. 3 Claims. (Cl. 241—6.)

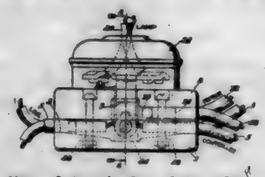
1. A garter including, in combination, a pad comprising a pair of superposed members fixed together, one of said members having an aperture, a leg-encircling band having an end fixed between the pad-members, a plate disposed upon said end of the band and concealed between the pad-members, a stud upon said plate protruding through said aperture, a loop carried by the other end of the band for detachable engagement upon



the pad with the stud, and means comprising a fabric section upon the plate and thread-stitches passed only through said fabric section and the band for independently fastening the plate to the band.

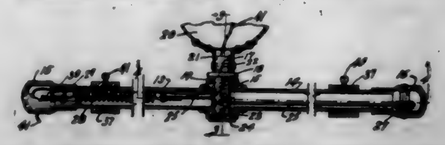
1,537,158. WEIGHING DEVICE. GEORGE E. CHATILLON, New York, N. Y. Filed Sept. 7, 1923. Serial No. 661,850. 1 Claim. (Cl. 116—129.)

In an adjustable zero weighing device, the combination of a frame having an opening, an indicator supporting shaft extending through said opening, a dished dial disc concentric with said shaft, and means for securing said disc in rotatable relation to the frame including a supporting plate attached to the frame and an eyelet concentric with said shaft and passing through said plate and said disc to retain peripheral portions of the disc in yielding engagement with the frame.



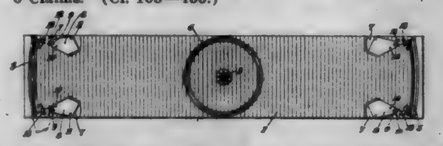
1,537,159. LUBRICATING ATTACHMENT FOR TRANSMISSION CASES. GEORGE W. CUMMINGS and GEORGE P. CUMMINGS, Elmhurst, N. Y. Filed Oct. 29, 1924. Serial No. 746,507. 5 Claims. (Cl. 184—105.)

5. In a device of the class described, a filler tube, a funnel seated on said tube, an upwardly seating valve closing the top of said tube, a stem on said valve extending upward through the funnel, a ring located in the upper end of the funnel and having a swivel engagement therewith, a crossbar extending across the said ring with which the upper end of said stem has a swivel engagement, a cap screwed into the upper end of said funnel, said cap and ring being formed respectively with opposite screw-threads, and connections between the cap and the ring whereby the latter is caused to be rotated in unison with the cap while permitting relative axial movement, said connections comprising tongues on the cap engaging grooves in the ring.



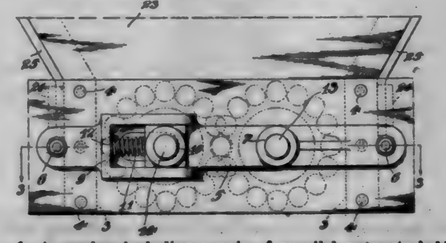
1,537,160. CONNECTER. FREDERICK DIEHL, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 24, 1924. Serial No. 688,335. 3 Claims. (Cl. 173—334.)

1. An electric cord holder and current tap comprising an insulating casing formed in two mating sections and having through passageways for a pair of line conductors, an anchor post within said casing around which an additional conductor may be looped to hold its emergent legs in juxtaposition to the emergent line conductors,



and a plurality of terminal sockets adapted to receive plug-connecter elements, said terminal sockets being disposed within said casing and connected with the respective line conductors.

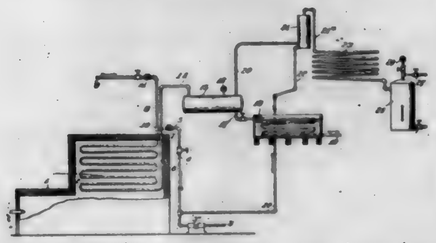
1,537,161. DIRIGIBLE ROAD LAMP. JOHN P. EVERETT, Denver, Colo. Filed Nov. 2, 1923. Serial No. 672,395. 3 Claims. (Cl. 240—62.)



1. A dirigible headlight comprising a horizontal tube, arranged to be secured to an automobile; a vertical lamp supporting shaft rotatably mounted on said tube; a spring arranged in and secured to one extremity of said tube and a cable secured to said spring and surrounding said shaft and extending to connection with the steering mechanism of said automobile, said connection acting to rotate said shaft in one direction, said spring acting to rotate said shaft in the opposite direction.

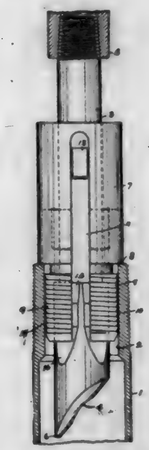
1,537,162. FREIGHT CAR. CHARLES FOWLER, Beverly Farms, Mass. Filed July 15, 1922. Serial No. 575,301. 6 Claims. (Cl. 105—455.)

1. In a freight car having a floor, a turntable mounted for rotation above the floor, and bridging means to hold the car floor in a plane with an adjacent receiving platform.



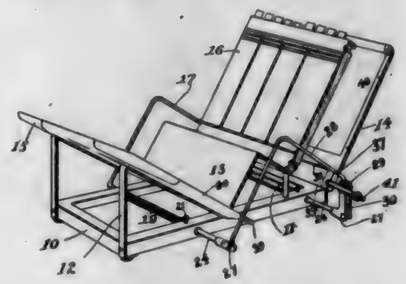
1,537,163. CRUSHER. ANTHONY P. GIUNTA and CHARLES P. GIUNTA, Philadelphia, Pa. Filed Apr. 28, 1924. Serial No. 709,440. 2 Claims. (Cl. 83—12.)

1. A crusher including a pair of parallel supports held apart by wall members, fixed and slidable bearings in the supports, a pair of cooperating rolls mounted between said wall members and each having its axis extending



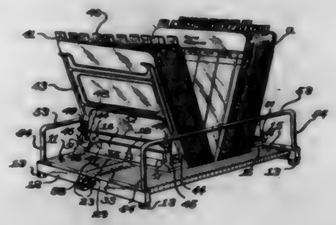
through said parallel supports, the axis of one roll being mounted in the fixed bearings and that of the other roll being mounted in the slidable bearings, and tie-rods extending through the bearings and parallel supports exteriorly of the wall members, substantially as described.

1,537,164. PROCESS FOR CRACKING HYDROCARBONS. WILLIAM L. GOMORY, Chicago, Ill., assignor to Clifford M. Leonard, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,773. 1 Claim. (Cl. 196—63.)



A continuous process for cracking hydrocarbons which consists in mixing steam with the oil to be cracked, continuously forcing the mixture under a pressure about one hundred and fifty pounds through a conduit heated to approximately 1000° F., the temperature and pressure being such as to permit about fifteen to twenty per cent of the hydrocarbons to remain in the liquid phase, passing all the products from said conduit to an enlarged space not directly heated and permitting the heavier, unvaporized hydrocarbons to separate therein without raising their temperature, separately condensing the less volatile and more volatile hydrocarbons and returning the former to the heating conduit.

1,537,165. PIPE PULLER. ELLSWORTH GRAY, Houston, Tex. Filed Sept. 15, 1923. Serial No. 662,951. 8 Claims. (Cl. 294—96.)



1. A pipe puller including a mandrel whose lower end is flared, a slidable sleeve thereon, having vertical slots and inside grooves extending at substantially right angles to said slots, lugs projecting from the mandrel and working in said slots and grooves, expansible pipe engaging means depending from said sleeve.

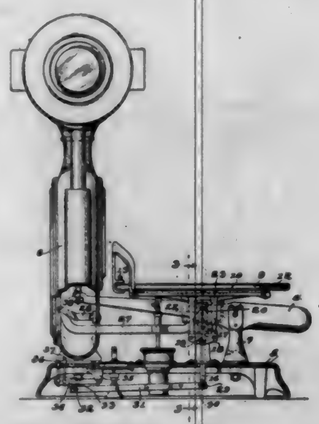
1,537,166. POSTING STAND. CHARLES R. HADLEY, Los Angeles, Calif.; Frank D. Barnhill and Pacific-Southwest Trust & Savings Bank, executors of said Charles R. Hadley, deceased, assignors to Charles R. Hadley Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 25, 1922. Serial No. 590,226. 4 Claims. (Cl. 45—57.)

2. In a posting stand, the combination of a base, a support mounted on the base to receive a loose leaf binder, a guide connected with one side of the base, members mounted in the base to shift laterally with respect thereto, an inverted substantially V-shaped guide pivoted at its ends to said shiftable members, means to hold the shiftable members in different positions of adjustment, and means to releasably hold the pivoted guide in position to engage a binder placed on the stand.

1,537,167. TRAY BINDER. CHARLES R. HADLEY, Los Angeles, Calif.; Frank D. Barnhill and Pacific-Southwest Trust & Savings Bank, executors of said Charles R. Hadley, deceased, assignors to Charles R. Hadley Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 29, 1923. Serial No. 659,905. 8 Claims. (Cl. 129—16.)

1. A tray binder comprising a flat support having a slot, clamping members on the support, index guides between the clamping members having ears projecting into the slot and provided with holes, a rod detachably engaging the support and extending through the holes, and means to force one of the clamping members toward the other to clamp loose leaves between the guides.

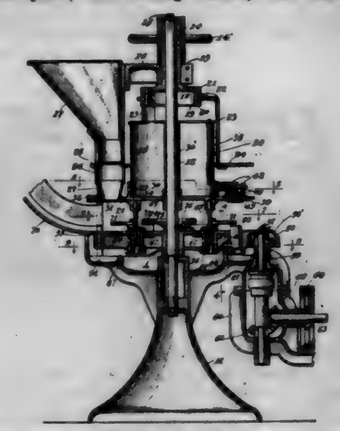
4. The guide described comprising a sheet of relatively smooth paper, a tab projecting from one margin of the sheet, and friction strips secured to the faces of the sheet adjacent the opposite margin for the purpose described.



8. A tray binder comprising a flat support having sockets, clamping members on the support, one of said clamping members being adjustable toward and from the other clamping member, guide rods at opposite sides of the support provided with downwardly bent ends seated in the sockets, and screws to clamp said rods in the sockets.

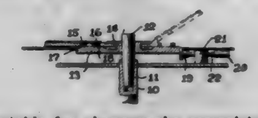
1,537,168. TUBE-FORMING MACHINE. PRIMM R. HAWTHORNE, St. Louis, Mo., assignor to Abraham L. Levi, St. Louis, Mo. Filed Dec. 6, 1921. Serial No. 520,217. 14 Claims. (Cl. 113—33.)

1. In a flat-strip tube-forming machine, in combination, a movable carriage, a stationary die, jaws mounted on and movable with the carriage, a core mounted on and movable with the carriage and projecting axially through the die and between the jaws, the jaws being also movable relatively to the core and to each other for gripping the strip in tube form upon the core, and means for actuating the carriage with its carried jaws and core relatively to the die for pulling the strip upon the core through the die.



1,537,169. CHECK-LINK MECHANISM FOR WEIGHING SCALES. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Aug. 15, 1918. Serial No. 249,971. 14 Claims. (Cl. 265—71.)

1. A check link mechanism for scales, comprising a scale frame, a lever fulcrumed thereon, a platform supported by the lever at a point located at a distance from the lever fulcrum, a pair of spaced check links of equal length extending from the platform in the direction opposite that of the lever fulcrum and connected with the platform and scale frame, and pivoted link connecting means between said check links and said lever permitting free eccentric movement of said check links and said lever.



1,537,170. CAN-FILLING MACHINE. AUGUST HOLMQUIST, Sr., Hoopeston, Ill., assignor to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 13, 1919. Serial No. 282,475. 25 Claims. (Cl. 226—98.)

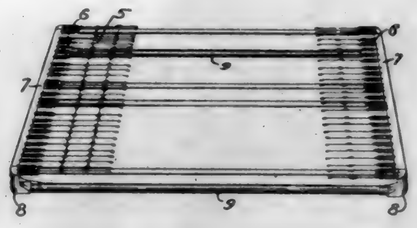
1. In a machine for filling cans, a plurality of movable filling material discharging means; means for moving said discharge means, one after another, in substantially the same path; can moving means; and means for

effecting relative movement between a can and said discharging means to secure successive registration of the can with each of said discharging means.

1,537,171. PHONOGRAPH. HAROLD J. KAYE, New York, N. Y. Filed Nov. 26, 1921, Serial No. 518,006. Renewed Mar. 20, 1924. 5 Claims. (Cl. 274—39.)

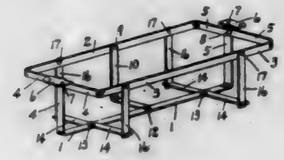
1. A turntable for phonographs comprising a rotatable member, detachable record engaging and supporting means, and means to prevent vertical displacement of the rotatable member engaging portion of the record engaging and supporting means.

1,537,172. HOLDER FOR PANS AND COVERS. RUDOLPH A. KOTTKE, Detroit, Mich. Filed Oct. 15, 1923. Serial No. 668,616. 5 Claims. (Cl. 211—17.)



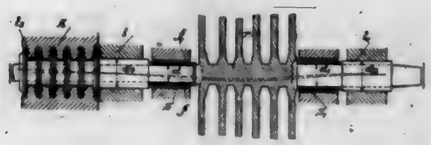
1. A holder for pans and covers comprising two complementary wire members, overlapping and slidably engaging each other, said members being downwardly bent at two opposite ends of said portions forming extensions, and being bent at the other opposite ends of said portions and at the end portions of said extensions, laterally from the common plane of said extensions and overlapping portions to form supports for the holder.

1,537,173. BED SPRING. MORRIS LIPPS, New York, N. Y. Filed Nov. 18, 1920. Serial No. 424,088. 1 Claim. (Cl. 5—205.)



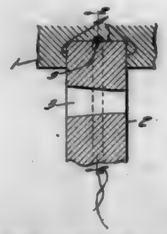
In a bed spring, a frame consisting of side bars, angled end bars and corner brackets, each of said corner

brackets being socketed to fit over the ends of the side bars and having vertical and horizontal raised seats for the ends of the angled end bars, a flange extending along the medial upper surface of the socket



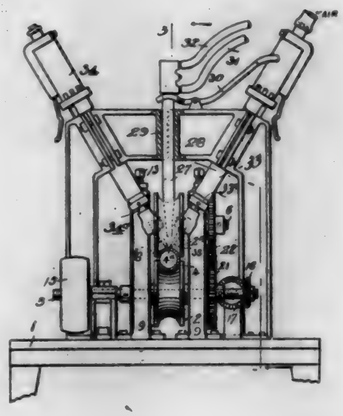
and rearwardly and upwardly therefrom to the raised seats, the vertical seat extending on both side of the flange and the horizontal seat terminating at the upper end of said flange.

1,537,174. HANGER BASKET AND BRACKET. SIGMUND LISKOW, Cincinnati, Ohio. Filed Aug. 1, 1921. Serial No. 488,981. 4 Claims. (Cl. 224—20.)



1. A basket including central and side longitudinally extending U-shaped members, each member consisting of a bar provided with end extensions, a pivot pin connecting all of the end extensions at one end of the basket together and another pivot pin connecting all of the end extensions at the other end of the basket together, supporting arms pivotally connected to said bars and provided with latching elements, the latching element of each supporting arm being adapted to engage the latching element of a complementary supporting arm to form transversely extending U-shaped parts to hold said U-shaped members in spaced position.

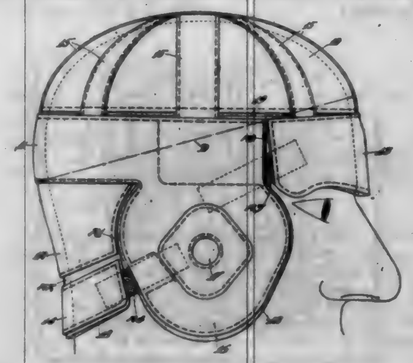
1,537,175. ELASTIC-FLUID TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 4, 1923. Serial No. 655,721. 15 Claims. (Cl. 253—39.)



1. An elastic fluid multistage turbine comprising a single rotor, a rigid shaft for said rotor, glands for said rotor shaft, bearings for said rotor shaft and supporting means for reducing the deflection of said rotor shaft.

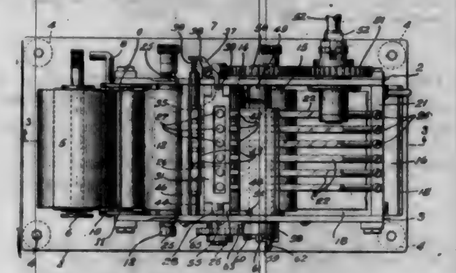
1,537,176. TURBINE CONSTRUCTION. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 15, 1924. Serial No. 732,305. 8 Claims. (Cl. 253—78.)

1. A steam turbine comprising a guide nozzle carrier or guide member carrier with a guide groove on the interior thereof and a guide nozzle member disposed in said groove with its surfaces abutting against certain surfaces of the groove and one of said members having a groove or channel communicating with the abutting surfaces and adapted to receive a rust soluble medium.



1,537,177. WELDING TUBES. GEORGE A. LUTZ, Cranford, N. J., assignor to American Circular Loom Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 26, 1922. Serial No. 577,517. 11 Claims. (Cl. 78—83.)

11. A machine for welding the meeting edges of a preformed metallic tube having an open seam comprising means to feed the tube, means to heat the tube along its seam, hammers located on opposite sides of the plane of the seam of the tube and at an angle to each other, and engines to actuate said hammers to cause the heated metal of the tube at the seam to contact.

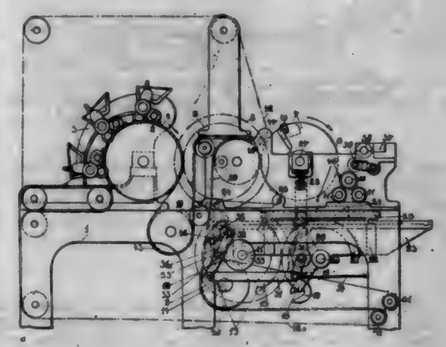


1,537,178. HELMET. JOHN E. MAYNARD, Plymouth, N. H., assignor to The Draper-Maynard Company, Plymouth, N. H., a Corporation of New Hampshire. Filed Oct. 11, 1923. Serial No. 667,985. 4 Claims. (Cl. 2—3.)

1. A helmet comprising a skull portion, ear flaps, movable forehead and neck flaps depending from said skull portion at the front and rear respectively, said neck flap being independent of said ear flaps, and means, including a resilient connection between said neck and

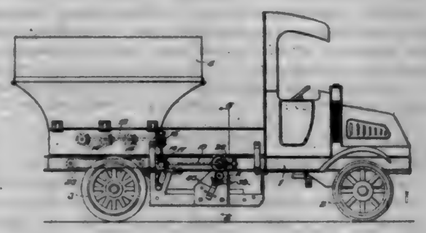
ear flaps, for resiliently drawing said forehead and neck flaps toward one another along lines located below the maximum diameter of the helmet.

1,537,179. MACHINE FOR TESTING RIBBONS AND CARBON PAPER. JACOB A. L. MÖLLER, New York, N. Y., assignor to Standard Products Corporation, a Corporation of New York. Filed Feb. 4, 1924. Serial No. 690,462. 5 Claims. (Cl. 79—51.)



1. In a testing machine, the combination with individual type and a platen against which the type may strike; of a plunger for each type, means for causing each plunger to deliver a succession of blows to said type of uniform intensity including a spring for each plunger, and means for applying supplemental spring pressure of a definite intensity to each of said plungers to definitely vary the intensity of the blows struck.

1,537,180. COMBINED RULING AND HEAD-PRINTING MACHINE. MAX MÜLLER, Leipzig, Germany, assignor to the Firm: Böttcher & Müller, Leipzig, Germany. Filed Mar. 14, 1923. Serial No. 625,130. 4 Claims. (Cl. 101—214.)

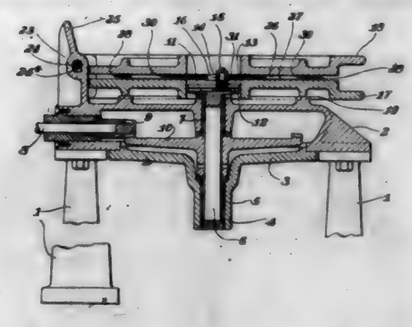


1. A combined ruling and head printing machine, comprising, in combination, a ruling machine having an elongated frame; an impression cylinder and a printing-machine slide arranged closely to the cylinder of said ruling machine in said elongated frame; intermediate wheels so arranged as to be adapted to be driven by said ruling cylinder and to transfer the motion to said impression cylinder and to the members actuating said slide; a shaft driving the printing-machine slide; two cogged sectors secured to one end of said shaft; lugs

extending forth from said sectors and having each at each end a cycloideshaped cut-out; two cogged segments so arranged as to be adapted to co-operate alternately with the first-mentioned sectors and to move in contrary directions; rolls attached to the ends of said segments

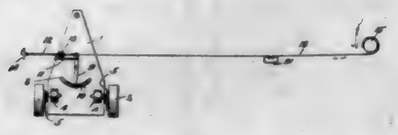
and of which that advancing at the time being is adapted to engage the cut-out of the adjacent sector and to initiate the movement of the slide driving shaft, whereas the other roll is adapted to co-operate with the corresponding adjacent segment and to retard the movement of said shaft, substantially as described.

1,537,181. DISTRIBUTING TRUCK. FRANK L. NAPIER, St. Joseph, and NELSON W. NAPIER, Benton Harbor, Mich. Filed Oct. 13, 1919. Serial No. 330,334. 6 Claims. (Cl. 94—44.)



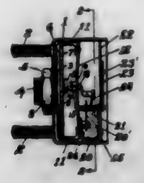
1. In a distributing truck adapted for spreading loose paving materials in a sheet or layer on the ground, the combination of a hopper for the materials, instrumentalities disposed below the plane of the hopper and having means to spread the loose materials in a horizontally disposed flat sheet and operative to carry and gradually feed said sheet by continuous motion thereof to the surface of the ground, while the truck is travelling along the street, including at least one forwardly travelling belt for supporting said sheet of materials, so that the sheet travels forward faster than the truck, feed mechanism in the bottom of said hopper to discharge the materials at different points longitudinally thereof to spread them over said belt, and means to operate said belt.

1,537,182. LAPPING MACHINE. HARRY L. NICHOLSON, Wilmerding, Pa. Filed Feb. 15, 1924. Serial No. 692,986. 5 Claims. (Cl. 51—161.)



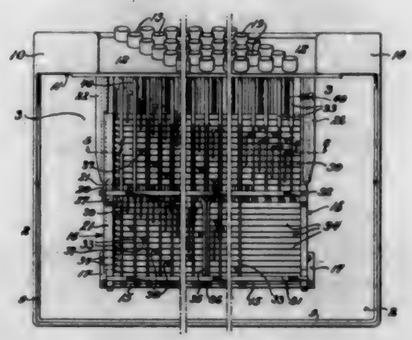
5. In combination in a lapping machine, lapping means in the form of a pair of opposing plates having annular abrading surfaces, carrier means for the articles to be

lapped in the form of a perforated plate mounted between said pair of plates, and crank means having a connection with one of said means and adapted to give



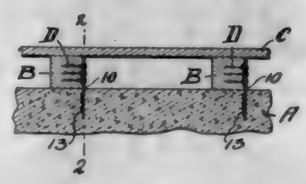
it an eccentric circular movement, the said connection being constructed so as to permit of a very substantial amount of lost motion between said crank means and said means.

1,537,183. AGRICULTURAL MACHINE. JOSEPH S. O'HARA, Romney, W. Va. Filed Jan. 3, 1925. Serial No. 461. 8 Claims. (Cl. 191—12.)



1. The combination with a tractor having separate propelling wheels, and separate power units for driving the respective wheels, of anchored means connected to the tractor and operated by the tractor while in motion for controlling the operation of the respective power units to propel the tractor along a predetermined path.

1,537,184. PRESSURE GAUGE. JOHN R. PADESKY, La Crosse, Wis., assignor to National Gauge & Equipment Company, La Crosse, Wis., a Corporation of Wisconsin. Filed May 2, 1924. Serial No. 710,642. 3 Claims. (Cl. 73—110.)

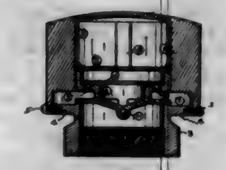


1. In a gauge, a pressure responsive element, a spindle mounted to oscillate, an indicator hand on said spindle, a support, a finger pivoted to said support, a crank arm connected with said finger and cooperating with said pressure element, a flexible connection between the free end of said finger and said spindle, and a spring connected with said spindle for holding said indicator hand in zero position, said support being of bendable material whereby bending of the support serves to cause the crank arm, by contact with said pressure responsive element, to oscillate said finger and take up slack in said flexible connection.

1,537,185. BASS-KEY MECHANISM FOR ACCORDIONS. JAMES PALMER, Philadelphia, Pa. Filed Sept. 22, 1922. Serial No. 589,896. 12 Claims. (Cl. 84—376.)

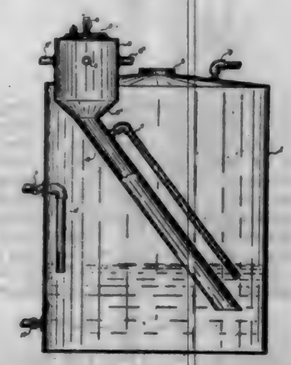
3. In an accordion, a bass casing having a partition and sloping faces adjacent its front side; sound making means mounted on the partition; a support removably mounted on the partition and provided with adjustable extensions; a key plate secured to the extensions and engaging the sloping faces, and bass key mechanism for controlling the sound making means mounted on the support and having its keys passing through the plate, whereby the support and key plate may be collapsed to clear the sloping faces and removed with the bass key mechanism as a unit.

1,537,186. UNIVERSAL ANCHORING TIE. JOHN E. PARRISH, Richmond, Va. Filed Sept. 17, 1924. Serial No. 738,286. 2 Claims. (Cl. 72—101.)



2. In combination, a concrete base, a screed and a tie plate connecting the base and screed having a plurality of groups of concentered prongs, each prong having its tip portion outbent at one side of the plate and its base portion disposed in the plane of the plate whereby at each prong group a central opening is produced defined at one side of the plate by outstanding prong tips and in the plane of the plate by resilient tongues formed by said base portions, said tie plate being partially embedded in said base and projecting from the base for engagement with the screed, the openings of the embedded portion of the tie plate promoting bonding of the material of the base at opposite sides of the plate, the prong tips providing anchoring means, the resilient tongues surrounding the openings of that portion of the plate confronting the screed providing means for gripping a securing element entered through the associated opening while being driven, the prong tips of the portion of the plate confronting the screed entering the screed as the securing elements are driven home to thereby provide additional securing means connecting the tie plate to the screed.

1,537,187. TRAIN-ACTUATED SIGNAL FOR ROAD AND STREET CROSSINGS. SAM PAVILLARD, Decatur, Tex. Filed Nov. 3, 1924. Serial No. 747,547. 5 Claims. (Cl. 246—294.)

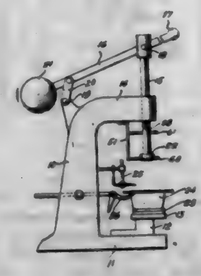


1. Signaling apparatus for street and road crossings comprising a revolving shaft and signaling devices revolving therewith, sounding devices consisting of a bell and a spring actuated striker co-operating with said signaling devices, arms actuated by said shaft, pivoted bearers carried by said arms for operating said striker, and means to be actuated by the wheels of a passing train for driving said shaft.

1,537,188. PRESSURE-RELEASE VALVE. OTTO A. PETERS, Wichita Falls, Tex. Filed July 21, 1923. Serial No. 652,998. 2 Claims. (Cl. 137—53.)

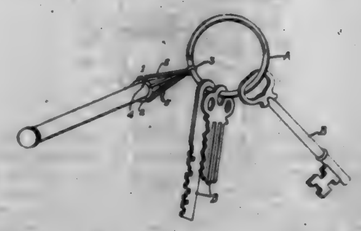
1. A release valve of the character described, comprising a cylinder, a spider connection attached to said cylinder, a valve seated on said spider connection, an apertured member in said valve, a disc slidably mounted on said apertured member.

1,537,189. OIL-FLOW TANK. OTTO A. PETERS, Wichita Falls, Tex. Filed Mar. 7, 1924. Serial No. 697,549. 4 Claims. (Cl. 220—86.)



1. In an oil flow tank of the character described, the combination of a tank, a housing mounted on said tank, a plurality of tubular members attached to said housing exteriorly of said tank, a tubular member attached to the bottom of said housing and extending downwardly in said tank, and a second tubular member attached to the first mentioned tubular member near the upper end thereof to provide for release of gas pressure.

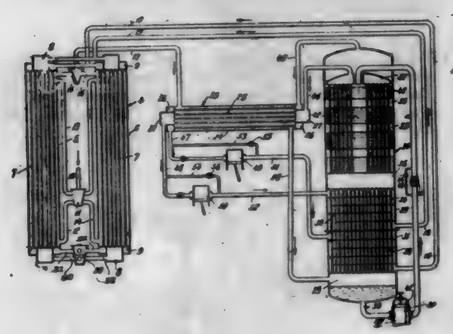
1,537,190. FUEL BRIQUETTE. EMIL PIRON, New York, N. Y., assignor to Piron Coal Distillation Systems, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 24, 1923. Serial No. 664,605. 1 Claim. (Cl. 44—24.)



A fuel briquette comprising a mass of pulverized coke mixed with sulphite liquor and enclosed in a layer of carbonized tar.

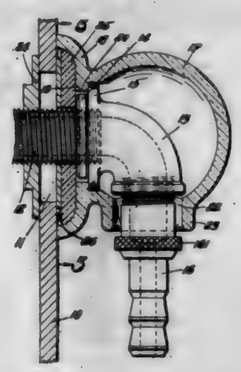
1,537,191. HAT MARKING. RALPH K. REYNOLDS, Danbury, Conn., assignor to Mallory Hat Company, Danbury, Conn., a Corporation of Connecticut. Filed Oct. 19, 1923. Serial No. 669,480. 29 Claims. (Cl. 101—41.)

1. In hat marking apparatus, in combination, means adapted to support a hat in inverted position, a printing die mounted for vertical movement into and out of engagement with the inner surface of the crown of said inverted hat, means for moving said die, and a member substantially embracing the path of movement of said die at a point above said hat and having a smooth lower face across which an inking roller is adapted to be drawn contacting the operative surface of said die to ink the same subsequently to the positioning of said hat in inverted position for printing thereon.



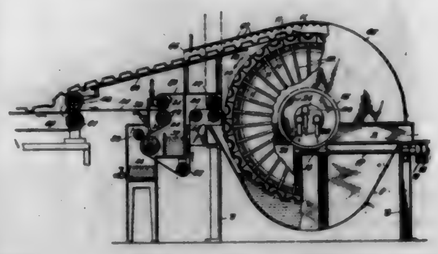
1,537,192. PENCIL-HOLDING DEVICE FOR KEY RINGS. CHARLES M. RICH, St. Louis, Mo. Filed Dec. 5, 1923. Serial No. 678,629. 3 Claims. (Cl. 24—255.)

1. A pencil-holding device adapted to be attached to a key ring, comprising a member having an intermediate portion, a split ring rigidly fixed to said intermediate portion at one of its ends and a second ring rigidly fixed to said intermediate portion at the opposite end



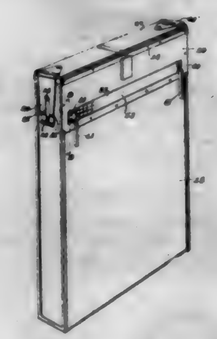
thereof, the last mentioned ring being adapted to receive the key ring to which said pencil-holding device is attached and said split ring being adapted to grip the pencil.

1,537,193. LIQUEFYING GASES. MONTAGUE H. ROBERTS, Jersey City, N. J., and CLAUDE C. VAN NUYS, New York, N. Y., assignors to Air Reduction Company, Inc., a Corporation of New York. Filed Mar. 4, 1919. Serial No. 280,515. 23 Claims. (Cl. 183—115.)



1. In the liquefaction of gases, the method which comprises, liquefying a portion of the incoming compressed gas, separating the liquid and withdrawing the unliquefied portion, evaporating the liquid while maintaining a substantial pressure thereon by heat interchange with the incoming gas to liquefy a portion thereof, expanding the evaporation product and causing the expanded product to cool the incoming gas before it is subjected to heat interchange with the evaporating liquid.

1,537,194. SPOUT AND HOUSING. ALFRED ROGERS, Milton, Mass. Filed Mar. 5, 1921. Serial No. 450,076. 13 Claims. (Cl. 137—111.)



4. A fitting for bath tubs and the like having a wall, comprising a housing having an aperture encircled by a flange to abut said wall and a second aperture at an angle thereto, an elbow-shaped spout enclosed by said housing with its inner and outer ends registering with said apertures respectively and having means for clamping said flange against said wall.

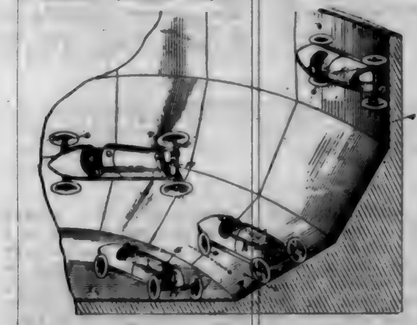
1,537,195. APPARATUS FOR FILTERING AND FOR FORMING ARTICLES FROM PULP SOLUTIONS. ORANGE J. SALISBURY, Salt Lake City, Utah. Filed Sept. 13, 1921. Serial No. 500,300. 5 Claims. (Cl. 92—42.)

5. Means for the continuous production of articles from pulp, comprising a suction drum, an article shaping surface on the drum, a pulp tank, and a web, interposed between the article shaping surface and the pulp in the tank, and means to rotate the drum and web in the tank.

1,537,196. MOVING-PICTURE-FILM CONTAINER. HERMAN C. SCHLICKER, Milwaukee, Wis., assignor of one-half to John R. Freuler, Milwaukee, Wis. Filed Nov. 8, 1919. Serial No. 336,703. 10 Claims. (Cl. 88—17.)

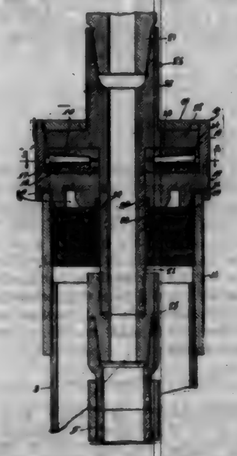
1. A moving picture film container, comprising a casing having a filling opening and an elongated side exposure opening, said exposure opening being in the side portion of the casing of greatest width, means for automatically closing said exposure opening and removable means for holding a film in endless formation within the casing and permitting it to be rotated in a direction transversely to and in register with the exposure opening to expose portions thereof while extending in straight lines between opposite end portions of the casing in consecutive order through said exposure opening.

1,537,197. JOINT OR COUPLING FOR POSTS. OSKAR SCHUBERT, Freiburg, Germany, assignor to Gebr. Himmelsbach Aktiengesellschaft, Freiburg, Germany. Filed Jan. 13, 1925. Serial No. 2,240. 3 Claims. (Cl. 20—99.)



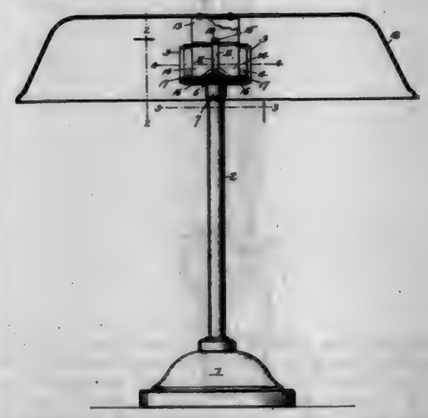
1. A metal coupling plate for the purpose set forth, curved and folded along two parallel edges parallel

with the axis of curvature, the folded portions forming bends at the bends and lying in part against the con-



cave face of the plate, and the inner edges of said folded parts being bent away from said concave face to form flanges.

1,537,198. MINIATURE AUTOMOBILE FOR EXHIBITION PURPOSES. WILLIAM EDWARD SOLDNER, Salina, Kans. Filed Apr. 12, 1924. Serial No. 706,215. 11 Claims. (Cl. 180—1.)



1. A device of the character described comprising a vehicle having a rear wheel and a front steering wheel, steering means attached to the front wheel, and means upon which gravity or centrifugal force has a predominating influence according to the speed of the vehicle to automatically operate the steering wheel and thus guide the vehicle.

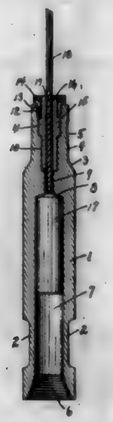
1,537,199. ROTARY MUDDING CLAMP AND METHOD OF MUDDING WELLS. HALE B. SOYSTER and HARVEY W. LEE, Los Angeles, Calif. Filed Oct. 3, 1922. Serial No. 592,102. 6 Claims. (Cl. 61—36.)

1. A process of mudding a porous formation below the casing of a well which comprises forcing mud through a string of pipe to said formation while rotating said pipe and while maintaining the upper end of the casing sealed.

1,537,200. ELECTRIC LAMP. WILLIAM H. SPENCER, Bogota, N. J., assignor to I. P. Frink Inc., New York, N. Y., a Corporation of New York. Filed Apr. 4, 1924. Serial No. 704,158. 6 Claims. (Cl. 240—128.)

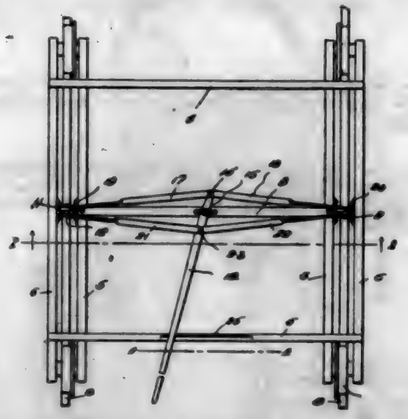
6. The combination with a double ended lamp socket, of a reflector therefor, said lamp socket and reflector having a yieldable clamping connection permitting angular adjustment of the reflector about the axis of said lamp socket and relatively slidable guiding surfaces extending circumferentially around the axis of said lamp socket.

1,537,201. DUMPING SAND PUMP. FRED SWAN, Marietta, Ohio. Filed July 3, 1923, Serial No. 649,340. Renewed Apr. 8, 1925. 12 Claims. (Cl. 166—19.)



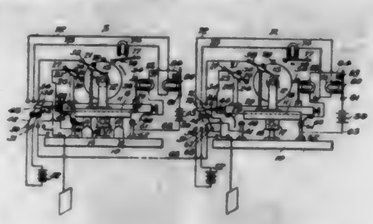
1. In a device of the character described, a hollow cylinder adapted to be raised and lowered in a well hole provided at its lower end with means for carrying an upwardly opening valve comprising oppositely arranged members adapted to together form a cylindrical tube, one of said members being so hinged to the other on an axis at right angles to the axis of the cylinder that its lower end may be swung away from the lower end of the other member, and a valve seat provided with a valve and carried by the hinged member adapted to fit against the interior face of the said other member when the hinged member is in closed position.

1,537,202. CLAMPING RING FOR EXPANSIBLE TOOLS. FRED SWAN, Marietta, Ohio. Filed Feb. 9, 1924, Serial No. 691,725. Renewed Apr. 3, 1925. 5 Claims. (Cl. 255—74.)



1. A clamp for well drilling tools adapted to enclose expansible cutters and hold them in closed position comprising a ring having its inner diameter substantially that of the inner diameter of the well casing, adapted to rest upon the upper edge of the coupling at the upper end of the casing and provided with means for engaging said coupling to hold it concentric therewith.

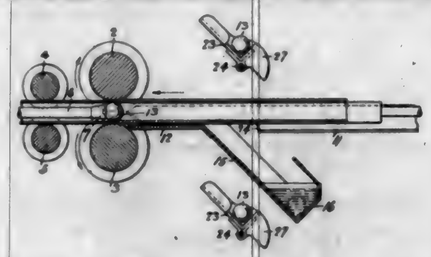
1,537,203. SWIVEL JAR WIRE-ROPE SOCKET. FRED SWAN, Marietta, Ohio. Filed Aug. 7, 1924. Serial No. 730,561. 3 Claims. (Cl. 24—123.)



1. In a swiveling jarring device for well drilling apparatus comprising a body provided with a relatively large cylindrical bore adapted to receive a cylindrical jar or piston extending upward in said body and terminating in an annular shoulder, and also provided with a rope guiding bore extending upward from said shoulder having the portion immediately above said shoulder of relatively small diameter and having its upper portion of greater diameter, and a bushing having an opening through it for the drill rope secured in said portion of the rope guiding bore of greater diameter.

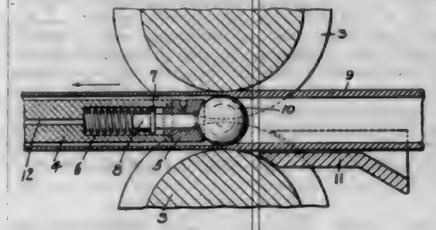
1,537,204. BRAKE FOR RAILWAY ROLLING STOCK. EARL S. SWARTZBAUGH, West Helena, Ark. Filed Sept. 15, 1923. Serial No. 662,810. 1 Claim. (Cl. 188—48.)

In combination with a wheeled truck of a railway vehicle, a cross bar mounted thereon and provided at a point midway between its ends with a longitudinally disposed slot, a lever having a fulcrum pin which is loosely received in said slot, clamping jaws pivotally mounted upon the truck at the opposite ends of the cross bar and links pivotally connected at their inner ends with the lever and pivotally connected at their outer ends with the clamping jaw.



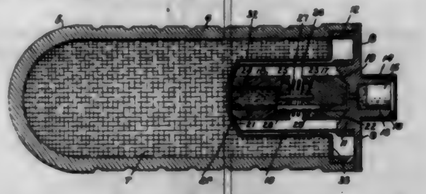
1,537,205. FACSIMILE TELEGRAPH. LUDWIG TSCHÖRNER, Vienna, Austria, and NICHOLAS SANDOR, Dresden, Germany. Filed Oct. 30, 1920. Serial No. 420,679. 9 Claims. (Cl. 178—13.)

1. A facsimile telegraph apparatus comprising a base; a cylinder rotatably mounted on said base; a slide carrier slidably mounted on said base and adapted to slide in a direction parallel with the axis of said cylinder; a slide member slidably mounted on said slide carrier and adapted to slide transversely to the direction of movement of the slide carrier; a sending instrument mounted on said slide member; and a receiving instrument mounted on said slide member, said instruments being mounted so that not more than one can be in operative relation with said cylinder.



1,537,206. TUBE-ROLLING METHOD AND APPARATUS. MALCOLM U. WIKSTROM, Pittsburgh, Pa. Filed Mar. 17, 1923. Serial No. 625,771. 8 Claims. (Cl. 80—11.)

8. In apparatus for making seamless tubing, the combination with rolls, of a mandrel-bar, a spherical plug adapted to engage said mandrel-bar, a guide in front of said rolls, a rocking delivery device adapted to deposit the plug on said guide, a downwardly extending chute communicating with said guide, an inclined trough communicating with said delivery device, means for

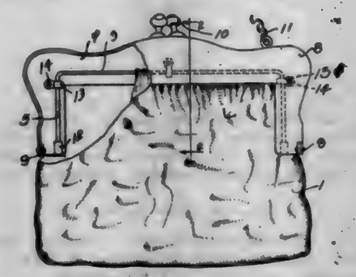


delivering the plug from said chute into said trough, and means carried by said delivery device for closing the end of said trough adjacent said delivery device.

1,537,207. APPARATUS FOR FORMING METAL TUBES. MALCOLM U. WIKSTROM, Detroit, Mich. Filed Aug. 22, 1924. Serial No. 733,586. 4 Claims. (Cl. 80—11.)

4. The combination with rolls for forming tubes, of a mandrel bar, a plug movable into the pass of the rolls, and resilient means placed under stress upon advance movement of said plug into said pass, for returning said plug to position.

1,537,208. PERCUSSION FUSE. SAMUEL WILEY, Metuchen, N. J. Filed Nov. 8, 1923. Serial No. 673,446. 2 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

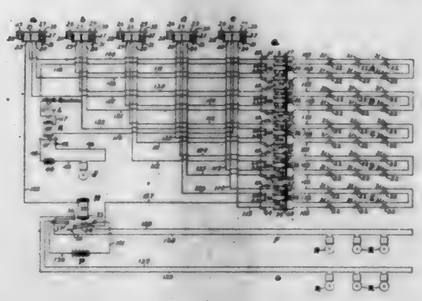


1. A fuse for propectiles embodying an outer member provided with a flange adapted to be threaded into the projectile, a container dependent from said outer member and adapted to extend within the projectile, a primer in the outer member, a plurality of normally separated blocks capable of relative axial movement mounted in the container, resilient means interposed between the blocks to maintain the blocks apart in flight, an exploding charge in one of the blocks, a striker in the other of the blocks adapted to be thrown against the exploding charge on impact, a pin in one of said blocks, a delay charge in the other of the blocks, said pin and charge adapted to co-operate to prevent relative movement of the blocks until a predetermined time in flight has elapsed, said delay charge being adapted to be ignited by the primer.

1,537,209. DISK WHEEL. JOHN F. WILMOT, Detroit, Mich. Filed Feb. 19, 1923. Serial No. 619,872. 10 Claims. (Cl. 301—63.)

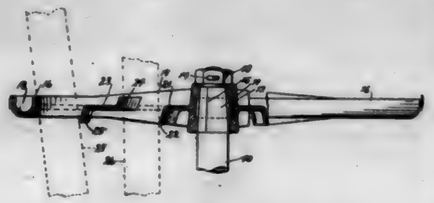
6. In a vehicle road wheel, a wheel body consisting of a hub and a metal disk formed of a series of disks of consecutively greater diameter all secured together at the hub and each disk of smaller diameter being welded at the periphery only to the disk of next greater diameter, the assembled disks being shaped to provide a concavo-convex central portion gradually merging into a reversely bent arcuate peripheral portion providing a flat cylindrical surface at the periphery of the disk of largest diameter, a rim fitting the said portion, said rim having a series of bolt apertures, the axes of which are parallel with the center plane of the rim, and bolts extending through the periphery of the disk supporting the rim thereon.

1,537,210. HAND BAG. RUBY O. WOOD, Spokane, Wash. Filed May 24, 1924. Serial No. 715,566. 3 Claims. (Cl. 150—29.)



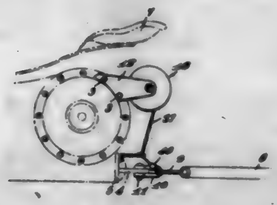
1. The combination with a pair of hinged U-shaped frame plates, of a pair of U-bars adapted to suspend a bag, supporting sockets on said plates to receive the ends of said bars, and releasable means on the plates for retaining said bars.

1,537,211. SIGNALING SYSTEM. JOHN H. WOOTTON, New York, N. Y. Filed Sept. 7, 1922. Serial No. 586,736. 11 Claims. (Cl. 177—355.)



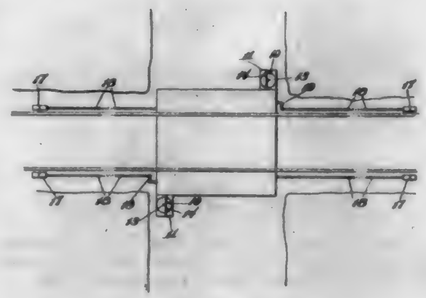
1. In a signaling system, a signal circuit comprising two parallel loops, a high resistance connection between one end of one of said loops and the opposite end of the other thereof, signal manifesting means arranged for response to variations of current flow through said connection, a current source and signal manifesting means connected between the remaining ends of said loops, signal devices each having a differentially wound electromagnet, magnet windings of succeeding devices connected in alternate ones of said loops, and circuit controllers

each having normally open closable contacts serially connected in one and the other of said loops, respectively, at adjacent portions thereof, one of the contacts of each



controller connected in a portion of one or the other of said loops which is situated between the differential magnet windings of one or another of said signal devices.

1,537,212. HAND-BRAKE WHEEL. HENRY I. WRIGLEY, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Nov. 28, 1924. Serial No. 752,534. 6 Claims. (Cl. 74—33.)

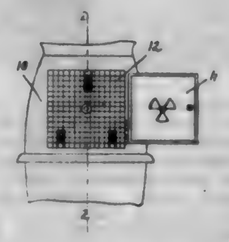


1. In a brake mechanism, a brake shaft and a brake wheel having a hub mounted on the shaft, a rim, spokes connecting the hub and the rim, and means dividing the spaces between the spokes into such narrow portions as to prevent the brakeman's club from being inserted through the wheel and into engagement with the shaft.

1,537,213. EXTENSION HITCH. WILLIAM JEROME WYLIE, Columbia, Miss. Filed May 2, 1924. Serial No. 710,610. 4 Claims. (Cl. 280—33.14.)

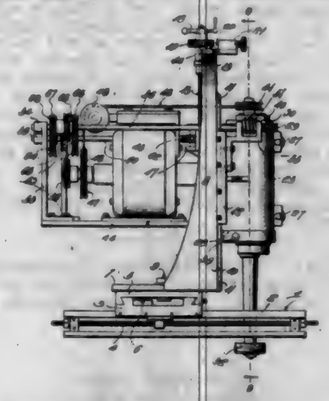
1. In a device of the class described, a drum, means for mounting the drum for rotation on a tractor, a guide, means for mounting the guide on a tractor, a tow line slidable in the guide and wound about the drum, and spring means for rotating the drum to wind the tow line thereon.

1,537,214. RAILWAY SIGNALING APPARATUS. LEWIS A. YOUNG, Bigelow, Kans. Filed Oct. 21, 1924. Serial No. 744,965. 4 Claims. (Cl. 246—293.)



1. In combination, a signal capable of limited rotation and a trip for operating the signal rigidly connected therewith whereby said signal limits the operation of the trip, said trip being mounted for oscillation and embodying a pair of arms adapted to be alternately disposed in the path of a train-carried member, each of said arms being formed in two section, one of which is adapted for engagement by the train-carried member, said section being yieldably mounted to permit passage of the train-carried member upon engagement of the train-carried member therewith in one direction without operation of the trip and being rigid to its associated arm upon engagement of the train-carried member therewith in the opposite direction whereby to cause operation of the trip.

1,537,215. TREATING ORES, CONCENTRATES, SANDS, AND OTHER MATERIALS CARRYING VALUES. LESLIE W. AUSTIN, San Jose, Calif., assignor of one-half to Peron W. Lee, Sacramento, Calif. Filed Sept. 2, 1924. Serial No. 735,488. 3 Claims. (Cl. 83—67.)

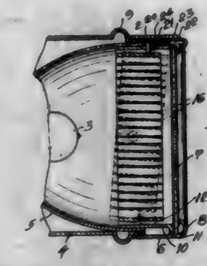


2. The treatment of ores, concentrates, sands, and other materials carrying values with an amalgam consisting of sodium, zinc and mercury, the sodium not exceeding 10% of the weight of the mercury and the zinc not exceeding 15% of said weight.

1,537,216. PROTECTIVE SCREEN. DAVID S. BAGBY, La Belle, Mo. Filed June 23, 1922. Serial No. 570,357. 2 Claims. (Cl. 126—190.)

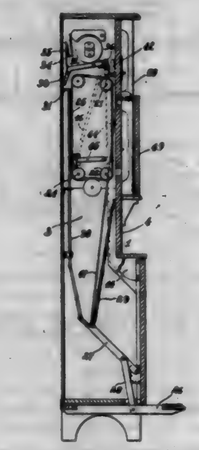
1. A device of the character described comprising a resilient metallic reticulated sheet adapted to overlie the door opening of the fire-box of a stove, and having its edges projecting beyond such opening, a plurality of clamping strips secured to the recticulated sheet and having offset ends adapted to engage the inner face of the side walls of the stove.

1,537,217. CYLINDER-GRINDING MACHINE. JAMES BALLOU and GEORGE W. BALLOU, Little Rock, Ark. Filed Mar. 12, 1923. Serial No. 624,622. 6 Claims. (Cl. 51—245.)



1. A cylinder grinding machine comprising a vertical guideway having two laterally spaced vertical tracks, a carriage slidably engaged with said tracks and spanning the space between them, cylinder grinding means carried by said carriage at one side of said tracks, a horizontal plate secured at one end to the side of the carriage remote from the grinding means, said plate passing between said vertical tracks and projecting from the side thereof remote from said grinding means, an electric motor mounted on said plate, and driving connections between said motor and said grinding means.

1,537,218. MUSICAL TOY. JEROME BARTOLOWSKY, Oakland, Calif. Filed Feb. 11, 1922. Serial No. 536,893. 3 Claims. (Cl. 46—46.)

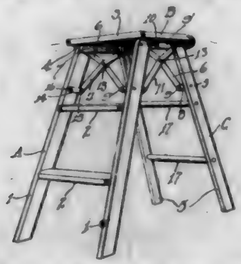


1. A toy comprising a pair of telescoping members, an air chamber in the outer end of the outer member, a musical element in the inner end of said air chamber, the outer end of said chamber being provided with openings, a rod extending diametrically through the outer part of said air chamber on which the toy is turnably journaled, a handle on said rod, a connecting element connected to said rod, a connecting element connected to the lower end of the inner telescoping member, and an elastic band connected at its ends to said connecting elements respectively.

1,537,219. HEADLIGHT. EVAN BENO, Spokane, Wash. Filed May 24, 1924. Serial No. 715,547. 6 Claims. (Cl. 240—45.2.)

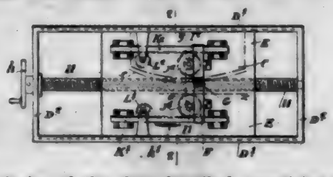
1. The combination with a headlight and a bearing sleeve therein, of a ring having trunnions journaled in the sleeve, fixed parallel horizontally disposed slats in said ring each having an upper non-reflecting face and a lower reflecting surface, and means for adjusting and retaining said ring in a tilted position, and additional means for tilting beyond the adjusted position.

1,537,220. COIN-CONTROL TOWEL CABINET. JOSEPH N. BORROUGHS, Oakland, Calif. Filed July 24, 1922. Serial No. 577,015. 4 Claims. (Cl. 45—32.)



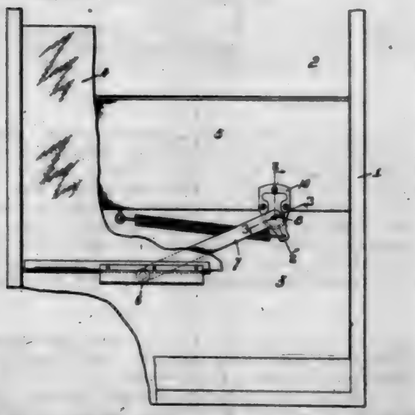
1. A coin controlled towel dispensing device comprising a cabinet, a towel supply roller journaled in said cabinet, a pair of feed rollers journaled in said cabinet, a pair of pressure rollers cooperating with said feed rollers, said pressure rollers being mounted on a pair of pivoted arms, means to normally spread said arms apart, means for forcing said arms toward each other against the action of said last-mentioned means, and coin-controlled means for rotating said feed rollers.

1,537,221. LADDER STOOL. GEORGE H. BUGENHAGEN, Minot, N. Dak. Filed Apr. 17, 1924. Serial No. 707,218. 3 Claims. (Cl. 228—2.)



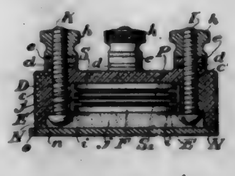
1. A ladder stool comprising a ladder portion, a seat pivotally secured to said ladder portion, supporting legs for said seat and means including links connecting said ladder portion, seat, and legs together, said means

being adapted to swing said ladder portion, seat, and legs into parallel relation with respect to each other, and to swing said legs away from said ladder portion, and



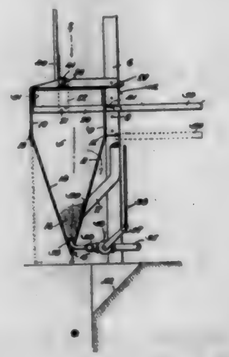
into a position to support said seat, certain of said links being disposed in alignment with each other when said legs are in extended position, whereby said legs are locked in extended position.

1,537,222. MECHANISM FOR TRANSFORMING A DISPLACEMENT OF A MEMBER INTO AN INVERSELY PROPORTIONAL DISPLACEMENT OF ANOTHER MEMBER. ANTOINE CASTELLANI, Paris, France, assignor to Societe d'Optique et de Mecanique de Haute Precision, Paris, France, a Limited Joint Stock Company. Filed Nov. 3, 1923. Serial No. 672,689. 10 Claims. (Cl. 74—14.)



2. A device of the class described comprising a movable carriage, a roller operatively connected to said carriage, a cam engaged by said roller, a pair of driven elements, and means operatively connected to said roller for moving said elements through distances that are inversely proportional.

1,537,223. WINDOW-CONTROL MECHANISM. ANGELO ROBERT CLAS, Toledo, Ohio, assignor to The Toledo Automotive Products Company, a Corporation of Ohio. Filed Sept. 24, 1923. Serial No. 664,354. 3 Claims. (Cl. 192—8.)

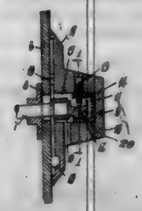


1. In a window control mechanism, a driven shaft in operative connection with an associated window member and having a peripheral projection on a part thereof, a rotatable control member sleeved over the shaft and having an opening in which the shaft projection extends for limited movements in either direction relative to the sleeve, a helical spring encircling the sleeve portion of the control member and having its ends inturned into the sleeve opening at opposite sides of the shaft projection, the normal space in said opening at each side of said projection being greater than the thickness of the inturned portion of the spring, whereby such portion may have limited circumferential movement in the opening to permit an expansion of the spring by the action of the shaft projection thereagainst when the shaft is turned to effect a turning of the control member, and stationary means enclosing the spring and with which the spring frictionally engages to prevent a turning of the control member when the spring is expanded.

1,537,224. RADIOFREQUENCY TRANSFORMER. SAMUEL COHEN, Brooklyn, N. Y. Filed Jan. 27, 1923. Serial No. 615,210. 2 Claims. (Cl. 175—361.)

1. Transformer structure of the character described, comprising a housing of insulating material having a chamber, a transformer unit disposed in said chamber and comprising a plurality of grooves and windings in said grooves, conducting members projecting from opposite sides of said chamber over said unit within said housing, connections from said coils to said conducting members, and binding posts extending through said conducting members to the exterior of said housing.

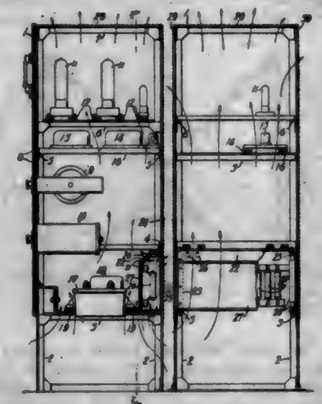
1,537,225. MOLD SANDER. ROY P. M. DAVIS, Mount Union, Pa. Filed Oct. 5, 1923. Serial No. 666,804. 4 Claims. (Cl. 25—115.)



1. In an apparatus for sanding open ended molds, a sand box open at its top end, means for feeding sand to the lower end of the box, means positioned at the upper end of said box adapted to support a mold, a cover plate secured to said last mentioned means for normally closing the top of the mold and sand box, and means for forcing sand upwardly through the mold and against said cover plate.

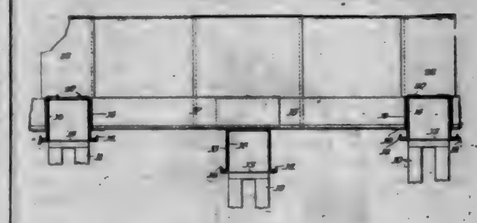
1,537,226. LEVER FILLER FOR FOUNTAIN PENS WITH METAL CASINGS. WILLIAM P. DE WITT, Somerville, Mass., assignor to De Witt-La France Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 21, 1922. Serial No. 530,742. 7 Claims. (Cl. 120—46.)

1. A fountain pen having, in combination, a metal casing provided with a slot, an ear on said casing extending transversely thereof and projecting thereinto, at one side of said slot and a lever normally positioned in said slot, one of said last-named parts having a projection constituting a pivot thereon projecting into a recess provided in the other of said last-named parts and within the bore of said casing, whereby said lever is pivotally mounted directly on said casing and secured thereto.



1,537,227. DIAL WITH UNIVERSAL CONNECTIONS. WILLIAM P. DE WITT, Somerville, Mass., assignor to De Witt-La France Company, Cambridge, Mass., a Corporation of Massachusetts. Filed June 26, 1924. Serial No. 722,489. 15 Claims. (Cl. 287—53.)

2. A rotary dial, a connecting member adapted to be fastened to one end of a shaft and provided with a slot extending longitudinally thereof, said connecting member being positioned in a recess provided in said dial and terminating in a spherical shaped end fitting into a recess provided in said dial, and a connecting pin on said dial projecting into said slot and terminating at its inner end in a depression provided in the bottom of said slot.

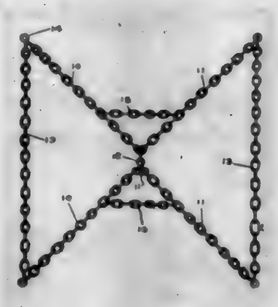


1,537,228. MEANS FOR COOLING CARRIER-WAVE APPARATUS. JOHN O. GARDAN, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 3, 1922. Serial No. 565,509. 8 Claims. (Cl. 250—7.)

7. A radio transmitter cabinet comprising a plurality of elements subject to deterioration at high temperatures, a resistance unit which evolves considerable quantities of heat under service conditions mounted in said cabinet, and means, including an inclined panel of heat and electric insulating material having terminals

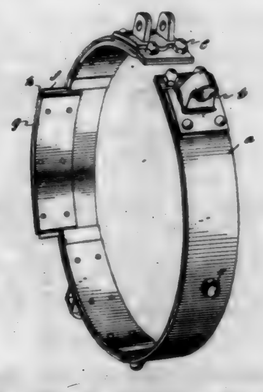
mounted thereon, to direct away from the main stream of cooling air through said cabinet the air employed for cooling said resistance unit.

1,537,229. METAL FORM CONSTRUCTION. HARVEY M. GERSMAN, Chicago, Ill., assignor to Kalman Steel Co., Chicago, Ill., a Corporation of Delaware. Filed Aug. 4, 1924. Serial No. 729,991. 12 Claims. (Cl. 25—131.5.)



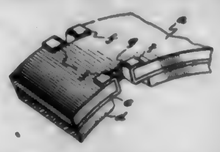
1. In a concrete form system, the combination of stringers and supports therefor, the top surface of alternate stringers being in different horizontal planes, and soffits extending transversely between stringers, said soffits at their ends abutting the sides of stringers and at an intermediate point resting upon the top surfaces of an intermediate stringer.

1,537,230. GARMENT. JOHN WILLIAM GODBEHERE, Hot Springs, Ark. Filed May 24, 1923. Serial No. 641,229. 2 Claims. (Cl. 2—78.)



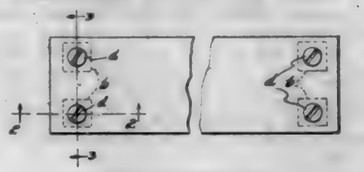
2. A one piece outer garment having a drop seat with a belt secured to the upper edge of said seat and extended at its ends beyond the side edges of the seat, the body portion of the garment having its back extended below the waist line, the seat adapted to be closed up over said extension, said belt having longitudinally arranged tapes secured at their ends to the inner face of the belt, and superposed loops formed on the garment through which said tape and belt pass whereby the opening movement of the seat is restricted and the belt held against the disengagement from the garment.

1,537,231. TIRE TRACTION AND NONSKID CHAIN LUG. EUGENE E. GRAVES, Lincoln, Nebr. Filed Apr. 17, 1923. Serial No. 632,785. 3 Claims. (Cl. 152—14.)



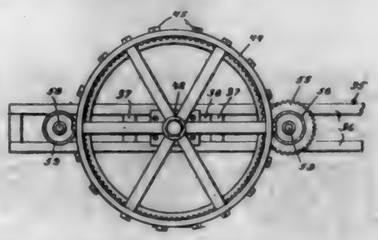
1. In a tire chain structure, a pair of crossed chains adapted to rest diagonally on the surface of the tire, a transverse chain connecting the forward extremities of the crossed chains and a second transverse chain connecting the rearward extremities of the crossed chains, said transverse chains serving primarily as traction chains, and other chains connecting said first named chains intermediate their ends so as to lie longitudinally on the surface of the tire to serve primarily as nonskid chains.

1,537,232. BRAKE BAND AND LINING. RICHARD B. HARTMAN, Middletown, Ohio, assignor to Hartman Brake Corporation. Filed Jan. 30, 1920. Serial No. 355,285. 25 Claims. (Cl. 188—249.)



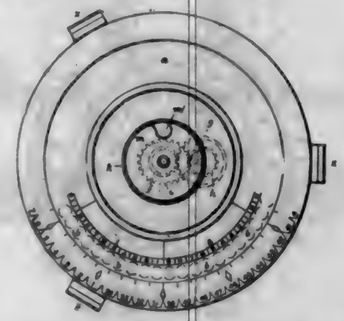
5. In a brake, the combination of a rotatable drum having a braking surface of substantially uniform diameter from side to side, a brake band that can be contracted upon the drum and having a face substantially concentric with the braking surface of the drum, said band being open on the side that the braking surface of the drum is open, a plurality of brake lining segments of substantially uniform radius from side to side adapted to slide freely between the face of the brake band and the braking surface of the drum at the open side of these members when the segments are unsecured, each brake lining segment made up of a relatively thin, flexible, stiff strip as a backing and a strip of brake lining material secured to the face thereof, and means engaging the backing strips for releasably securing the segments to the brake band.

1,537,233. BRAKE BAND AND LINING. RICHARD B. HARTMAN, Middletown, Ohio, assignor to Hartman Brake Corporation. Filed Feb. 2, 1920, Serial No. 355,846. Renewed Oct. 17, 1924. 12 Claims. (Cl. 188—249.)



5. In a brake, the combination of a brake band provided with pairs of notches in its side edges, and removable brake lining segments each comprising a metallic backing provided with punched out tongues and a facing of brake lining material secured thereto, the said tongues being adapted to be turned over the side walls of the notches to lock the brake lining segments removably to the brake band.

1,537,234. BRAKE AND BRAKE LINING. RICHARD B. HARTMAN, Middletown, Ohio, and CHARLES S. MOXSON, Detroit, Mich.; said Hartman assignor of his entire right to Hartman Brake Corporation. Filed Apr. 9, 1920. Serial No. 372,629. 3 Claims. (Cl. 188—249.)



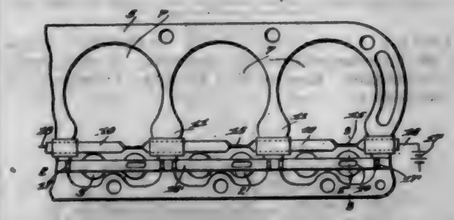
2. In a brake, the combination of a brake-band member, and a plurality of removable elements arranged around the band-member, each element comprising a drum-gripping member in the form of a molded, relatively yieldable composition material, and relatively rigid fastening means molded into the composition material by which the same may be removably attached to the brake-band member.

1,537,235. POWER-TRANSMISSION MECHANISM. AMASA P. HAY, Goshen, Ind. Filed Oct. 1, 1923. Serial No. 665,877. 4 Claims. (Cl. 180—70.)

1. In a transmission mechanism, a frame, bearings slidable longitudinally of the frame, an axle journaled through said bearings, ground engaging wheels on the axles, ring gears on the wheels, a shaft mounted transversely of the frame, rollers on said shaft bearing against the rearmost points of the wheels, drive spindles, rollers on said spindles bearing against the forwardmost portions of the wheels, and pinions on said spindles meshing with the forwardmost points of the gears.

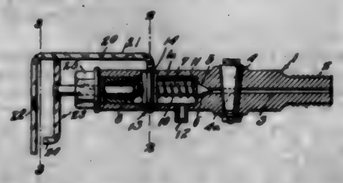
1,537,236. APPARATUS FOR USE IN PLAYING GAMES OF THE ROULETTE TYPE. JOHN JAMES JARVIS, Barnes, England. Filed Feb. 27, 1923. Serial No. 621,650. 4 Claims. (Cl. 273—110.)

2. An apparatus of the class described comprising a drive shaft, a sleeve mounted thereon, a ball supporting disc having a discharge chute carried by the sleeve, a non-circular pinion carried by the shaft, a gear train operatively connecting the pinion to the sleeve whereby to rotate the sleeve at a variable speed, a ball receptacle, and means to frictionally mount the same on the sleeve whereby the receptacle is caused to slip with respect to the disc during periods of acceleration and deceleration to discharge the balls therefrom.



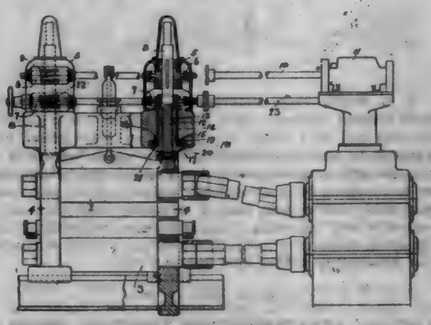
1,537,237. NOZZLE HOLDER. JOHN D. KARSTNER, Minneapolis, Minn. Filed Mar. 5, 1924. Serial No. 697,011. 1 Claim. (Cl. 248—29.)

A nozzle-holder formed from a single rod and comprising a standard, the lower end of which is adapted to be pressed into the ground, the upper edge portion of said standard being folded upon itself and then outward and upward in a plane that radiates from the standard to form a U-shaped clip the arms of which extend upward in said plane and from thence said rod extends horizontally outward to form an arm, the free end portion of which is bent laterally and rearward in a horizontal plane to form a second U-shaped clip the arms of which extend toward said standard in said horizontal plane.



1,537,238. VAPORIZER. EUGENE KRAFT, Spokane, Wash. Filed Jan. 22, 1924. Serial No. 687,718. 5 Claims. (Cl. 123—141.)

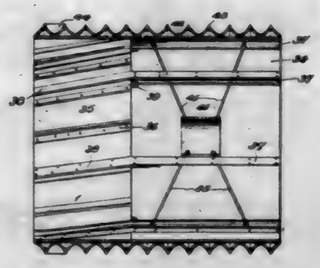
1. In combination, an explosion engine having a combustion chamber and intake and exhaust valves opening to said chamber, ignition terminals above the intake valve, a primary metal vaporizing strip extending adjacent said valves for vaporizing the mixture and oil while the engine is running, means for heating said strip prior to the first explosion to vaporize the mixture, and a secondary metal strip extending abreast said



valves and in close proximity to said terminals and adapted to be heated by combustion to prevent fouling of said terminals and also to assist in vaporizing the mixture.

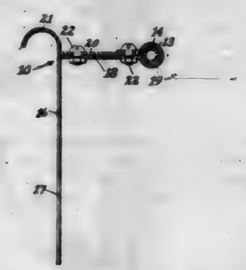
1,537,239. GAUGE COCK. JOHN H. LA LONDE, Jacksonville, Fla. Filed Oct. 29, 1923. Serial No. 671,613. 1 Claim. (Cl. 251—134.)

A gauge cock comprising a hollow body provided with a spring seated valve for closing one end, said valve having a stem extending through and slidably mounted in the other end, a split collar encircling said body intermediate its ends and held against longitudinal movement thereon, an L-shaped member pivotally mounted at one end on said collar the other end of said member extending transversely across the path of said stem and spaced from the outer end of the stem, an arm pivoted to said member and connected with said stem and adapted to be moved toward the transversely arranged portion of the member to unseat the valve.



1,537,240. MILL SCREW-DOWN. HARRY A. LEWIS, Norristown, Pa., assignor of one-half to Alan D. Wood, Philadelphia, Pa. Filed Nov. 19, 1923. Serial No. 675,743. 6 Claims. (Cl. 80—56.)

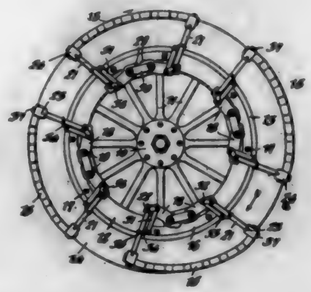
6. In a mill screw-down, the combination with the rolls and housing, of a screw, means for turning said screw, a nut engaged by said screw, means for rotating said nut in the opposite direction from said screw, a sleeve surrounding said nut, a thrust-collar on said sleeve



engaging the housing, said housing having a recess formed therein, a head at the lower end of said sleeve having a lubricant receptacle, said head entering said recess and engaging said thrust-collar.

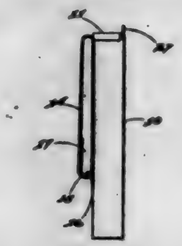
1,537,241. ATTACHMENT FOR TRACTORS. JAMES W. LIEDORFF, Calino, Mo. Filed Aug. 2, 1923, Serial No. 655,300. Renewed Mar. 30, 1925. 7 Claims. (Cl. 301—39.)

2. Mechanism for the purposes set forth comprising a cylindrical shell adapted to encircle the driving wheel of a tractor and the cleats on said wheel, braces secured rigidly to the inner surface of the shell and having deflected portions adapted to be secured upon the outer surface of the tractor driving wheel, and clips secured to the said bracing members and adapted to engage over the flange at the edge of the tractor driving wheel rim.



1,537,242. DRYING RACK. FRED J. LUKINS, Huntington Park, Calif. Filed Aug. 13, 1923. Serial No. 657,251. 3 Claims. (Cl. 126—332.)

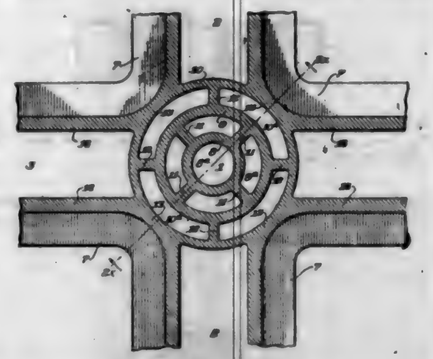
1. A drying rack comprising a plurality of brackets, each bracket having a hook portion adapted to hook over the top rail of a range or stove, a slotted vertical arm adapted to receive a mounting screw which secures it to the side of a range or stove, a horizontal arm terminating in a clamping loop at a fixed distance from said hook and said slotted arm and a clamping bolt adapted to constrict said clamping loop; a tubular rod held in said clamping loops in a horizontal position and an extension rod telescoping within said tubular rod.



1,537,243. ATTACHMENT FOR VEHICLES. GEORGE A. LUNZ, Buffalo, N. Y. Filed June 14, 1924. Serial No. 720,124. 16 Claims. (Cl. 301—47.)

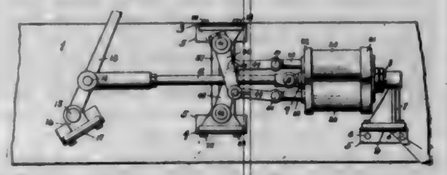
1. In a device of the character described, the combination of a support, an impact-receiving member, and means for connecting said member with said support, comprising yieldable means fulcrumed on said support for resisting movement of the impact-receiving member in one direction, and attaching arms connecting said

yieldable means with said impact-receiving member, said arms being movable in one direction only relatively to said yieldable means.



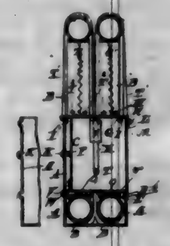
1,537,244. TICKET HOLDER. HUGH MCCAGHREN, Ottawa, Ontario, Canada. Filed Oct. 15, 1923, Serial No. 668,612. Renewed Mar. 30, 1925. 2 Claims. (Cl. 208—89.)

1. A ticket holder including a body having an open end and a discharge slot at its other end; a resilient ticket support held in said body and including an inclined finger portion serving to support tickets in overlapped relation with the uppermost ticket presented to the discharge slot; said support including a heel carrying an inclined face for forcing the tickets to overlapping position; means for retaining said support in normal position within said body; said body having a slot formed in one face for exposing the uppermost ticket and permitting discharging of the same through said discharge slot by pressure on the ticket and movement of the same longitudinally in said body; and means carried by said body for supporting the same on a belt.



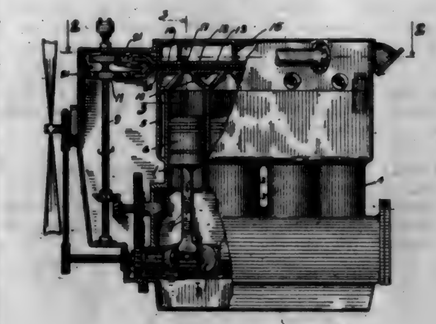
1,537,245. RAILWAY CROSSING WITH CENTER SUPPORTS. WILLIAM T. MCNINCH, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed May 28, 1924. Serial No. 716,337. 10 Claims. (Cl. 246—464.)

1. A railway crossing comprising intersecting members formed with treads and flangeways, and each with a pair of vertical supporting webs which intersect one another at points radially remote from the point of intersection of the flangeways of the members, and by their said intersections, defining the walls of a polygonal support for the crossing, and a substantially continuous vertical



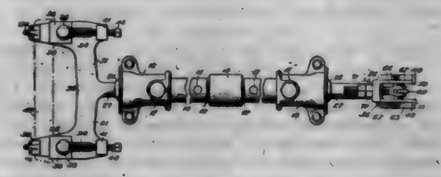
supporting wall surrounding the point of flangeway intersection, but radially within and spaced from the walls of said polygonal support.

1,537,246. EQUALIZING MEANS. EDWARD J. MADDEN, Detroit, Mich. Filed Oct. 8, 1923. Serial No. 667,191. 5 Claims. (Cl. 188—204.)



3. An equalizing means comprising a group of cylinders having intercommunicating passages, means to move said group longitudinally of the cylinders, a fluid in said cylinders, pistons in said cylinders, a frame to slidably support said cylinders, a shaft for each cylinder mounted in said frame transversely to the path of said cylinders, a crank arm attached to each shaft, and means connecting each crank arm to one of said pistons to transmit the force of said pistons to said shafts.

1,537,247. COMBINED TIRE HOLDER AND TOOL BOX. ANTHONY MALLOY, Cleveland, Ohio. Filed Dec. 30, 1918. Serial No. 268,848. 3 Claims. (Cl. 224—29.)

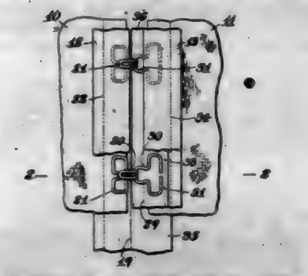


1. In a combination tire carrier and tool box, a semicircular trough shaped casing open at the top and provided with a semicircular opening in its front wall and having a continuous rear wall, a semicircular tool box insertable in said opening, a rest for the lower end of said tool box in said rear wall of said casing, means for interlocking the said lower edge of said tool box with the front edge of said casing, a cover for said tool box, means for interlocking the rear edge of said cover with the rear wall of said casing and means for interlocking the ends of said cover with the ends of said tool box.

1,537,248. INTERNAL-COMBUSTION ENGINE. THOMAS J. MALONEY, Denver, Colo. Filed Dec. 13, 1923. Serial No. 680,371. 8 Claims. (Cl. 123—188.)

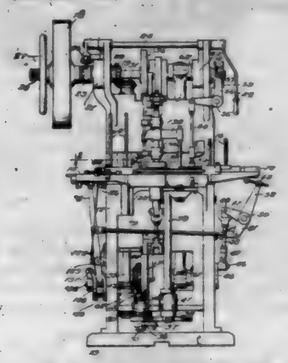
1. An internal combustion engine having a plurality of cylinders arranged in a row, intake and exhaust ports opening into said cylinders, means for periodically opening and closing said ports in a predetermined sequence, said means comprising two flat slides, each provided with two parallel rows of four openings, each of the openings adapted to register with certain port openings and with corresponding openings in the other slide so as to permit gases to enter and leave said cylinders in a predetermined sequence, and means for reciprocating said slides in accordance with the speed of the engine.

1,537,249. TOWING POLE. ROBERT E. MANLEY, York, Pa. Filed Aug. 18, 1923. Serial No. 658,060. 7 Claims. (Cl. 280—33.14.)



1. A towing pole clamp comprising a pair of widely separated, substantially parallel arms, a bracket integral with said arms, a pair of relatively movable jaws on each of said arms, and pivotal means for connecting said bracket to a towing pole.

1,537,250. HOOK AND EYE TAPE. DAVIS MARINSKY, New York, N. Y. Filed Mar. 21, 1922. Serial No. 545,611. 8 Claims. (Cl. 2—265.)

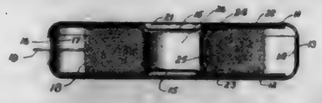


4. An article of the class described comprising two tape members in which hook devices and eyes are adapted to be mounted, one of said tape members being composed of two stripe, one of the strips of said tape member being provided with spaced apertures, said

strips being secured together by a line of stitching passing through the apertures of said first named strip

to form between the separate strips where stitched together openings through which hook devices or eyes are adapted to be passed.

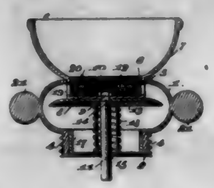
1,537,251. GASKET-LINING APPARATUS. ARTHUR C. MAYER, Indianapolis, Ind., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 7, 1921. Serial No. 513,329. 19 Claims. (Cl. 113—80.)



1. In gasket lining apparatus, the combination of a rotating turret, means for feeding gaskets to said turret, means for feeding can ends to said turret, and means for preventing operation of said last mentioned means in the absence of a gasket in the turret at a predetermined station in the rotation of the latter.

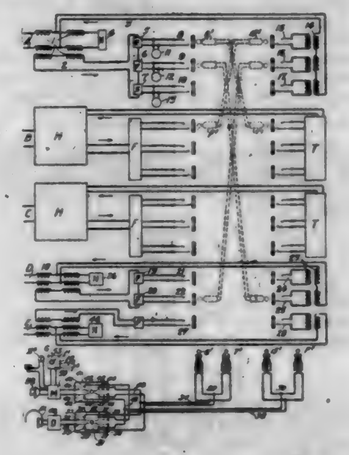
1,537,252. PROCESS OF PRODUCING NEARLY NON-ALCOHOLIC LIQUORS. JOHANNES FRIEDRICH MEYER and HANS LÖCKEN, Berlin, Germany. Filed May 10, 1924. Serial No. 712,471. 2 Claims. (Cl. 195—1.)

1. A process of making a carbonated beverage containing less than one-half of one per cent of alcohol by volume which consists in adding yeast to a malt wort and allowing the wort to undergo alcoholic fermentation in a closed space, to prevent the escape of carbon dioxide, stopping the fermentation when the percentage of alcohol by volume in the wort is less than one-half of one per cent, by cooling the wort, and then immediately centrifugally separating the yeast and other solid matter from the liquid portion of the wort while maintaining a pressure thereon sufficient to prevent the escape of carbon dioxide therefrom.



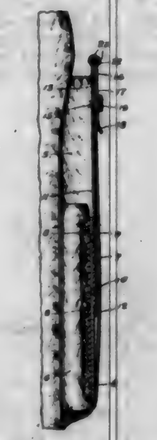
1,537,253. CONTAINER (DENTAL FLOSS). GEORGE F. MILLER, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 5, 1921. Serial No. 505,648. 2 Claims. (Cl. 242—138.)

2. A container for dental floss and the like, consisting of an exterior two-part holder having marginal flanges telescoped one within the other, and an interior reel arranged to turn within the holder and having



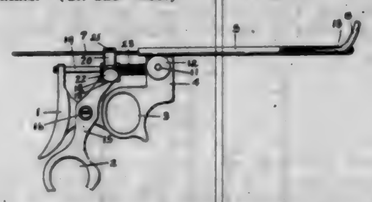
flanges serving as a base for the winding of the floss on the reel and telescoped one within the other near the center of the reel.

1,537,254. RADIATOR CAP. ASBERY T. MILLS, Richland, Iowa. Filed Jan. 10, 1924. Serial No. 685,410. 3 Claims. (Cl. 220—86.)



3. A radiator cap comprising a hollow body having a tubular attaching portion at its lower end and having an opening in the upper wall thereof in alignment with said tubular attaching portion, a vertically movable valve disposed within said body, spring means urging said valve upward to position to close said second named opening, and a filler member secured to said valve and extending slidably through said second named opening, said filler member being adapted to be actuated by pressure on the upper end thereof to move said valve from closed position.

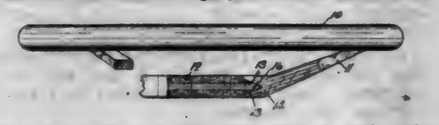
1,537,255. CARRIER-CURRENT SYSTEM. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1920. Serial No. 433,716. 16 Claims. (Cl. 179—15.)



1. A signaling system comprising a multiplicity of lines having a plurality of carrier current channels employing carrier currents of different frequencies superimposed on each line and means at an intermediate station for connecting any channel of one line with a channel of any other line.

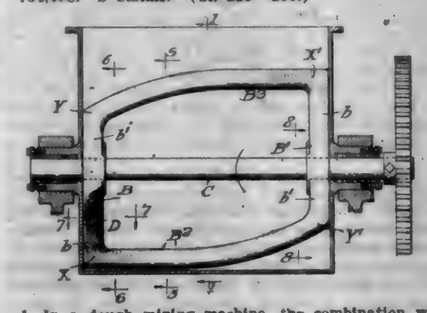
1,537,256. POCKETBOOK CLASP. LEWIS S. MITCHELL, Seattle, Wash. Filed Aug. 27, 1923. Serial No. 659,667. 1 Claim. (Cl. 150—47.)

A pocket book clasp of the character described comprising a base plate, means for securing said plate to a pocket book or the like, guides formed on said plate, a hinge member having a relatively long tongue slidably mounted in sand guides, means for limiting the upward and downward movement of said plate on said tongue, a male boss on said hinge member, a relatively short hinge member pivotally secured to the first named hinge member, a female boss on said short hinge member arranged to engage said male boss, and means for regulating the friction between said hinge members substantially for the purpose set forth.



1,537,257. APPLICATOR. STANLEY S. MISNER, Sturgis, Mich. Filed Apr. 17, 1922. Serial No. 553,607. 12 Claims. (Cl. 128—269.)

5. In an applicator, the combination of a stock provided with finger holds permitting the grasping between the thumb and forefinger, a barrel, a plunger rod projecting from the rear end of the barrel, a medicine carrier on said plunger, a plunger slide having a seat on which said plunger is disposed and provided with a set screw for adjustably securing the plunger thereto, a guide for said slide, a return spring for said slide, and a trigger-like actuating lever pivoted on said stock to engage said slide.

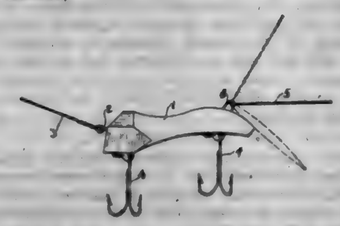


1,537,258. STEERING WHEEL. CHARLES P. NELLIS, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 24, 1923. Serial No. 682,370. 13 Claims. (Cl. 74—33.)

1. A handwheel having a rim adapted to be grasped with the hands and a spider rigidly attached thereto, said spider comprising: a unitary central wood hub portion having recesses cut therein to receive the inner ends of the spokes, a plurality of separate spokes having inner ends inserted and rigidly secured in said recesses,

the upper surface of the inner ends of said spokes overlapping and lying flush with the upper surface of said hub portion at the joint therebetween.

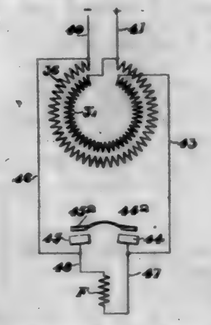
1,537,259. DOUGH-MIXING MACHINE. FELIX NOTE and GEORGE ROYAN, Chicago, Ill., assignors to American Oven & Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1924. Serial No. 754,488. 6 Claims. (Cl. 259—109.)



1. In a dough mixing machine, the combination with a mixing machine, the combination with a mixing chamber, of a revoluble mixing frame therein comprising end bars having long and short members and arms connecting the short member of one end bar with the long member of the other end bar, each of said end bars having the forward face of its longer member formed with a concave working surface inclined inwardly towards the back edge of the bar.

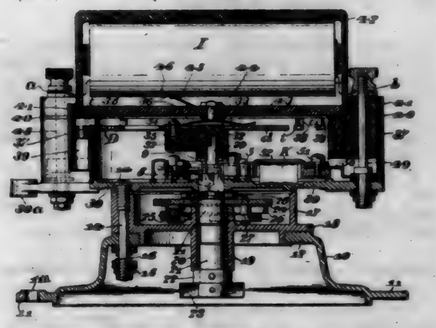
1,537,260. METHOD OF TREATING LIQUIDS TO REMOVE OR RECOVER SUBSTANCES THEREFROM. WALTER ALBERT PATRICK, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Feb. 25, 1921. Serial No. 447,857. Renewed Dec. 26, 1922. 26 Claims. (Cl. 252—2.)

26. The method of altering the concentration of a solution consisting in adsorbing in silica gel that component of the solution which exhibits the lower surface tension toward the adsorbent.



1,537,261. ARTIFICIAL BAIT. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed May 26, 1920. Serial No. 384,255. 5 Claims. (Cl. 43—46.)

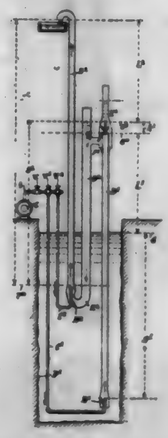
1. An artificial bait, comprising a body portion arranged for attachment to the line, and a relatively thin flat elongated trailing lure loosely connected at one end



to said body portion for both lateral and up and down motion while maintaining its flat plane approximately horizontal.

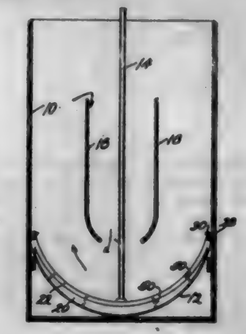
1,537,262. OIL-VALVE-ACTUATING MECHANISM FOR OIL BURNERS. WILLIAM R. RAY, San Francisco, Calif. Filed Jan. 28, 1924. Serial No. 688,955. 6 Claims. (Cl. 158—36.)

1. The combination with an electric motor driven liquid fuel burner, of a fuel delivering pipe connected therewith, a valve on the pipe, electrically operated means for opening and closing said valve, a common electric circuit for the motor and said electrically operated means, and means for automatically energizing said electrically operated means a predetermined time period after a circuit has been closed through the motor.



1,537,263. IGNITION APPARATUS. HORACE B. RICE, deceased, late of Philadelphia, Pa.; Kathleen F. Rice, administratrix, Enfield, Conn. Original application filed Nov. 12, 1920, Serial No. 423,633. Divided and this application filed Aug. 20, 1923. Serial No. 658,247. 4 Claims. (Cl. 123—117.)

3. Ignition apparatus comprising a base, a governor chamber thereon, a governor in said chamber, a second chamber adjacent said governor chamber, interrupter mechanism in said second chamber, a casing on said second chamber, and an induction coil in said casing, said second chamber and said casing being rotatable with respect to said first named chamber for advancing or retarding ignition.

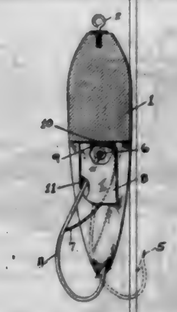


1,537,264. METHOD OF AND APPARATUS FOR ELEVATING LIQUIDS BY A MULTILIFT UNIFLOW AIRLIFT SYSTEM. EDWIN M. ROGERS, New York, N. Y. Filed Mar. 24, 1923. Serial No. 627,405. 54 Claims. (Cl. 103—233.)

1. A multilift uniflow airlift system comprising, in combination, a first uptake column and a second uptake column in successive positions and at successive elevations, respectively; a submergence column intermediate to said uptake columns and at its upper end open by an outlet to atmosphere and at its lower end connected with and to supply liquid to said second uptake column, and having said upper end thereof extending above the height of a liquid-head and submergence-effect normal to said second uptake column, and means appurtenant to said submergence column and first uptake column and

including a closed-in channel forming a portion of a subsurface flowage-path for the uniflow stream, for generating within the first uptake column an aerated upflowing stream and transmitting this generated liquid into the submergence column at a position below said open upper end thereof and thereby form by an underfeed thereto a super-head column-increment located in the submergence column above the flowage-path of the uniflow stream.

1,537,265. PNEUMATIC FLOTATION APPARATUS. JOSEPH P. RUTH, Jr., Denver, Colo. Filed Feb. 21, 1920. Serial No. 360,370. 6 Claims. (Cl. 261—122.)

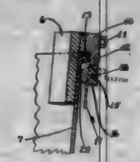


1. In pneumatic flotation apparatus, a hollow member curved about its longitudinal axis, upstanding transverse walls, and bars for clamping a porous medium to the curved upper edges of said walls.

1,537,266. WEEDLESS BAIT. DENNIS P. RYAN, Toledo, Ohio. Filed Sept. 5, 1924. Serial No. 735,990. 2 Claims. (Cl. 43—35.)

1. An artificial bait for fish, having a recess, a fish hook pivotally connected to the body of the bait and

having a curved portion in an exposed position relative to the body of the bait, a spring connected to the body of

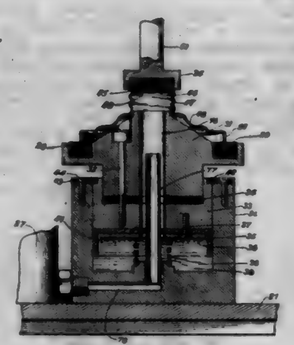


the bait for returning the hooked end into the recess when it is pressed therefrom by pressure on the curved exposed portion.

1,537,267. METAL SHELF SUPPORT. JOSEPH SCHAEFER, Cleveland, Ohio, assignor to to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1921. Serial No. 469,904. 3 Claims. (Cl. 45—54.)

3. In a device of the class described, a shelf supporting clip formed of sheet metal and having a central portion bent into U-form, said U-shaped portion being provided with lateral wings or ears adapted to engage the marginal portions of recesses in a vertically extending supporting member, the end portions of said clip being formed as oppositely extending flanges, one of said flanges being adapted to engage the front marginal portion of an opening in which the clip is inserted to support the weight of the shelf while the other marginal flange is adapted to maintain a spaced relation from the marginal portion of such recess or opening so as to permit the insertion of a shelf for supporting the same.

1,537,268. RIVETING JIG. LOUIS SCHOTT, Cincinnati, Ohio. Filed May 8, 1924. Serial No. 711,903. 4 Claims. (Cl. 78—58.5.)

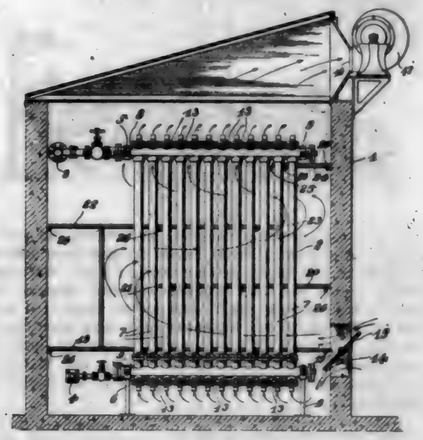


1. In a device of the class described the combination with an anvil plate for engaging the inner side of a vessel wall, of a pair of spaced arms mounted in spaced relation to the anvil plate, and a clamping member mounted eccentrically between the arms for engaging the outer side of said vessel wall.

1,537,269. CONTINUOUS WIRE-DRAWING MACHINE. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1923. Serial No. 659,474. 5 Claims. (Cl. 205—14.)

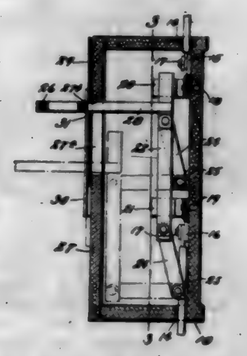
1. In a wire drawing machine, the combination with a shaft, a wire drawing drum, means for positively gearing the shaft to said drum, driving means for the shaft comprising a belt and two pulleys connected thereby, one pulley being on said shaft, and means associated with said driving means for instantaneously and smoothly increasing the speed of said gearing when the load decreases and decreasing its speed when the load increases, said means being operated by variations in the torque on said shaft.

1,537,270. CAN-TOP-TESTING MACHINE. WILLIAM HENRY STABLER and WILLIAM HOWARD AYRES, Baltimore, Md., assignors to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 1, 1922. Serial No. 604,160. 9 Claims. (Cl. 73—51.)



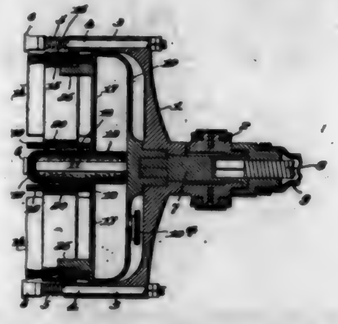
1. An apparatus for testing hollow articles having in combination, a movable support on which the article may rest by gravity, said support having a sealing means for closing to the passage of air the space within said article and a passage leading from said space, a pressure gauge communicating with said passage, and means for depressing said article and thereby causing the operation of said sealing means and also the movement of said support, whereby air pressure is increased within the article and said pressure is communicated to said gauge.

1,537,271. CONDENSER. PHILIP STROMBACK, Philadelphia, Pa. Filed June 21, 1923. Serial No. 646,775. 3 Claims. (Cl. 257—227.)



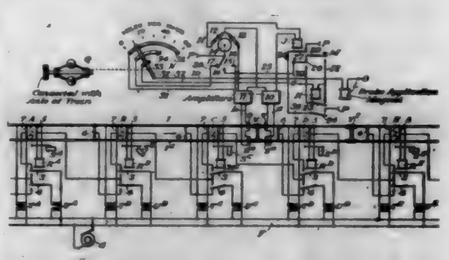
1. A condenser for use in refrigerating apparatus comprising a casing having an air inlet opening adjacent its bottom and an air outlet opening at its top, a fluid inlet manifold and a fluid outlet manifold mounted in the casing and connected by outer tubes, inner tubes passing through the outer tubes and the manifolds and providing independent passages therethrough, a partition

dividing off a portion of the casing and having an end crossing the air inlet opening, said inner tubes extending into said divided off portion of the casing to receive the



cooling air inflowing through said inlet opening, and means above the partition for directing the air inflowing above said partition to and about the outer tubes, substantially as described.

1,537,272. SAFETY SWITCH. OLIVER T. SWEET, St. Louis, Mo. Original application filed Feb. 17, 1919, Serial No. 277,421. Divided and this application filed May 6, 1921. Serial No. 467,478. 6 Claims. (Cl. 200—162.)



1. In a safety switch construction, the combination of an insulation housing having a plurality of separate compartments, a pair of stationary contact members in each compartment, a pair of links pivotally supported in each compartment, a switch blade pivotally mounted on the free ends of said links and movable into simultaneous engagement with both of said contact members, a closure plate for said housing, said plate being provided with vertically disposed slots, a handle arranged exteriorly of said housing and having fingers projecting inwardly through said slots into said compartments for engaging said blades, and a sliding plate having cooperative engagement with said handle and contacting with said closure plate whereby the slots formed therein are closed at all times.

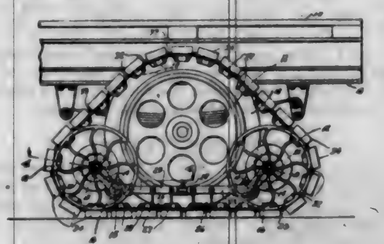
1,537,273. WINDOW-CLEANING APPARATUS. FRANCIS W. TULLY, Brookline, Mass. Filed Apr. 6, 1920. Serial No. 371,714. 23 Claims. (Cl. 15—103.)

1. A window cleaner comprising in combination a scrubber and a drier, having their respective operating surfaces in substantially the same plane and normally fixed relatively to one another, means for supplying washing liquid to the scrubber, means simultaneously to move the scrubber and drier while in contact with a window surface, and a handle whereby said scrubber and drier may be manipulated.

1,537,274. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. STANLEY J. TURRETT, New York, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 24, 1924. Serial No. 739,556. 8 Claims. (Cl. 246—63.)

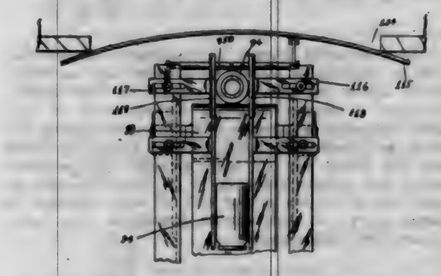
2. In combination, a trackway divided into sections, two sources of train governing current for each section at least one of which is connected across the rails at the exit end of the section, a main train carried relay controlled jointly by currents from said two sources, an auxiliary relay on the train controlled solely by current from said one source, a brake application magnet having a circuit controlled by a front contact of said auxiliary relay, and means including a manually operable circuit controller and a back contact of said main relay for preventing said circuit from being opened due to de-energization of said auxiliary relay.

1,537,275. METAL WEATHER STRIP. ORIEN P. WALLACE, St. Louis, Mo., assignor, by direct and mesne assignments, of one-third to Dominick Kulage, St. Louis, Mo., and one-third to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 19, 1923. Serial No. 663,562. 2 Claims. (Cl. 20—69.)



1. The combination with a window-frame and a sash having a longitudinal slot in its narrow side, of a weather-strip having an L-shaped cross-section, one

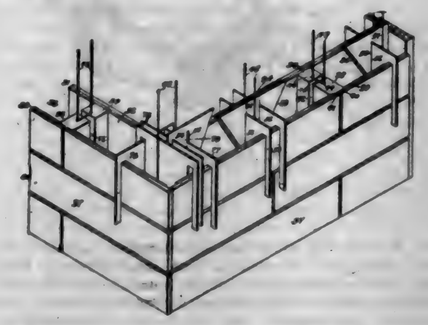
flange of which is slidable laterally in the said slot, and the other flange of which is spaced from the said narrow side, a second weather-strip secured to the said window-



frame and situated between the said narrow side and the said other flange, and resilient means for pressing the said other flange against the said window-frame strip.

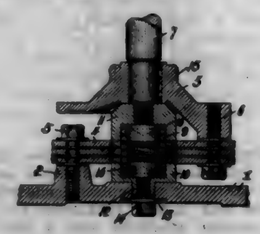
1,537,276. DETACHABLE TRACTION DEVICE FOR VEHICLE WHEELS. JACOB J. WEISS, Chicago, Ill. Filed May 31, 1924. Serial No. 716,849. 15 Claims. (Cl. 305—8.)

7. A traction device mountable on a vehicle wheel and comprising tread engaging wheels at the front and rear of said vehicle wheel, means rotatably mounted on said tread engaging wheels and engaging the vehicle wheel, bars extending from said tread engaging wheels, rollers mounted on said bars and engaging said vehicle wheel, detachably connected link means extending between said rollers and bars, and downwardly extending tread guide means and supporting means mounted on said link means.



1,537,277. LEER-CONVEYER MECHANISM. PERCY Q. WILLIAMS, Cincinnati, Ohio. Filed July 29, 1922. Serial No. 578,406. 18 Claims. (Cl. 198—21.)

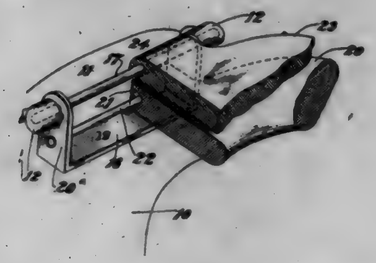
1. In a device of the class described the combination of a leer, a leer conveyer, a conveyer adapted to carry ware on its side and to deposit the ware onto the leer conveyer exteriorly of the leer, and means to intermittingly move ware over the leer conveyer into the leer, the intermittingly actuating means being adapted to be controlled by the ware.



2. In a device of the class described the combination of a leer, a conveyer adapted to carry ware to the leer, means whereby to form a pocket into which the conveyer discharges the ware, means to move the ware from the pocket into the leer, and means associated with the pocket controlled by the ware adapted to control displacement of the pocket forming means whereby to permit unobstructed action of the ware moving means upon the ware.

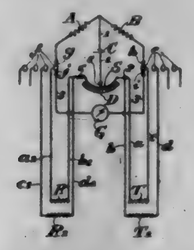
1,537,278. MOLDING DEVICE FOR CONSTRUCTING CONCRETE WALLS. GEORGE D. WILSON and RAY H. GRAMM, Buffalo, N. Y., assignors of one-third to Harry A. Brocas, Buffalo, N. Y. Filed Apr. 17, 1922. Serial No. 553,806. 11 Claims. (Cl. 25—131.)

1. A molding device for constructing a wall having two shells of precast plates arranged in tiers and spaced apart and field cast studs formed against the inner sides of said shells, said mold comprising a pair of transverse mold plates which are adapted to connect at opposite ends with the plates of both shells and are spaced apart, and a longitudinal mold plate connecting said transverse plates and forming with the latter and the shell plates a mold cavity in which the plastic material is placed which forms a stud on the inner side of one of the tiers of shell plates.



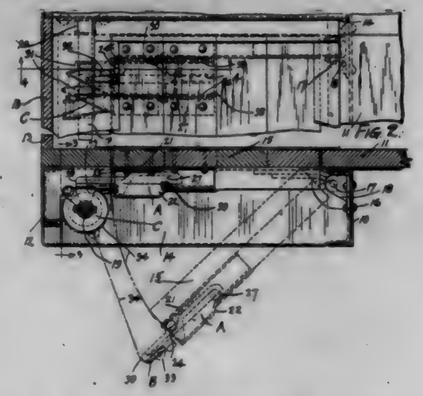
1,537,279. UNIVERSAL JOINT. HARRY H. WOLFE, Toledo, Ohio, assignor to The American Floor Surfacing Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed May 6, 1922. Serial No. 558,872. 3 Claims. (Cl. 64—26.)

1. In combination with a rotary abrading block carrying head, a pair of spaced opposed members one of which is connected to the head and each having a circular series of inwardly extending bosses, the bosses of the two series being arranged in alternating order, a pliable ring-like driving device engaged on its opposite side faces with the two series of bosses and being secured to each, inwardly extending cup secured to the opposed members and being disposed in spaced confronting relation and alined with the open center of the ring device, an end thrust-receiving coil spring



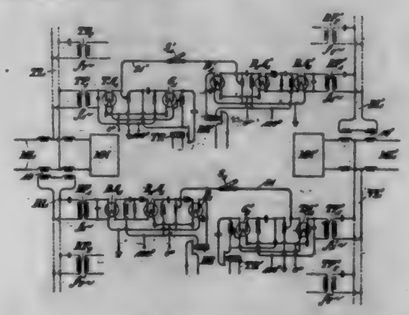
engaged at its ends in the cups and plugs frictionally engaged with the inner circumference of the spring ends to hold the latter in the cups, the spring extending through the open center of the ring-like device and being spaced therefrom so as to permit transverse movement of the device without engaging the spring.

1,537,280. **HINGE FOR TOILET SEATS.** MAXIMILLIAN WILLIAM WURSTHOFF, San Francisco, Calif. Filed Oct. 3, 1923. Serial No. 666,366. 2 Claims. (Cl. 4—236.)



1. A hinge for connecting a toilet seat and its cover to a toilet bowl comprising a pair of standards, a hinge pin extending between the upper ends of said standards, hangers pivoted to said pin and dependent therefrom and disposed one adjacent each standard, an extension on said cover fitting between said hangers and pivoted on said hinge pin which extends through said extension, and an extension on said seat fitting between said hangers beneath said hinge pin and being rigidly secured to said hangers.

1,537,281. **ELECTRICAL MEASURING APPARATUS.** FELIX WUNSCH, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1923. Serial No. 635,202. 14 Claims. (Cl. 73—32.)

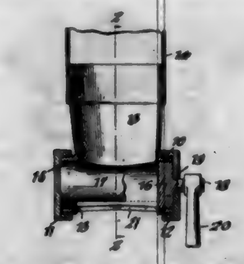


10. The combination with a Wheatstone bridge and a plurality of resistances to be included in an arm of said bridge, of switching mechanism comprising a contact member for each of said resistances and an elongated contact member connected with a ratio arm of said bridge, movable contacts connected to each other and engaging, respectively, one of said contact members and said elongated contact member, a movable contact connected with a conjugate conductor of said bridge and adapted to engage one of said contact members, the movable contacts co-acting with said first named contact members engaging therewithin such relation that the contact resistances between said first named contact members and the movable contact connecting with said ratio arm are excluded from the arm of said bridge including said resistances, and means for effecting movement of said movable contacts in unison with each other.

1,537,282. **CAR-DOOR-OPERATING MECHANISM.** ALBERT E. ZIMMER, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 4, 1923. Serial No. 660,784. 11 Claims. (Cl. 105—302.)

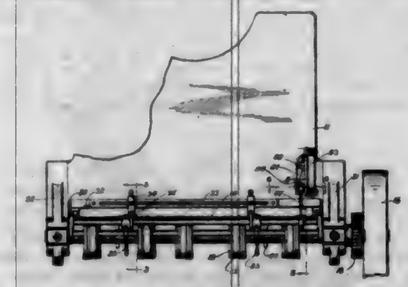
1. In a door operating mechanism comprising; a winding shaft; a flexible connection therefrom to the door; a latch for supporting the door in closed position; and anti-friction balls for supporting said latch.

1,537,283. **REPEATER FOR MULTIPLEX SYSTEMS.** HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,457. 12 Claims. (Cl. 178—44.)



2. In a signaling system, a transmission circuit over which a plurality of carrier frequencies may be transmitted, means for impressing signals on each carrier frequency, a one-way amplifier corresponding to each carrier frequency associated with said transmitting circuit at an intermediate point, selective means associated with the input side of each amplifier for selecting thereto the carrier frequency to be amplified, and selective means on the output side of each amplifier to prevent energy of other carried frequencies from being by-passed into said repeater.

1,537,284. **DRAW-OFF VALVE FOR ICE-CREAM APPARATUS.** HIRAM J. AYERS, New York, N. Y. Filed Mar. 9, 1922. Serial No. 542,455. 2 Claims. (Cl. 251—92.)



1. A draw-off valve for viscous substances, comprising a casing having an inlet and an outlet at opposite sides thereof, and a valve-plug arranged in said casing and

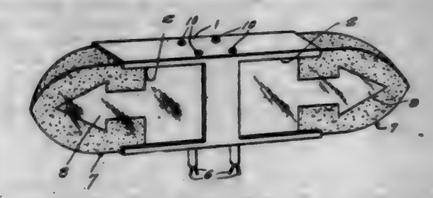
having a transverse port for connecting said outlet with said inlet, one of said elements having an approximately V-shaped edge at its outlet side which co-operates with

an adjacent straight edge of the other element, said V-shaped edge being formed by two oblique faces extending continuously from the center of the element substantially to the ends thereof.

1,537,285. **SIDE-GAUGE-LOCKING DEVICE FOR SLITTERS.** HERBERT BANKS, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 16, 1922. Serial No. 594,944. 7 Claims. (Cl. 164—61.)

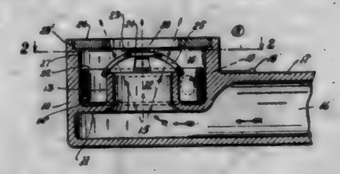
1. In a sheet metal slitting machine, the combination of slitting elements, a table supporting the sheets as they are fed to said elements, front and side gauging devices for squaring the sheets upon said table, and locking means for said gauging devices requiring contact by the sheets with each of said devices prior to their being advanced to said cutting elements.

1,537,286. **PROCESS FOR THE MANUFACTURE OF DECOLORIZING CARBONS.** OSCAR L. BARNEBEY, Detroit, Mich. Filed Mar. 23, 1921. Serial No. 454,971. 10 Claims. (Cl. 252—3.)



1. A process of manufacturing decolorizing carbons comprising charring carbonaceous silicon-containing material, and removing the silica by reaction with fluosilicic acid.

1,537,287. **BELT ATTACHMENT.** EDWARD S. BATE, Hammond, Ind. Filed Jan. 6, 1923. Serial No. 611,103. 3 Claims. (Cl. 24—8.)



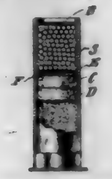
1. In combination with a belt, a band formed of flexible material adapted to receive the belt, said band being provided with spaced parallel slits in one face thereof and defining a loop for the passage of a chain.

1,537,288. **TRAFFIC INDICATOR.** JACOB C. BEAM, Phillipsburg, N. J. Filed Nov. 26, 1921. Serial No. 517,874. 1 Claim. (Cl. 177—329.)

An indicator of the class described comprising an open ended substantially rectangular casing and having an integral partition therein intermediate of its ends, a socket for the reception of a lamp secured to each side of said partition, the front portion of said casing being partly cut away on each side of said partition to provide openings for the radiation of light therethrough, an indicating member inserted into each end of the casing and consisting of a hollow body of light penetrable material, said members being formed to fit the ends of the casing and each having an opening in its inner end to receive the sockets referred to, the front wall of each member being flat and having a transparent indicating device thereon partly exposed by the cut away portions of the casing, the remainder of the front of the indicating member being formed to diffuse light rays, the top, bottom and rear walls of the indicating member not covered by the casing being curved and merging into the front wall and provided with a light reflecting surface.

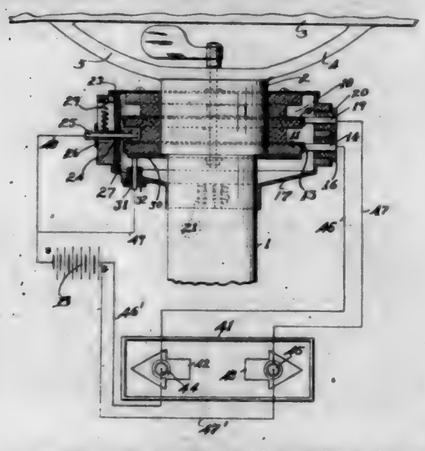
1,537,289. **OIL BURNER.** JOSEPH BIANCHI and LOUISE A. BIANCHI, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,573. 5 Claims. (Cl. 158—28.)

5. A burner of the class described including a body, a partition dividing the body into an upper and lower compartment, the lower compartment having an extension provided with a cavity for the introduction of air thereto, there being an opening in the partition surrounding by an annular flange, a dish-shaped member carried by the flange and provided with a central opening and radially disposed openings about said central opening, a wick arranged in the upper compartment, a closure member for the upper compartment having an opening above the opening of the partition.



1,537,290. **FISH BAIT.** ARTEMAS C. BUNKER, Seattle, Wash. Filed Apr. 3, 1924. Serial No. 703,844. 3 Claims. (Cl. 43—42.)

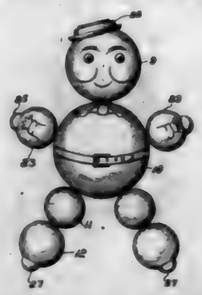
1. A fish bait having a thin pear shaped section with another section at its forward or smaller end and a groove extending around the under side of the narrow portion between them, said pear shaped section having



feathers attached to its larger or rear end and an eye on its under side to which hooks may be attached; and said section at the forward end having a flattened upper surface which extends downward toward the front on a slight curve to a point a short distance from the front and then with a quick curve from this point to the tip, a slightly concaved lower surface which is made on a radius from a line which would correspond with the axis of the pear shaped section, and having an eye in its upper surface to which the line may be attached.

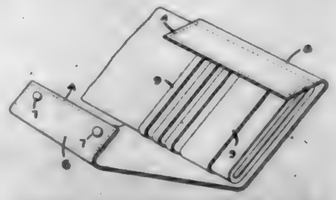
1,537,291. SHOTGUN SHELL. WILLIAM FRANKLIN COUTER, Palo Alto, Calif. Filed Apr. 14, 1924. Serial No. 706,439. 1 Claim. (Cl. 102—15.)

A cartridge comprising a shell with its propelling charge, a wad, and a shot container flexibly connected with said wad, whereby the air resistance on said wad will cause the separation of said container from the shot in flight.



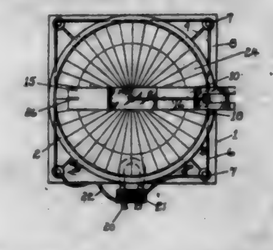
1,537,292. AUTOMOBILE TURNING SIGNAL. ANDREW J. CRUSE, WALTER L. HANSCOM, and BERT BECKERLEG, San Francisco, Calif. Filed May 7, 1923. Serial No. 637,111. 3 Claims. (Cl. 200—59.)

1. An automobile turning signal comprising the combination with a steering gear of an automobile, of an insulated ring surrounding the steering post, metallic contacts arranged in two circuits carried thereby, manual means to connect either circuit with a source of current supply, a secondary contact to continue the connection of either circuit and to reset the manual connections, and a switch to shift the secondary contact from one contact to the other.



1,537,293. TOY. ARTHUR V. DA COSTA, Providence, R. I. Filed Nov. 12, 1921. Serial No. 514,755. 4 Claims. (Cl. 46—40.)

1. A toy comprising a hollow bulbous body member having hollow bulbous head and limb members connected thereto by an elastic connector, all of said members having convex contacting surfaces whereby they are



universally yieldable relatively to the body member and are held under yielding tension to roll one upon the other to automatically return to normal when displaced.

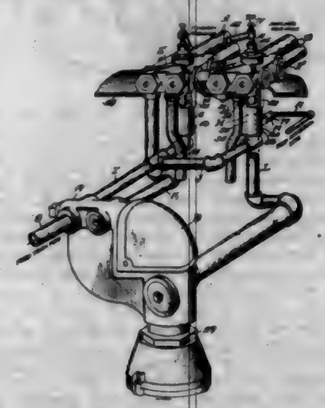
1,537,294. UNIFORM-GOLD PROTECTOR. PERCY A. DE COURCY, Boston, Mass. Filed Feb. 15, 1923. Serial No. 619,250. 5 Claims. (Cl. 150—52.)

1. A protector for folding around and covering the portions of a garment on which tarnishable insignia are mounted, said protector having an inner surface of soft, flexible, lintless, pile fabric to rest against the insignia, an outer surface of tough, flexible material, means for stiffening the protector between the folds thereof and means for fastening the protector on the garment.

1,537,295. INDICATOR. HARRY FRIEDMAN, Tiffin, Ohio. Filed July 24, 1924. Serial No. 728,037. 7 Claims. (Cl. 273—161.)

7. In an indicator, a table, a ring of magnetic material supported on the table, a source of electric current, a wire having portions extending in straight lines across portions of the ring and connected to the source of current, a rotatable member, a magnet supported on the rotatable member and having a coil connected to one terminal of the source of current and the other terminal connected to the ring, the ring connected to the wire at a plurality of points, a disc having designating characters located in subdivisions of the disc and positioned in indicative relation to the rotatable member.

1,537,296. SAFETY FUSE. ADDISON F. GEARHART, MacDunn, W. Va. Filed May 5, 1922. Serial No. 558,816. 2 Claims. (Cl. 200—133.)



1. A safety fuse comprising a block of insulating material formed of separable sections detachably secured together, said sections being formed with spaced parallel longitudinally extending semicylindrical mating passages leading near their ends into angular recesses, a pair of terminals associated with each passage and including an angular head engaged within the angular recesses and further including a reduced extension projecting beyond the end of the block for connection with current carrying wires, and a fuse wire connected with each pair of terminal members.

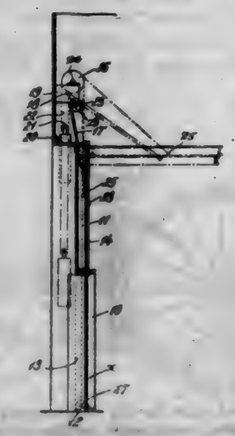
1,537,297. METHOD OF PRODUCING EBONITE SHEET. WILLIAM C. GEER and HAROLD GRAY, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1923. Serial No. 659,244. 3 Claims. (Cl. 18—56.)

1. The method of producing ebonite sheet which comprises vulcanizing sheeted stock in rolled form, successive convolutions of the stock being separated only by a layer of rubber-dusting powder, and at least surface regions of the stock having incorporated therein an amount of stiffening material sufficient to cause the stock to be nonadhesive throughout the period of vulcanization.

1,537,298. HEATING SYSTEM. EGBERT H. GOLD and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor to said Gold. Filed Mar. 24, 1919. Serial No. 284,616. 38 Claims. (Cl. 237—6.)

2. In combination, a railway car, a conduit to contain air under pressure, a radiator in the car, and automatically operated controlling means whereby the heating medium is circulated through all of said radiator when air pressure is present in said conduit and whereby said heating medium is circulated through only a portion of the radiator when air pressure is not present in said conduit.

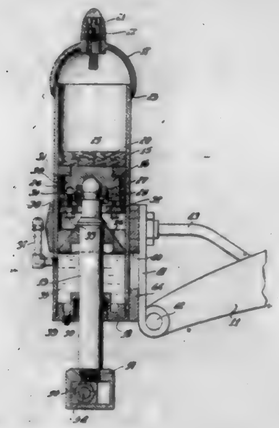
28. In combination, a railway car, a radiator therein, controlling mechanism adapted to be set to establish a circulation of heating medium either through the radiator as a whole or through only a portion of same, and automatically actuated means for setting said controlling mechanism for the first mentioned control on attachment of the car to the locomotive, and for the second mentioned control on detachment of the car therefrom.



29. The combination with a railway car provided with a steam supply pipe and a pipe to contain compressed air, of two radiating coils in the car, a vapor regulator, two valves associated with said radiating coils, respectively, one of said valves adapted in one position to direct steam from the supply pipe to its radiating coil and then to the other valve and in another position to direct such steam immediately to said other valve, short circuiting said radiating coil and opening a drain therefrom, said other valve adapted in one position to direct steam to its radiating coil and therefrom to the vapor regulator, and in another position to direct steam immediately to the vapor regulator, short circuiting its radiating coil and opening a drain therefrom, steam motors associated with said valves, respectively, and communicating directly with the steam supply pipe so as to be subject to the high pressure therein, for operating said valve, and a valve actuated by pressure in said air pipe for controlling the admission of steam to one of said motors.

1,537,299. JACKET FOR SAND MOLDS. SAMUEL P. GREENE, Dayton, Ohio, assignor to The Standard Foundry Company, Dayton, Ohio. Filed Sept. 4, 1923. Serial No. 660,851. 3 Claims. (Cl. 22—112.)

1. The herein described method of casting jackets for sand molds consisting in adapting a sand flask as the pattern for a jacket, in using the flask so constructed to form the inner part of a sand mold for the jackets, in arranging cores relative the said inner part to complete the mold and in casting a jacket therein.

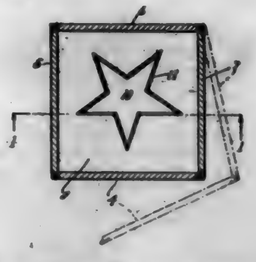


1,537,300. COUNTERBALANCING MECHANISM FOR SECTIONAL DOORS. EDWARD P. HAINES, Mount Airy, Pa., assignor to The Patent Appliance Company, New York, N. Y., a Corporation of New Jersey. Filed June 9, 1921. Serial No. 476,248. 11 Claims. (Cl. 20—19.)

1. A door with horizontally opposite parts arranged to move vertically, and supporting means engaging the side edges of the door at points materially below its

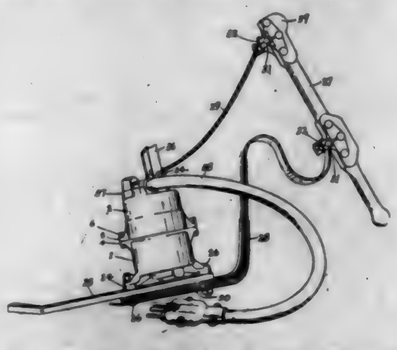
upper edge, arranged to swing the door as its vertically movable parts are raised, combined with a pair of counterweights, a sheave on each counterweight, a pair of vertically spaced stationary sheaves above the path of travel of each counterweight, and a counterweight rope running under each counterweight sheave, over the stationary sheaves, and attached to spaced points on the edges of the door.

1,537,301. SHOCK ABSORBER. JOSEPH HOFFMAN, Cleveland, Ohio. Filed June 2, 1923. Serial No. 643,077. 7 Claims. (Cl. 267—65.)



3. In combination, a pair of vehicle sections, a cylinder on one of said sections, a piston operatively connected to the other of said sections, a member movable with the piston, and a liquid within the cylinder surrounding the piston rod and also surrounding said member, and said member being so arranged that movement thereof through the liquid is restricted to a greater degree when the piston is moved in one direction than when the piston is moved in the opposite direction.

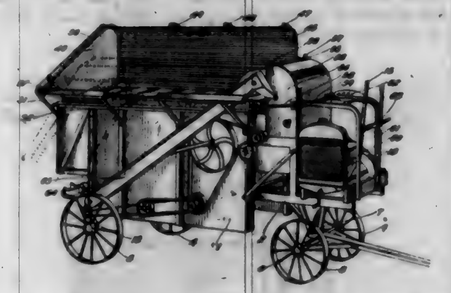
1,537,302. RAILROAD SPIKE. JAKOB HOJNOWSKI, Nekoosa, Wis. Filed July 6, 1923. Serial No. 649,855. 3 Claims. (Cl. 85—27.)



1. A railroad spike having a backwardly facing tongue formed thereon, said spike having a passage therethrough in line with the tip of said tongue whereby the said tip may be forced outwardly, after insertion of the spike in a tie, by a nail inserted through said passage.

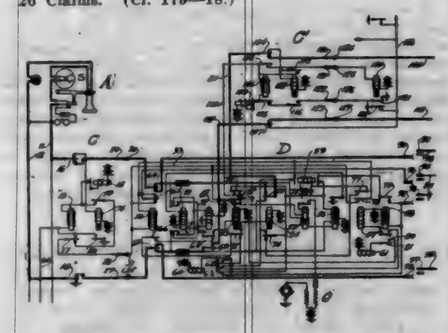
1,537,303. MOLD. GEORGE S. HUNT, Chicago, Ill. Filed Nov. 16, 1923. Serial No. 675,108. 5 Claims. (Cl. 25—123.)

1. A mold comprising sides and a bottom, said bottom being recessed to receive portions of a metallic member having projection above the bottom between the sides of the mold, substantially as described.



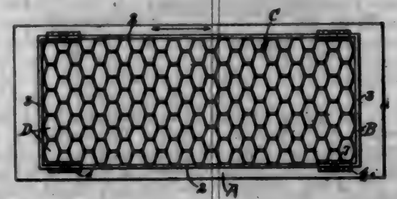
1,537,304. TAMPER AND LIKE IMPACT TOOL. CORWILL JACKSON, Chicago, Ill. Filed Sept. 13, 1924. Serial No. 737,582. 14 Claims. (Cl. 104—13.)

1. In a structure of the class described, the combination of a housing comprising detachably connected top and bottom members having opposed bearing boxes in their ends, said bearing boxes having annular oil grooves adjacent the inner ends thereof, there being discharge passages leading from said grooves to the outside of the housing, said housing members having lubricant feed reservoirs therein opening to said bearing boxes, a motor field unit mounted in said top housing member and constituting therewith an assembled unit, a shaft, bearings for said shaft removably engaged in said bearing boxes, said shaft being provided with oil retaining flanges disposed in the planes of said oil grooves, an armature mounted on said shaft, an unbalancing weight mounted on the lower end of said shaft, said shaft, bearings, armature and unbalancing weight constituting an assembled unit removable when said housing members are disconnected, a tool mounted on said bottom housing member, and a handle bar having a resilient connection to said housing.



1,537,305. THRASHER. WINFRED JACOBS, Dodge City, Kans., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Filed May 2, 1921, Serial No. 466,171. Renewed Oct. 25, 1924. 8 Claims. (Cl. 130—21.)

1. In a thrashing machine, the combination of a casing having an opening in its top, thrashing devices within the casing, a conveyor extending longitudinally of the casing beneath the opening in the top thereof and adapted to deliver material to be thrashed to the thrashing devices, a shelf extending lengthwise of the opening in the top of the casing and projecting laterally therefrom,



and a guard extending upward from the opposite side of the opening in the top of the casing and projecting laterally over said opening.

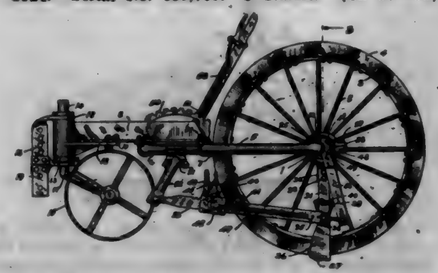
1,537,306. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Port Washington, N. Y., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1920. Serial No. 376,501. 26 Claims. (Cl. 179—18.)

9. In a telephone system, a subscriber's line, means including a rotary line or trunk selecting switch for extending said line when calling into connection with an idle one of a plurality of trunk lines, movable wipers in said switch having no normal position as regards the said trunk lines, and means for automatically advancing the said wipers into connection with the next trunk line when the connection is released.

1,537,307. EGG TURNER. WILLIAM F. JEANS, Santa Rosa, Calif. Filed Feb. 12, 1924. Serial No. 692,241. 3 Claims. (Cl. 119—44.)

3. An egg turning tray, comprising a rectangularly shaped frame movable in the direction of its longitudinal axis, a support for the frame, and a plurality of cells or pockets formed in the frame for the reception of eggs, one egg in each pocket, said pockets having an elongated hexagonal shape and the longitudinal axis of each pocket extending transversely of the frame, said pockets having two V-shaped sides and two ends parallel with relation to each other and parallel with relation to the direction of movement of the frame.

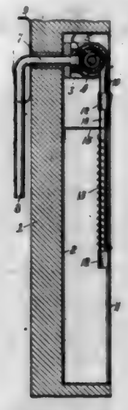
1,537,308. FRUIT-PREPARING TOOL. CHARLES S. JENNER, San Francisco, Calif. Filed Oct. 13, 1924. Serial No. 743,302. 5 Claims. (Cl. 146—3.)



1. A fruit preparing tool comprising a long, slender blade having one cutting edge adapted to sever a fruit into halves and to cut around the pulp adjacent to, and concentrically with the rind, severing the pulp and radial fiber divisions from the rind, and a hook on the other edge of the blade adapted to remove the seeds from the severed halves, the transversely extending edge of the hook being blunt and unsharpened whereby to support the seeds thereon.

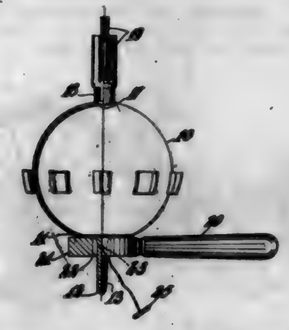
1,537,309. MOP. CLYDE NELSON JUSTICE, Greensboro, N. C., assignor to Justice Manufacturing Company, a Corporation of North Carolina. Filed Feb. 7, 1924. Serial No. 691,267. 5 Claims. (Cl. 15—220.)

1. A mop consisting of a looped main frame comprising separate wires having a plurality of endless circular-thrums crowded thereon and locked to the frame by twisting the wires, a cross-bar secured to the frame and a tab secured to said cross-bar adapted to be engaged by a mop holder.



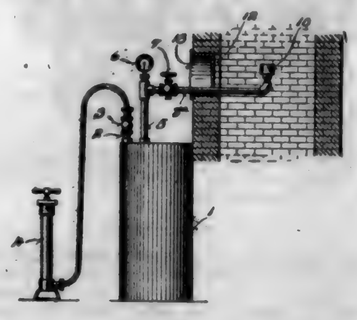
1,537,310. WEEDER AND CULTIVATOR. EARL KIMBER and EDGAR LLOYD, Wray, Colo. Filed Jan. 31, 1924. Serial No. 689,769. 5 Claims. (Cl. 97—52).

1. In a machine of the class described, in combination, a roller having an outer surface formed by a plurality of outwardly projecting helically arranged flanges, a frame to which the roller is pivotally connected, a caster guide-



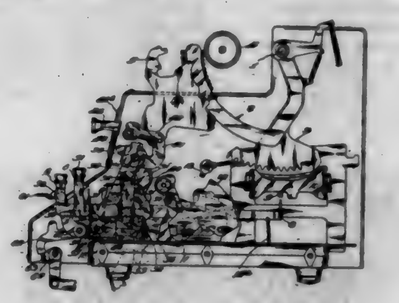
wheel secured to one end of said frame, a knife member secured to said frame, said knife extending parallel to the axis of the roller and in close proximity to the outer edges of said flanges, and means for adjusting said knife radially, said means comprising eccentrics rotatably secured to the axle of said roller.

1,537,311. SIGNAL DEVICE. TERRENCE J. KING, Toledo, Ohio, assignor of one-half to Clarence S. Ordway, Toledo, Ohio. Filed Dec. 17, 1923. Serial No. 681,221. 4 Claims. (Cl. 116—52.)



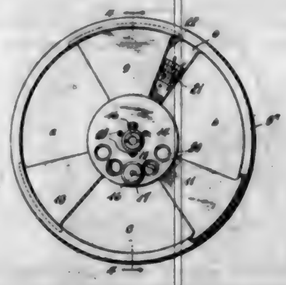
1. In combination with the side of a vehicle body and a casing embedded therein, a shaft journaled in the vehicle body side and having a crank arm disposed within the body, a bevel gear on the shaft disposed within the casing, a bracket in the housing, a shaft journaled in the bracket and disposed at right angles to the first named shaft, a bevel gear on the second shaft in mesh with the first named gear, an arm fixed to the second shaft and movable into and out of the casing, a spring tensioned signal plate rotatable on the arm and having a curved inner corner, and a bracket in the casing formed to engage the said curved corner of the signal plate to rotate the latter on the arm upon movement of the arm to inoperative position.

1,537,312. MUSICAL TOP. ANTONI KOBONA, Newmarket, N. H. Filed Dec. 21, 1921. Serial No. 528,810. 1 Claim. (Cl. 46—32.)



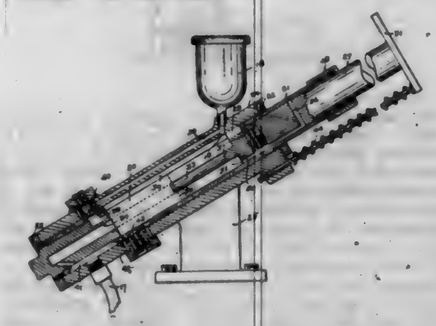
A top comprising a hollow spherical body having a series of openings spaced therearound, vanes curving outwardly and forwardly from the sides of said openings, a whistle member mounted on the top of said body, and a narrow elongated tip projecting downward from said body and forming a winding drum for a cord, said body presenting a flattened circular base portion from which said tip projects downward, said base portion being adapted to support the top on a suitable handle prior to spinning thereof.

1,537,313. CHIMNEY CLEANER. JOHN G. KOUDELKA, Antigo, Wis. Filed Jan. 10, 1922. Serial No. 528,142. 1 Claim. (Cl. 15—20.)



A chimney cleaner comprising a reservoir for fluid under pressure, means for forcing fluid into said reservoir, a conduit leading from said reservoir and adapted to be inserted within a flue opening, a removable cap for the extreme outer end of said conduit and a removable diaphragm held in sealing relation to the extreme outer end of said conduit by said cap, said diaphragm being adapted to rupture when a pre-determined fluid pressure is reached, whereby the entire system is subjected to uniform fluid pressure up to the extreme end of said conduit at the instant rupture of said diaphragm occurs.

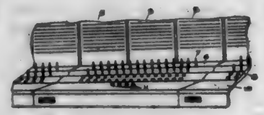
1,537,314. KEY-CONTROL MECHANISM FOR ADDING MACHINES. HARRY LANDSIEDEL, Cincinnati, Ohio, assignor to Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 7, 1922. Serial No. 586,611. 16 Claims. (Cl. 235—60.)



1. In an adding machine in combination with a main operating shaft and stop devices for restricting the movement thereof, a series of numeral keys, a universal control device adapted to be moved by the depression of any one of the numeral keys, means actuated thereby or adjusting the stop mechanism to stopping position, and a special key adapted when depressed to impart an excess movement to the universal control mechanism and thereby move the stop mechanism to a non-stopping position, substantially as described.

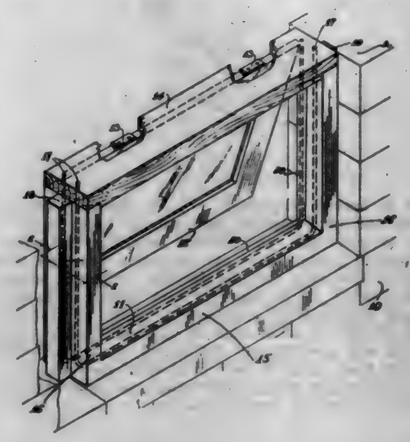
1,537,315. MOVING-PICTURE SHUTTER. CARL J. LANG, Olean, N. Y. Filed Dec. 20, 1922. Serial No. 607,989. 3 Claims. (Cl. 88—19.3.)

1. A shutter comprising two sections fastened together to rotate in the same direction and each having a plurality of cooperating radial blades and intervening openings, said sections being adjustable angularly with respect to each other, to vary the effective size of said openings, both sections having cooperating wide and narrow blades in the respective sections, the wide blades of the respective sections being located at respectively different angles to the narrow blades thereof.



1,537,316. FLUID-ACTUATING MECHANISM FOR BRAKES. LOUIS P. LANSING, San Francisco, Calif., assignor of one-half to Harold N. Otto, San Francisco, Calif. Filed Mar. 3, 1923. Serial No. 622,557. 3 Claims. (Cl. 188—152.)

1. Fluid brake actuating mechanism, comprising a plurality of pressure-fluid-operable brake actuating devices, a pressure supply cylinder of two diameters and a piston of two diameters in said cylinder, means for advancing the piston in the cylinder by the operator and a fluid supply chamber having a port communicating with the cylinder, said port being closed by the piston when the piston is advanced and uncovered when the piston is withdrawn, and connections between said pressure supply cylinder and said devices, a one way valve to relieve the fluid otherwise trapped when the smaller piston and cylinder are functioning.

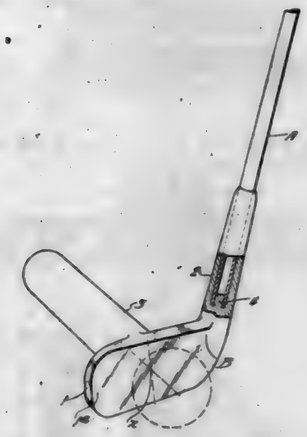


1,537,317. TELEPHONE SWITCHBOARD. JOHN H. LEWIS, Jr., Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 4, 1922. Serial No. 541,175. 9 Claims. (Cl. 179—91.)

9. In a switchboard, a plug shelf, plugs positioned on said plug shelf, a key shelf having keys thereon, said plug shelf and said key shelf being in different levels, and an inclined lamp shelf connecting said plug and key

shelves, the combination between two of said shelves being a hinge connection.

1,537,318. WINDOW-FRAME CONSTRUCTION. HERMAN LIPSTREUER, Cleveland, Ohio. Filed Aug. 20, 1923. Serial No. 658,203. 5 Claims. (Cl. 72—90.)

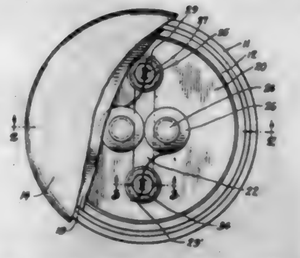


1. The combination of a masonry wall having an opening therein, a rectangular frame having one side of wood and the remaining sides of reinforced concrete positioned in said opening, the reinforcing element extending beyond the concrete and secured in the wood side and projections from said frame structure engaging with the wall for locking the frame in position.

1,537,319. LAND, MUD, AND WATER MOTOR CAR. WERNER LUCK, Brooklyn, N. Y. Filed Sept. 8, 1924. Serial No. 736,520. 1 Claim. (Cl. 115—1.)

A motor car for use on land and water, swamps or mud comprising a boat-shaped body, axles, rear and front wheels on said axles, means for allowing an independent elevation of said front and rear axles and wheels from the seat of the driver, and paddles connected with the rear wheels for allowing propulsion of the vehicle through the water and an immersion of the front wheels to enable a proper steering.

1,537,320. GOLF CLUB. CHARLES W. MARSH, Muskegon, Mich. Filed Oct. 19, 1922. Serial No. 596,489. 4 Claims. (Cl. 273—77.)



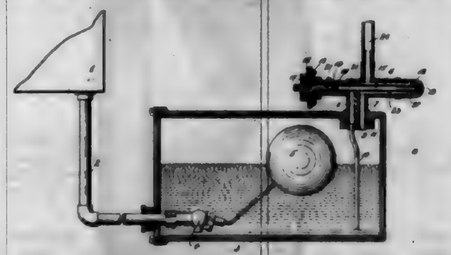
4. A putter comprising a head having a metallic blade and an elongated neck portion rising from one end of said blade and formed integrally therewith, a cylindrical protuberance cast integral with said blade, said protuberance being of sectional thickness approximately equal to the depth of said blade and having a length substantially equal to the width of said blade whereby the center of mass of said club head is located within said protuberance and behind the impact surface of said blade, and a hollow metal shaft having a tubular lower end, said neck portion being cast over said shaft to cool and rigidly contact thereon.

1,537,321. MONOGRAM PANEL. LEON MAYER, Chicago, Ill. Filed Oct. 18, 1923. Serial No. 669,316. 1 Claim. (Cl. 40—63.)

A monogram panel comprising a sheet metal stamping formed to provide an elongated rectangular frame having three square openings in the face thereof, partitions formed integrally on said frame and arranged between said openings, a flange struck out from the face of said frame and extending around the edges thereof, three square character plates arranged on said frame within said flange with the characters readable through said square openings, said plates being reversible in said frame to permit the characters to be readable either crosswise or lengthwise of said frame, oppositely disposed lugs struck out from said flange directly adjacent the ends of said partitions adapted to be bent over the backs of said plates for clamping opposed edges of said plates against said partitions, and a pair of prongs struck out from said flange at the ends of said frame adapted for attachment to a support.

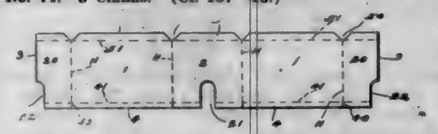
1,537,322. RADIO TELEPHONE RECEIVER. EINAR W. NIELSEN, Newark, N. J. Filed May 25, 1922. Serial No. 563,562. 7 Claims. (Cl. 179—117.)

5. A fixed field magnet of circular shape having an elongated open slot passing through its center, and a pair of electro-magnet elements fixed on said field magnet upon opposite sides of the slot therein.



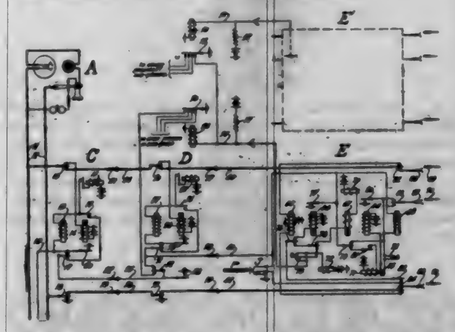
1,537,323. AUTOMATIC STOP FOR PHONOGRAPHS. WILLY RIBS, Berlin, Germany, assignor to N. V. Machina Maatschappij voor Handel en Industrie, Amsterdam, Netherlands. Filed Dec. 3, 1923. Serial No. 678,087. 1 Claim. (Cl. 190—122.)

In combination with the turn table of a phonograph having a lateral surface, a bearing having a recess substantially perpendicular to the said lateral surface, a brake bolt located in the said recess and having both of its ends projecting out of the said recess, the end of said brake bolt adjacent the said turn table having an enlargement, a compression spring located within the said recess and having one of the ends thereof abutting the said enlargement, a brake member connected to the said brake bolt adjacent the said enlargement and adapted to exercise a braking effect on the said lateral surface, a latch lever pivotally mounted to the said bearing adjacent the said turn table and having an opening through which the said enlargement projects, the said latch lever being adapted to engage the said enlargement at one of the edges of the said opening, a second bearing substantially perpendicular to the recess of the first mentioned bearing and located on that side of the first mentioned bearing which is opposite to the said turn table and an adjusting lever pivotally mounted on the second bearing and adapted to engage the adjacent projecting end of the said brake bolt.



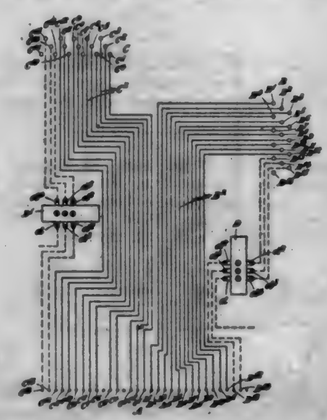
1,537,324. BURNER. JOHN A. SHERMAN, Worcester, Mass. Filed July 7, 1922. Serial No. 573,437. 4 Claims. (Cl. 158—76.)

3. An oil burner comprising a hollow casing provided with a hollow nozzle having a burner opening, a tubular oil-supplying member mounted in said casing and having a perforated tip in alinement with said burner opening, said tip extending into said hollow nozzle, said tubular member being of lesser diameter than the chamber of said hollow casing and the said tip being of lesser diameter than the chamber of said hollow nozzle, thus affording an annular air passage to said burner opening, a compressed air supply pipe communicating directly with said annular air passage, said burner casing having a neck by which it may be attached to an oil tank, said neck having an air passage communicating with said annular air passage and an oil passage communicating with said tubular oil supplying member through an



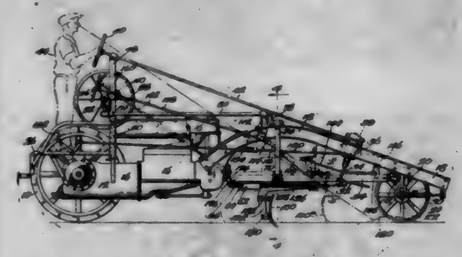
opening with which said oil-supplying member is provided, a cap with which said tubular member has a screw-threaded connection, said casing having an annular groove adjacent said cap, and a two-part ring attached to said cap and extending into said groove, so that by turning said cap said oil-supplying member may be adjusted longitudinally to vary the operative size of said opening to regulate the oil feed.

1,537,325. METER BOX. CECIL R. SMITH and WILLIAM E. SMITH, Seattle, Wash. Filed Jan. 2, 1925. Serial No. 74. 3 Claims. (Cl. 137—18.)



1. A meter box comprising a plurality of walls bent from a strip of sheet metal to form an enclosure open at its top and bottom, the ends of said strip meeting in an end wall of the enclosure, pipe-receiving slots extending upward from the bottom of the end walls, the slot at one end coinciding with the adjoining ends of the strip, and the adjoining ends above such slots being connected by welding, and means for supporting a cover upon the top of said enclosure.

1,537,326. MAKE-BUSY SCHEME FOR TELEPHONE SYSTEMS. BERNARD D. WILLIS, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 28, 1922. Serial No. 584,761. 11 Claims. (Cl. 179—18.)

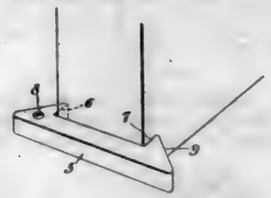


1. In a trunking system, a group of trunks, a switch having access thereto, a conductor common to said group maintained at a certain potential at each of said trunks, means for taking said trunks for use, means responsive to the taking for use of each of said trunks for removing said certain potential from said conductor at one point, and means responsive to the removal of said certain potential at the last trunk to be taken for use for rendering said switch non-selectable.

1,537,327. TYPOGRAPHIC COMPOSING MACHINE. JAMES BARCLAY, London, England. Filed Oct. 31, 1924. Serial No. 747,130. 6 Claims. (Cl. 199—77.)

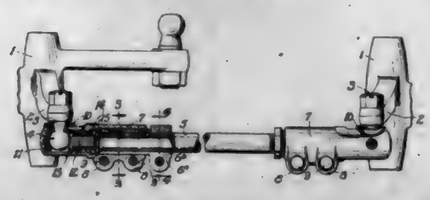
1. In a typographic casting machine the combination with a positioning mechanism comprising a series of signal-controlled gauges, of an additional gauge, and a diverter responsive to a special signal to operate the additional gauge.

1,537,328. ONE-MAN POWER GRADER. WILLIAM T. BEATTY, Flossmoor, Ill. Filed July 31, 1924. Serial No. 729,397. 29 Claims. (Cl. 37—156.)



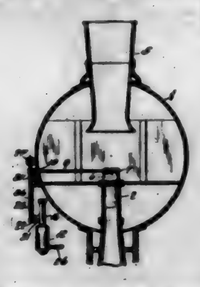
1. In a self-propelled road machine, a cutting blade carried over the ground by a machine sustained by not to exceed four wheels and located between the front and rear wheels thereof, a power plant, an operator's station, means selectively adjusting the blade vertically, diagonally and latitudinally from said station, said blade and station being located at points on the machine where the eye of the operator without moving his head can embrace the front end of the blade, the surface of the road in profile, immediately ahead of the blade and the road in front of the machine for a substantial distance.

1,537,329. DOOR CATCH. HAROLD S. BIRD, Cambridge, Mass. Filed Feb. 8, 1924. Serial No. 691,404. 2 Claims. (Cl. 292—216.)



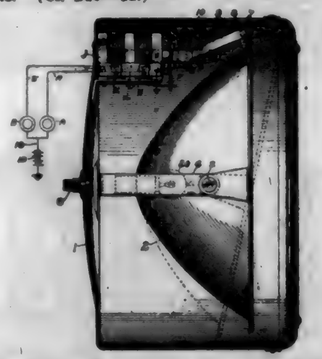
1. In combination, a swinging door and a wall toward or away from which said door is adapted to swing, of

a pivoted check in the path of movement of said door and adapted to engage and hold the same when the



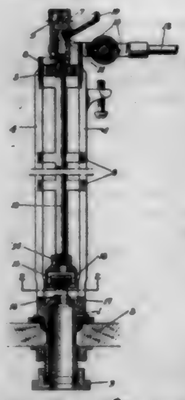
door has moved a predetermined distance, and a cam surface on said check engageable with said wall when the said door has been engaged with the check.

1,537,330. CROSS TUBE FOR STEERING GEARS. LAURENCE RAY BUCKENDALE, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Mar. 7, 1924. Serial No. 697,682. 3 Claims. (Cl. 287—90.)



1. A steering gear construction comprising a cross tube having threaded ends, a tubular sleeve having threaded engagement with the thread of the cross tube and also having threaded engagement with a tubular fitting, said sleeve being split endwise and said fitting being also split endwise and provided with lugs, clamping bolts extending through said lugs, a disk mounted to move endwise of said fitting and bearing against the end of said sleeve, and a spring-positioned plunger inside of said fitting having at its end a bearing portion adapted to co-operate with a counterpart bearing member on an arm of the steering knuckle.

1,537,331. EXHAUST-NOZZLE COVER. HARRY A. CAMPBELL, Portland, Oreg. Filed June 30, 1924. Serial No. 723,425. 4 Claims. (Cl. 162—4.)



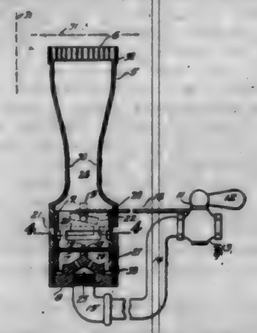
1. In a locomotive boiler, the combination of an exhaust nozzle, a cover hingedly connected to close said nozzle, said cover mounted upon a rotatable rod extending outwardly of the boiler shell, a steam cylinder connected with a source of steam supply under pressure controlled by the main engine throttle, and operative connections between said cylinder and said rod to open and close said nozzle through said cover.

1,537,332. HEADLIGHT. JOSEPH P. CARNEY, Chicago, Ill. Filed Nov. 22, 1923. Serial No. 676,825. 5 Claims. (Cl. 240—41.)

1. A headlight comprising a casing, a reflector tiltably mounted therein and an electromagnetic control device mounted in said casing for tilting said reflector, said control device including a pair of solenoid windings disposed coaxially in alinement, a movable core mounted therein for lengthwise actuation by said windings, an armature normally engaging said core to prevent movement thereof and being releasable by electromagnetic action to release said core when either of said coils is energized, and mechanical means operatively connecting said core to said reflector, whereby movement of said core in one direction tilts said reflector downwardly, and reverse movement of said core restores the reflector.

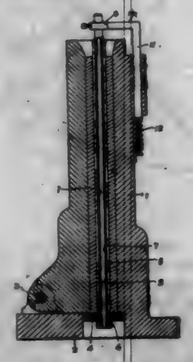
1,537,333. BALL COCK. ROMEO A. CASAROTTI, Oakland, Calif. Filed Apr. 24, 1924. Serial No. 708,075. 5 Claims. (Cl. 137—104.)

3. A ball cock including a water intake member formed with a valve seat, a float-operated plunger structure slidably mounted for movement to and from the intake member, said structure including a head having a valve to engage the seat, a tube connected to said head, and another head to which the other end of the tube is connected, both heads having passage means leading from the exterior thereof to the tube.



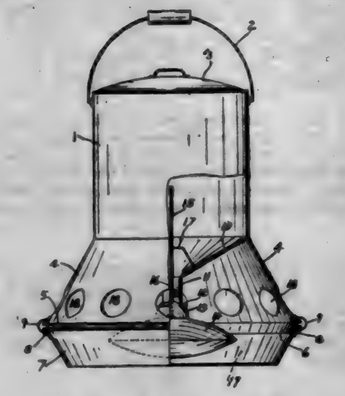
1,537,334. SPINNING TOP. BERNHARD CLUSS, Newark, N. J. Filed June 5, 1922. Serial No. 566,156. 2 Claims. (Cl. 46—32.)

1. As a new article of manufacture, a block of hard wood formed to present a generical conical shape having parabolic side walls, an arcuate top joined by curves to said side walls, a flanged metallic head blending into the parabolic walls, on the lower end of said block,



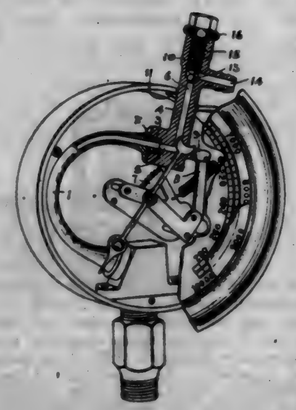
means for securing said head in axial position, and a coarse helical channel formed in the side walls from a point near the bottom to a point midway in the height of the block.

1,537,335. GAS BURNER. CHARLES N. CROSS, Stanford University, Calif. Filed Mar. 14, 1921. Serial No. 451,089. 6 Claims. (Cl. 158—119.)



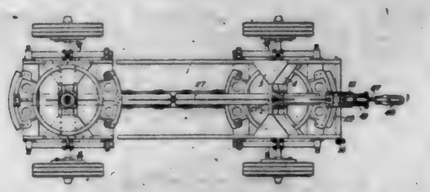
1. In a gas burner, an apertured chambered base having mounted thereon a needle, a burner tube fixedly attached to said base, a partitioned sleeve within said tube and arranged to move axially in respect to said tube when rotated, an orifice in said partition of said sleeve, and means for effecting the rotative and axial movements of said sleeve.

1,537,336. MEANS FOR MAKING TUBULAR ARTICLES. RICHARD S. CURRIE, Toronto, Ontario, Canada. Filed Apr. 19, 1924. Serial No. 707,705. 2 Claims. (Cl. 22—151.)



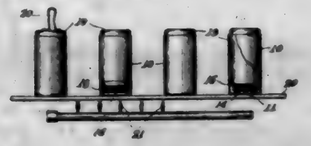
1. A means for moulding tubular articles, comprising, a vertically arranged mould formed in two longitudinal sections, one being rigid with the base and the other hinged to swing outwardly, a perforated core tube secured at the bottom end of said mould, and means carried by the fixed portion of said mould and connected with the upper end of said core tube for applying an elastic tension thereto.

1,537,337. FEEDING FOUNTAIN FOR POULTRY. DANIEL DE ANGULO, near Dayton, Ohio. Filed June 6, 1924. Serial No. 718,401. 2 Claims. (Cl. 119—80.)



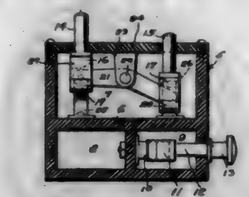
1. A device of the type described comprising a tank, a partition in the latter having a downwardly projecting tubular part, a trough secured to the bottom portion of the tank to receive feed poured into the top of the latter, said tank provided around its lower portion with holes through which fowls may project their heads to feed from the trough, a float within the trough, and a valve on the float adapted to engage the lower end of the tubular part of said partition to shut off the flow of liquid to the trough when the latter is filled.

1,537,338. HOMOGENIZER GAUGE. CHARLES DEVEREAU, Toronto, Ontario, Canada, assignor to The James Morrison Brass Manufacturing Company, Limited, Toronto, Canada. Filed Nov. 11, 1922. Serial No. 600,386. 2 Claims. (Cl. 73—109.)



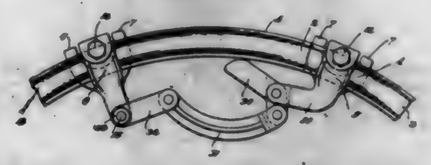
1. A homogeniser gauge having a hollow stem extending outwardly from the free end of the tube spring, and a valve closing said hollow stem.

1,537,339. SHORT-TURN TRAILER. JOHN M. EADIE, New York, and OSCAR P. LIEBREICH, Brooklyn, N. Y.; said Liebreich assignor to said Eadie. Filed Sept. 18, 1923. Serial No. 662,899. 23 Claims. (Cl. 280—33.44.)



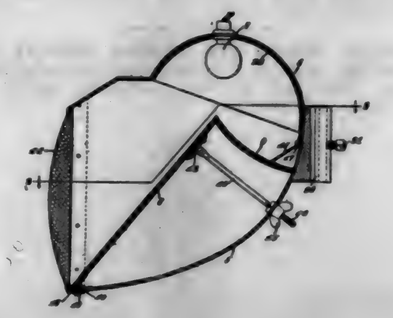
1. A draft connection and coupling for short turn trailers comprising an intermediate coupler which is pivotally connected at either end for both horizontal and vertical adjustments, and means for locking either of the pivotal connections against horizontal pivotal movements at will but permitting vertical pivotal movements.

1,537,340. PROCESS FOR ASSEMBLING BATTERY CELLS. RICHARD MAX EATON, Niagara Falls, N. Y., assignor to Niagara Searchlight Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 15, 1924. Serial No. 706,723. 3 Claims. (Cl. 136—38.)



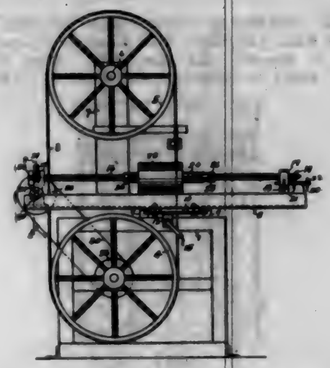
1. The process of assembling electric battery cells consisting of placing paraffin in the bottom of the zinc shell, entering the carbon element to rest on the paraffin, inserting a hollow cylindrical adjuster between said carbon element and the wall of said shell, applying sufficient heat to the lower portion of said shell to soften the paraffin, permitting the cell to cool, removing the adjuster, filling the space between the carbon and shell with an excitant, and sealing the end of the cell.

1,537,341. AUXILIARY SWITCH FOR THE LIGHTING SYSTEMS OF AUTOMOBILES. EARL J. FRENCH, Escanaba, Mich. Filed Oct. 26, 1921. Serial No. 510,486. 1 Claim. (Cl. 200—59.)



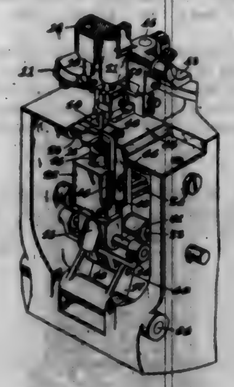
A device of the character described comprising a casing, a horizontally disposed switch located in the lower part thereof and constituting a main line switch, said main line switch comprising an operating plunger projecting horizontally through a wall of the casing, a pair of switches disposed in the upper part of the casing, a pivoted interlocking bar between said switches to cause them to move together, said switches comprising vertically disposed plungers projecting through the top of the casing and a clamp carried by the casing and adapted to clamp said casing upon one of the spokes of a steering wheel and in such position as to cause the vertically disposed plungers to lie within the plane of the wheel between the rim and the center of the wheel and to cause the horizontally disposed plunger of the main line switch to lie below the plane of the rim of said steering wheel.

1,537,342. RIM TOOL. WILLIAM FRICK and FRANK KLIMA, Detroit, Mich. Filed Sept. 25, 1923. Serial No. 664,077. 1 Claim. (Cl. 157—1.)



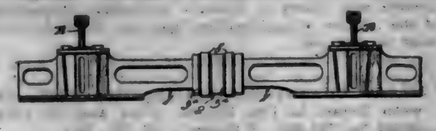
A rim adjusting device comprising gripping members, each gripping member having rim engaging jaws and adjustable engaging heads, the heads adapted to cooperate with the jaws in gripping the flanges of a rim contiguous to the split ends thereof, an angular lug carried by one of said gripping members and extending towards the other gripping member, a three part linkage between said gripping member composed of an actuating member pivotally connected to one of said gripping members and adapted to be swung in an arc relative thereto, a pivoted fulcrum member carried by the angular lug of the other gripping member and a curved link connecting said actuating member to a short arm of said fulcrum member so that said actuating member may shift the last mentioned gripping member and thereby move one split end of a rim relative to the other end of the rim.

1,537,343. AUTO HEADLIGHT. LUTHER GIFFORD, EDWARD H. SCHULTZ, and CHARLES L. WEST, St. Cloud, Minn.; said Schultz assignor of his entire right to William L. Sell, St. Cloud, Minn. Filed Sept. 25, 1923. Serial No. 664,749. 2 Claims. (Cl. 240—41.)



1. A lamp of the class described including a body portion, a reflector positioned within the body portion, said reflector having a forward end hingedly connected to one wall of the body portion, an upper curved section forming a part of the reflector and having one edge thereof normally engaging one wall of the body portion, means for moving the reflector, towards and away from the rear wall of the body portion, and means having connection with the body portion and contacting with the upper curved section of the reflector for preventing light rays from passing to the rear of the reflector.

1,537,344. SAW FOR CUTTING PAPER ROLLS. WILLIAM B. GILES, Park Place, TEX. Filed Oct. 30, 1922. Serial No. 597,730. Renewed Mar. 14, 1925. 7 Claims. (Cl. 164—35.)

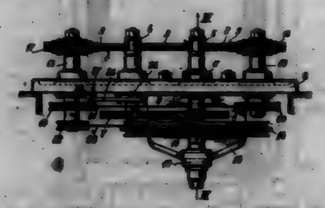


1. A device of the character described including a framework, band saw pulleys mounted thereon, a band saw operating over said pulleys, means for driving one of said pulleys, an adjustable support carried by the framework and provided with said bearings, a shaft mounted in said bearings means for adjustably mounting a paper roll on said shaft, means for manually adjusting said support toward and from the saw.

1,537,345. MACHINE FOR INSERTING FASTENERS. SYLVESTER LEO GOOKIN, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,219. 44 Claims. (Cl. 218—14.1.)

43. An eyelet-inserting machine having, in combination, an eyelet set having a clenching shoulder arranged to be introduced through one of the layers of the work to clench the entering end of an eyelet barrel between adjacent layers of the work, a stripper arranged to engage the work adjacent to the lacing hole in which the eyelet is inserted, and means for causing positive relative movement of the set and the stripper to strip the work from the set after the eyelet has been clenched.

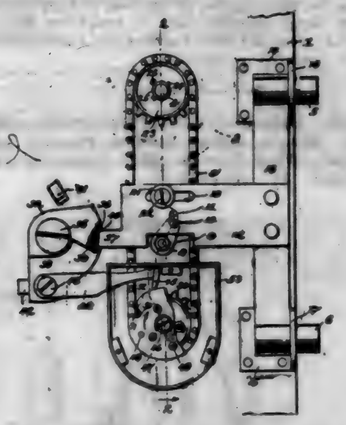
1,537,346. RAILWAY-TIE COUPLING. WILLIAM R. GOEBEL, Alhambra, and HENRY BARKSCHAT, Los Angeles, Calif. Filed June 9, 1924. Serial No. 718,902. 4 Claims. (Cl. 238—31.)



1. In a device of the class described, an elongated coupling for the reception of the ends of tie-sections, said coupling being provided with a removable side plate, and band encircling said coupling for maintaining said plate in operative position.

1,537,347. LOUD-SPEAKING TELEPHONIC APPARATUS. EDWARD ALFRED GRAHAM, Brockley, London, England. Filed June 30, 1924. Serial No. 723,883. 3 Claims. (Cl. 179—146.)

1. Portable loud speaking telephonic apparatus comprising a case having an opening therein and a movable wall normally closing said opening, a loud speaking telephone comprising a telephonic receiver and a sound conduit, wholly located within said case, the sound conduit having a flared outlet end occupying the opening in said case, collapsible supporting means adapted to hold said case above the ground in position for use and coacting detachable screw threaded connecting means carried by the case and collapsible supporting means, substantially as described.

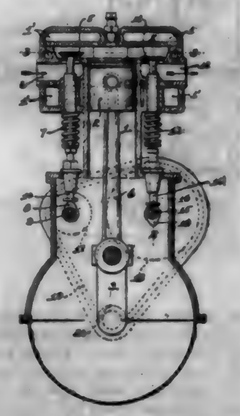


1,537,348. APPARATUS FOR THE MANUFACTURE OF IGNITION PELLETS, HAVING A COMBUSTIBLE CORE AND AN IGNITION MATERIAL WHICH MAY BE KINDLED ON A FRICTION SURFACE. HANS GROSSMANN, Zurich, Switzerland. Filed Nov. 26, 1921. Serial No. 518,077. 4 Claims. (Cl. 18—21.)

1. In apparatus of the type described, the combination of two circumferentially coacting discs adapted to rotate in opposite directions, cavities provided on the circumference of said discs spaced to coincide with each other upon the rotation of said discs, means to feed a plastic string to said discs for being shaped to pellets by said discs, a radial bore communicating with each cavity, a

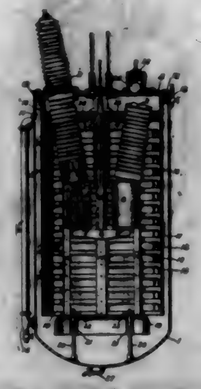
pin slidably arranged in each bore, springs on said pins, a cam disc cooperating with the rear ends of said pins for causing an axial displacement of the latter against the action of said springs whereby the pellets are ejected, and means to cause a momentary lubrication of the interior of said cavities upon the forward movement of each pin.

1,537,349. CHANGEABLE-COMBINATION LOCK. OSWALD HAASE, La Paz, Bolivia. Filed Aug. 12, 1924. Serial No. 731,626. 8 Claims. (Cl. 70—58.)



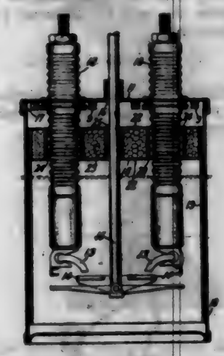
1. In a combination lock, the combination of an operating spindle; a sprocket wheel mounted on said spindle for rotation therewith; a second sprocket wheel; tumbler mechanism associated with and adapted to be operated by rotation of said second-mentioned sprocket wheel; and a sprocket chain connecting said sprocket wheels.

1,537,350. SAFETY DEVICE FOR ELEVATORS. LEE C. HALSEY, Murphysboro, Ill. Filed Dec. 26, 1922. Serial No. 609,016. 2 Claims. (Cl. 187—78.)



2. The combination with an elevator car and the uprights of the elevator shaft, of racks on the uprights, transversely and oppositely slidable bars on the car, shafts on the slidable bars, pinions and winding drums on the shafts, the pinions being arranged to engage with and be rotated by the racks to rotate the drums, cams mounted on the car and arranged to engage with the opposite untoothed side faces of the uprights, and cables connected to and windable on the drums and connected to the cams.

1,537,351. INTERNAL-COMBUSTION ENGINE. HAROLD A. HALL, Los Gatos, Calif., assignor of one-half to Earle C. Fancher, San Jose, Calif. Filed Dec. 26, 1924. Serial No. 758,058. 4 Claims. (Cl. 123—90.)



1. In an engine having a cylinder with a piston operable therein, said cylinder having a port for the passage of the impelling fluid; a plurality of valves for controlling said port; and means for operating said valves successively in timed relation to the piston movement.

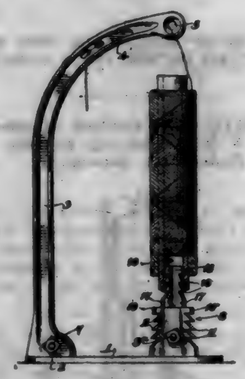
1,537,352. ELECTRICAL APPARATUS. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 23, 1919. Serial No. 332,621. 29 Claims. (Cl. 200—150.)

14. In an electric switch, the combination with a vessel adapted to be filled with an insulating fluid, relatively movable cooperating contacts separable in said fluid, a chamber within said vessel communicating with said fluid and containing a gas, and means for varying the gas pressure within said chamber and hence the pressure exerted upon the insulating fluid in said vessel.

1,537,353. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 8, 1921. Serial No. 443,440. 12 Claims. (Cl. 200—150.)

1. An oil switch provided with an outlet for the gases formed by the opening of the circuit and a porous mass forming a plurality of extended narrow passages for the escape of said gases located in said outlet.

1,537,354. SICKLE BAR. CHARLES F. HOVEE, Conrad, Mont. Filed Mar. 10, 1924. Serial No. 698,802. 9 Claims. (Cl. 56—300.)



4. In a cutting mechanism, a sickle bar having a pocket, a blade having a stem seated in the pocket, and a resilient plate covering the pocket and stem and having one portion frictionally engaging the body of the blade and another portion frictionally engaging the stem of the blade.

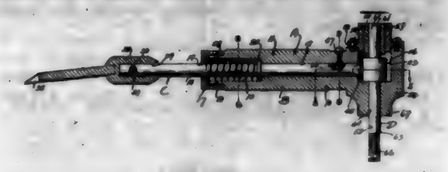
1,537,355. COMBINATION COMPASS AND CHRONOMETER. SPENCER W. HUTCHISON, Oakland, Calif. Filed Aug. 27, 1923. Serial No. 659,603. 3 Claims. (Cl. 58—126.)

1. A combination compass and chronometer comprising a chronometer provided with a dial having time indicating indices thereon and pointers mounted upon a common centrally positioned post to indicate time; and a compass needle mounted upon the outer end of the post and independently movable thereon relative to the pointers and dial for indicating direction, said needle having inwardly bent ends adapted to engage the surface of the dial and maintain clearance between the needle and the pointers.

1,537,356. TWINE HOLDER. THOMAS C. JOHNSON, Quincy, Ill. Filed May 28, 1924. Serial No. 716,425. 4 Claims. (Cl. 242—141.)

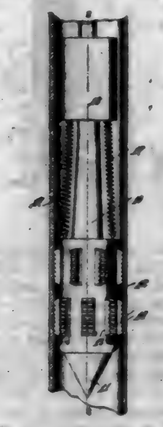
1. A twine holder comprising a base having an upstanding twine-guiding arm at one end, an upstanding integral post formed at the other end thereof, said post having radial wings with teeth formed in their outer edges to impinge within the larger end of a twine-carrying cone and support the same, and a superimposed, integral post mounted thereon and having radial wings of less radial extent than those of the lower post to provide shoulders at the junction with the latter, and teeth formed in the outer edges of the same to impinge within one end of a twine-carrying spool or reel and support the same.

1,537,357. SAW-SETTING DEVICE. JOSEPH KAMPER, Greer, Idaho. Filed Sept. 4, 1924. Serial No. 735,912. 4 Claims. (Cl. 76—63.)



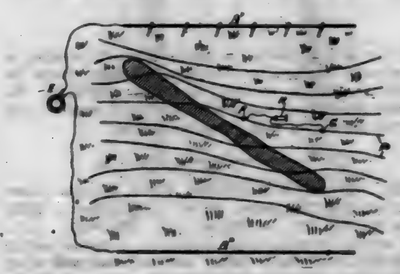
1. A saw-setting device including an anvil member, a punch member, a guide for the punch member, means for operating the punch member, means for adjusting the said guide toward and away from the anvil member, and means for regulating said adjusting means.

1,537,358. SURFACE-TREATING TOOL. LOUIS STEWART LARTIGUE, Charleston, W. Va. Filed Dec. 1, 1923. Serial No. 678,035. 4 Claims. (Cl. 125—6.)



4. A surface treating tool comprising a casing having a compartment provided therein and a passageway leading from the compartment longitudinally through the casing, a cap carried by the forward end of said casing and having an opening disposed axially of the passageway, a cam in said compartment and rotatable therein,

a blade carrying shaft extending through the cap and passageway into the compartment and having an abutment, and a spring between the cap and abutment and

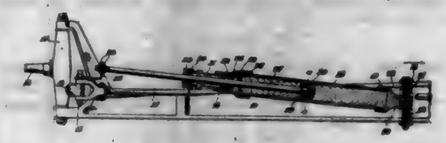


yieldably holding the blade carrying shaft against outward movement and its inner end in contact with said cam.

1,537,359. WELL-CASING PULLER. JOSEPH C. LEWIS, Farmington, N. Mex. Filed Aug. 26, 1924. Serial No. 734,278. 3 Claims. (Cl. 294—86.)

1. A well casing spear including a tapered stem, a casing slidable on the stem, wedge blocks in the casing, resilient suspending connections between the casing and stem, and means on the stem for engagement by the casing for limiting the movement of the casing in one direction on the stem.

1,537,360. ORE DETECTOR. HANS TORKEL FREDRIK LUNDBERG, Lidingo, Villastad, and HARRY JOHAN HJALMAR NATHORST, Stockholm, Sweden, assignors to Aktiebolaget Elektrisk Malmletning, Stockholm, Sweden, a Corporation of Sweden. Filed Jan. 24, 1919. Serial No. 272,803. 6 Claims. (Cl. 175—182.)

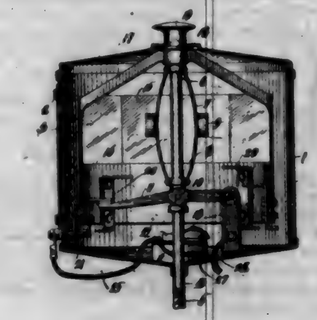


1. Apparatus for discovering and determining electrically the location of veins of ore or mineral, comprising two primary electrodes adapted to be brought into contact with the soil and connected with a source of electric current, at least one of said primary electrodes having a considerable extension in a horizontal direction in proportion to the distance between said primary electrodes, and two secondary electrodes connected with a sensitive receiving apparatus and adapted to be brought into contact with the soil at different points between the primary electrodes.

1,537,361. HEATER. WILLIAM A. MCGLAMERY, Asheville, N. C. Filed June 25, 1923. Serial No. 647,763. 3 Claims. (Cl. 126—120.)

1. A heater of the character described comprising a lower portion, an upper portion, and an upwardly inclined intermediate portion connecting the portions first mentioned, said intermediate and lower portion being provided with an open front, a grate basket fixed to the rear wall of the lower portion in a manner to underlie the rear inclined wall of the intermediate portion, a draft door controlling an opening arranged in the rear wall of the intermediate portion above the grate basket, means extending to the front of the heater for operating said draft door, a plate detachably secured to the side edges of the upper portion and slotted deflector plates curved downwardly and extending from the inner side of said plate as and for the purpose specified.

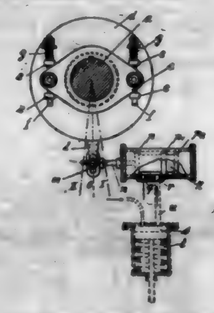
1,537,362. STEERING STABILIZER. WILLIAM J. MACLELLAN, Long Beach, Calif. Filed Aug. 2, 1923. Serial No. 655,335. 1 Claim. (Cl. 280—90.)



In a steering stabilizer, the combination of a U-shaped clamp adapted to straddle an axle, means to extend transversely through the free ends of the clamp abutting the axle limiting the clamp against endwise movement from the axle and adjustable for binding the clamp upon the axle, a hydraulic cylinder provided at one end with a cap terminating in a head having an inclined opening therethrough, a vertically disposed bolt extending transversely through the free ends of the clamp and through said opening in spaced relation to the axle pivotally mounting the cylinder to incline upwardly towards its free end, spacing sleeves upon the bolt at opposite sides of the head centering the head thereon, a piston in said cylinder and having a piston rod, and means adapted to form a connection between said rod and a vehicle steering arm.

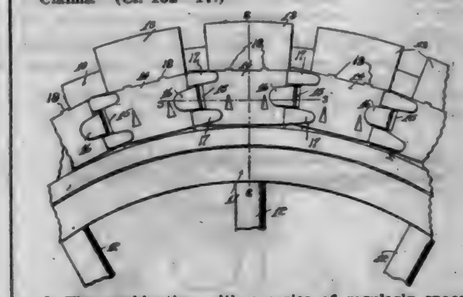
1,537,363. FIGURE TOY. HENRY H. MARTIN, Louisville, Ky. Filed June 19, 1924. Serial No. 721,083. 3 Claims. (Cl. 46—40.)

1. A figure toy including a driven shaft, a figure supporting arm secured at its center to said shaft and having outstanding studs at its opposite ends, figures swivelled on the said studs and slightly overlapping one another in spaced planes, means for rotating the driven shaft, and means controlling such rotation and arranged to intermittently check the rotation as described.



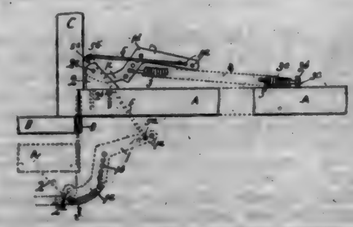
1,537,364. SPEED SIGNAL. HARRY E. MASON, Covington, Ky. Filed Apr. 24, 1922. Serial No. 556,226. 3 Claims. (Cl. 175—355.)

1. In combination, a casing, a rotatable member mounted in said casing, a plurality of spaced contacts of varying lengths on said rotary member, a lever pivoted in said casing, a circuit including said lever, said rotatable member adapted to be rotated so as to place one of said contacts in said circuit by being disposed in the path of movement of said lever, a signal in said circuit, and a governor mechanism for controlling said lever with respect to the contact which may be disposed in the path of movement of the lever so as to close the circuit in the manner and for the purpose specified.



1,537,365. MECHANISM FOR THE AUTOMATIC REGULATION OF THE BRAKING FORCE OF COMPRESSED-AIR BRAKES. HERMANN MÜLLER, Siegen, Germany. Filed Mar. 21, 1924. Serial No. 700,911. 4 Claims. (Cl. 303—21.)

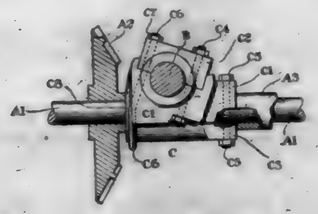
1. A mechanism for the automatical regulation of the braking force of compressed air brakes for railway cars designed to prevent the slipping of the braked wheels on the rails, comprising in combination with the brake cylinder and with the brake axle, a relieved piston valve, a casing of said piston valve, a casing of said piston valve fixed on the frame of the car, a tubular conduit connecting said valve casing with the pressure space of the brake cylinder, a rotating ring on the brake axle,



a sliding ring loosely mounted on said rotating ring, and means for connecting said sliding ring with said relieved piston valve so that said piston valve regulates the air pressure in the brake cylinder owing to the displacements in the casing within determined limits.

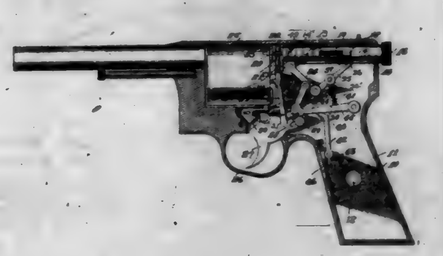
1,537,366. TIRE SHIELD. EDWARD L. NASH, St. Louis, Mo. Filed Mar. 27, 1924. Serial No. 702,354. 2 Claims. (Cl. 152—17.)

2. The combination with a series of regularly spaced tire shoe sections, of connecting means therebetween comprising a metal plate on each end of each of the sections and having prongs secured through the end of the section, one end of each plate having a transverse slot, the other end of each plate having a pair of offset tongues arranged in overlapping relation to an adjacent plate, and an intermediate tongue engaged through said slot and extended back onto the plate.



1,537,367. DOOR CLOSER. JOHN O. NASLIN, Seattle, Wash. Filed Oct. 23, 1923. Serial No. 670,280. 6 Claims. (Cl. 16—80.)

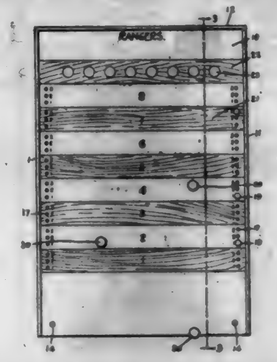
1. In a door closer, a counter-balance having a curved end adapted for spring-abutment and pivoted to a hinged part near its hinged edge, an outward projecting swinging end adapted for balance-arm connection, and an inter-



mediate portion adapted for spring connection, spring-means actuating the closing movements of said part, and means for maintaining said balance against the said spring-means.

1,537,368. BEARING BOX. RICHARD L. NEUBERT, Knoxville, Tenn. Filed Jan. 26, 1922. Serial No. 531,998. 5 Claims. (Cl. 308—74.)

1. In a structure of the kind described, the combination with an axle and a shaft and a body and an upper cap and a lower cap forming bearings transverse to each other, of means extending through the body and engaging both said caps, and additional means for separately binding said caps to said body, substantially as described.

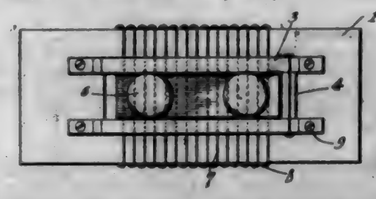


1,537,369. FIREARM. GUSTAV NICHOLSON, Itacuburi del Rosario, Paraguay. Filed Apr. 30, 1924. Serial No. 710,058. 4 Claims. (Cl. 42—59.)

2. A revolver mechanism including a slidable spring pressed hammer, a trigger, a pivoted arm movable by the trigger, an arm pivotally connected with the movable arm, a second arm pivotally connected with said movable arm, hammer engaging and releasing means on the first of the arms, and a safety means operable by the second pivotal arm.

1,537,370. GAME AND BOARD THEREFOR. ALBERT E. PRINCE, Indianapolis, Ind. Filed May 23, 1921. Serial No. 471,827. 1 Claim. (Cl. 273—126.)

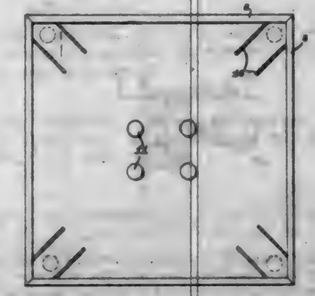
The combination of a table or other substantially flat support, a plurality of headed retaining means such as nails, and a game apparatus independent of and detachable from said support and adapted to be positioned thereon and supported thereby, said apparatus comprising a pair of opposite, flat, unobstructed playing surfaces suitably legended and a peripheral wall projecting outwardly from both surfaces and simultaneously serving as a support and as a retainer and defining the playing area, said peripheral wall partially enclosing the playing area and leaving exposed an edge thereof for playing purposes, said apparatus having a plurality of openings adjacent the nonenclosed playing edge for receiving said retaining means which project through said



openings and are retained thereby and engage the support for anchoring the game apparatus thereto with either playing area exposed.

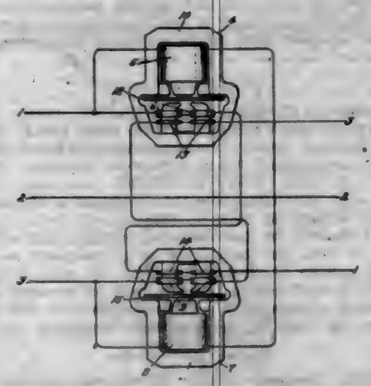
1,537,371. PROTECTION OF ALTERNATING-ELECTRIC-CURRENT SYSTEMS. WALDEMAR PETERSEN, Darmstadt, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 8, 1918. Serial No. 233,387. 11 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a high tension electric system, an alternating current apparatus having a neutral point, and an inductance connected between said neutral point and the ground and being dimensioned electrically substantially to neutralize the capacity current to ground of the ungrounded part of the system, whereby, upon grounding the system, the earth current is substantially suppressed at the point of breakdown.



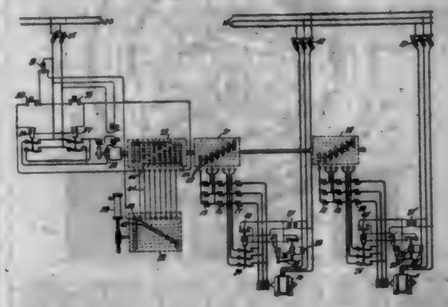
1,537,372. BUTTER CUTTER. PETER J. PITSON, Perrysburg, Ohio. Filed June 14, 1924. Serial No. 719,995. 1 Claim. (Cl. 31—22.)

A butter cutter including a base having an opening, separate cutting wires stretched across the opening, means engaging the ends of the respective wires for fastening the wires to the base, walls detachably mounted on the base at the sides of the opening and cooperating with the base to clamp the wires at intermediate points,



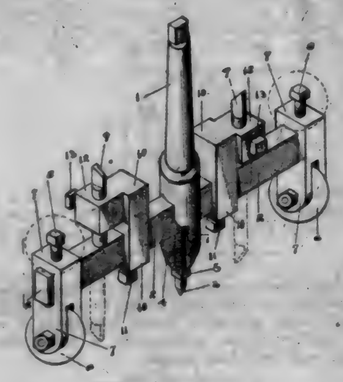
an end wall interposed between and clamped by the first named walls and flush with one end wall of the opening, an elongated plunger between and guided by the side walls and the end wall, and separate handles upstanding from the end portions of the plunger.

1,537,373. PUZZLE. JAMES G. PORTEUS, Marion, Ind., assignor of one-half to Sanford Clinton Jones, Marion, Ind. Filed Apr. 27, 1922. Serial No. 556,889. 1 Claim. (Cl. 273—113.)



In a puzzle, a base, side walls secured to the base and extending upwardly therefrom, said walls having inwardly extended flanges, a cover of translucent material adapted to engage the flanges, a pair of spaced walls arranged in the corners of the base and extending at oblique angles with respect to the side walls, the central portion of the base being free of obstructions, balls mounted on the base to roll thereover, and said balls adapted to move from positions between the obliquely disposed walls at one corner of the base directly across the base to a position between the walls at the opposite corner of the base.

1,537,374. ELECTRICAL INSTRUMENT. WILLIAM H. PRATT, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 27, 1921. Serial No. 488,046. 8 Claims. (Cl. 171—303.)

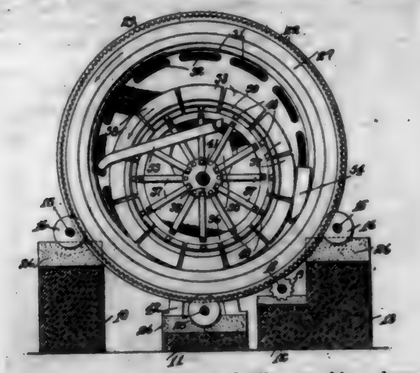


1. In combination with a three phase alternating current circuit, a meter for measuring the power flowing therein comprising a pair of single phase induction wattmeter elements having current and potential coils connected to measure the power flowing in said circuit and an auxiliary current coil on each of said elements connected in series with the current coil of the other element for causing the measurements to be substantially independent of wide and continuous variations in the frequency of the circuit.

1,537,375. CONTROL SYSTEM FOR ADJUSTABLE-SPEED MOTORS. ARTHUR C. PRESCOTT, East Orange, N. J., and WESLEY C. PLUMER, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Dec. 16, 1924. Serial No. 756,327. 7 Claims. (Cl. 172—179.)

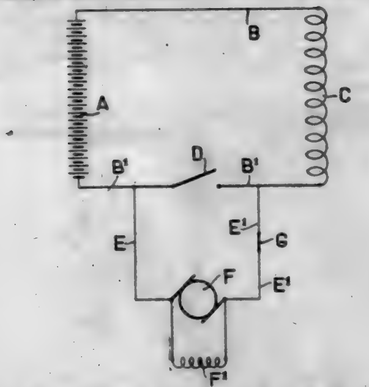
2. In a control system for a plurality of electric motors, the combination of separately operable switches for selectively connecting each of said motors to a source of supply for operation thereof simultaneously operated speed controlling switch mechanisms for said motors, and automatic switch mechanism for controlling the acceleration of each motor during starting independently of said speed controlling switch mechanism.

1,537,376. CUTTER. GEORGE PROSSER, Portland, Oreg. Filed Sept. 24, 1924. Serial No. 739,487. 1 Claim. (Cl. 164—71.)



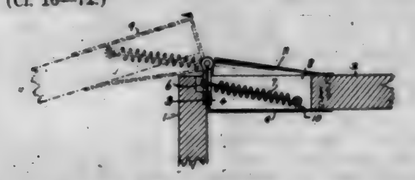
In a cutter: a shank bar transversely mounted through a slot in said shank; a centering member threaded into the lower end of said shank and securing said bar in place; a bracket upon said bar; an offset extension to said bracket disposed parallel to said bar; and a cutting tool mounted upon said extension and adapted to contact with said bar.

1,537,377. ORE PULVERIZER. GEORGE E. C. ROUSSEAU, Sacramento, Calif. Filed Nov. 20, 1923, Serial No. 675,884. Renewed Jan. 12, 1925. 4 Claims. (Cl. 83—9.)



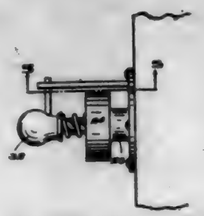
1. An ore crusher including a drum and a crushing wheel within the drum and gravitating to the lower

side of the interior thereof, means for feeding ore between the periphery of the wheel and the interior of



the rim of the drum, and a floating crushing element between the wheel and rim at a point opposite the point wherein the ore is fed.

1,537,378. ARRANGEMENT FOR SUPPRESSING SPARKS. LUDWIG SCHÖN, Essen, Germany. Original application filed Sept. 4, 1920, Serial No. 408,382. Divided and this application filed May 26, 1921. Serial No. 472,852. 5 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



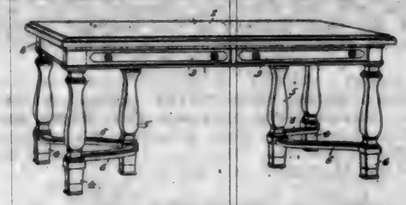
1. In combination with a source of direct current, a load inductance, a switching means in series with said inductance, said switching means comprising a switch and an electrodynamic condensance in shunt with the switch of said switching means.

1,537,379. HINGE. ALBERT E. SCOTT, Houston, Tex. Filed June 1, 1923. Serial No. 642,736. 3 Claims. (Cl. 16—72.)

1. The combination with a door or other swinging object, and a support therefor, of a hinge for supporting said door from said support, said hinge and the adjacent part of the door being slotted, a yieldable member adapted to swing through said slots, one end of the said member being connected to the door and the other end being anchored to said support at a point eccentric with respect to the joint of the hinge, plates secured to the opposite sides of the door and enclosing the slots thereof.

1,537,380. TELEPHONE ATTACHMENT. HARRY FLOYD STILLSON, Williamsburgh, Ontario, Canada. Filed Mar. 23, 1923. Serial No. 627,242. Renewed Mar. 30, 1925. 1 Claim. (Cl. 179—84.)

An attachment for a telephone including the combination with the telephone box and the rotatable shaft of the calling up mechanism; of a member mounted on said telephone box and extended into the same opposite the rotatable shaft; a guide arm carried by said member and provided with connected long and short slots; a sleeve operable within said member and having a bearing disc; said sleeve having spiral grooves therein; the first mentioned member having a bearing disc opposite to the first mentioned bearing disc; bearing balls operable between said discs; a cap for said discs; an operating rod having threads working in said grooves to rotate said sleeves and the rotatable shaft of the calling up mechanism when the operating shaft is moved in one direction within the sleeve; a head for said operating rod; means within said head for preventing rotation of said operating rod when moved longitudinally to rotate said sleeve; means for resiliently retaining said head and said operating rod in extended unoperated position; and a guide finger extended from said head and working in said slots of the guide arm for guiding said head and said operating rod and limiting movement thereof to determine the length of the ring given by operation of the rotatable shaft of the calling up mechanism and the sleeve connected to said rotatable shaft.



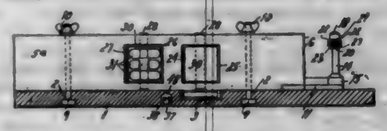
1,537,381. CUTTING AND MILLING TOOL AND METHOD OF MANUFACTURING THE SAME. BENNO STRAUSS, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 28, 1920. Serial No. 433,651. 4 Claims. (Cl. 75—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A method of manufacturing cutting and milling tools of iron, not capable of being hardened per se, which consists in treating an alloy of steel comprising 0.1 to 0.2% carbon and 8 to 14% of chromium by a cementing process at the cutting edges and then subjecting the tools to the customary tempering process.

1,537,382. TABLE. ALFRED H. STRINGS, Chicago, Ill., assignor to Commercial Furniture Company, Chicago, Ill. Filed June 25, 1923. Serial No. 647,684. 4 Claims. (Cl. 45—31.)

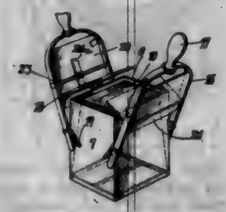
1. In a stationary table, the combination of a top, legs depending from the top, one at each corner thereof, auxiliary legs arranged adjacent the ends of the table at a point intermediate the corner leg supports and spaced inwardly therefrom, and means for securing the auxiliary leg supports to the corner leg supports whereby there is provided an unobstructed central end space

between the corner leg supports and the adjacent auxiliary leg support, and the auxiliary leg supports being



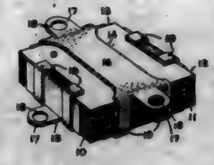
free from connection one with another, whereby the space between the auxiliary leg supports centrally of the table is also unobstructed.

1,537,383. SWITCH. DANIEL B. STUCKEY, Portland, Oreg. Filed Sept. 4, 1924. Serial No. 735,865. 5 Claims. (Cl. 246—323.)



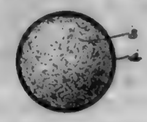
1. A pair of switches, one being the switch of a railroad track, and the other being a switch intermediate such tracks; a shaft intermediate said tracks and parallel thereto, and connected to each of said switches to operate them simultaneously; tripping mechanism upon said shaft; and a wheel upon a car adapted to operate said mechanism, said wheel being guided by said intermediate switch.

1,537,384. WRAPPING AND SEALING MACHINE. JOHN L. SULLIVAN, Thompsonville, Conn. Filed Dec. 8, 1923. Serial No. 679,471. 25 Claims. (Cl. 93—2.)



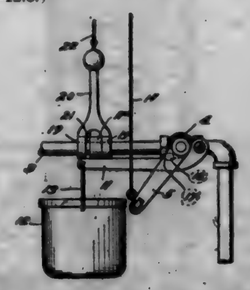
1. In a wrapping and sealing machine, a support having a heating-unit therein, recessed guide bars mounted on said support, one of said bars being adjustable relative to the other, and heating-units yieldingly held in the recesses in said bars.

1,537,385. CARTON HOLDER AND FILLER. EDWIN J. SWIFT, Sheepshead Bay, N. Y. Filed Mar. 29, 1924. Serial No. 702,929. 7 Claims. (Cl. 226—19.)



7. A carton filling device comprising a container open at its top and bottom, the lower edges of the container being bevelled and having an interior ledge for supporting an open, inverted carton, a knife blade positioned between the ends of the container adjacent its bottom, a pair of yoke shaped frames having handles pivoted to the sides of the container, flaps attached to the frames for closing the open top of the container when the frames are moved toward each other, said frames being movable outwardly with the flaps to permit the filled carton to drop by gravity as the said container is inverted.

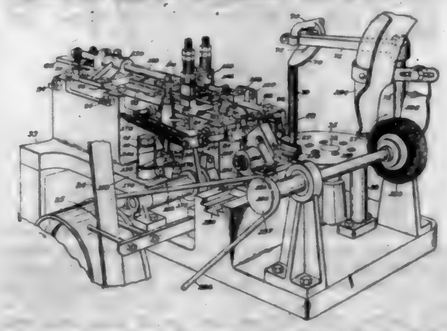
1,537,386. ELECTROSTATIC CONDENSER. EGBERT MOORE TINGLEY, Elizabeth, N. J., assignor to General Electric Company, a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,315. 2 Claims. (Cl. 250—41.)



2. A condenser comprising a block of alternate conducting and insulating sheets, alternate conducting sheets extending beyond one side of said block and the intermediate conducting sheets extending beyond another side of said block, a terminal clamp for said block having a body portion lying against one face of said block and having fingers extending over one pair of opposite sides thereof and engaging the opposite face thereof, and a similar terminal clamp having a body portion lying against said opposite face and having fingers extending over another pair of opposite sides of said block and engaging the first mentioned face, the extending portions of said alternate conducting sheets being in electrical connection with a finger of one of said clamps and the extending portions of said intermediate conducting sheets being in electrical connection with a finger of the other of said other terminal clamps.

1,537,387. BALL. ALBERT O. TROSTEL, Milwaukee, Wis. Original application filed June 12, 1922, Serial No. 567,877. Divided and this application filed July 25, 1923. Serial No. 653,621. 3 Claims. (Cl. 273—60.)

3. A baseball in which the entire body of the ball is composed of felted hair compressed to finished spherical form, and an outside covering for said body.



1,537,388. AUTOMATIC TRIP VALVE FOR OIL BURNERS. NATHAN E. TYRRELL, Kansas City, Mo. Filed May 12, 1924. Serial No. 712,642. 6 Claims. (Cl. 158—42.3.)

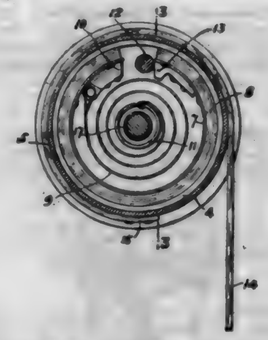
1. In a trip valve, the combination of a valve operating lever, a weight imposing force on said lever to close the valve, a trip lever associated with said valve lever

to maintain the valve in open position, and a second pivoted weight mounted to swing in an arc to intercept and trip the trip lever.

1,537,389. WIREWORKING MACHINE. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Mar. 13, 1924. Serial No. 698,873. 39 Claims. (Cl. 153—35.)

1. In a structure of the class described, the combination of a work holder, a reciprocatingly mounted carriage provided with a fixed jaw and a pivoted jaw, a brake for frictionally retarding the movement of said carriage, means for actuating said carriage and said jaw comprising a draw bar having a lost motion connection to said carriage and operatively connected to said pivoted jaw so that the jaw is opened and closed by the independent movement of said draw bar at the ends of the stroke of the carriage, a reciprocating actuating member, a driving connection for said actuating member and draw bar comprising a clutch bar on said driving member having a hole therein, a friction shoe on said draw bar coacting with said clutch bar providing a friction drive connection, a driving pawl on said draw bar adapted to engage said hole in said clutch bar providing a positive drive connection, a stop for holding said carriage on its forward stroke to permit engagement of said pawl, means for retracting said stop timed with the engagement of said driving pawl, a cam for disengaging said driving pawl on the return stroke of the carriage, and an adjustable return stop for said carriage positioned to engage after said pawl has been disengaged.

1,537,390. TOY ALARM CLOCK. SIDNEY C. VINCENT, Baltimore, Md. Filed Jan. 23, 1923. Serial No. 614,400. 2 Claims. (Cl. 46—46.)

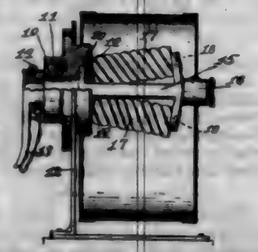


1. A toy alarm clock comprising a cup-shaped casing, a bracket mounted in the casing, a bell clapper having a portion with a bearing in the casing and in the bracket, said bell clapper extending through the casing, a bell mounted upon the casing in position to be struck by the bell clapper, a manually operated wheel mounted in the casing and in the bracket, said wheel having points adapted to engage a portion of the bell clapper to rock the same upon its pivot, a spring normally holding the bell clapper in engagement with the bell, manually operated means for rotating the wheel carrying shaft, a cup-shaped front plate adapted to fit snugly in the open side of the casing, there being an aperture centrally located in said plate, an extension having connection with the wheel and extending through said plate, and hands mounted on said extension, whereby when the wheel is rotated, the hands will be rotated.

1,537,391. METAL DISK WHEEL. EDWARD R. WAGNER, Milwaukee, Wis., assignor to E. R. Wagner Manufacturing Company, North Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 4, 1922. Serial No. 541,256. 3 Claims. (Cl. 301—63.)

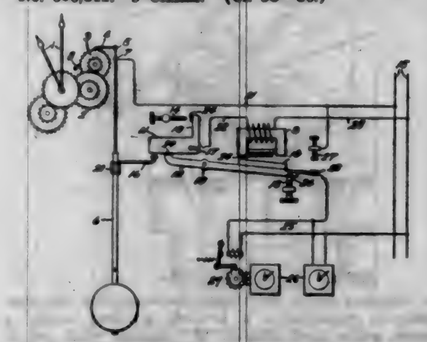
2. A metal disk wheel comprising two circular sheet metal web members formed with outwardly flanged central openings and bulged outwardly adjacent said openings and to a less extent adjacent their peripheries, the flange of one web member having an outward projection, a sheet metal cap fitting over said flange and formed with a recess adapted to be sprung into engagement with the projection on said flange, and a flanged ring fitted and secured on the flange of the other web member and extending inwardly over the outer end thereof.

1,537,392. RECOIL BRAKE. FRANK R. WALLACE, Philadelphia, Pa., and LEROY TABOR, Riverton, N. J. Filed Sept. 6, 1924. Serial No. 736,211. 2 Claims. (Cl. 267—10.)



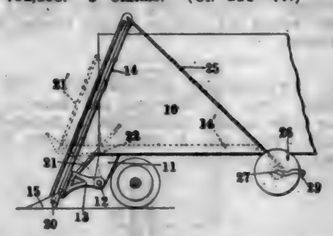
1. A recoil brake comprising the combination with vehicle frame and axle elements and a supporting spring interposed between the two of concentric casings of which the inner one is fixed in respect to one of said vehicle elements and of which the outer one is turnable, an internal brake band provided externally with brake lining and arranged for co-operation with the inner surface of the fixed casing, a retracting spring attached to one end of the brake band and at the other end attached to the fixed casing, a post or projection on the outer movable casing adapted to push on the other end of the brake band, and a strap connected to the other vehicle element and with the exterior of the outer turnable casing.

1,537,393. PLATE-MARKING DEVICE. EDWARD H. WALSH, Chicago, Ill. Filed May 26, 1921. Serial No. 472,927. 6 Claims. (Cl. 33—32.)



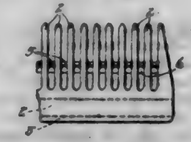
1. In combination with a metal working machine comprising a plurality of shearing means spaced from each other, a member spanning the space between said shearing means, means for supporting said member and a marker slidably secured to said member.

1,537,394. PENCIL SHARPENER. JOSEPH CARL WANGEN, Great Falls, Mont. Filed Sept. 15, 1923. Serial No. 662,955. 4 Claims. (Cl. 120—96.)



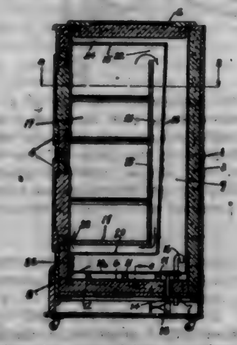
1. In a device of the character described, a cutting roller, a cog adapted to be arranged in end to end relation with either end of the cutting roller and in contact therewith, and means for effecting a detachable locking engagement between the cog and the adjacent end of the roller.

1,537,395. ELECTRIC CLOCK. HENRY B. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Filed Nov. 14, 1922. Serial No. 600,841. 9 Claims. (Cl. 58—30.)



1. A constant speed motor comprising an electromagnet, a movable armature lever therefor, a pendulum provided with a contact for controlling the energizing circuit of said electromagnet, a weight pivoted in such a manner as to be raised by the movement of said armature lever and to impart an energy impulse to said pendulum in falling and a rotary timing device driven by said pendulum.

1,537,396. DEVICE FOR LOADING TRUCKS. JOHN S. WHITE, St. Louis, Mo. Filed Aug. 18, 1924. Serial No. 732,598. 5 Claims. (Cl. 214—77.)



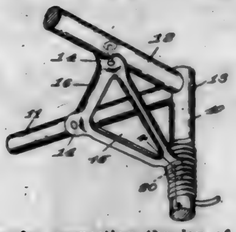
1. In a device of the class described, the combination with a vehicle body, of a hoisting lever pivoted to said body at a point below its bottom, means for actuating said lever, and a loading apron operated by said lever, said apron being pivoted at one end and having sliding contact with one of said first named parts.

1,537,397. COMB AND CLEANING DEVICE THEREFOR. BENJAMIN L. WILHELM, Chicago, Ill. Filed Apr. 16, 1924. Serial No. 706,998. 4 Claims. (Cl. 132—28.)

1. The combination with a comb having a longitudinal groove extending inwardly from the back thereof, a slot forming a continuation of said groove and extending inwardly into the body portion of the comb, a cleaner having a handle arranged to enter and be retained in the groove, and teeth carried by said handle and adapted to enter the slot.

1,537,398. REFRIGERATOR. WILLIAM P. WILLSON, Arlington, Vt., assignor to William E. Kidder, Kalamazoo, Mich. Filed Aug. 20, 1923. Serial No. 658,475. 5 Claims. (Cl. 62—68.)

3. A refrigerator comprising a casing, a bottom pan disposed in the bottom of said casing and provided with a drain opening, a refrigerant chamber adapted to hold a liquid and comprising a horizontal bottom portion



disposed within said bottom pan and a vertical portion, and a provision chamber comprising a vertical wall spaced from a vertical wall of said refrigerant chamber and a horizontal bottom wall spaced from a horizontal wall of said refrigerant chamber providing an air circulating passage between such walls, said passage being open at the top and bottom thereof to said provision chamber but otherwise closed thereto, there being a drain opening from said circulating passage to said bottom pan, said refrigerant chamber being provided with a liquid waste pipe having its inlet in spaced relation to the bottom thereof.

1,537,399. SWINGSPOUT ATTACHMENT FOR CONTAINERS. OZRO N. WISWELL, Los Angeles, Calif., assignor to Swingspout Measure Co., a Corporation of California. Filed May 2, 1922. Serial No. 557,949. 5 Claims. (Cl. 221—26.)

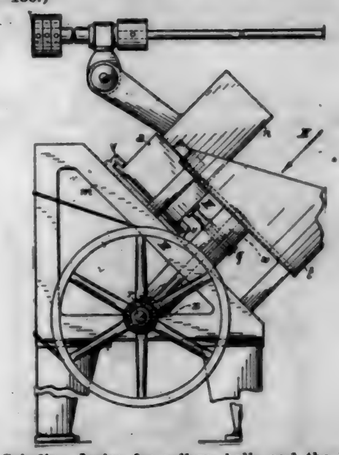
4. In a swinging spout construction, the combination of: a spout; a tubular member attached at an angle to, and forming an extension of, said spout; a sleeve in which said tubular member is turnably mounted; and means for turnably mounting said sleeve on a container so that the axis of turning movement of said sleeve is at an angle to the axis of turning movement of said tubular member.

1,537,400. TRIANGLE CHAIR BRACE. JOSEPH W. WOHLHIETER, Newark, N. J. Filed Dec. 20, 1922. Serial No. 607,942. 9 Claims. (Cl. 155—197.)

1. A brace for connecting the leg of a chair, to a pair of chair stretchers, and comprising a triangular member having the apices of the triangles angularly disposed with reference to the body of the triangle and bent to form trough shaped portions adapted to seat respectively on the leg and stretchers, said trough shaped portions being provided with rivet receiving openings.

1,537,401. CONTROLLING OR REGULATING DEVICE FOR PROPELLERS. LUDWIG BLUMSCHEIN, Berlin-Johannisthal, Germany. Filed Nov. 18, 1924. Serial No. 750,569. 1 Claim. (Cl. 170—60.)

The combination with a propeller, a regulating device mounted on a wing of the propeller comprising an axle rotatably secured at right angles in the wing; a streamline interrupting surface secured to and adapted to rotate with said axle; an arm secured at one end to said axle; a tension spring secured at one end to the free end of said arm and at the other end to the wing to normally hold said surface substantially parallel to the circumference generated by the ends of the wings, said



arm and the spring being mounted on the inside of said propeller; and a weight secured in said surface near the free end thereof and adapted to cause said surface to rotate due to centrifugal force against the force of said spring upon excessive speeds of the propeller.

1,537,402. BEATER DEVICE FOR BRAIDING MACHINES. JULIUS BOTTENBERG, Barmen, Germany, assignor to the Firm of Alb. & E. Henkels, Langerfeld, near Barmen, Germany. Filed Nov. 17, 1922. Serial No. 601,628. 3 Claims. (Cl. 90—17.)

1. Single-thread lace braiding or plaiting machine comprising in combination, two groups of alternately movable, laterally flexible thread beater arms, pairs of such beater arms being cranked outwards and vertically reciprocable wedges arranged radially to the rear of the cranked beater arms of the one group and connected with the beater arms of the other group.

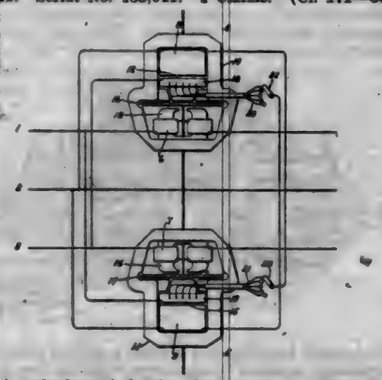
1,537,403. GRINDING DEVICE. PAUL BRÜHL, Dusseldorf, Germany, assignor to the Firm: Maschinenfabrik "Rheinland" A.-G., Dusseldorf, Germany. Filed Feb. 14, 1924. Serial No. 692,740. 6 Claims. (Cl. 51—130.)

1. Grinding device for rollers, balls and the like comprising in combination a grooved grinding means, a grooved guide block adapted to cooperate with and to reciprocate relatively to said grinding means in the direction of the groove and means for feeding work pieces into said grooves.

1,537,404. TUBING. HARRY W. BUNDY, Detroit, Mich. Filed Dec. 3, 1923. Serial No. 678,173. 3 Claims. (Cl. 137—75.)

1. A relatively light gauge tubing, comprising a plural ply single tube for heat exchange purposes made of relatively thin gauge stock, so thin that a tube made of single ply would be so flexible as to lack utility where a stiff tube is required and in which the plies overlap and are secured together for only substantially one-half the cross section of the tube for the purpose of giving reinforcement and stiffness.

1,537,405. METHOD OF MAKING DOUBLE TUBES. HARRY W. BUNDY, Detroit, Mich. Filed Jan. 9, 1924. Serial No. 685,146. 4 Claims. (Cl. 113—33.)



1. The method of making a pair of small tubes with an intervening connecting web, which comprises causing the strip to travel longitudinally and fashioning the edges over into small tubes with overlapped joints with the body of the tube to form a pair of small tubes connected by an intervening web, and then flowing a stream of solder onto the web between the tubes to solder the lapped joints.

1,537,406. PROCESS OF MAKING COMPOSITIONS OF FIBROUS MATERIALS AND CEMENT. GERALD ORLEY CASE and JAMES RANKIN GARROW, London, England, assignors to Novocretes Limited, London, England. Filed Oct. 18, 1924. Serial No. 744,510. 21 Claims. (Cl. 8—47.5.)

1. A process for utilising fibrous materials in conjunction with cement, which consists in saturating the said material and then mixing the damp saturated material with a substance, which after re-acting with the damping liquid produces an insoluble compound in and on the material, and adding cement to the mixture, then subjecting the whole to pressure, whereby liquid remaining in the material is brought into contact with the cement and a "setting" action initiated.

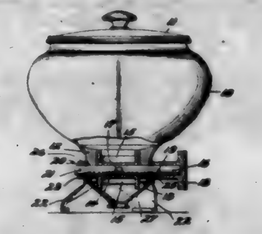
1,537,407. ELECTRICAL INSTRUMENT. FREDERICK P. CHURCH, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 27, 1921. Serial No. 488,041. 4 Claims. (Cl. 171—309.)

1. A polyphase induction instrument for three-phase circuits comprising two single phase wattmeter elements with their movable members mechanically connected together, each element having a current coil, a main potential coil and an auxiliary potential coil, and circuit connections for connecting each main potential coil in series with the auxiliary potential coil of the other element.

1,537,408. COMBINED DISPENSING SPOUT AND SHAKER FOR CANS OR BOXES. FRANK H. COOSWELL, Manistee, Mich. Filed July 26, 1924. Serial No. 728,458. 7 Claims. (Cl. 221—11.)

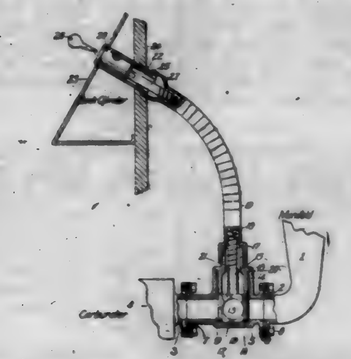
7. A box or container having a single opening for the outflow of the material, in combination with a swinging spout adapted to receive the material passing through said opening, and a controlling gate located between the spout and the box and container, by which the material may be made to flow in a plurality of streams or in a single stream as it passes through said opening, according to the setting of said controlling gate.

1,537,409. PROCESS FOR CONSTRUCTING BOOTS AND SHOES. LARRY L. COMEAU, Bradford, Mass. Filed June 30, 1924. Serial No. 723,333. 3 Claims. (Cl. 12—142.)



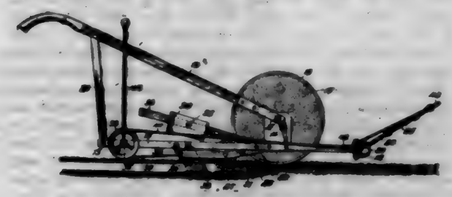
3. The process of constructing a shoe, consisting in assembling the upper and placing the heel counter therein, temporarily securing a sheet of flexible material to a last from its shank to its toe, placing the upper and the heel counter upon the last and turning the edge of the upper inwardly onto said flexible sheet and the shank of the last, cementing the inturned edge of the upper to the aforesaid flexible sheet and temporarily tacking said edges to the shank of the last, removing the tacks when the cement is dry, passing transverse lengths of wire through the inturned edges of the upper behind the aforesaid sheet, connecting the ends of each length of wire and securing a shank reinforcing member in place by and between the upper and lower portions of said lengths of wire, and securing a sole to the inturned edges of the upper with its instep portion covering said wires and reinforcing member.

1,537,410. SANITARY SUGAR BOWL. ROBERT A. COURTNEY, Westminster, Md. Filed Jan. 8, 1923. Serial No. 611,540. 1 Claim. (Cl. 221—106.)



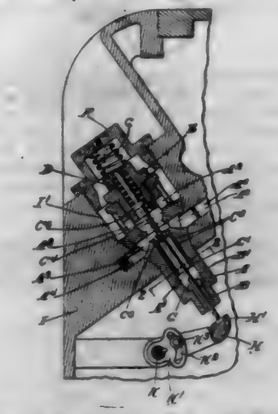
A sugar bowl or the like having a sheet metal body provided with a lower cylindrical portion, a base fitting within said cylindrical portion, a funnel having a cylindrical portion fitting over the corresponding portion of the

bowl, supporting legs having a cylindrical portion fitting over the corresponding portion of the funnel, a shaft extending through all of said parts and permanently connect-



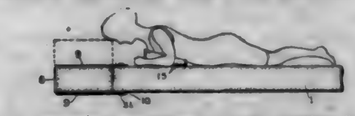
ing them and a cylinder on said shaft provided with pockets for removing portions of the contents of the bowl and delivering them into the funnel when the shaft is turned.

1,537,411. MANIFOLD LOCK. DANIEL R. COX and DAVID A. KINNIB, Pasadena, Calif. Filed Apr. 24, 1924. Serial No. 708,654. 5 Claims. (Cl. 251—6.)



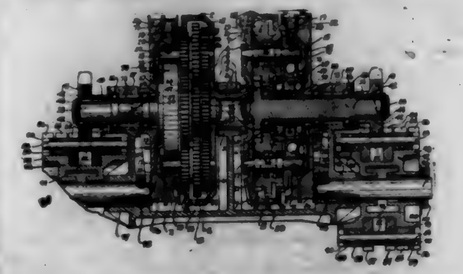
1. A manifold lock comprising a valve adapted to be introduced between a carburetor and an intake manifold and adapted to open and close the gas passage, a gas tight tubular shell leading from the valve, a shaft leading through the tubular shell to turn the valve, and a port from the valve to the tubular shell.

1,537,412. MACHINE FOR CUTTING SOD. CHARLES F. DAFFERNER, Ottumwa, Iowa. Filed Nov. 27, 1923. Serial No. 677,303. 3 Claims. (Cl. 97—226.)



1. In a sod cutter, the combination of a frame, a supporting arm at each side of the frame and pivoted thereto to swing in a vertical plane, a vertical disk cutter journaled on each of said arms, means for forcing said disk cuters into the ground, a fixed cutting blade having a horizontal portion and vertical end portions connecting it to the frame, said supporting arms terminating in forks each engaging opposite sides of the respective vertical end portions of the fixed cutter.

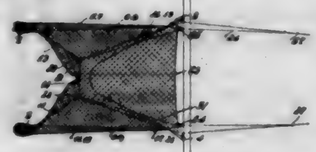
1,537,412. VALVE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 2, 1920. Serial No. 407,620. 12 Claims. (Cl. 251—75.)



5. A valve comprising a valve casing a valve piston therein an upper extension from said piston having a lateral enlargement, a hollow plug surrounding said extension in contact with said enlargement a spring within said plug and adapted to bear against said plug and said enlargement a valve operating stem in contact with but separate from said valve piston and adapted to move said piston in opposition to said spring.

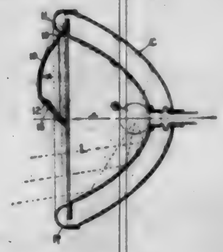
1,537,414. MEANS FOR OVERCOMING INSOMNIA. ALICE O. DARLING, Bristol, N. H. Filed Sept. 20, 1920. Serial No. 411,661. 6 Claims. (Cl. 128—70.)

1. A mattress comprising a body portion having a cut out in which is normally received a portion which is adapted to be swung inwardly over the body portion to receive the forehead of a reclining person to hold the face above the body portion and provide a breathing space, and a support for the chest of the person.



1,537,415. POWER-TRANSMITTING MECHANISM. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed Apr. 15, 1922. Serial No. 553,252. 41 Claims. (Cl. 180—9.2.)

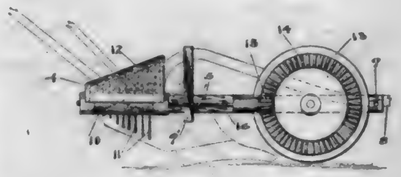
1. A speed reducing and reversing driving mechanism including in combination a driven shaft having a gear wheel fixed thereto, a sleeve and a gear wheel fixed



thereto, the gear wheel being of less diameter than the gear wheel on the shaft, a second sleeve and a gear wheel fixed thereto, the gear wheel being of greater diameter than the gear wheel on the shaft, one of the sleeves being rotatably mounted on the shaft and the other sleeve being rotatably mounted on said sleeve, a pinion having gear teeth meshing with each of said gear wheels, a rotatable shell in which said pinion is journaled provided with gear teeth near its periphery, geared means engageable with the gear teeth on the shell for driving it, and means for selectively holding the larger or the smaller gear wheel against rotation.

1,537,416. TRAILING NET. ROELOF DE BOER and HENRI WILLEM DE VOOGT, Heemstede, Netherlands. Filed Apr. 11, 1924. Serial No. 705,921. 13 Claims. (Cl. 43—9.)

1. An improved trawlnet having two otterboards and two waists, the vertical central planes of which pass practically through the connecting points of the net to the otterboards.

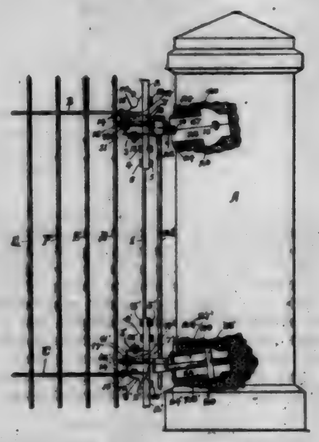


1,537,417. HEADLIGHT SHIELD. GEORGE DE WALD, Brooklyn, N. Y. Filed Jan. 23, 1923, Serial No. 614,400. Renewed Oct. 15, 1924. 1 Claim. (Cl. 240—484.)

The herein described headlight guard of a single piece of sheet metal having a forwardly extending hood formed with corrugations radiating from practically a single point below the axis of the hood for stiffening it, and a visor formed along the inner edge of the hood, the visor being in the form of a segment of a cone and having straight transverse elements, said visor extending inward and bearing along its free edge a stiffening lip deflected outward in a direction substantially approximately parallel to the main part of the hood, so that the visor will strengthen the hood in a direction substantially perpendicular to that of the corrugations aforesaid, the entire inner surface of the guard being of a reflecting character, said corrugations serving thereby to diffuse that portion of the light which strikes the hood from the lamp and the reflector, so that after being radiated back upon the reflector it will issue below the guard in a more even beam.

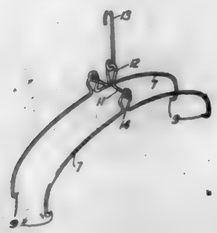
1,537,418. PULVERIZER. HENRY C. DE WEESE, Portland, Oreg. Filed Aug. 8, 1923. Serial No. 656,464. 2 Claims. (Cl. 97—6.)

1. In a pulverizer adaptable to a plow; a housing adjacent the mold board of the plow and positioned longitudinally of the mold board; substantially depending teeth within said housing; a cylinder rotatably mounted within said housing and positioned longitudinally of the mold board; a plurality of spirally mounted series of teeth upon said cylinder adapted to pass between adjacent teeth upon said housing as said cylinder rotates, said



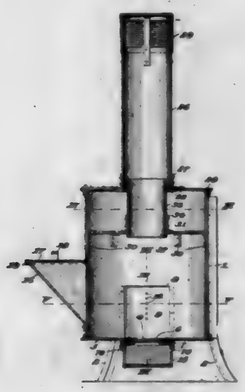
cylinder teeth being of various lengths so that each tooth just clears the mold board of the plow as it rotates with said cylinder; and means to rotate said cylinder.

1,537,419. TURN SHOE. MILTON L. DODGE, Newburyport, Mass. Filed Nov. 23, 1921. Serial No. 517,200. 12 Claims. (Cl. 12—142.)



2. The method of making turn shoes, which comprises securing an upper to a moistened sole, both inside-out, on a last, removing the last, turning the shoe, and locating a dry previously molded toe box and a dry previously molded counter stiffener in their proper positions in the shoe, molding the sole by pressure applied to both faces thereof while the sole is still in temper, drying the sole, and then finishing the shoe.

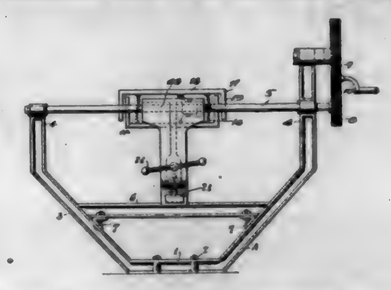
1,537,420. GATE HINGE. JAMES M. DODDRIDGE, Milton, Ind. Filed July 25, 1924. Serial No. 728,089. 4 Claims. (Cl. 16—129.)



1. In combination with a concrete post, box-like hinge members imbedded in the post and projecting slightly from the face thereof, a hinge stub carried by each of said hinge members, and means whereby said stubs may be adjusted longitudinally and vertically.

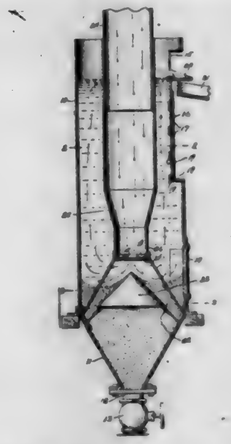
1,537,421. GRAPPLE. BARTHOLOMEW L. DRISCOLL, Watsonville, Calif. Filed Apr. 24, 1923. Serial No. 634,265. 1 Claim. (Cl. 294—99.)

A grapple comprising twin spring arms, each arm bent in the center to form an eye and having inwardly directed object-engaging points on the ends thereof, a link connecting the eyes of said arms, and means for suspending the grapple pivotally attached to said link.



1,537,422. INCINERATOR. SAMUEL A. DUGAN, Galveston, Tex. Filed Feb. 19, 1924. Serial No. 693,861. 9 Claims. (Cl. 110—18.)

1. An incinerator of the character described having a main stack rising from its top, a perforated plate for supporting wet garbage and slops in the upper portion of said incinerator, an opening in said perforated plate in line with said main stack, and a supplemental stack extending upwardly from said opening in said perforated plate, there being a space in the bottom portion of the incinerator below said plate for burning trash, whereby the fire from said trash is utilized for incinerating the wet garbage and slops on said perforated plate.



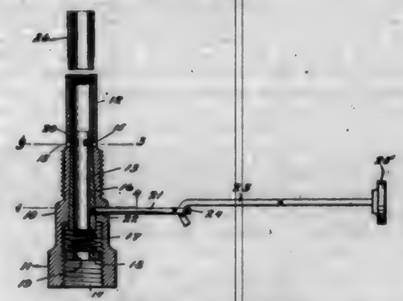
1,537,423. BEARING SCRAPER. WILLIAM LEE ELLISON, Giddings, Tex. Filed July 18, 1923. Serial No. 652,426. 5 Claims. (Cl. 90—11.)

1. In combination, a supporting frame, including a base, a pair of diverging legs extending upwardly from the ends of the base and terminating in journals, a shaft rotatable in said journals, a bridge beam connected to the intermediate portion of the legs, means for rotating

the shaft, a bearing supporting mechanism mounted on the beam, and a scraper mechanism operatable by said shaft.

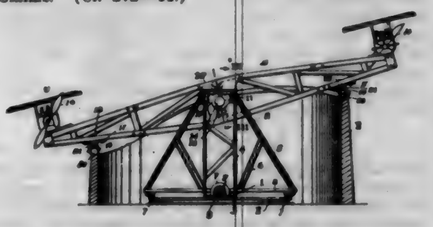
1,537,424. GRAVITY CONCENTRATOR. WILLIAM G. ELMS, Oakland, Calif. Filed Apr. 17, 1924. Serial No. 707,185. 1 Claim. (Cl. 83—82.)

A concentrator comprising a cylindrical casing having a downwardly tapering lower end, a cone supported within the casing immediately above such lower end, an inlet pipe directed into the upper end of the casing and having its lower end decreasing in size and terminating immediately above and in fixed relation to the cone to discharge thereagainst means for regulating the size of the outlet orifice of the inlet pipe, means for regulating the effective height of the casing and means for regulating the effective head of the inlet pipe, the effective diameter of the casing decreasing at a point spaced above the lower end of the inlet pipe.



1,537,425. DAUBER. FRED FARWELL, Cincinnati, Ohio. Filed Dec. 1, 1922. Serial No. 604,132. 2 Claims. (Cl. 15—160.)

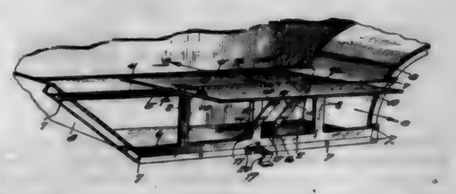
1. A device of the class described comprising a base, a sheet of rubber attached thereto, a plurality of bunches of rubber bands attached to said sheet in relatively



spaced relation by means of a fastening device compressively engaging each group of the bands, and forming a continuous mixture of tangled, intermingled loops.

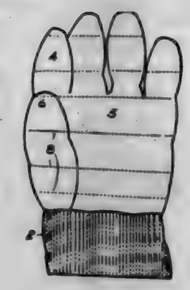
1,537,426. LIQUID-RESERVE VALVE. WEAVER F. FESSLER, Greenville, Pa., assignor to James F. Taylor, New Castle, Pa. Filed June 20, 1924. Serial No. 721,216. 3 Claims. (Cl. 158—46.5.)

1. A device of the character described comprising a body adapted to be mounted at the bottom of a liquid storage tank, the body having a tubular extension and a tapered bore and formed with holes entering the bore at its juncture with the extension, the lower end of the body being formed with a chamber communicating with the bore, a tubular tapered valve rotatably mounted within said bore, an operating handle for the valve, an adjustable abutment screwed into the chamber, and a spring interposed between said abutment and the lower end of the valve, the valve having ports adapted to register with said holes.



1,537,427. ROUNDABOUT. JOHN A. FISHER, Sandusky, Ohio. Filed Feb. 21, 1922. Serial No. 538,247. 3 Claims. (Cl. 272—44.)

1. In an amusement device of the character described, the combination with two concentric annular tracks, the inner track maintaining a constant elevation while the outer track has an undulating top surface, of a central support provided with wheels whereby it is rotatably mounted on the inner track, an arm diametrically disposed relative to said central support and pivotally mounted thereon intermediate of the ends of said arm so as to swing on a horizontal axis, said arm engaging said outer track at two diametrically opposite points, and passenger cars mounted on the opposite ends of said arm, whereby when said support is rotated said cars travel around the axis of the amusement device in a swooping or undulating manner.

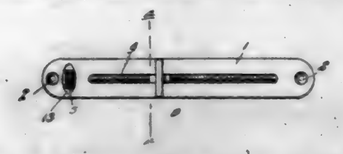


1,537,428. COMBINED FOLDING TABLE AND LUGGAGE CARRIER. MOSE FISHER, Plain, N. Mex. Filed Apr. 25, 1924. Serial No. 708,969. 4 Claims. (Cl. 224—29.)

1. In a combined folding table and luggage carrier for automobiles, the combination with a frame secured to the outer edges of the running-board and the fenders, of folding table leaves, one being hingedly mounted on the upper edge of the frame, said table leaves being

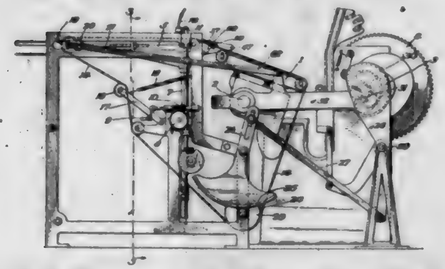
hingedly united whereby their adjacent edges may abut and thereby reinforce and support the table leaves in horizontal positions.

1,537,429. GLOVE. MAURICE C. FRANKENSTEIN and JOSEPH W. FRANKENSTEIN, Pittsburgh, Pa. Filed Jan. 7, 1922. Serial No. 527,572. 1 Claim. (Cl. 2—161.)



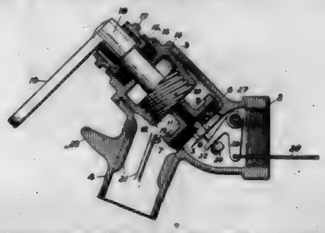
A glove having its front formed of a plurality of plies of material and further having the backs of the index finger and thumb thereof formed of a plurality of plies of material, the plurality of said plies of material forming said front being secured together by a plurality of rows of stitching, each of said rows extending transversely in a line of flexure of the glove when in use, and said plies of material forming the backs of the index finger and thumb secured together by stitching extending in alignment relatively to the rows of stitching securing the plies forming the front of the glove, substantially as described and for the purpose set forth.

1,537,430. DEMOUNTABLE-RIM FASTENER. FREDERICK W. FRENCH, Oakland, Calif. Filed Aug. 1, 1924. Serial No. 729,579. 2 Claims. (Cl. 301—20.)



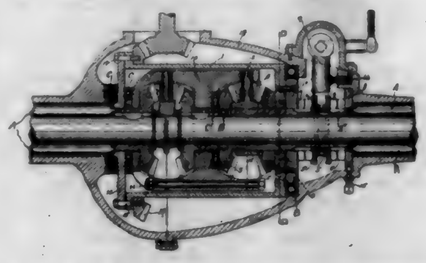
1. The combination with a wheel body and a rim, of studs on the wheel body, and retainers located between the body and the rim, the retainers having notches in their transverse edges for the reception of the studs, and there being seats for the reception of the studs, in the retainers, at the inner ends of the notches, the seats extending transversely of the wheel body.

1,537,431. ADJUSTABLE WINDOW-SHADE BRACKET. PETER J. GARRETT, Morgantown, W. Va. Filed June 4, 1923. Serial No. 643,214. 1 Claim. (Cl. 156—24.)



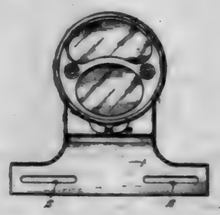
A curtain fixture including an elongated plate having a slot disposed longitudinally thereof, posts mounted at one side of the plate and disposed beyond the ends of the slots, the plate being provided with an opening disposed in alignment with the slot, a threaded arbor journaled in the posts, a knurled wheel mounted upon the arbor and having a portion of its periphery passing through the opening in the plate, a block slidably mounted in the slot and having a threaded opening which snugly receives the thread of the arbor, and a plate carried by the block for supporting a shade roller.

1,537,432. AUTOMATIC PRINTING-PRESS FEEDER. JOHN L. GIDEON, Chicago, Ill., assignor of one-half to Edward E. Kaech, Chicago, Ill. Filed Feb. 8, 1923. Serial No. 617,901. 22 Claims. (Cl. 101—287.)



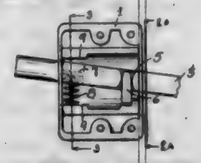
1. The combination with a rocking platen type of printing press, of two paper gripping means respectively adapted to grip opposite ends of a sheet, a flexible carrier carrying both gripper means, means for reciprocating the carrier in timed relation to the operation of the press, and automatic means for causing the two gripping means to grip and release the sheet in correspondingly timed relation.

1,537,433. FAUCET. WALLACE M. GIFFEN, Alameda, Calif., assignor of one-fourth to Nelson W. Thompson and one-fourth to Blanchard B. Maynard, both of Oakland, Calif., and one-fourth to George C. Noble, Berkeley, Calif. Filed Apr. 23, 1923. Serial No. 634,105. 3 Claims. (Cl. 137—21.)



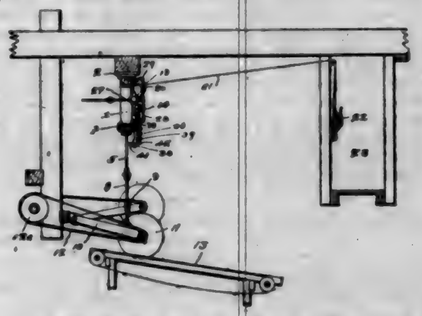
1. A faucet comprising a valve and a housing of Y-shape, one branch of said Y adapted to support the valve and cover therefor, another branch adapted for an inlet and having mechanism therein controlled by the valve, and the third branch adapted for an outlet, and the said housing provided with a seat between said inlet and said outlet, and an additional seat provided on the inner extremity of said valve-branch cover opposite and parallel to said housing seat, enabling the said valve to close against the inlet and when open to keep pressure off the packing of the valve, the said mechanism comprising a bell crank pivotally mounted in said inlet branch, one lever of said crank adapted to engage a stem carried by the said valve and projecting in said last-named branch and the other lever having a wire attached thereto leading from said inlet branch to a remote member, the opening of the valve operating the bell crank and the movement of the latter determining the movement of the remote member.

1,537,434. AUXILIARY TRANSMISSION GEAR. EDWIN J. GOULD, Oakland, Calif., assignor to Consolidated Controls Corporation, Oakland, Calif., a Corporation of California. Filed June 25, 1924. Serial No. 722,359. 8 Claims. (Cl. 74—99.)



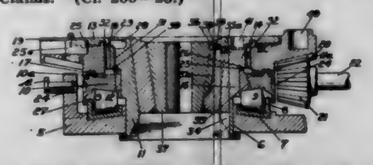
1. In an auxiliary transmission gear, the combination of a bevel gear with an extending hub, a second bevel gear mounted loosely on said extending hub, bevel pinions meshed with each of said bevel gears and mounted on spider shafts extending through a casing integral with the differential casing of a motor vehicle, a housing surrounding said differential casing and secured to the second named bevel gear, a master gear mounted on said housing and meshed with the drive pinion of a motor vehicle, means to prevent rotation of the first named bevel gear, to secure a speed reduction of the said differential casing, substantially as set forth.

1,537,435. SUPPORT FOR AUTOMOBILE LAMPS. JAMES J. GOUGH, Chicago, Ill., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Nov. 13, 1924. Serial No. 749,631. 12 Claims. (Cl. 240—57.)



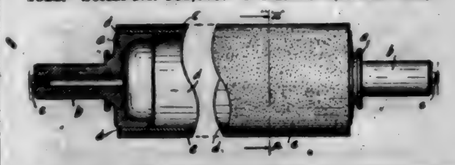
1. The combination with a lamp, of a support having a hook-formed portion projecting toward the lamp, cooperating means on the lamp and the support for preventing transverse movement of the lamp away from the said portion of the support, and a latching member carried by the lamp and movable so as to move a portion of the said member into or out of the said hook-formed portion of the support.

1,537,436. LATCH. RAYMOND EVAN GRAF, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich. Filed Aug. 7, 1922. Serial No. 580,284. 4 Claims. (Cl. 292—22.)



1. A latch comprising an integrally formed housing having a bolt fulcruming opening in its inner end wall and a slot in its outer wall, a lever-like bolt fulcrumed in said opening in the inner end wall of said housing to swing in said slot in its outer end wall, said bolt having a notch in its rear side adjacent its fulcrum point and a recess in its edge constituting a spring seat, said housing having an integral tongue engaging said notch in said bolt to support the bolt against longitudinal movement, and a spring seating surface opposed to said spring seat of said bolt, and a spring disposed in said seats in said bolt to coact with the seat of said housing.

1,537,437. TRIMMER-SAW MECHANISM. GUST GRAFFENBERGER, Portland, Oreg., assignor to Metallic Manufacturing Co., Portland, Oreg. Original application filed Sept. 18, 1922, Serial No. 588,964. Divided and this application filed Feb. 1, 1923. Serial No. 616,322. 2 Claims. (Cl. 143—41.)



1. In combination with a series of trimmer saws, a fluid pressure cylinder for each saw in which the piston is cushioned at each end of its stroke by trapping the fluid pressure, and a valve control for each cylinder admitting and checking the admission of fluid at each end of its stroke, operable when desired to cause a single stroke in either direction.

1,537,438. MAKE-UP ROTARY. EDGAR E. GREVE, Bellevue, Pa. Filed Aug. 1, 1923. Serial No. 655,018. 8 Claims. (Cl. 255—28.)

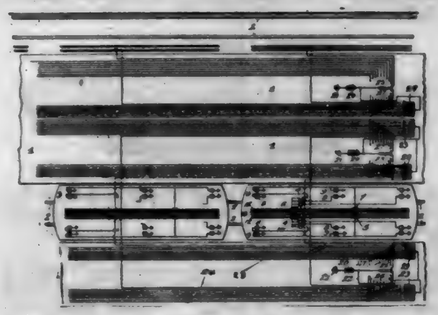
1. A rotary comprising a base, a drive ring having an integral flanged upper end, a separate removable spacing ring surrounding the driving ring intermediate the ends thereof and connected therewith, a gear ring rotatably carried on said spacing ring and confined between said spacing ring and the top flange of the drive ring, and bearings on the base rotatably supporting said spacing ring.

1,537,439. PRESS ROLL FOR PAPER MACHINES. CHARLES R. GRIFFITH, Portland, Oreg. Filed Apr. 13, 1922. Serial No. 552,879. 9 Claims. (Cl. 92—49.)

1. A press roll, made of vulcanized rubber having pores providing air cells in the circumference thereof, to render the same repellent.

1,537,440. FLUSH-VALVE MECHANISM. NICOLAS GYMNAITIS, Santa Barbara, Calif. Filed Mar. 1, 1922. Serial No. 540,311. 4 Claims. (Cl. 137—93.)

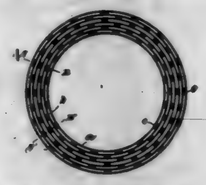
1. A flush valve mechanism comprising a casting, a casing supported on the casting, a port formed in the casting, a valve controlling said port, a stem formed on the valve and slidable through the casting, a piston within the casing and connected to said stem, a sleeve fixed to the piston and having spacing ribs formed on the periphery thereof, a spring for normally urging the piston to a position in which said valve is closed, a handle extending through a slot in the casing and rigidly connected to the sleeve for moving the piston against the action of said spring to open said valve, and means for controlling the flow of air to and from the casing.



1,537,441. PHARMACEUTICAL COMPOUND CONSISTING OF THE MAGNESIUM-VANADIUM SALT OF TRIGLYCOLLAMIC ACID. HANS HAHL and WALTER KROPF, Elberfeld, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Jan. 24, 1925. Serial No. 4,494. 3 Claims. (Cl. 260—11.)

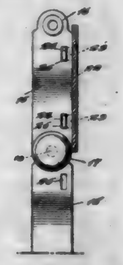
1. The process for producing complex salts of vanadium and an alkali earth metal with triglycollamic acid, which process consists in treating the triglycollamic acid with vanadium trioxide and an alkali earth metal compound, substantially as described.

1,537,442. MULTIPLE-UNIT DOOR-CONTROL MECHANISM. FRANK HEISLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Sept. 30, 1919. Serial No. 327,577. 2 Claims. (Cl. 105—241.)



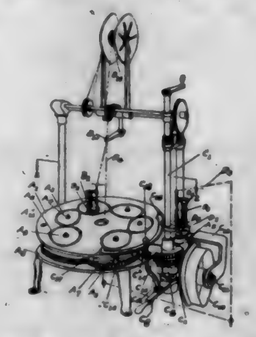
1. In a door control system for cars, the combination with a train of cars and door operation control devices

carried by each car of the train, of shoes carried by each of said cars, circuits connecting said shoes with said



devices, and means for supplying current simultaneously to all of said devices on all cars for initiating movement of the doors thereof.

1,537,443. SPRING WHEEL. NICOLAS M. HERRERA, Buenos Aires, Argentina. Filed Mar. 6, 1922. Serial No. 541,522. 1 Claim. (Cl. 152—37.)



A metallic elastic tire, comprising two cylindrical concentric telescoping cases of different heights, each being formed by two right angled members connected together by bolts, a series of cylindrical concentric equidistant hoops connected to each other by means of alternately placed spacers and bolts contained in the telescoping cases, the cylindrical hoops being connected to the casings by means of certain of said first mentioned bolts passing through certain of said spacers.

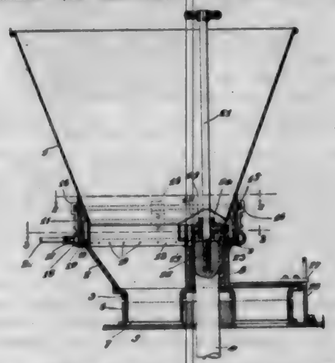
1,537,444. APRON CONVEYER. JOHN S. HEAZOG, Newark, Ohio. Filed Feb. 2, 1923. Serial No. 616,462. 2 Claims. (Cl. 198—195.)

1. An apron conveyer, comprising a carrying chain the links of which consist of two parts each constituting a side bar having lateral lugs at one end and a perforated boss at its other end into which a lug of an adjacent side bar is seated, said lugs and bosses working under and receiving all draft strains and a bolt or pin located in the lugs for holding the two parts of the links in operative position, laterally arranged slats or bars of a width substantially equal to the lengths of the links of the chains and means integral with the slats for connection with the side bars of the chain.

1,537,445. KNOCK-OFF DEVICE FOR BRAIDING MACHINES. HERMAN HODGSON and GERALD F. REYNOLDS, Cortland, N. Y., assignors to Cortland Line Co., Inc., Cortland, N. Y., a Corporation of New York. Filed Dec. 26, 1924. Serial No. 758,183. 10 Claims. (Cl. 96—19.)

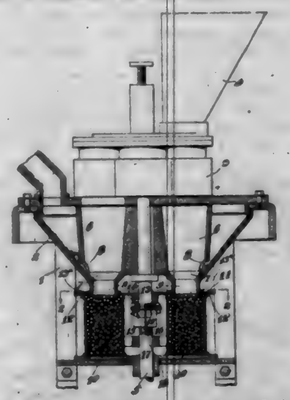
1. In a machine for plaiting a plurality of braid strands about a core strand, said machine comprising a movable bobbin carrier with appurtenances including a suspended drop weight for each of the braider strands, a drive mechanism including a disengageable clutch, which drive is adapted to impart a plaiting movement to said carriers, a stop device including a knock-off arm cooperating with the said drop weights and adapted to disengage the clutch and bring said carriers to rest in the event of rupture on part of any one of the said braid strands, a core strand carrier with appurtenances therefor including a drop weight normally suspended by the core strand adapted to feed said core strand into the braid, and means including a cam element actuable in unison with said drive means adapted to co-operate with the last-named drop weight and upon rupture of the core strand serving to disengage said clutch in a manner analogous to that applied to the braider strands and cause further braider operations to cease.

1,537,446. CARD TRAY FOR PLAYING CARDS AND THE LIKE. CLIFFORD E. ALBERT, Cincinnati, Ohio, assignor to The United States Playing Card Company, Norwood, Ohio, a Corporation of Ohio. Filed Mar. 7, 1925. Serial No. 13,897. 4 Claims. (Cl. 273—148.)



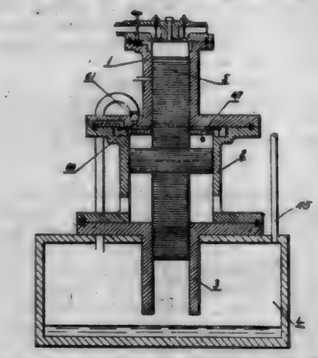
2. In a device of the class described the combination with a pair of containers having compartments therein, said compartments being open at opposite ends of the container, and resilient means comprising a wall portion of each compartment for yieldingly retaining cards in said compartments.

1,537,447. SCREW SOCKET FOR THE NECKS OF FLEXIBLE CONTAINERS. JOHN EDWARD ADLER, Guelph, Ontario, Canada. Filed Feb. 4, 1924. Serial No. 690,540. 6 Claims. (Cl. 150—8.)



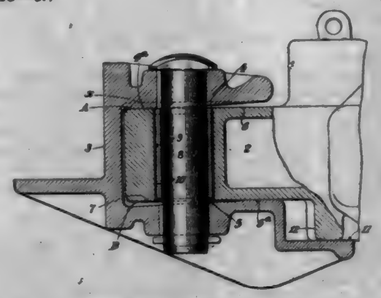
1. In a container formed of flexible material or compound, the combination with the neck and screw socket, of means extending longitudinally of and from end to end of the socket and in spaced relation thereto for preventing its turning within the neck of the container.

1,537,448. CANNING MACHINERY. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Jan. 23, 1924. Serial No. 687,923. 12 Claims. (Cl. 226—72.)



1. In a can filling machine, a feed hopper; a gear carried thereby; a power driven shaft; a measuring unit secured to the shaft and rotatable therewith, the measuring unit consisting of telescoping parts adapted to receive material from the hopper, and a gear carried by one of the telescoping parts and meshing with the gear on the hopper.

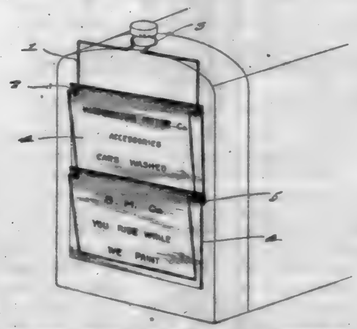
1,537,449. CAN-FEEDING MECHANISM. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Jan. 23, 1924. Serial No. 687,925. 4 Claims. (Cl. 226—96.)



1. In a canning machine, a series of feed funnels having tubular necks; a disk having a series of flanged openings adapted to embrace the necks, and means for adjusting the disk relatively to the necks.

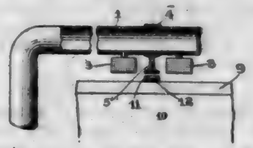
1,537,450. MACHINE WITH FREE FLYING PISTON. JULES BABIN, Paris, France. Filed July 7, 1922. Serial No. 573,492. 3 Claims. (Cl. 123—2.)

1. Gas control system particularly applicable to motor compressor apparatus of the internal combustion type with free flying piston and reservoir of compressed air constituting an artificial atmosphere, comprising an admission valve for previously compressed explosive mixture, a rod for said valve, two admission pistons mounted on said rod, the cross section of the upper admission piston being greater than the cross section of the lower admission piston, means whereby the lower face of the lower admission piston is submitted to the pressure of the gas mixture, an exhaust valve for burnt gas, a rod for said valve, an inner exhaust piston on said rod, an exhaust cylinder for said inner exhaust piston, a duct for the communication of said exhaust cylinder with the upper face of the upper admission piston, a duct through said inner exhaust piston, an outer exhaust piston above said inner exhaust piston, a cylinder cap for said outer exhaust piston, a piston slide valve, grooves in said piston slide valve, means for the communication through one of said grooves of above said exhaust cylinder with the compressed air reservoir, means for the communication through another groove of said exhaust cylinder with the atmosphere, a cylinder for said piston slide valve and means for the communication of the bottom of said cylinder with the upper part of the power cylinder.



1,537,451. ENGINE COUPLER AND POCKET THEREFOR. ARTHUR J. BAZELEY and JOHN WILLISON, Cleveland, Ohio, assignors, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 9, 1921. Serial No. 460,050. 3 Claims. (Cl. 213—6.)

1. In a device of the character described, a coupler pocket, a shank of an engine coupler seating in said pocket, the top and bottom of the shank when the coupler is horizontal each having in one portion a sur-



face engagement with corresponding portions of the top and bottom, respectively, of the pocket whereby drooping of the coupler head is prevented, and the top and bottom of the shank each having in another portion a face diverging relatively from corresponding faces on the top and bottom of the pocket, to facilitate insertion of the shank into the pocket.

1,537,452. RADIATOR SHIELD. FRANCIS BLAKEMAN, Eads, Colo., assignor of one-half to Frank L. Pyles, Eads, Colo. Filed May 3, 1924. Serial No. 710,861. 1 Claim. (Cl. 257—132.)

A radiator shield comprising a rectangular frame formed of wire, the side members being provided with angularly disposed shoulder portions and panels having openings which receive the said side members of the frame and which are adapted to be supported upon the shoulder portions thereof.

1,537,453. APPARATUS FOR THE MANUFACTURE OF ICE-CREAM CONES. HARRY L. BOWDOIN, Long Island City, N. Y., assignor to Cone Company of America, Long Island City, N. Y., a Corporation of Delaware. Filed Apr. 17, 1922, Serial No. 553,766. Renewed Mar. 27, 1925. 4 Claims. (Cl. 107—58.)

1. In an apparatus for the manufacture of edible cones, having pendent burners, a support therefor, and a revoluble, mould carrying member, with a mould cover to pass, while closed, under the burners, the combination of means operable by the mould cover, when slightly raised, to elevate the support and thereby provide a clearance which permits the raised cover to pass under the burners.

3. A heating apparatus comprising a radially arranged fixed heater element, a movable element adapted to pass the heater elements, circumferential arcuate guard means operable to prevent the movable element from striking the heater element, and signalling means comprising a semaphore, and a hold fast latch therefor releasable by contact with the movable element to indicate the operation of the guard means.

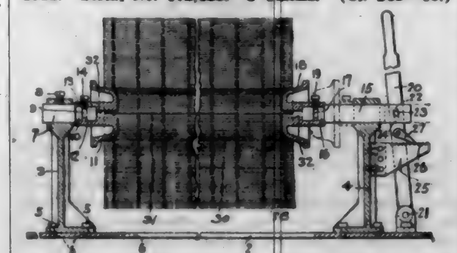
1,537,454. ABRASIVE IMPLEMENT AND METHOD OF MAKING SAME. FRANK P. BROCK, Evanston, Ill., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1922. Serial No. 606,298. 9 Claims. (Cl. 51—280.)

1. In the manufacture of abrasive or polishing implements, the method comprising incorporating a potentially reactive phenolic resin, and a reactive aldehyde having a boiling point substantially above 100° C., with an abrasive material; molding the resulting mixture under pressure; and heating the shaped article to transform the resinous binder.

1,537,455. TYPEWRITING MACHINE. CLARENCE H. BROWN, Cedar Rapids, Iowa, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1922. Serial No. 558,860. 12 Claims. (Cl. 197—128.)

1. In a typewriting machine, in combination, a platen, a rear paper-table to direct a work-sheet or bill around the bottom of the platen, a flexible intermediate paper-table to hold a record-sheet above the rear paper-table and extending around the lower rear portion of the platen between the latter and the rear paper-table, a support, above and to the rear of the platen, to which the intermediate paper-table is fixed, a collating table at the delivery side of the platen to assist in adjusting the bill and between which and the platen the record-sheet passes, and means for flexing said intermediate paper-table and clamping the record-sheet against the platen.

1,537,456. WEAR AND STRAIN RESISTING FABRIC. JOHN BROWN, Auckland, New Zealand. Filed Sept. 10, 1920. Serial No. 409,293. 1 Claim. (Cl. 154—52.)



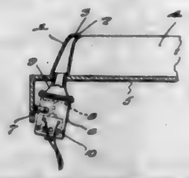
As a new article of manufacture, a bitumen rubber and silk material comprising a strip of relatively thin bitumen rubber with silk threads embedded therein, each of the silk threads comprising silk fibers each of which is separately impregnated with a rubberizing solution.

1,537,457. TILTABLE BED, TRUCK, AND SHIFTABLE CRANE. DON C. BRYAN, Huntington Beach, Calif. Filed Sept. 8, 1922. Serial No. 586,866. 2 Claims. (Cl. 214—94.)

1. A motor truck having means forming a vertical floor socket at the transverse center and behind the cab, a tiltable bed upon the motor truck behind the floor socket, a stanchion having a pin fitting in the socket, a pulley at the upper end of the stanchion, cable winding means operated by the truck motor, a cable connected to the cable winding means and adapted to run over the pulley, a hook upon the tiltable bed to which the cable may be attached so that by operating the winding means the forward end of the tiltable bed will be raised, and means for attaching the forward end of the tiltable bed to the stanchion to hold the bed in its elevated position.

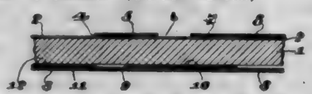
1,537,458. REEL. GEORGE E. BULL, Monessen, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1922. Serial No. 602,421. 3 Claims. (Cl. 242—68.)

2. In a reel, the combination with a standard, a spindle held therein, said spindle having a bearing portion with an annular groove, a head engaging said bearing portion, a screw passing through said head engaging said annular groove, a second standard, a longitudinally movable spindle mounted therein having a bearing portion with an annular groove formed therein, a head engaging said bearing portion, a screw passing through said head engaging said annular groove, a lever connected to said last-named spindle, and means for locking said lever in different positions.



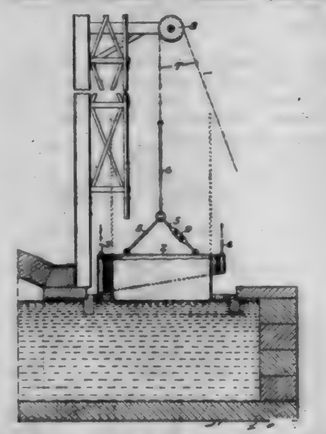
1,537,459. LOCKING TONGUE FOR KNOCKDOWN FURNITURE. CHARLES PETER CAMPBELL, Orillia, Ontario, Canada. Filed June 9, 1923. Serial No. 644,410. 1 Claim. (Cl. 20—92.)

The combination with two wall members set at right angles one to the other, of a channel piece secured to one member and having a vertical slit located in the wall forming the base of the channel, a locking tongue comprising a strip of metal, the body of which is bent intermediately upon itself to form a double thickness adapted to fit into the aforesaid slit of the channel member, and having its ends out-turned and the edges of the out-turned portions converging from one end thereof to the other, and a securing cap having its sides converging from one end to the other and inturned to conform to the shape of the aforementioned out-turned portions of the body and then inwardly with the inner side of such out-turned portion and having upwardly and downwardly extending tongue extensions adapted to be bent inward to engage the out-turned portions of the body.



1,537,460. COOLING-FAN ATTACHMENT FOR CUSHION SEATS. JAMES D. CAMPBELL and WALTER T. TUCKER, Duncan, Okla. Filed Oct. 7, 1924. Serial No. 742,191. 2 Claims. (Cl. 98—27.)

1. A device of the class described comprising in combination with a seat cushion, an air distributor supported at the rear thereof and conforming to the configuration of the seat cushion, said distributor comprising a casing, the top thereof being provided with a series of spaced air outlet openings, a nozzle having its upper end extending into the bottom of the air distributor

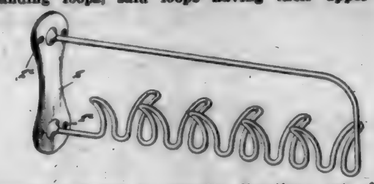


casing, and a rotary fan communicating with the bottom of said nozzle for forcing the air upwardly therethrough and through the openings in the top of the air distributor casing.

1,537,461. PROCESS OF MAKING MOLDS FOR PRODUCING PRINTING PLATES. LAFAYETTE CATES, Drexel Hill, Pa. Filed Mar. 18, 1922. Serial No. 544,812. 6 Claims. (Cl. 101—401.3.)

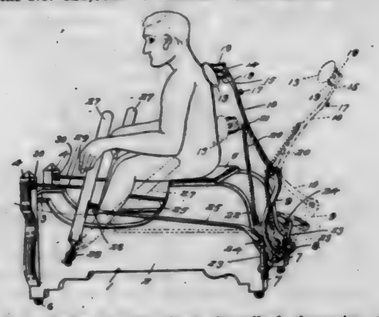
1. The process of producing printing plates embodying permanent "make-ready" in the face thereof which comprises as steps therein the compression of a sheet of moldable material against the engraved face of a photo-engraved plate to obtain an impression therefrom upon the face of said sheet of moldable material and thereafter effecting relative depression and elevation of different portions of said face of the mold sheet to conform to the required "make-ready" to be embodied within the finished printing plate and thereafter forming a printing plate upon said face.

1,537,462. COOLING HOLLOW GLASS ARTICLES DURING DRAWING. HENRY F. CLARK, Oakmont, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 8, 1921. Serial No. 476,052. 7 Claims. (Cl. 49—83.1.)



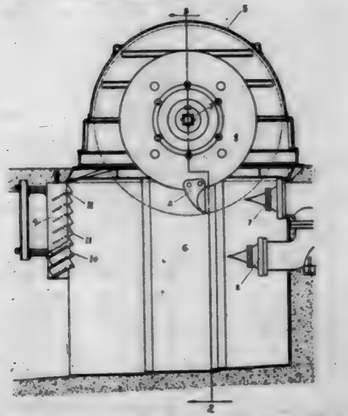
1. In the method of drawing glass cylinders from a molten bath of glass, the steps consisting in cooling the glass, and adjusting the cooling effect around the cylinder by adjusting the position of the cooler relative to the cylinder being drawn, substantially as described.

1,537,463. GARMENT-SUPPORTING BRACKET. HIRAM HOLDEN, Manchester, N. H. Filed June 14, 1924. Serial No. 720,055. 1 Claim. (Cl. 45—13.)



A bracket for the purpose described comprising upper and lower wire members lying in the same vertical plane,

said lower member being bent to form a plurality of upstanding loops, said loops having their upper ends

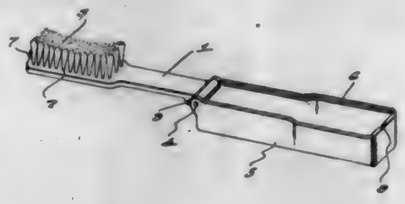


alternately deflected in opposite directions out of said plane, and means for connecting said members to a suitable support.

1,537,464. OINTMENT CHIROPRACTOR. OLIVER H. HUMMEL, Jr., Hot Springs, Ark. Filed Mar. 30, 1923. Serial No. 628,794. 4 Claims. (Cl. 128—62.)

1. In a device of the above described character comprising a frame having a seat rest on top of same, a shaft rotatably journaled to the rear end of the frame, a sectional arm fixed to said rotatable shaft, an ointment applying buffing member and rubber supported by said arm, handles journaled on the sides of the frame, means for connecting the handles with the rotatable shaft and means to cause the buffing member to move downwardly on the back of a patient upon backward movement of the handles.

1,537,465. LOUVER-TYPE BAFFLE PLATE. ELY C. HUTCHINSON, Oakland, Calif., assignor to The Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed Oct. 21, 1924. Serial No. 744,953. 7 Claims. (Cl. 253—136.)



1. A baffle comprising a column of transversely curved, spaced plates successively overlapping and disposed at a downwardly retreating angle relatively to the pressure directed against them.

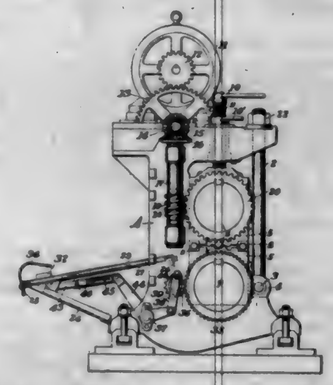
1,537,466. INTERRUPTER FOR MAGNETO MACHINES. GEORGE HUNTER, Westminster, London, England. Filed Feb. 16, 1924. Serial No. 693,156. 5 Claims. (Cl. 200—26.)

3. An interrupter for magneto machines, comprising an electrical contact ring, a rotatable ring eccentrically disposed within the contact ring and embodying inner and outer rings with balls between the same the outer ring being maintained in engagement with the inner surface of the contact ring, segments having one end of each connected together by an intermediate piece in the form of a spring and removably mounted within the inner ring within which the segments are retained by the elasticity of the intermediate spring piece, a rotatable shaft provided with an eccentric device having parallel flat sides and curved ends and a recess in one of the curved ends and a coiled spring arranged in the recess and bearing against the intermediate piece within the inner ring.

1,537,467. FOLDING TOOTHBRUSH. ARTHUR G. INGLE, Portland, Oreg. Filed June 23, 1924. Serial No. 721,760. 1 Claim. (Cl. 15—185.)

In a folding tooth brush, comprising in combination, a handle, a brush head on the outer end thereof, a casing hingedly associated with the inner end of the handle, the casing having its top open and adapted to receive the handle and brush head when the latter is in a folded position, means for holding the same in position in the casing, means for holding the handle against swinging movement when the same is in an extended position, said last means comprising a projection on the inner end of the handle, the same being provided with a notch, and a spring carried by the adjacent end of the casing for cooperation with the notch in the projection.

1,537,468. SEALING HEAD. JOHN A. JOHNSON, Woodhaven, N. Y. Filed May 8, 1922. Serial No. 559,218. 3 Claims. (Cl. 226—86.)



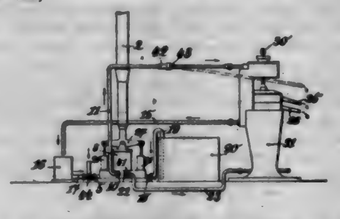
1. A sealing head for affixing smooth skirted closures to bottles comprising a casing, a fixed ring inwardly tapered within the lower end of the casing, a slidable sleeve within the lower end of the casing, a segment ring radially movable in the sleeve and adapted to contact with the taper on the fixed ring, a plunger within the sleeve, said plunger being adapted to rise within said

sleeve a distance approximately equal to the height of a closure before the segment ring moves radially and means for independently exerting downward pressure on the

sleeve and plunger respectively whereby the metal at the lower edge of the skirt of the closure is pinched or folded between the ends of the segment ring sections.

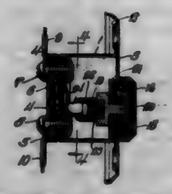
1,537,469. CORRUGATING MACHINE. LANE JOHNSON, Ingram, and RICHARD W. MOSER, Pittsburgh, Pa., assignors to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 25, 1923. Serial No. 641,404. 6 Claims. (Cl. 153—77.)

1. In apparatus for corrugating sheet material, a pair of corrugating rolls, means for driving said rolls, and automatic means for feeding sheets to said rolls, comprising a stationary feed table for supporting the sheets while being advanced to the rolls, means movable above said table for engaging each sheet and advancing the same on said table to said rolls, and means for actuating said movable means, substantially as described.



1,537,470. STICK FOR HANDLING HIGH-VOLTAGE LINE CONDUCTORS. TOMLINSON F. JOHNSON, Jr., Atlanta, Ga. Filed Feb. 6, 1923. Serial No. 617,407. 3 Claims. (Cl. 175—265.)

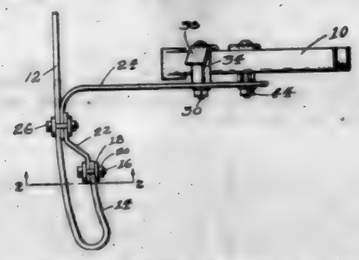
3. A device of the class described, comprising a pole, a metallic head secured to one end of the pole, a movable clamping member having a plurality of arms or hooks equidistantly arranged so that the movable member is always balanced, and a shank connecting the member and head, said member engaging a conductor and binding the same on the head when the pole and head are turned in the proper direction, said outstanding arms terminating in downwardly turned lugs beyond the periphery of



the head to prevent the said conductor from slipping between the head and one of the arms when the pole is turned onto the shank.

1,537,471. INSTALLATION FOR THE SEPARATION OF LIQUIDS. STEPHAN KARPINSKY, Sevres, and JAMES STEWART ANDERSON, St.-Ouen, France. Filed Jan. 16, 1924. Serial No. 686,686. 3 Claims. (Cl. 233—24.)

1. In an installation for the separation of complex liquids, the combination of a pair of coacting pumps whereof one serves for the discharge of a liquid at any suitable pressure and the second for the discharge of the complex liquid submitted to the separation treatment, a centrifugal separator supplied by the pump discharging the said complex liquid, a turbine whose wheel is mounted on the shaft of the said separator and is supplied by the first-mentioned pump discharging liquid at any suitable pressure.



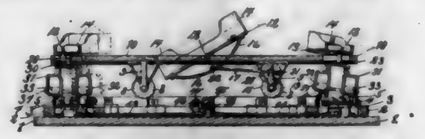
1,537,472. ELECTRIC SWITCH. CHARLES Y. KNIGHT, Chicago, Ill., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Dec. 6, 1923. Serial No. 678,797. 4 Claims. (Cl. 200—77.)

1. A switch comprising an insulating base having a recess therein, a pair of wire terminals extending through the base at opposite ends of the recess, a circuit terminal plate connected to one wire terminal and having a portion thereof disposed within the recess, the other wire terminal having a head overhanging the recess, a switch front extending parallel to the base and having a slot substantially in the longitudinal plane of the recess, and a switching member extending through the slot of the switch front and slidable upon the switch front,

the switching member having a conducting portion continuously engaging the said plate portion and yieldingly pressed toward the latter and movable by a sliding of the switching member with respect to the switch front into and out of a position in which it also engages the said overhanging wire terminal head.

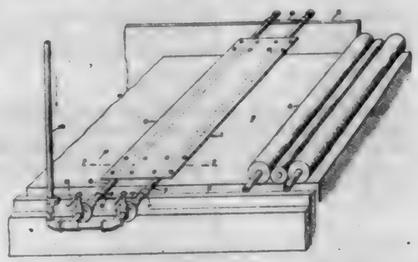
1,537,473. AUTOMOBILE BUMPER AND ATTACHING MEANS. CHARLES E. KRAUS, Louisville, Ky., assignor to Fred W. Kraus, Louisville, Ky. Filed Apr. 25, 1924. Serial No. 708,854. 3 Claims. (Cl. 293—55.)

1. An automobile bumper, including in combination, a transversely extending bar, each end of said bar being bent rearwardly and thence inwardly in parallel relation to the main portion of said bar, bracing elements, affixed to the end of each of said inward extensions, each of said bracing elements comprising a member having offset ends, one of said ends attached to said inwardly extending end and the other end adapted to co-operate with the main portion of the bumper bar, and means co-operating with the bracing elements for attaching the bumper to an automobile.



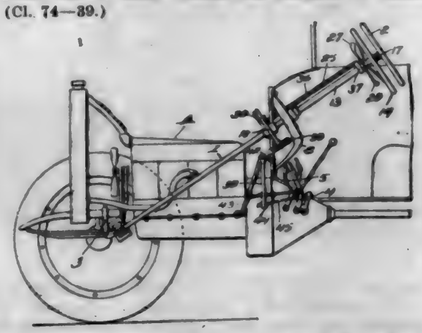
1,537,474. RAIL-HOLDING DEVICE. PAUL KRIESEL, Conover, Wis. Filed Nov. 9, 1923. Serial No. 673,761. 1 Claim. (Cl. 238—52.)

A rail holding device comprising, in combination, members adapted to underlie the rails and engageable with the outer flanges thereof, the inner portions of the members being provided with inwardly disposed shafts, clamping members mounted on the shafts to engage the inner flanges of the rails, means for holding said clamping members in engagement with said flanges, and a turn-buckle in threaded engagement with the opposed end portions of the shafts, said turn-buckle being provided therearound with three entrance openings providing therebetween elongated members the inner faces of which terminating a material distance outwardly of the axial center of the turn-buckle with the side faces of the members substantially radial to said axial center, the arrangement of said elongated members permitting the insertion of a turning bar within an entrance opening to contact with the side wall of one of the members and the inner face of a second member.



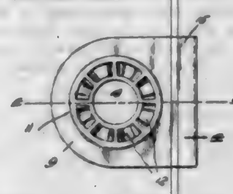
1,537,475. ROUNDABOUT. ADOLPH KUDLER, Los Angeles, Calif. Filed Jan. 27, 1922. Serial No. 532,250. 6 Claims. (Cl. 272—18.)

1. The roundabout set forth comprising a stationary track having inner and outer annular rails; a revolvable table; wheels for supporting said table above said track; gliding platform movable with said table; rollers normally engaging the rails of said track; yokes connecting said rollers to said platforms; movable track segments between the rails of said stationary track that



differ in contour and which are normally held out of engagement with said rollers; and means for raising said track segments to engage said rollers and impart to said platform other than rotary motion.

1,537,476. INK HEATER FOR PRINTING PRESSES. DELLA V. LA MOTT, Oakland, and CALHOUN J. DOGGETT, San Francisco, Calif. Filed Dec. 26, 1922. Serial No. 608,898. 2 Claims. (Cl. 101—337.)

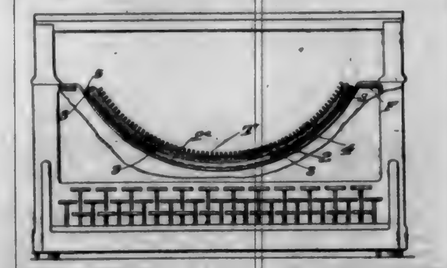


1. The combination with a printing press including an ink plate, of a burner extending across said ink plate above the latter and arranged to apply heat to the plate and a flat, deflector plate supported on the upper side of the burner and arranged to deflect heat onto the plate, said deflector plate extending a short distance on opposite sides of the burner and extending over but a small part of the ink plate.

1,537,477. BRAKE AND CLUTCH CONTROL FOR MOTOR VEHICLES. PIERRE LEVEQUE, Chicago, Ill. Filed Dec. 1, 1924. Serial No. 753,235. 7 Claims. (Cl. 74—89.)

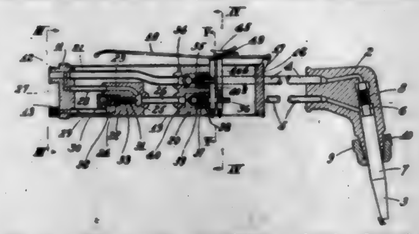
1. In combination with a motor vehicle including the steering post, the steering wheel and the clutch and brake levers thereof, of means for facilitating the upward and downward swinging movement of the steering post, and additional means cooperating with the aforementioned means for automatically actuating said levers depending upon the direction in which the steering post is moved.

1,537,478. NUT LOCK. GUSTAV LIPKE, East Pittsburgh, Pa. Filed Dec. 14, 1923. Serial No. 680,669. 1 Claim. (Cl. 151—13.)



In combination with a nut provided on its under side with ratchet notches, a lock in the form of a washer consisting of a plate having a central opening adapted to receive a bolt and provided around said opening with an annular upstruck portion which is approximately U-shaped in transverse section, the intermediate part of the said upstruck portion being provided with incisions and the material between the opposite end portions of the incisions being depressed inwardly and within the upstruck portion of the plate and then extended through the openings provided by the incisions and having free ends disposed above the exterior surface of the intermediate part of the upstruck portion, the said material thus formed providing resilient pawls permanently connected with the plate and adapted to engage in the ratchet notches of the nut.

1,537,479. METHOD OF MAKING MAGNESIUM CHLORIDE. RICHARD C. LOUD, Gambier, Ohio. Filed Mar. 2, 1922. Serial No. 540,588. 4 Claims. (Cl. 23—91.)



1. A process of making magnesium chloride which consists in treating the ammonium chloride mother-liquor of the ammonia-soda process with dolomitic lime so that the calcium oxid (or hyroxid) added will be sufficient to react quantitatively with the ammonium chloride in the liquor; expelling the liberated ammonia; treating the slurry so formed with gas containing carbon dioxide, until the magnesium oxid (or hydroxid) is converted into magnesium chloride, filtering off the precipitated calcium carbonate and evaporating the liquor with removal of the salt (NaCl) to a solid magnesium chloride.

1,537,480. TYPE-BAR CUSHION FOR TYPEWRITERS. LOUIS M. LLOZENA, Los Angeles, Calif., assignor of one-half to Walter D. Jackson, Los Angeles, Calif. Filed Dec. 22, 1922. Serial No. 608,496. 10 Claims. (Cl. 197—42.)

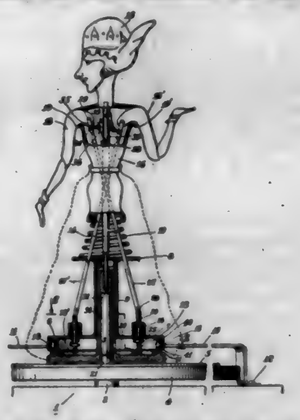
1. A typewriter type bar cushion consisting of a cushioning member of circular cross section and which is rotative on its longitudinal axis to present fresh unworn surfaces as the member becomes worn at the exposed contact zone engaged by the keys, said member consisting of a section of substantially cylindrical tubular woven elastic material.

1,537,481. CUTTING AND WELDING TORCH. JAMES D. MCCUTCHEON, Pittsburgh, Pa. Filed Jan. 20, 1923. Serial No. 613,874. 10 Claims. (Cl. 158—27.4.)

10. A cutting torch comprising a head adapted to deliver cutting and heating jets, a base casting at the rear of the torch provided with three passageways, each of said passageways having a valve seat interposed therein, a valve cooperating with each of said valve seats having its stem extending longitudinally of the torch, a pipe connecting each of said passageways to the said head, one of said pipes conducting gas to supply the cutting jet, a control lever common to all of said valves, operative connections between the said lever and the stems of the valves, movement of said lever in one direction serving to open the valve for controlling the flow of the cutting gas and to close the remaining valves.

1,537,482. CALENDAR CLOCK. MARCO MARTINI, Oakmont, Pa. Filed Aug. 22, 1924. Serial No. 733,580. 6 Claims. (Cl. 58—6.)

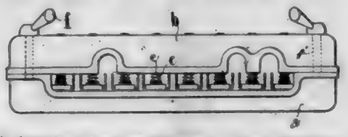
1. The combination with clock mechanism, of a casing therefor, openings in said casing, a tape adapted to contain designations representing hours of the day, a second tape adapted to contain designations representing minutes, and means for moving said tapes each independently, by a single movement to bring the successive designations past said openings.



1,537,483. RUBBER COMPOSITION. FREDERICK J. MAYWALD, Nutley, N. J. Filed Aug. 31, 1921. Serial No. 497,414. 2 Claims. (Cl. 106—23.)

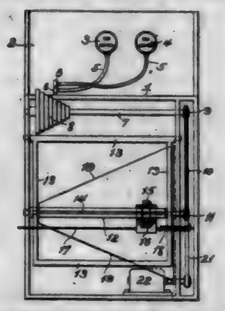
2. A composition for producing rubber products having a comparatively high degree of softness and flexibility comprising an admixture of pure rubber gum compound and Sandee gum.

1,537,484. DANCING DOLL. FLORENCE B. MEEHAN, Highland Park, Ill., assignor to Hugh H. Meehan, Chicago, Ill. Filed Mar. 18, 1921. Serial No. 453,485. 3 Claims. (Cl. 46—40.)



1. The combination with a phonograph including a rotating member, of a horizontal disk frictionally engaging said rotating member coaxially for rotation therewith, and having a horizontal cam portion, a fig-

ure having a part movable with respect to the figure as a whole, anchoring means restraining said figure from turning, and means connected with said movable



part and in engagement with said cam surface, whereby movement of said disk causes movement of said movable part with respect to said figure as a whole.

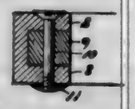
1,537,485. JUNCTION BOX FOR ELECTRICAL CONNECTIONS. ALBERT HENRY MIDGLEY, Uxbridge, England, assignor to Midgley Car Lighting Company, Limited, London, England. Filed Apr. 3, 1922. Serial No. 549,532. 3 Claims. (Cl. 247—14.)

1. A junction box comprising a base member, a stud mounted thereon and insulated therefrom, a cover, spring means mounted on the cover and insulated therefrom, said spring means including a portion adapted to surround said stud and located in a position so that when the cover is placed on the base member the spring means will surround the stud and be compressed.

1,537,486. TESTING MACHINE FOR SPEEDOMETERS. WILLIAM F. MILLER, Miami, Fla. Filed Mar. 17, 1923. Serial No. 625,694. 5 Claims. (Cl. 73—51.)

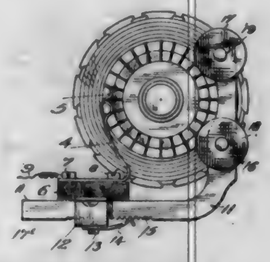
5. In a speedometer-testing machine, the combination of a rotatable member, means for simultaneously actuating a master speedometer and a speedometer to be tested from the periphery of said rotatable member, a swinging frame mounted below said rotatable member, a rotating driving member at one side of said frame, a pulley mounted in the swinging frame and held thereby in engagement with the driving member, means for shifting said pulley from end to end of the swinging frame, yieldable means for holding the pulley normally at one end of the frame and operative connection between the pulley and the rotatable member.

1,537,487. DEEP-WELL PUMPING APPARATUS. JOHN N. MODISETT, Hermosa Beach, Calif. Filed May 27, 1924. Serial No. 716,240. 7 Claims. (Cl. 103—221.)



1. In oil well pumping apparatus and in combination with the usual working barrel and standing valve therein, a telescopic element engaged at its upper end with the lower end of the working barrel and adapted at its lower end for engagement with the bottom of a well, means limiting the telescopic engagement of the sections of the element, and means carried by the lower end of the standing valve and projecting into said telescopic element engaging a portion of said telescopic element during telescoping thereof to thereby lift the standing valve above the upper end of the working barrel.

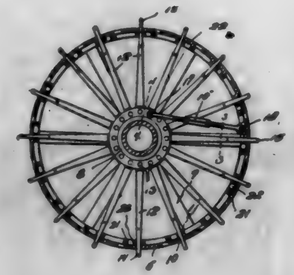
1,537,488. OPERATING MECHANISM FOR DIRIGIBLE HEADLIGHT CONSTRUCTION. FRED M. NASH, Trinidad, Colo. Filed Mar. 17, 1924. Serial No. 699,790. 1 Claim. (Cl. 240—62.)



In a dirigible headlight structure, a pair of shafts spaced from each other and journaled for turning movement, a sprocket wheel carried by each shaft, chain sections having links provided with openings adapted to receive the teeth of the sprocket wheels, one chain section trained about each sprocket wheel, the end portions of the chain sections, upon the respective sprocket wheels being disposed toward each other in opposite directions, table sections connected at their ends with the oppositely disposed ends of the chain sections and bridging the space between the ends of said chain sections, a steering column, a sprocket on the steering column, a chain section about the sprockets on the steering column, a guide tube of angular construction, a pulley in the curved portion of the guide tube, a second sprocket on one of the shafts, a chain section disposed about the last mentioned sprocket, cable sections connected to the ends of the last mentioned sprocket and to the end of the chain section trained about the sprocket on the steering column, and also trained over the pulley.

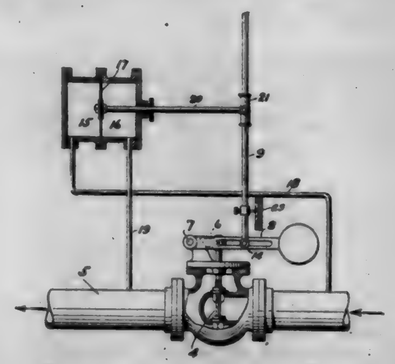
1,537,489. OPTICAL WASHER AND SCREW. CHARLES NOBS, Jr., Newark, N. J., assignor to Charles Nobs & Son, Newark, N. J., a Corporation of New Jersey. Filed Oct. 16, 1922. Serial No. 594,720. 3 Claims. (Cl. 88—53.)

1. In an optical frame connection, the combination with the frame, of an apertured hinge element secured to said frame, a temple having a hinge element secured thereto, said hinge elements adapted to inter-engage with their apertures in registry, a pintle screw inserted through said registering apertures, and a screw-threaded washer upon the exposed end of said screw for securing said temple and frame in permanent pivotal relation to each other, said washer having an annular projection surrounding its aperture, said projection adapted to be spun down over the end of said screw.



1,537,490. TESTING DEVICE FOR ARMATURES AND THE LIKE. THEODORE J. OMAN, Elmhurst, N. Y., assignor to P. J. Durham Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1921. Serial No. 492,170. 5 Claims. (Cl. 175—183.)

1. In an armature testing device, a supporting member comprising two limbs at substantially right angles, spaced insulation members on one of said limbs, and an adjustable insulation member carried on the other of said limbs and having independent contact fingers.

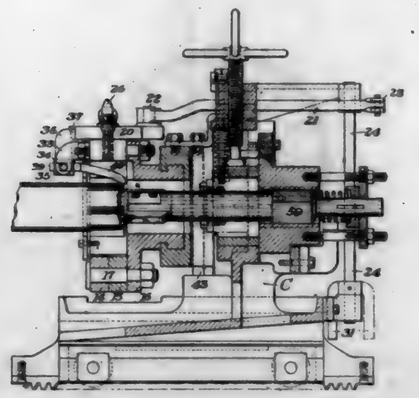


1,537,491. TRACTION WHEEL. CHARLES M. PALMER, Abingdon, Va. Filed Aug. 31, 1923. Serial No. 660,291. 2 Claims. (Cl. 301—46.)

1. A traction wheel comprising a hub and a rim held concentrically with relation to the hub, a sleeve rotatably mounted upon the hub, a rim having transversely disposed slots with flanges at the opposite sides thereof, the flanges at one side of the slots being spaced from the edges thereof, traction spurs pivotally connected at their inner ends with the sleeve and passing through the slots, springs interposed between the traction spurs and the

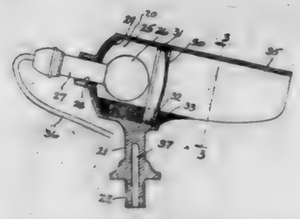
flanges which are spaced from the edges of the slots and means for turning the sleeve with relation to the hub and the rim.

1,537,492. FLUID-LEVEL-FEED CONTROL. OLIVER H. PAXSON, Jr., Philadelphia, and GEORGE F. FENNO, Upper Darby, Pa. Filed Nov. 24, 1922. Serial No. 603,058. 6 Claims. (Cl. 137—68.)



5. Fluid level feed control comprising a feed line subject to varying pressure, a boiler feed water regulator responsive to water level, mechanism actuated by pressure changes in said feed line, and means for providing graduated flow area in said line and operatively connected with said regulator and with said mechanism.

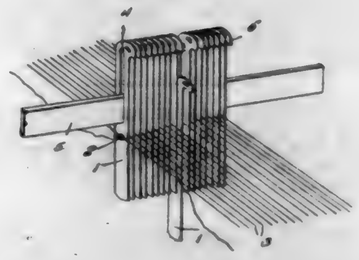
1,537,493. PIPE-THREADING MECHANISM. HARLEY D. PENNINGTON, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 18, 1923. Serial No. 639,786. 1 Claim. (Cl. 10—96.)



In a pipe threading machine, a die head, threading dies pivotally mounted thereon, a cam for opening and closing said dies, spaced arms projecting forwardly from said head, journal members adjustably mounted in said arms, an upwardly extending detent arm journaled between said spaced arms on said journal members and

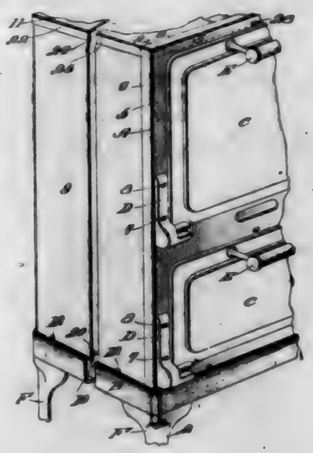
adapted to engage a shoulder on the periphery of said cam, and a trip arm slidably mounted in said detent arm and held in adjusted position by said journal members,

said trip arm being arranged to be engaged by the end of the pipe being threaded whereby to move said detent arm to released position.



1,537,494. VEHICLE LAMP. WALTER J. PIKE, Newaygo, Mich. Filed Dec. 27, 1921. Serial No. 524,920. 1 Claim. (Cl. 240—7.)

A motor vehicle lamp comprising a cylindrical casing open at one end and provided with a lamp receiving aperture in the other end, the open end of the casing being formed into a hood open at the bottom and having downwardly extending side portions of unequal height, an annular flange on the exterior of said casing and surrounding said aperture, means for adjustably securing a lamp in said aperture, and means for attaching the casing to a vehicle in a position substantially longitudinal with said vehicle and inclined downwardly from rear to front.



1,537,495. SURE-FIND DROP WIRE. OSTERN J. PLAYER, Rockingham, N. C., assignor of twenty-two and one-half per cent to H. L. Laws, twenty-two and one-half per cent to E. H. Bowling, ten per cent to G. T. McArthur, and ten per cent to J. C. Clarke, all of Durham, N. C. Filed Jan. 8, 1925. Serial No. 1,300. 2 claims. (Cl. 139—368.)

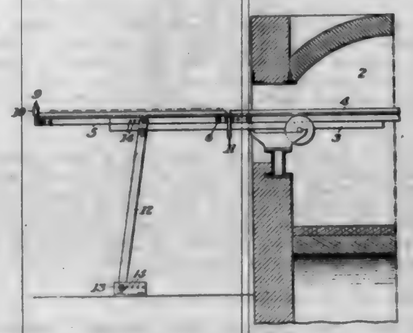
1. In a drop wire for looms wherein the same is provided with the usual longitudinal guide slot in the upper portion thereof to receive the usual guide bar, and a warp thread receiving opening below said slot, of means extending beyond the side edge of the upper portion of the drop wire at a point adjoining the upper end of the slot whereby the drop wire may be readily visible when the same becomes lowered, said means being provided

with a hook receiving opening to facilitate the raising of the drop wire, the opening being formed at a point above the upper end of the longitudinal guide slot.

1,537,498. GAS STOVE. MINARD A. POSSONS, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 7, 1924. Serial No. 724,610. 10 Claims. (Cl. 126—39.)

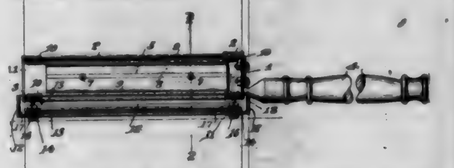
1. An oven housing comprising overlapping side and substantially U-shaped front walls, and a U-shaped angle iron overlapping, engaging and clamping both walls in position.

1,537,497. ADJUSTABLE SHADE AND CURTAIN BRACKET. BEULAH L. RAINS, Dunlap, Mo., assignor of one-fourth to Augusta G. Simpson and Martha Jane Newman, both of Alliance, Nebr. Filed May 1, 1924. Serial No. 710,236. 8 Claims. (Cl. 156—24.)



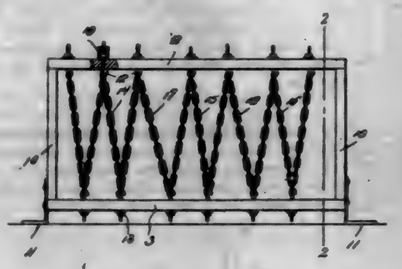
8. A window fixture of the class described comprising a pair of shade roller brackets, a pair of drapery supporting bars hingedly connected at their outer ends to said brackets, the inner ends of said bars being adjustably

connected together, a second pair of curtain supporting bars adjustably connected together at their inner ends, each bar being provided with a vertical portion at its



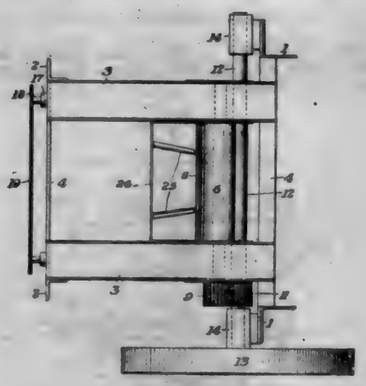
opposite end, and flexible connections between the last named ends of the vertical portion and the intermediate portions of the aforesaid shade brackets.

1,537,498. TILTING TABLE FOR LEERS. LOUIS R. SCHMERTZ, Ligonier, and LAWRENCE A. GESSNER, Jeannette, Pa., assignors to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 16, 1923. Serial No. 639,330. 13 Claims. (Cl. 214—18.)



1. In a leer, a pivoted receiving table and means spaced from the pivot for supporting the table, said means including a point of support movable with respect to the pivot point of the table and thereby operating to tilt the table, substantially as described.

1,537,499. TOASTER. EDWARD D. SCHMIDT, Medford, Okla. Filed Mar. 14, 1924. Serial No. 699,246. 4 Claims. (Cl. 53—5.)

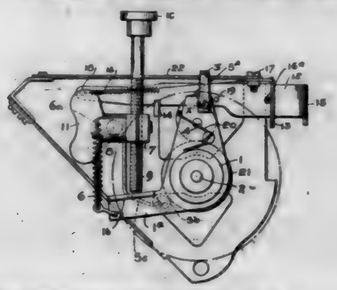


1. A toaster appliance comprising, a support having a foraminous bottom and provided with vertically disposed spacing elements, a rectangular frame constituting a holder having the top, bottom and front thereof open and adapted to be mounted on said element, said frame further having an inturned flange along the top and bottom edge of the sides and back, a guide and retaining member comprising a relatively long substantially M-shaped member having the free ends of the legs and the central portion thereof resting against and extending along the inner face of each side wall and secured thereto, and a foraminous screen removably held between the flange of each side and the adjacent leg of said member to retain within the holder between the screens, an article to be toasted.

1,537,500. ELECTRICAL RESISTANCE. CHARLES EDWARD SCOTT, Isaban, W. Va. Filed Apr. 23, 1924. Serial No. 708,474. 1 Claim. (Cl. 201—63.)

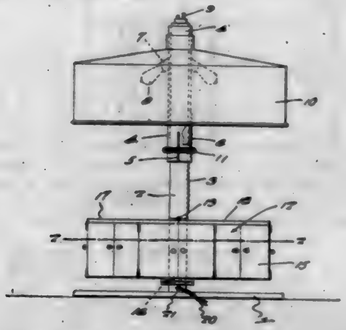
A variable electric resistance device comprising a frame having parallel side bars, hooks having shanks passing transversely through said bars, means for adjusting the hooks longitudinally and transversely of the bars, a chain having its terminal links engaged with certain of the terminal hooks, and intermediate links of the chain being engaged with the other hook, whereby stretches of the chain are disposed transversely across the space between the bars, and the adjacent stretches of the chain being disposed at angles with relation to each other.

1,537,501. APPARATUS FOR STRAIGHTENING METAL ARTICLES. CHARLES A. SELEY, Sewickley, and MILO M. MCCALLISTER, Erie, Pa., assignors to American Flexible Bolt Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1921. Serial No. 509,868. 4 Claims. (Cl. 153—54.)



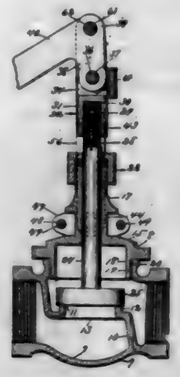
1. In a machine for straightening metal articles, the combination of a frame, a plurality of rolls mounted in said frame, means for introducing an article between said rolls with its axis substantially parallel to the axes of the rolls, said means being adapted to position the article against one of said rolls, and also including a depression in said rolls into which the article passes from said introducing means, and means for adjusting said rolls relative to each other for straightening articles of different sizes, substantially as described.

1,537,502. BINDER. ROLAND WINCHESTER SELLEW, Middletown, Conn. Filed Dec. 20, 1922. Serial No. 607,964. 6 Claims. (Cl. 281—1.)



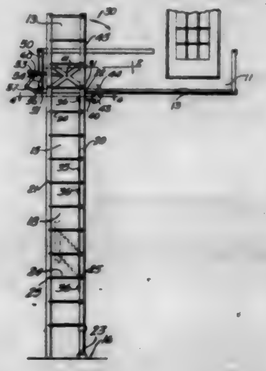
1. In a device of the character described, a unitary binder member, means for permanently securing a plurality of sheets to said unitary binder member, and means for detachably securing a plurality of sheets directly to said unitary binder member, said permanently and detachably secured sheets being separated at the points of securing.

1,537,503. TYPEWRITER-SPACING MECHANISM. BARNETT SHATZ, Buenos Aires, Argentina, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 29, 1923. Serial No. 615,688. 7 Claims. (Cl. 197—114.)



1. The combination with a platen shaft, of a friction disk mounted on the same, a cam pawl adapted to lock with said disk, means for swinging said cam about its axis to cause the cam to lock with said disk, and means, including a second cam pawl acting on said disk, for holding the cam in a fixed position relatively to said disk after the cam has been locked to the disk.

1,537,504. ELECTRIC LAMP. JOHN SHEEDY, Seattle, Wash. Filed May 27, 1924. Serial No. 716,195. 1 Claim. (Cl. 240—81.)

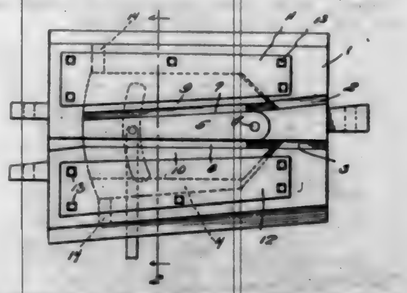


An electric lamp comprising a base, a supporting standard extending upwardly therefrom, corrugations provided on the upper portion of the standard, a tubular member having its lower end slit and receivable on the upper end of the standard, corrugations provided on the inner wall of the tubular member for cooperation with the corrugations on the standard whereby the tubular member may be supported in various adjusted positions on the standards, a clamping ring disposed around the lower split end of the tubular member for securing the same in engagement with the standard, electric lamps carried by the upper portion of the tubular member, and a lamp shade carried by the tubular member and extending over the lamp.

1,537,505. VALVE-OPERATING MECHANISM. RICHARD H. SMITH, Norton, Mass., assignor of one-third to Homer L. Lane and one-third to Charles H. Lane, both of Norton, Mass. Filed Apr. 17, 1923. Serial No. 632,694. 6 Claims. (Cl. 251—41.)

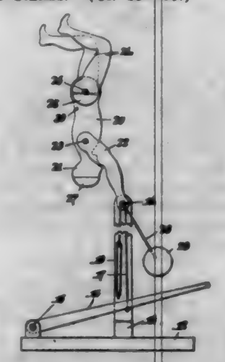
3. In a valve operating mechanism, a valve casing, a valve stem, a swinging frame pivotally mounted and carrying a cross member, and a lever of elbow form pivoted at its elbow on the upper end of said frame, and fulcrumed on the said valve stem, said lever being movable to bring the pivot of its elbow upon either side of the vertical axis of the stem.

1,537,506. COLLAPSIBLE FIRE ESCAPE. ANTONIN SPERL, Pomona, Calif. Filed June 15, 1922. Serial No. 568,440. 18 Claims. (Cl. 227—5.)



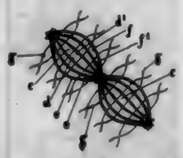
16. In a fire escape, the combination of: a collapsible ladder; and a ladder member pivoted at the upper end of said collapsible ladder adapted to serve as an extension to said ladder when in vertical position and adapted to collapse said collapsible ladder when swung out of vertical position.

1,537,507. PRODUCTION OF VAT DYES. HAROLD W. STIEBLER, Lawrence, Mass. Filed Nov. 6, 1920. Serial No. 422,185. 3 Claims. (Cl. 260—29.)



1. The process of producing anthraquinone vat dyes which consists in reacting on an amino derivative of anthraquinone with nitrobenzene in the presence of caustic alkali at a temperature of about 185° C.

1,537,508. SWITCH FROG. JAMES P. SWIFT, Millstone, Ky. Filed Dec. 13, 1924. Serial No. 755,785. 1 Claim. (Cl. 246—442.)

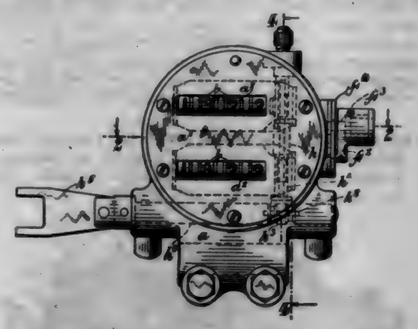


A switch frog comprising a base plate having longitudinally extending grooves formed in the upper surface thereof, said grooves converging toward the forward end of the plate, said base plate being a recess provided therein between the ends thereof and communicating with the grooves, a tongue pivoted at its rear end in the recess and having converging grooves provided in the upper surface thereof adapted to be brought in alinement with the corresponding grooves provided in the base plate, the upper surface of the tongue forming tread portions on both sides of both grooves, and cover plates secured on the upper surface of the base plate and extending over the sides of the recess and over the major portions of the tread portions on the outer sides of the grooves in the tongue, said base plate having recesses provided with drain openings at the sides thereof.

1,537,509. FIGURE TOY. ARTHUR W. TUPPER, Riverdale, Md., assignor of one-half to Dwight B. Galt, Riverdale, Md. Filed Apr. 28, 1921. Serial No. 465,198. 18 Claims. (Cl. 46—40.)

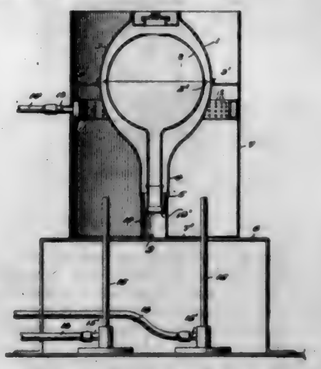
1. In a device of the class described, a rotatable support, a body, arms connected rigidly at one end to said support and pivoted at their opposite ends to said body, free swinging members pivoted inwardly from one end to said body, and weights on the short ends of said members to normally maintain said members in one position.

1,537,510. METHOD OF PRODUCING LEAFLIKE FIGURE WORK IN BRAIDED LACE. EMIL BÖRBECK, Barmen, and EUGEN TÜRCK, Langerfeld, near Barmen, Germany. Filed Aug. 26, 1921. Serial No. 495,724. 3 Claims. (Cl. 96—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The method of producing leaf-like figure-work in braided lace which comprises forming each leaf by braiding together a plurality of longitudinal threads by means of a plurality of groundwork threads each of which only once crosses each of said longitudinal threads and causing the outer longitudinal threads to intercross at either end of the leaf so as to change sides, a leaf like figure being formed as a continuation of the first after the intercrossing of the longitudinal threads.

1,537,511. WHEAT AND FLAX SIEVE. CARL ULFSETH, Marshall, Minn. Filed Mar. 3, 1924. Serial No. 696,529. 3 Claims. (Cl. 130—19.)

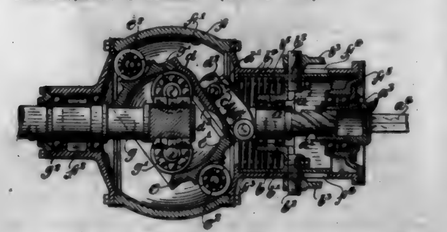


2. A grain sieve including a frame having parallel spaced side members, a plurality of sieve plates rotatably mounted in said side members having the adjacent edges of the adjacent plates arranged in overlapped relation, means for simultaneously rotating said plates in the frame for spacing the overlapped ends of each plate relative to one another, and for adjusting said spacing of the plates for separating different varieties and grades of materials, and means carried by the sieve plate for cleaning the spaces between the overlapped edges thereof.

1,537,512. DUPLEX COUNTING MACHINE. CURTIS HUBBY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 24, 1923. Serial No. 620,878. 2 Claims. (Cl. 235—91.)

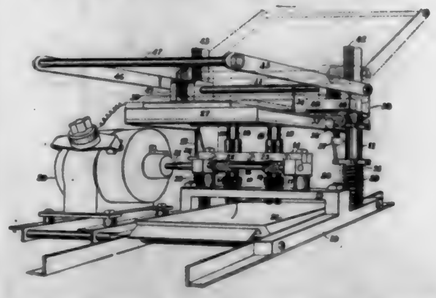
1. A duplex counter comprising two counting machines mounted on parallel axes, each having a driving gear, a common shiftable driving pinion for engagement with one gear or the other, a driving worm, a swinging yoke mounted at one side of the worm and supporting the pinion at the other side of the worm in constant engagement therewith, and means to operate the yoke to shift the driving pinion into engagement with one gear or the other.

1,537,513. VACUUM-BOTTLE HEATER. WALTER WAGNER, Chicago, Ill. Filed Oct. 5, 1922. Serial No. 592,664. 13 Claims. (Cl. 34—26.)



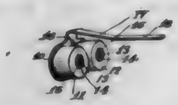
1. In a heater for vacuum bottles of the type including a body portion having a central annular bead or flange projecting therefrom and having a neck portion with a shoulder formed thereon inwardly of the outer edge thereof, a housing, means within said housing for engaging said annular bead or flange portion of the bottle and the shoulder portion of the neck thereof for supporting the bottle in an inverted position within the housing, and burner elements within the housing supported adjacent the walls thereof.

1,537,514. MUSIC-INSTRUCTION GAME. JESSIE LEE WEEKS, New York, N. Y. Filed Aug. 7, 1924. Serial No. 730,625. 8 Claims. (Cl. 273—132.)



8. The combination with a game board having indicia thereon representing the staff of a melody, the notes of said melody being indicated by holes formed in the surface of said game board, said holes appearing as differently colored when the board is placed on a supporting surface for playing a game, of balls corresponding in color to said holes and adapted to be placed therein for the purpose specified, and a pack of cards bearing notes corresponding to those used in the melody on said board.

1,537,515. TRANSMISSION DEVICE. CARL W. WEISS, Brooklyn, N. Y., assignor of one-half to Clarence B. Sturges, Fairfield, Conn. Filed Sept. 13, 1922. Serial No. 587,897. 5 Claims. (Cl. 74—26.)



1. The combination of a variable speed transmission device having a nutating element capable of being changed in position to vary the speed ratio, a torque-responsive element having one part connected to said nutating element and the other part adapted to receive rotary movement, a longitudinally movable bearing for the first named part, means to support said bearing, means tending normally to move said bearing in one direction, and independent means under the control of the operator to move said bearing in opposition to the last named means.

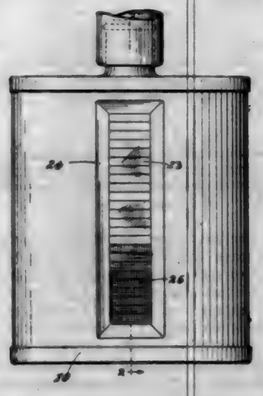
1,537,516. PERFORATING MACHINE. NELSON S. WELK and ALEXANDER B. ROB, Athens, Ohio; said Welk assignor of his entire right to The McBee Binder Company, Athens, Ohio. Filed Nov. 17, 1921. Serial No. 515,793. 4 Claims. (Cl. 164—90.)

1. A perforating machine comprising a spring actuated assembly base with perforations therein; hollow drills mounted for rotation beneath the assembly base, the drills registering with the perforations; a pressure bar mounted for vertical movement above the assembly base and in alinement above the perforations; means to move the pressure bar downward to engagement with the material to be perforated and to continue said pressure downward until the drills have perforated the material and come into engagement with the pressure bar.

1,537,517. SIGHT AND BARREL PROTECTOR FOR GUNS AND RIFLES. FRANK L. WHEELING, Los Angeles, Calif. Filed Sept. 4, 1924. Serial No. 735,775. 9 Claims. (Cl. 42—76.)

8. A sight protector for gun barrels, comprising a finger adapted to be secured upon the muzzle end of a gun, said finger extending rearwardly over the front sight of the gun.

9. A gun barrel protector comprising a plate adapted to be placed over the muzzle of a gun, a pin secured to said plate and extending into the barrel, and a felt washer mounted about said pin presenting a substantially cylindrical surface adapted to engage the interior surface of a gun barrel.



1,537,518. COATED FABRIC AND METHOD OF MAKING SAME. JOHN A. WILSON, Elizabeth, N. J., assignor to Duratex Corporation, Newark, N. J., a Corporation of New Jersey. Filed Mar. 9, 1920. Serial No. 364,571. 11 Claims. (Cl. 91—70.)

1. A coated fabric comprising a fabric base having applied thereto a mixture of rubber and inert, resilient organic material of low density and not readily permeable to water.

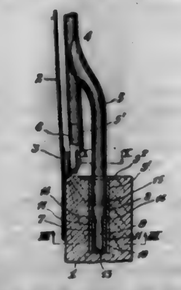
6. A coated fabric comprising a fabric base carrying a vulcanized coating composed of a mixture of rubber and comminuted cork.

7. A method of making a coated fabric comprising, mixing crude rubber with a relatively inert material of specific gravity less than one, adding an amount of evaporable or relatively fugitive substance to render the mixture fluid, applying the same to a fabric base, causing evaporation of said substance, and curing the applied coating.

1,537,519. INDICATING GAS-MASK CANISTER. MAX YARLICK, New York, N. Y. Filed Dec. 5, 1924. Serial No. 754,108. 5 Claims. (Cl. 23—252.)

1. A respirator canister having an air inlet at one end thereof and an outlet at the other, a filler for said canister for abstracting a definite impurity from air drawn therethrough, said filler including a part extending substantially the distance between the ends of the canister and subject by contact with said impurity to change in appearance, said canister exposing to view the length of said part, whereby the residual life of the canister can be readily ascertained.

1,537,520. BURNISHING BARREL. GEORGE E. ABBOTT, West Hartford, Conn., assignor to The Abbott Ball Company, West Hartford, Conn., a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,521. 9 Claims. (Cl. 51—164.)



1. A receptacle rotatably mounted and having a peripheral opening to the interior thereof, a closing member for said opening, means for securing said closing member in place, and a work holder member removably secured to said receptacle and adapted to serve as a vehicle for removal of articles from the receptacle, said work holder member also closing said opening and being supported by the walls thereof.

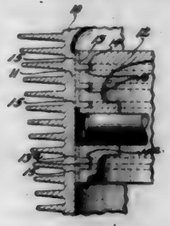
1,537,521. BOLT. ANTENOR ASSORATI, Lynbrook, N. Y., assignor of one-half to Henri Charpentier, Lynbrook, N. Y. Filed Sept. 12, 1924. Serial No. 737,804. 7 Claims. (Cl. 85—4.)

1. A lock bolt comprising clamping members having a recess, an intermediate member provided with laterally movable yielding means arranged to enter said recess for interlocking said members.

1,537,522. MOUNTING FOR AUTOMOBILE SIDE INCLOSURES. GEORGE E. BISHOP, Cleveland, Ohio. Original application filed Oct. 2, 1919, Serial No. 327,952. Divided and this application filed Apr. 18, 1922. Serial No. 554,462. 8 Claims. (Cl. 296—139.)

1. A support and mounting for automobile side inclosures comprising, a cylindrical supporting rod having a plane lower end; and a bushing adapted to be secured to an automobile body, said bushing having an upper cylindrical portion receiving the cylindrical rod with a non-bending fit and a lower portion having a plane surface formed closely to register with the plane surface of the supporting rod, interiorly disposed shoulders being formed in the bushing intermediate said upper and lower portions thereof and upon which the cylindrical rod rests.

1,537,523. DANGER SIGNAL. PETER J. BOLAND, Berwyn, Pa. Filed July 24, 1922. Serial No. 577,177. 4 Claims. (Cl. 40—145.)



1. A device of the character described comprising in combination a base plate, a sign supporting member pivotally supported on said base plate so as to be angularly adjustable thereon in a horizontal plane, a sign, connecting means whereby the sign is secured to the sign supporting means with freedom for angular ad-

justment with reference to a horizontal line running parallel to the plane of the sign and means for securing the sign supporting means and the angularly adjustable sign in fixed position.

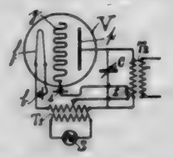
1,537,524. COLORING OR DYEING PHOTOGRAPHIC IMAGES. PERCY DOUGLAS BREWSTER, East Orange, N. J. Filed Dec. 6, 1918, Serial No. 265,656. Renewed May 13, 1924. 2 Claims. (Cl. 95—88.)

1. In the art of coloring or dyeing photographic silver images, the improvement comprising treating the silver of the image with a solution containing a potassium halide of the iodine-chlorine-bromine class, and with a solution containing the same halide and the corresponding halogen.

1,537,525. PISTON. ROLAND CHILTON and HAROLD H. YOUNG, Keyport, N. J., assignors to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Oct. 26, 1923. Serial No. 670,833. 14 Claims. (Cl. 74—109.)

1. In an internal combustion engine, in combination, a piston, a cylinder, split rings arranged on the piston in contiguous relation and constituting an upper and lower bearing means for the lateral support of the piston within the cylinder, each ring being in one piece and comprising as to its cross section a pair of integral rectangular portions adapted the one to contact on its periphery with the cylinder and with its inside circumference with the piston and the other to engage with suitable slots in the piston.

1,537,526. HEADLIGHT LENS. LOUIS DUFEK, Seattle, Wash. Filed July 16, 1923. Serial No. 651,696. 2 Claims. (Cl. 240—48.4.)



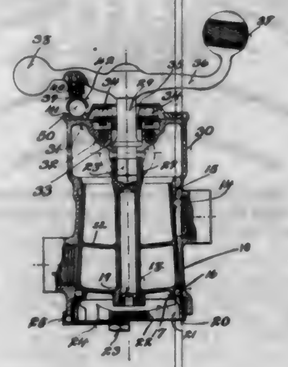
1. A headlight lens, comprising a body having a transversely and downwardly extending ridge on its upper face portion and an inwardly extending ridge on its back portion complementary to the first ridge, said ridges defining downwardly extending light deflecting surfaces, the upper surface of the first ridge to where it merges into the rim and the lower surface of the second ridge being of a color adapted to dim and diffuse upwardly extending rays of light, a plurality of transversely extending spaced ridges on the face located below the first ridge, complementary inwardly extending ridges on the back of the body to define, in connection with said pludality of ridges, downwardly extending light deflecting surfaces, the upper surfaces of which are translucent, an upstanding, curved, light refracting ridge on either side of the face of the body and connecting the ends of said transversely extending ridges, a plurality of vertical light refracting ribs disposed in the medial portion of the face and between a pair of the transversely extending ridges, a series of vertically extending light refracting ribs located between the ridges on the back of the body and angularly disposed toward a side of the body, and a second series of vertically extending light refracting ribs located between the ridges on the back of the body and angularly disposed toward the other side of the body.

1,537,527. DRAWING-FRAME ROLLER. LUKE DUNKERLEY, Oldham, England, assignor to Asa Lees and Company Limited, Oldham, Lancaster, England. Filed Feb. 26, 1924. Serial No. 695,169. 1 Claim. (Cl. 19—112.)

A device of the character described, comprising an integral wooden roller bored from opposite ends thereof to points at opposite sides of the center of its length thereby to form a central disk integral with the roller, disks secured in the opposite ends of said roller, each of said disks being provided with a central axially extending opening, and a shaft extending through said openings and secured to each of said end disks, said shaft extending beyond the roller at both ends thereof thereby to provide bearing portions for the roller.

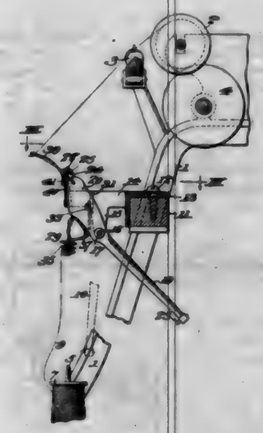
1,537,528. APPARATUS FOR PRODUCING THERMIONIC EFFECTS. CORNELIUS D. EHRET, Philadelphia, Pa. Filed Apr. 29, 1919. Serial No. 293,485. 18 Claims. (Cl. 179—171.)

1. The combination with a thermionic device comprising an anode, cathode and control electrode, of an anode circuit, a source of fluctuating current independent of said device impressing fluctuating current upon said anode circuit, and an aperiodic connection to said control electrode from a point between the terminals of said source.



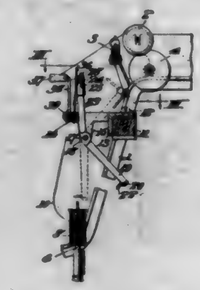
1,537,529. TOOL HANDLE. STONE R. ENBERG, Worcester, Mass., assignor to Walden-Worcester, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 1, 1923. Serial No. 621,985. 2 Claims. (Cl. 145—61.)

1. In a tool handle mounting, a tool shank having an annular groove adjacent the end thereof, a metal cup adapted to fit over the end of said tool shank, and having a portion of the walls thereof displaced inwardly to



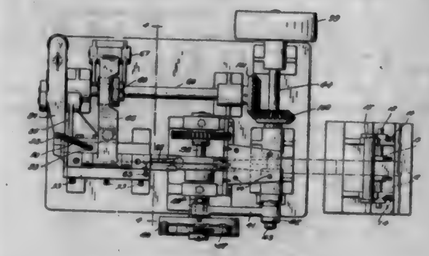
engage in said groove and prevent removal of said cup while permitting rotation of the same on the shank, and a handle member tightly enclosing and substantially concealing said cup.

1,537,530. VALVE. JOHN A. ESSENSON, Milwaukee, Wis. Filed Apr. 25, 1922. Serial No. 556,481. 4 Claims. (Cl. 251—100.)



1. In a device of the class described, the combination of a casing having a mixing chamber, an opening for one liquid, an opening for another liquid, an exit opening, a valve having a chamber for the first liquid and a chamber for the second liquid, a plurality of apertures for each chamber, said chambers opening into said mixing chamber, and means for rotating the valve to present said apertures selectively to an inlet opening.

1,537,531. THREAD-BREAKING DEVICE FOR SPINNING MACHINES. FERDINAND Q. HARTMAN and EUGENE ATWOOD HARTMAN, Danville, Pa. Filed Dec. 20, 1924. Serial No. 757,202. 5 Claims. (Cl. 117—82.)

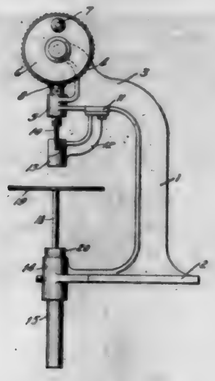


1. A thread breaking device for spinning machines in which a plurality of threads are independently spun and wound on a single take up spool comprising, a counterbalanced thread breaker pivoted to swing into position to break the threads, and a device carried by said breaker for guiding the threads, said device being movable on the breaker, the device and breaker being released by the breaking of a thread to permit the breaker to swing into the path of the unbroken thread.

1,537,532. THREAD-BREAKING DEVICE FOR SPINNING MACHINES. FERDINAND Q. HARTMAN and EUGENE ATWOOD HARTMAN, Danville, Pa. Filed Jan. 23, 1925. Serial No. 4,251. 15 Claims. (Cl. 117—82.)

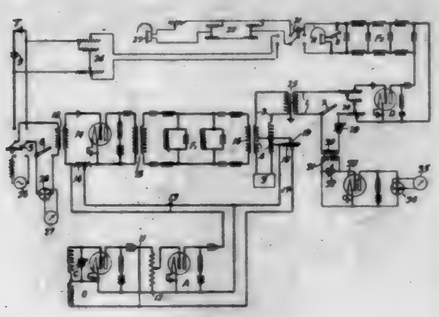
1. A device of the character described comprising, a counterbalance thread breaker pivoted to swing into position to break the threads, and a device mounted to oscillate on said breaker and provided with a bar for supporting the threads, whereby the breaking of a thread will free the bar and cause the device to rock and the breaker to swing into the path of the unbroken thread.

1,537,533. FIBER-CRIMPING MACHINE. WILLIAM JANNELL, West Park, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1921. Serial No. 456,146. 28 Claims. (Cl. 18—19.)



1. In a device of the class described, a stationary and a movable die member, a knife adapted to cooperate with the stationary member to cut a piece of material therein, means for actuating the knife when the die is closed and resilient means for holding said knife in cooperative relation with said die when the knife is actuated.

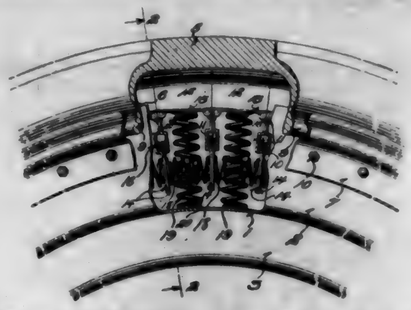
1,537,534. VALVE-CORE SEATING AND REMOVING MACHINE. ITHMAR M. JONES, Taylorville, Ill., assignor of one-half to Samuel Scudder, Taylorville, Ill. Filed Jan. 15, 1923. Serial No. 612,872. 3 Claims. (Cl. 81—57.)



1. A machine for thread seating in and removing cores from valve stems including, in combination, a standard, a table upon the standard for supporting the tube

and stem, a tool mounted upon the standard for rotary movement in a vertically stationary plane above the table for actuating the core to be thread-seated in or

removed from the stem, means upon the standard for rotarily actuating the tool, and spring means yieldingly urging said table toward said tool.

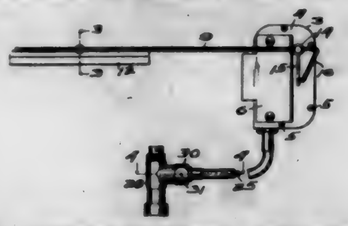


1,537,535. SIGNALING BY HIGH-FREQUENCY WAVES. FREDERICK W. KRANS, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,050. 21 Claims. (Cl. 179—171.)

1. In signaling by high frequency waves, the method of controlling the quality of signal reception which comprises transmitting a signal-modulated high frequency wave, independently transmitting a high frequency wave of the same frequency unmodulated and combining said signal-modulated and independently transmitted high frequency waves to produce the signal.

1,537,536. RESILIENT TIRE. ARTHUR W. LEES and JOHN J. SOKOL, Racine, Wis. Filed July 28, 1923. Serial No. 654,370. 3 Claims. (Cl. 152—8.)

1. A resilient tire comprising an inner casing adapted to be secured to the felly of a wheel, an outer flexible casing surrounding said inner casing and concentric therewith, means for securing said outer casing to said inner casing, a plurality of blocks located with said outer casing, a plurality of pairs of radially arranged springs located between said blocks and said inner casing, a plu-



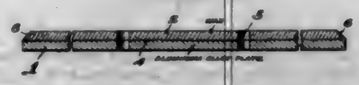
rality of radially positioned, inwardly extending plates hinged to said blocks, and a plurality of springs located between said plates.

1,537,537. EDGE TRIMMER FOR LAWNS. LEO H. LIEBSCHER, Milwaukee, Wis. Filed Mar. 1, 1924. Serial No. 696,240. 4 Claims. (Cl. 97—227.)

1. An edge trimmer of the character described comprising, a handle, means carried by the handle for insertion between the walk and the turf, a lever pivoted on said handle, a cutter blade carried by said lever, and a spring for retaining the lever in its normal position.

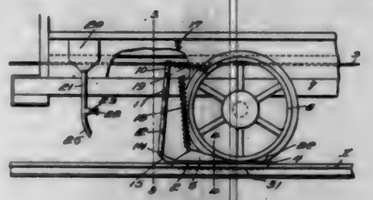
1,537,538. WINDSHIELD-WIPER-OPERATING MECHANISM. GEORGE H. LOBER, Toledo, Ohio. Filed July 9, 1921. Serial No. 483,895. 2 Claims. (Cl. 74—7.)

1. In a mechanism for operating a wiper of an automobile having a speedometer, a shell, a pair of gear wheels located in the shell, one of the gear wheels connected to the flexible drive shaft of the speedometer, the other of the gear wheels connected to the wiper mechanism, a collar connected to the last named gear



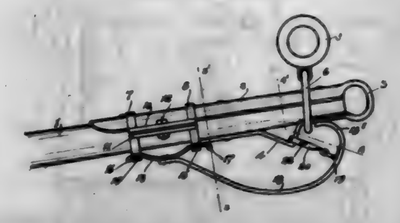
wheel and having a pair of channels, an elastic member for entering one or the other of the channels for engaging the collar to hold the gear wheels either in mesh or out of mesh.

1,537,539. PHOTOMICROGRAPHIC CAMERA. FRANCIS F. LUCAS, East Orange, N. J. Filed Nov. 22, 1921. Serial No. 517,017. 11 Claims. (Cl. 95—31.)



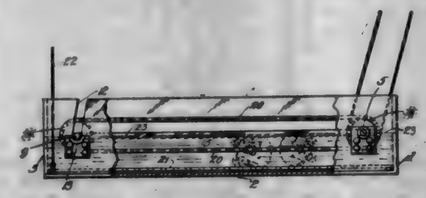
1. A container for enclosing sensitized medium comprising a compartment for the sensitized medium under exposure, said compartment having an opening, a slide for closing said opening of said container, a cover for said container, means disposed adjacent said cover for supporting a sensitized film medium, means disposed in said compartment for supporting a sensitized plate medium and means including a substantially flat plate provided with an opening for locating the position of the sensitized film medium and the sensitized plate medium when in exposed position.

1,537,540. ELECTROTYPER'S CASE. WALKER W. MCCARROLL, New Haven, Conn. Filed Sept. 8, 1924. Serial No. 736,502. 3 Claims. (Cl. 204—6.)



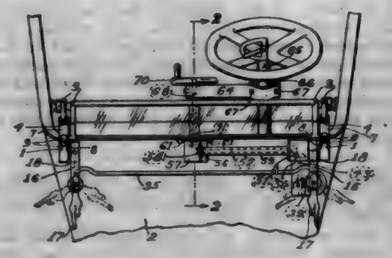
1. An electrotyper's case formed of a hard rolled plate composed of aluminum having 1 to 10% of a hardening metal incorporated therein.

1,537,541. AUTOMATIC SAFETY BRAKE. FRANK L. MCCARTY and ALFRED R. ANDERSEN, Rock Springs, Wyo. Filed Sept. 3, 1924. Serial No. 735,609. 2 Claims. (Cl. 188—36.)



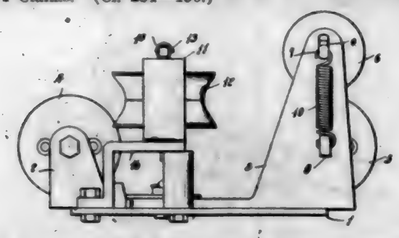
1. An emergency brake for railway cars comprising in combination with a car body, a wheel and a rail, a laterally extending shaft carried by said car body and mounted for limited rotatative movement, a journal on one end of said shaft, a brake shoe pivotally mounted in said journal, means for supplying sand to said rail, spring means for normally maintaining said brake shoe out of engagement with said wheel and rail and rendering said aforementioned means inoperative, separate spring means tending to thrust said brake shoe to a position intermediate said wheel and rail and means for normally rendering said last mentioned spring means inoperative.

1,537,542. TONGUE ATTACHMENT. ALONZO MATHER, Fairlight, Saskatchewan, Canada. Filed Mar. 23, 1922. Serial No. 548,016. 4 Claims. (Cl. 278—51.)



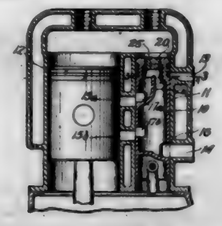
1. The combination, with a vehicle tongue provided with the usual knee, of a neck yoke retaining member having its rear end anchored to the tongue and its forward end bearing against the tongue to retain the neck yoke ring thereon, a plate hinged to an intermediate portion of the retaining member, a pair of clamping jaws pivoted to said plate having their free extremities hooked to engage behind said knee, and means for securing said jaws together in knee engaging relation.

1,537,543. SCALDING-TANK CONVEYER. OSCAR G. MAYER, Chicago, Ill. Filed Aug. 6, 1923. Serial No. 656,033. 3 Claims. (Cl. 17—15.)



1. In an apparatus of the kind specified, a vat, a plurality of crank shafts transversely arranged in said vat, a rack connecting the cranks of said shafts, and means for removing one of said shafts from the vat to render said rack idle.

1,537,544. SIGNALING DEVICE FOR MOTOR VEHICLES. EDWARD W. MEYER, St. Louis, Mo. Filed June 11, 1924. Serial No. 719,280. 3 Claims. (Cl. 116—48.)



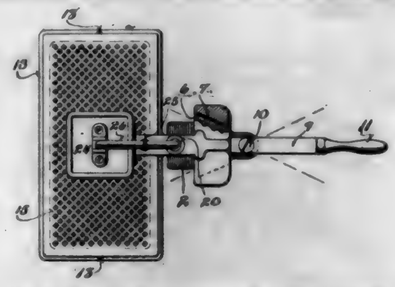
1. In an automobile signal, a bracket having spaced parallel arms, a lamp housing pivoted between said arms, a tubular extension projecting from one side of said housing, a transparent pointer mounted on the end of and opening into said extension, a lamp in said housing, and means to rotate the housing.

1,537,545. CABLE GUIDE. RUPERT R. MORTON, Finlow, W. Va. Filed Oct. 11, 1924. Serial No. 743,179. 4 Claims. (Cl. 254—190.)

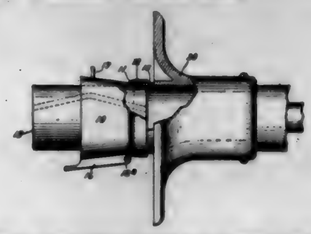
1. A cable guide of the character specified comprising spaced guide pulleys, one of the pulleys being mounted to move into and out of alinement with the other pulley, and a pair of transversely arranged guide pulleys each being yieldingly mounted to move toward and from one another.

1,537,546. INTERNAL-COMBUSTION ENGINE. ALDEN E. OSBORN, New York, N. Y. Filed Jan. 14, 1920, Serial No. 351,345. Renewed Mar. 10, 1925. 9 Claims. (Cl. 123—75.)

1. In an internal combustion engine, a piston, a tubular intake valve of the piston type having the head thereof exposed at all times to the heat and pressure of the burning gases, said tubular valve having ports in the sides thereof and a deflecting wall between said ports extending toward the head of the valve for directing the incoming gases in their passage from one port to the other toward the gas-heated head of the valve.



1,537,547. ADVERTISING DEVICE. CHARLES H. PERKINS, Poughkeepsie, N. Y. Filed Mar. 25, 1924. Serial No. 701,751. 4 Claims. (Cl. 104—58.)



3. A device of the character described including a hidden carriage, means to move said carriage, spaced apart wheels carried by said carriage, a sheet of flexible material above said wheels and a movable member including wheels resting upon the flexible sheet and being supported by the carriage wheels, whereby movement of the carriage will cause movement of the visible movable element.

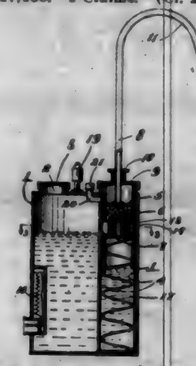
1,537,548. GRATER. FRITZ J. E. PETERS, Milwaukee, Wis. Filed July 26, 1924. Serial No. 728,437. 2 Claims. (Cl. 146—178.)

1. The combination of a supporting standard having an aperture therethrough, an oscillatory bar pivoted to said standard and projecting through said aperture and having a manipulating handle at its outer end, a grater supporting frame secured to the inner end of said bar and adapted to be oscillated thereby, said frame having upstanding flanges, a grater plate adapted to rest upon said flanges and having downturned flanges adapted to fit thereover, means for temporarily locking said grater plate to said frame, a tubular member rigidly carried by said standard above said grater plate, and adapted to receive material to be grated therein, and a spring urged pressure block located within said tubular member and adapted to press such material into contact with said grater plate.

1,537,549. SLEEVE CONTRACTOR. ANDREW RAFFAY, Schenectady, N. Y. Filed June 11, 1923. Serial No. 644,651. 7 Claims. (Cl. 29—88.2.)

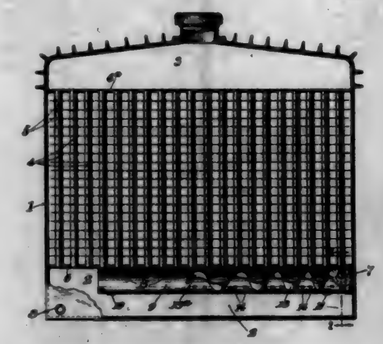
1. A sleeve contractor comprising a split resilient band having end projecting radially from the periphery thereof, and a locking member hingedly connected with the other end of said band and having a flange the interior surface of which makes engagement with the outer surface of said projecting end for holding the band in contracted position.

1,537,550. LUBRICATOR FOR DEEP-WELL-DRILLING APPARATUS. CLARENCE E. REED, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Jan. 13, 1923. Serial No. 612,481. 6 Claims. (Cl. 255—71.)



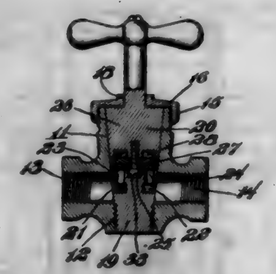
1. In rotary deep well drilling apparatus the combination of a drill stem, a head carrying cutters, a lubricant chamber with conduits leading to the cutter bearings, a piston in the chamber for forcing the lubricant to the cutter bearings, a screw threaded rod extending lengthwise of the lubricant chamber and through the piston, said screw rod having an extension coaxial with the apparatus and bearing at the center of the bottom of the hole being drilled, said extension holding the screw rod against rotating in unison with the rotation of the whole apparatus together with the piston whereby said piston is advanced along the screw rod, substantially as described.

1,537,551. ROTARY DEEP-WELL-DRILLING APPARATUS. CLARENCE E. REED, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed May 24, 1923. Serial No. 641,144. 1 Claim. (Cl. 255—71.)



A rotary bit for deep well drilling, comprising a head having a recess in its lower face with bridgepieces extending across said recess, cross roller cutters in said recess, and journal means for said cross roller cutters mounted in the end walls of the recess and in the bridge pieces, said bridge pieces being at different distances from the axial center of the drill head and with the portion of the cross roller cutter on one side of said center, extending across and below the path described by the bridge, on the other side of said axial center so that the surface of the bottom of the hole below said bridge pieces will be cut, substantially as described.

1,537,552. LATHER-MAKING DEVICE. MICHAEL ROTUNNO, New York, N. Y. Filed Feb. 7, 1923. Serial No. 617,488. 4 Claims. (Cl. 299—97.)



1. In a lather-making device, a liquid containing member, a soap containing, perforated plunger, operable within same, an ejector tube and plunger operating means attached to said plunger and connecting with the interior thereof, and spring operating means for normally maintaining the said plunger in its uppermost position.

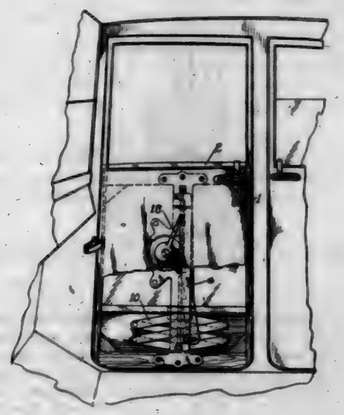
1,537,553. RADIATOR. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed June 10, 1924. Serial No. 719,039. 9 Claims. (Cl. 257—25.)

1. A radiator of the type comprising a lower chamber, an upper chamber and intermediate cooling passages, in combination with inlet and outlet passages for short-circuit flow of steaming liquid through said lower chamber and a flow retarding passage of greater cross-section than the inlet into which the inlet discharges.

1,537,554. STOP COCK. WILLIAM FRANCIS RYAN, Florence, Mass. Filed Dec. 24, 1924. Serial No. 757,838. 7 Claims. (Cl. 251—84.)

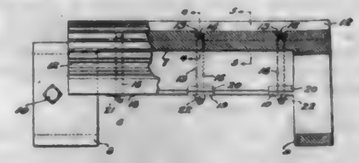
1. In a stop cock, a valve body having a bore and an inlet and an outlet communicating with said bore at one end thereof, a plug including rotating and stationary sections, the stationary section sealing the bore of the body at the end having the inlet and outlet and having ports connecting the inlet and outlet with the upper face of the stationary section, the rotating section having ports opening through its lower face and movable into or out of alignment with the ports of the stationary section and a channel within the rotating section connecting said ports.

1,537,555. VALVE ATTACHMENT. VINCENT LEO SCHENK, St. Joseph, Mo. Filed Feb. 25, 1924. Serial No. 695,035. 6 Claims. (Cl. 251—144.)



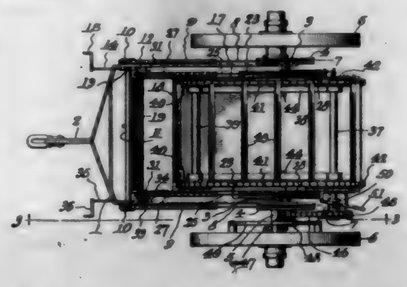
1. An attachment for use on a notched valve stem, said attachment comprising a body having a flange and a thrust wall, said flange and wall being adapted to receive and to transmit, respectively, the pressure of a

valve spring, and a rigid thrust member carried by said body and movable into position between said thrust wall and the notch-forming surfaces of the valve stem,



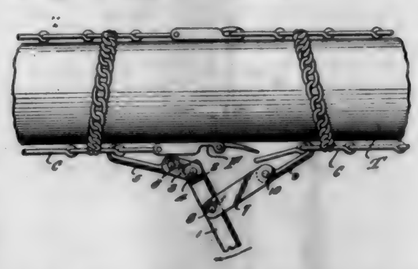
said thrust member having an irregular surface substantially conforming to the shape of said valve stem at the notched portion thereof.

1,537,556. WINDOW RAISER. ANDREW E. SCHMITT and PETER F. BUCK, Sandusky, Ohio. Filed Apr. 3, 1924. Serial No. 703,856. 2 Claims. (Cl. 268—4.)



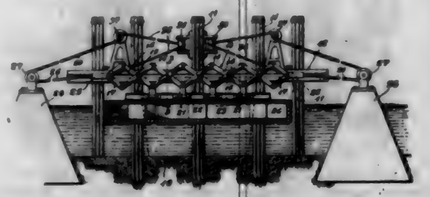
1. In a window-raising and lowering device, lazy-tongs connected to a fixed pivot pin forming one of the central pivot pins of the lazy-tongs, another central pivot pin of the lazy-tongs for connecting the window to the lazy-tongs, a cable connected to another of the central pivot pins, means for operating the cable to raise and lower the window and a dog having a plurality of notches for engaging one of the central pins of the lazy-tongs for securing the lazy-tongs in any one of the plurality of positions to which it may be moved by the said means.

1,537,557. INTERCHANGEABLE-TOOTH SEGMENT GEAR. FRANS KARL SCHNEIDER, Philadelphia, Pa. Filed Nov. 7, 1924. Serial No. 748,396. 6 Claims. (Cl. 74—28.)



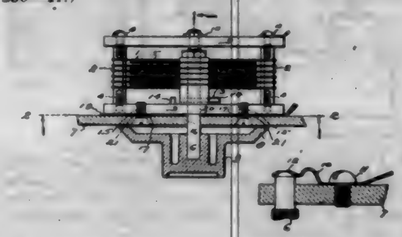
1. In a gear device, an arcuate body portion having a transversely extending channel; a series of teeth independent of said body portion and being arranged transversely to said channel; and a tie rod positioned within said channel and having holding engagement with said teeth.

1,537,558. EXCAVATOR. JESSE EMIL SCHULTZ, Albany, Wis., assignor of one-third to Ray Webb and one-third to Colonel Dixon, both of Albany, Wis. Filed Aug. 21, 1924. Serial No. 733,408. 9 Claims. (Cl. 37—4.)



1. The combination with supporting wheels, disks eccentrically mounted on and secured to the spindles thereof, and an axle connecting the centers of the disks, of a tiltable scoop supported by the axle, mechanism for tilting the scoop relative to the axle, said mechanism including a yielding element, and means for rotating the disks relative to the spindles to raise and lower the axle.

1,537,559. DEVICE FOR APPLYING NONSKID CHAINS. WILLIAM F. STAGGERS, Mannington, and CHRIS SANDER, Jr., Wheeling, W. Va.; said Staggers assignor to said Sanders, jr. Filed Nov. 19, 1923. Serial No. 675,723. 3 Claims. (Cl. 254—78.)

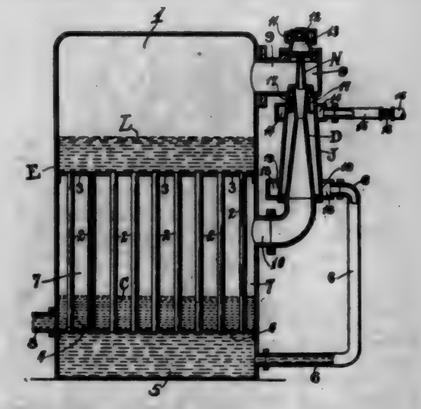


1. In a device of the class described, a handle having a reduced end, a pair of links pivotally mounted on said reduced end, a hook pivotally mounted on said links, a second pair of links pivotally mounted on the handle and spaced from the first pair of links, said second pair of links being of sufficient length to extend beyond and swing around the first pair of links, and a hook pivotally mounted on the second pair of links.

1,537,560. TIDE MOTOR. CHARLES F. STROMEIER, Van Nuys, Calif. Filed Sept. 16, 1924. Serial No. 738,038. 2 Claims. (Cl. 253—8.)

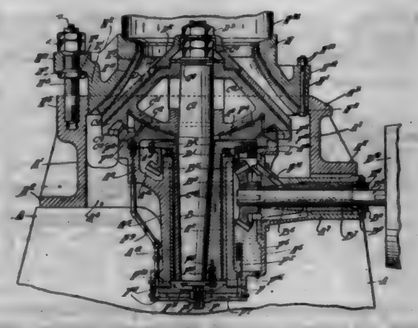
1. In a motor of the character described including a support, lazy tongs mounted on the support, a float connecting with the lazy tongs, power generating devices, and motion transmission means between the lazy tongs and the power generating devices and comprising cables connected with the ends of the lazy tongs, guide pulleys for said cables, and drums upon which the cables are wound, there being two cables connected to each end of the lazy tongs and two cables wound on each drum, each drum having its cables oppositely wound.

1,537,561. VARIABLE CONDENSER. FRANCIS E. STERN, West Hartford, and J CLAYTON RANDALL, Hartford, Conn., assignors to Stern & Company, Incorporated, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 16, 1922. Serial No. 582,124. 4 Claims. (Cl. 250—41.)



3. A variable condenser comprising a supporting frame having insulating front and back plates and metallic rails connecting said plates, a plurality of semi-circular metallic plates attached to and supported by the rails, a spindle supported by the insulating plates, means for rotating the spindle, a plurality of semi-circular metallic plates attached to the spindle and rotatively adjustable between the fixed plates, and a spring attached to the back plate, said spring having a perforated end bearing upon the rear end of the spindle for making electrical contact therewith and applying tension thereto.

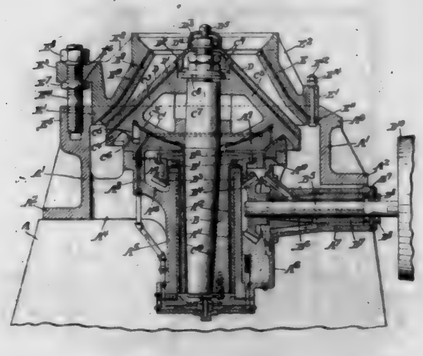
1,537,562. HINGE. ROBERT STOCK, Sandusky, Ohio. Filed Sept. 24, 1919. Serial No. 325,988. 2 Claims. (Cl. 16—174.)



1. In a separable hinge, the combination with a knuckle member and a member having a pintle connected thereto by a neck, said knuckle member being provided with a slot for the reception and removal of said neck, of a laterally projecting stop on the knuckle member adapted to be engaged by the pintle member for limiting the movement of the members.

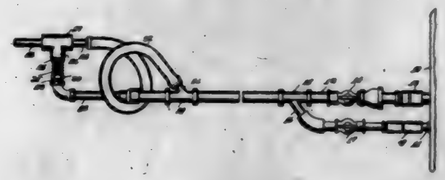
1,537,563. EVAPORATING SYSTEM. ROBERT SUCKER, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Mar. 17, 1921, Serial No. 453,111. Divided and this application filed June 9, 1923. Serial No. 644,443. 7 Claims. (Cl. 159—24.)

1. The method of evaporating liquid, which consists in expanding motive fluid, as steam, into jet formation, entraining thereby vapor evolved by said liquid, converting velocity of the mixture of motive fluid and vapor into pressure, and cooling said mixture while increasing in pressure.



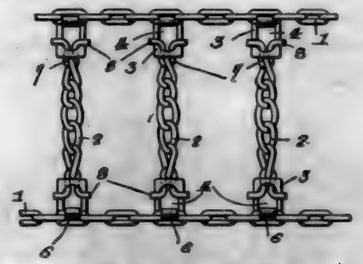
1,537,564. GYRATORY CONE CRUSHER. EDGAR B. SYMONS, Los Angeles, Calif., assignor to Symons Brothers Company, Milwaukee, Wis., a Corporation of South Dakota. Continuation of application Serial No. 662,636 and Serial No. 662,638, filed Sept. 14, 1923. This application filed Jan. 24, 1925. Serial No. 4,377. 29 Claims. (Cl. 83—10.)

1. In a gyratory crusher, a crushing cone of a higher angle than the angle of repose of the material delivered thereto, a downwardly and outwardly inclined concave overhanging said cone, the crushing space between said



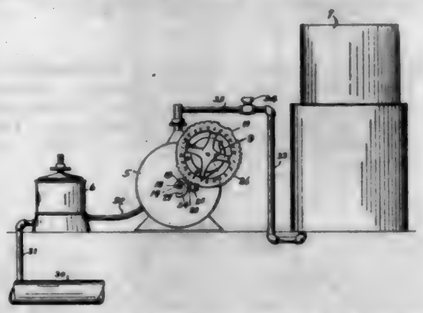
cone and concave having a cross section materially greater than that of the stream of material passing therethrough, and means for withdrawing the cone from the concave, after each crushing impact, at such high speed as to leave the material unsupported, so that it may drop freely by gravity away from the concave upon a lower portion of the cone.

1,537,565. PROCESS OF CRUSHING HARD MATERIALS. EDGAR B. SYMONS, Hollywood, Calif., assignor to Symons Brothers Company, Bakersfield, Calif., a Corporation of South Dakota. Filed May 15, 1924. Serial No. 713,397. 14 Claims. (Cl. 83—10.)



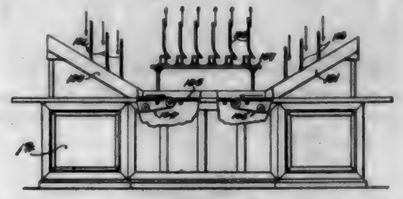
1. The process of crushing material, which consists in feeding such material by gravity between a pair of opposed crushing elements, and causing all particles of the material to fall by gravity therebetween toward the discharge opening, in successively interrupting the drop of such material and in supporting it upon and carrying it laterally upon one of said elements toward the opposed crushing element, while in contact with only the carrying element, in terminating such lateral excursion with a crushing impact, and causing all particles of the material to drop freely under gravity upon the first of said elements, after such crushing impacts, again conveying them laterally thereupon in an excursion terminating in the succeeding crushing impact, and discharging the finally reduced material by gravity from the crushing zone.

1,537,566. HIGH-PRESSURE PAINTING DEVICE. JESSE C. TEMPLE, Hattiesburg, Miss. Filed Dec. 28, 1923. Serial No. 683,238. 6 Claims. (Cl. 91—45.)



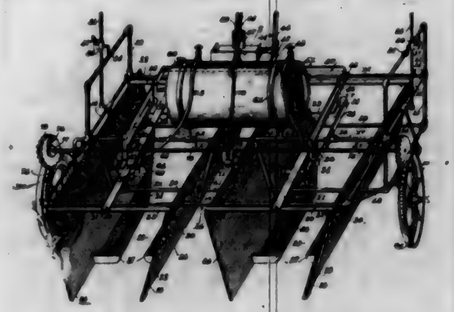
1. A painting device including a paint conduit, couplings at opposite ends of the conduit provided with branches, an air conduit disposed centrally within the paint conduit and having its ends fitted in the said branches, a discharge nozzle mounted on one end of the paint conduit, and a flexible conduit between the nozzle and the adjacent end of the air conduit.

1,537,567. ATTACHING DEVICE FOR ANTI-SKID CHAINS. JOSEPH EMILE THOMAS, Montreal, Quebec, Canada. Filed Mar. 25, 1924. Serial No. 701,789. 2 Claims. (Cl. 152—14.)



1. In combination with a tread chain, a pair of attaching plates each formed with an opening of sufficient size to permit the chain to slip therethrough, the end links of the chain being received in said openings and loosely attached to the plates.

1,537,568. PROPORTIONAL GAS-SAMPLE COLLECTOR. JOHN R. THOMPSON, Sr., and JOHN R. THOMPSON, Jr., Hanford, Calif. Filed June 13, 1923. Serial No. 645,214. 9 Claims. (Cl. 23—257.)



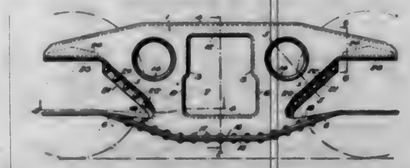
8. The method of accurately measuring and sampling the product from a gas main consisting in passing a portion of said product at a uniform pressure through a meter at a rate at all times bearing a fixed ratio to the rate of the product.

1,537,569. CENTRAL STATION FOR CARRIER-DISPATCH SYSTEMS. FREDERICK G. WHITTIER, Ipswich, Mass., and HAROLD S. THAYER, Tenafly, N. J., assignors to The Lamson Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1922. Serial No. 579,884. 27 Claims. (Cl. 186—14.)

25. A central station comprising an elongate guideway for carriers, operators' stations substantially midway of the length thereof, a bank of carrier delivery terminals within reach of said stations, and chutes for delivering carriers into opposite ends of said guideway.

1,537,570. INSECT EXTERMINATOR. DANIEL HOOK WOODWARD and JULIAN SIDNEY CHAMBERS, Atlanta, Ga. Filed June 22, 1923. Serial No. 647,098. 4 Claims. (Cl. 43—133.)

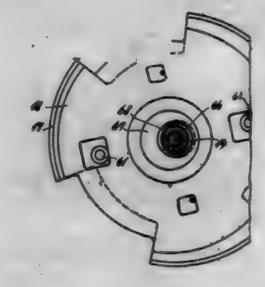
4. In an exterminator of the character described, a wheeled frame, an exterminating unit carried by the frame and free to partake of limited vertical or lateral movement with respect to said frame and a lifting device carried by the wheeled frame and engageable with the exterminating unit in such manner as to positively lift the same and yet leave the exterminating unit free to partake of vertical or lateral movement independent of the lifting device.



1,537,571. MORDANT DISAZODYESTUFFS. ERNST ZEHNTNER and ERNST BODMER, Basel, Switzerland, assignors to Society Durand & Huguenin S. A., Basel, Switzerland. Filed Nov. 26, 1923. Serial No. 677,121. 3 Claims. (Cl. 260—78.)

1. The herein described process for the manufacture of new mordant disazodyestuffs consisting in combining a tetrazoderivative of 4:4'-diamino-diaryl-2:'-disulfonic acid with such homologues of salicylic acid that have the alkyl groups in another position than in the ortho-position to the hydroxyl group.

1,537,572. BASE FOR ARTIFICIAL RESINS, WAXLIKE SUBSTANCES, AND LACQUERS. FRANZ ZERNIK, Berlin-Wilmersdorf, Germany. Filed Jan. 21, 1922. Serial No. 530,932. 4 Claims. (Cl. 134—26.)



1. A product of manufacture suitable as a base for artificial resins, waxlike substances and lacquers comprising a mixture of light-colored naphthenates practically insoluble in water.

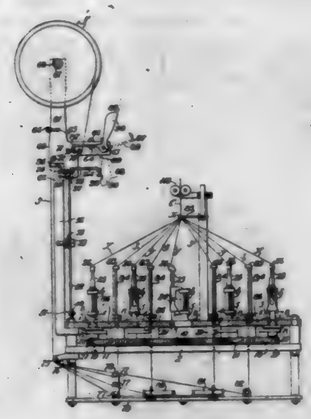
1,537,573. TRUCK SIDE FRAME. GUSTAF A. ANDERSON, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Oct. 17, 1922. Serial No. 595,097. 25 Claims. (Cl. 105—205.)

1. A car truck side frame involving a continuous metal sheet shaped to form an outer wall and an inner wall arranged in spaced relation, each of said walls having a plurality of truck column portions, a plurality of top arch bar portions, a plurality of bottom arch bar portions, and a plurality of pedestal tie bar portions; flanges formed integral with and projecting beyond said side walls at one side of the side frame, and means uniting said flanges.

1,537,574. CONTRIVANCE FOR CLEANING AND BONING FISH. RUDOLPH BAABER, Lubeck, Germany. Filed Jan. 5, 1922. Serial No. 527,257. 27 Claims. (Cl. 17—3.)

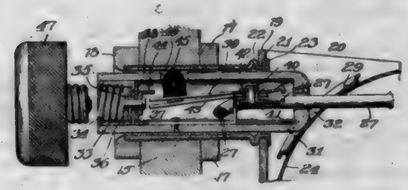
1. In a device for the purposes stated, a pair of separated discs with a passageway therebetween for the introduction of the fish, clamping levers mounted on and movable through one of the discs for gripping the tails of the fish, and knives located above and below the plane of the said discs beyond the peripheries thereof.

1,537,575. METHOD OF AND APPARATUS FOR APPLYING A SERVING TO A CORE. ADOLPH FRANCIS BANDUR, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1923. Serial No. 620,918. 50 Claims. (Cl. 173—13.)



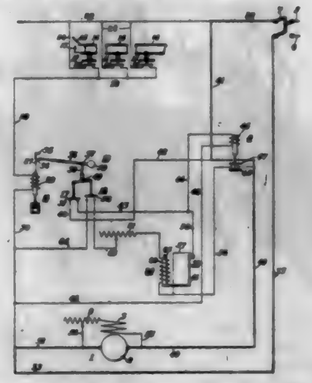
28. The method of applying loading material to a conductor which consists in maintaining the conductor at a temperature between approximately 1100° Fahrenheit and 1562° Fahrenheit while the loading material is being applied to the conductor.

41. The method of manufacturing a loaded submarine cable comprising a conductor, a heat treated loading material, and a filling material, which consists in applying the loading material to the conductor while maintaining the conductor at a temperature different from that of the loading material to provide a clearance between the loading material and conductor, to replace the strains on the loading material during the heat treatment thereof and provide a space for the filling material between the loading material and the conductor.



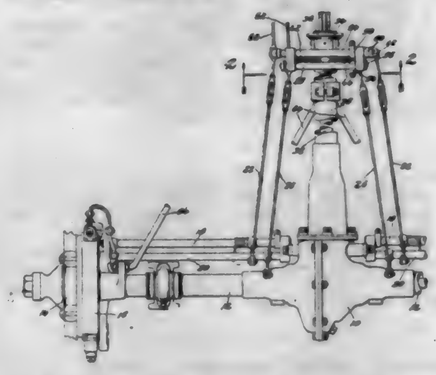
47. In an apparatus for applying a strand serving to a core, a rotatable serving head, a carrier for the serving material rotatable with the head in such manner that the serving material is served on the core, heating means, and means for subjecting the core to the heating means and passing it through the serving head.

1,537,576. STOP MOTION FOR BRAIDING MACHINES. ALFRED BABOLET, Wickford, R. I. Filed Oct. 4, 1923. Serial No. 666,479. 6 Claims. (Cl. 96—19.)



5. In a braiding machine, the combination with the braiding-mechanism comprising revolving bobbin-carriers carrying yarn-supplies, and means to traverse said carriers around the machine to interlace the yarns in a braid, of a standard projecting above the braiding-mechanism, a supply-spool for elastic strands supported on said standard, tension-means for the strands mounted on the standard, means for leading the strands downwardly beneath the braiding-mechanism, means for individually guiding the strands upwardly through the braiding-mechanism in position to be braided with the yarn strands, a series of drop-levers pivoted on the standard to adapt them to engage individually with the elastic strands at points adjacent the tension-means, stopping-mechanism for the braiding machine, and means actuated from the falling of a drop-lever to cause operation of the stopping-mechanism.

1,537,577. ELECTRICAL IGNITION DEVICE. JOHN BERG, Chicago, Ill., assignor to Metal Specialties Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1923. Serial No. 633,800. 15 Claims. (Cl. 219—32.)



1. In a device of the character set forth, an insulation body having its front side provided with a chamber, and a resistance element assembly, mounted in said chamber, comprising a spiral of resistance wire, insulation disks at opposite sides of the plane of said spiral, an intervening ring between said disks, and a retainer equipped with means clampingly securing said disks and intervening ring together.

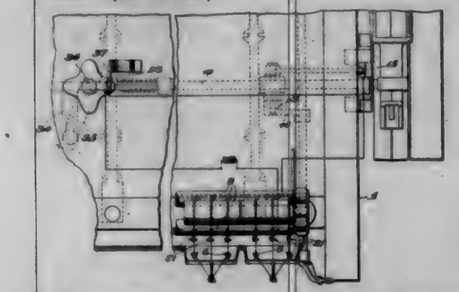
1,537,578. MOTOR-CONTROL SYSTEM. EDGAR M. BOUTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1920. Serial No. 412,499. 7 Claims. (Cl. 172—239.)

1. In a motor-control system, the combination with a motor, of means comprising a thermal relay for operating said motor for a predetermined period of time, and a time element device for rendering said relay inoperative for a predetermined period of time.

1,537,579. VEHICLE. FERDINAND A. BOWER and ENOS A. DE WATERS, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,394. 10 Claims. (Cl. 188—206.)

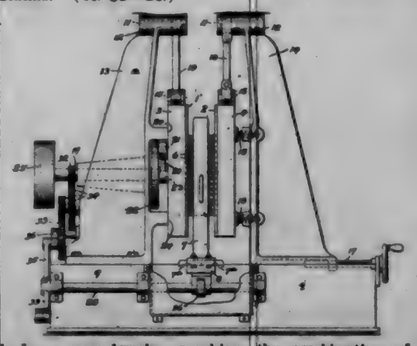
5. A bracket having a sleeve to embrace a propeller shaft housing, and two pairs of oppositely-extending arms each formed with bearings for a transverse brake-operating shaft, in combination with two shafts, the one shaft being longer than the other.

1,537,580. COMBINED SCRAPER AND DUMPING DEVICE. IRA E. BURKETT, Macon, Ga., assignor to Schofield-Burkett Construction Company, Macon, Ga., a Corporation of Georgia. Filed Sept. 11, 1922. Serial No. 587,411. 3 Claims. (Cl. 37—117.)



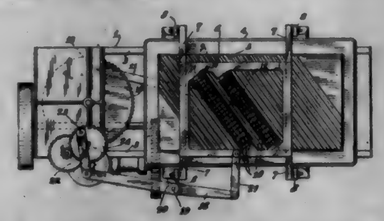
1. In a combined loading and dumping device, a scraper; pulling cables having respective ends attached to said scraper for drawing the latter forwardly and backwardly; a normally slack cable elevated above the surface of the ground and secured at one end to a fixture; means acting on said last named cable independently of said pulling cables for suspending the scraper therefrom, by

which the scraper will be lifted above the ground when the cable is drawn taut; a series of independently rotatable cable drums mounted upon a platform which is supported on wheels and movable transversely of the



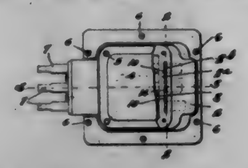
line of movement of said pulling cables; and a power device for selectively actuating the drums, each of said cables having their opposite ends wound upon a drum by which the respective cables are independently controlled.

1,537,581. ELECTRIC STOP MOTION. OBADIAH BUTLER, AMOS MORIN, and CHARLES J. LOWRY, Danielson, Conn. Filed Feb. 9, 1924. Serial No. 691,819. 7 Claims. (Cl. 118—4.)



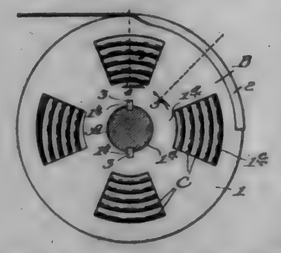
1. A stop motion mechanism including a longitudinally movable shipper, means urging it to inoperative position, a latch carried by the shipper, a keeper engageable by the latch to hold the shipper operative, a gravity operated tumbler for holding the keeper operative, an electromagnet having an armature normally arranged in the path of the tumbler for arresting the same, and means operable upon the breaking of a thread for closing a circuit through the magnet.

1,537,582. GEAR-LAPPING MACHINE. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 7, 1923. Serial No. 623,589. 12 Claims. (Cl. 51—26.)



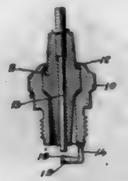
1. In a gear lapping machine, the combination of a pair of opposing racks, a support for rollably mounting the unlapped gear between the racks whereby the gear meshes with both racks and means for effecting relative movement of the racks and gear support in a direction lengthwise of the racks, substantially as and for the purpose described.

1,537,583. GEAR-LAPPING MACHINE. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 7, 1923. Serial No. 623,590. 11 Claims. (Cl. 51—26.)



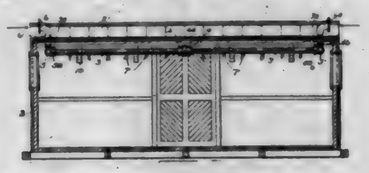
1. In a gear lapping machine, the combination of a rack, a gear carriage constructed to rollably mount an unlapped gear in mesh with the rack and means for effecting relative movement of the rack and the gear carriage in a direction lengthwise of the rack, the teeth of the rack being arranged at an inclined angle to the direction of such relative movement, substantially as and for the purpose described.

1,537,584. SHIFTING-ROD LOCK FOR TRANSMISSION GEARING. GEORGE C. CARHART, Syracuse, N. Y., assignor to The Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed June 15, 1923. Serial No. 645,565. 14 Claims. (Cl. 74—89.)



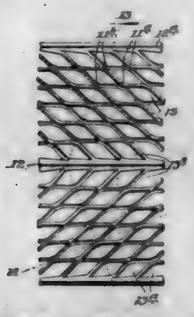
1. In a transmission gearing, the combination of a casing having a wall of substantially equal thickness throughout, said wall being exposed at one edge and formed with a slot like recess opening through such edge, a plurality of shifting rods movable through said wall and said slot like recess and locking means located in the recess and operable by any one of the rods during the shifting thereof from neutral to lock the other rod from shifting movement and a cover closing the open side of the recess.

1,537,585. SEWING-MACHINE-BELT PACKAGE AND METHOD OF MANUFACTURE. GUSTAV A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1921. Serial No. 523,142. 6 Claims. (Cl. 206—59.)



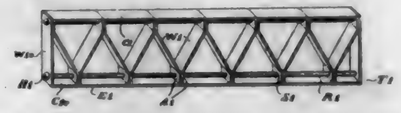
1. The method of packaging a sewing-machine belt which comprises winding the belt in a single layer on a shaft between two unconnected package-forming disks, then securing the outer margins of said disks together, and then removing the package from said shaft.

1,537,586. SELF-CLEANING SPARK PLUG. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Oct. 28, 1922. Serial No. 597,611. 2 Claims. (Cl. 123—169.)



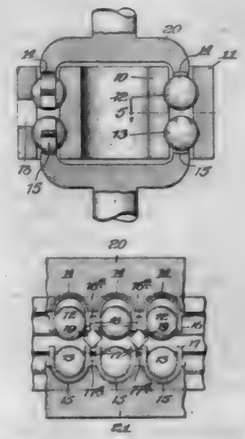
1. In a spark plug the combination with a central insulated electrode, of a grounded or shell electrode having an angularly bent portion with diverging sides extending throughout substantially the whole length of said portion, said angularly bent portion being located beneath the central electrode and arranged with its apex upward, so that such oil as may condense upon the same may run down and drip from the lower edges of the sides of said angularly bent portion.

1,537,587. MEANS FOR VENTILATING AND COOLING CARS. JOHN COLOMBO and CHARLES ANGELLO, Auburn, N. Y. Filed Oct. 22, 1924. Serial No. 745,184. 5 Claims. (Cl. 98—23.)



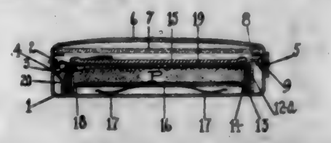
2. Means for ventilating and cooling freight and other cars, comprising parallel perforated aligning side conduits disposed inside of a car at the sides near its roof, means for coupling the aligning conduits at the opposite sides near the middle of the car, means for preventing communication between the aligning conduits, means for charging the conduits at one side of said couplings with air when the car is being moved in one direction, and means for charging the conduits at the other side of the couplings when the car is being moved in the opposite direction.

1,537,588. EXPANDED-METAL LATH. LEWIS E. CURTIS, Warren, Ohio, assignor to The Youngstown Pressed Steel Company, a Corporation of Ohio. Filed May 31, 1923. Serial No. 642,633. 6 Claims. (Cl. 72—717.)



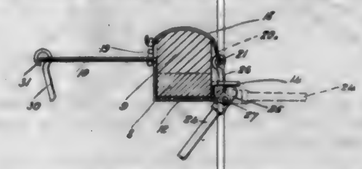
1. An expanded-metal lath having spaced longitudinal stay portions and intermediate deflected strands forming meshes having their median lines inclined at an angle to said stay portions and the bonds of said meshes being grooved.

1,537,589. STRIP AND ROD TRUSSED STRUCTURE. GEORGE HIVES DAWSON, Boston, Mass., and HURXTHAL FIELD FREASE, Canton, Ohio. Filed Oct. 27, 1924. Serial No. 746,068. 11 Claims. (Cl. 189—37.)



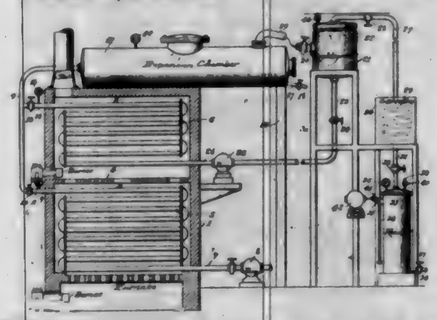
1. A trussed structure including spaced rows of chord members and connecting web members, feet on the members abutting each other at apexes, registered apertures in the feet, and tie rods extending through the registered apertures for locking and securing the truss members together.

1,537,590. METHOD OF ASSEMBLING BALL BEARINGS. JOHN DLESK, Jr., Chicago, Ill., assignor to Strom Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1924. Serial No. 710,776. 5 Claims. (Cl. 29—84.)



1. The method of assembling two row radial ball bearings consisting of placing the balls in the raceways, inserting retainers with bendable ears from opposite sides of said balls, placing spreaders between said retainers and in the paths of said ears, pressing said retainers and ears about said balls, and removing said spreaders.

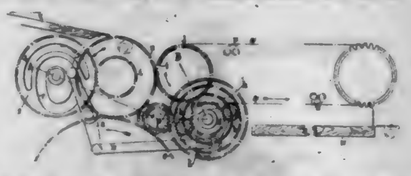
1,537,591. VANITY CASE. CARROLL E. DODSON, Kansas City, Mo. Filed Apr. 24, 1924. Serial No. 708,728. 5 Claims. (Cl. 132—83.)



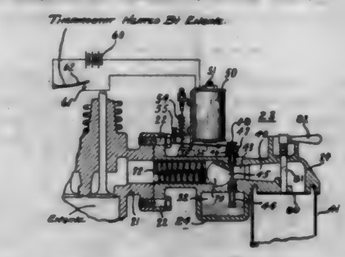
4. In a vanity case, comprising a bottom member, a lid member hinged thereto, a mirror in said lid, an intermediate powder container fitted therein, having a reticulated permeable screen closing its upper end, and a follower bottom comprising a metal disc with tongues cut opposite therein from near the outer edge of said disc and terminating near the center and formed at oblique angles therewith producing springs out of said disc to yieldingly advance said disc against the powder contents, the upper face of said disc covered with cloth-like material extending over the outer edge of said disc and adapted to snugly fit and brush the inside walls of said container and means for holding said powder container in interlocking engagement with said case.

1,537,592. DETACHABLE SPUR FOR WHEELS. ALEXANDER C. DU VALL, Oxford, Ohio. Filed Feb. 7, 1925. Serial No. 7,610. 6 Claims. (Cl. 152—2.)

1. An extension piece for a wheel, comprising a curved tread plate having a channel-shaped member on one side edge adapted to fit under a wheel rim between two spokes and provided with a projecting lug, an arm pivoted to the said plate and adapted to extend over the wheel rim, and a fastening lever pivotally connected with the free end portion of the said arm and provided with a cam-shaped head adapted to engage with the said lug and operating to clamp the tread plate to the wheel rim.



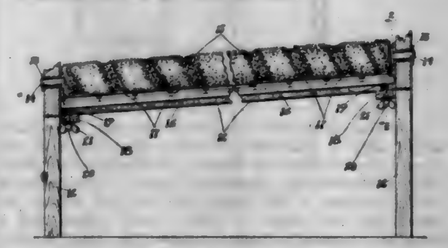
1,537,593. PROCESS FOR CRACKING OIL. GUSTAV EGLOFF, Independence, Kans., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 9, 1920. Serial No. 429,319. 5 Claims. (Cl. 196—58.)



4. A process of oil conversion, consisting in maintaining a body of heated hydrocarbons in an enlarged zone where substantial vaporization occurs, in subjecting the vapors to reflux condensation to condense the heavier vapors, in passing the reflux condensate in an advancing stream through a heating zone where it is subjected to cracking conditions of temperature and pressure, in delivering the heated condensate to said enlarged zone and simultaneously heating an independent stream of charging oil for delivery to said enlarged zone to a temperature sufficient to cause a substantial vaporization thereof in said zone, and in introducing said heated charging oil to the enlarged zone.

1,537,594. DELIVERY MECHANISM FOR PRINTING MACHINES. THOMAS FRANK ELSWORTH, FRED WESLEY WRIGHT, and PERCY HARKER, Leeds, England, assignors of one-fourth to George Mann and Company, Limited, Leeds, York, England. Filed Sept. 14, 1923. Serial No. 662,756. 4 Claims. (Cl. 271—79.)

1. A printing machine, having in combination an impression cylinder and means for continuously rotating said cylinder at a substantially uniform speed; delivery chains receiving a sheet direct and a single gear train driving said chains throughout the working cycle, said train including a variable speed gear; together with means for operating said variable speed gear at an appropriate moment to increase the speed of said chains above the uniform peripheral speed of said impression cylinder, as set forth.



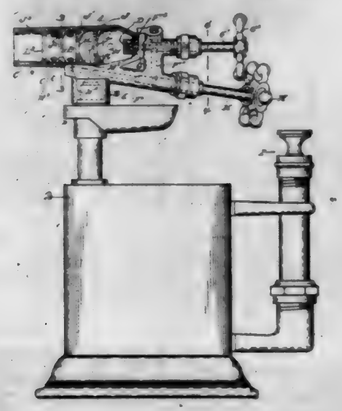
1,537,595. ENGINE. JOSEPH C. FEDERLE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 24, 1923. Serial No. 621,097. 11 Claims. (Cl. 123—180.)

1. In a fuel control system for internal-combustion engines, the combination with means for controlling the fuel mixture proportions; of an electromagnet for actuating said means; a current source; a circuit in which said electromagnet and current source are included; and means for breaking said circuit after the engine has started, and has become heated to a pre-determined degree.

1,537,596. FRUIT-POLISHING MACHINE. CAROL FLOYD, Orlando, Fla. Filed Oct. 4, 1922. Serial No. 592,271. 5 Claims. (Cl. 91—37.)

1. A fruit polishing machine having a brush for acting on the fruit, and means for supporting blocks of paraffine in position to directly contact with the brush to be transferred to the fruit by said brush.

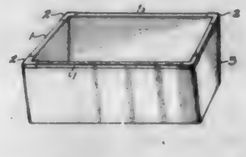
1,537,597. PROCESS FOR PRODUCING ACETONE AND BUTYL ALCOHOL. GEORGE W. FREIBERG, St. Louis, Mo. Filed July 17, 1924. Serial No. 726,574. 10 Claims. (Cl. 260—135.)



1. A process for producing acetone and butyl alcohol, characterized by fermenting carbohydrate material by means of bacteria which may be widely distributed in nature, are anaerobic bacilli with rounded ends, which form large resistant spores and which do not liquefy nutrient gelatine.

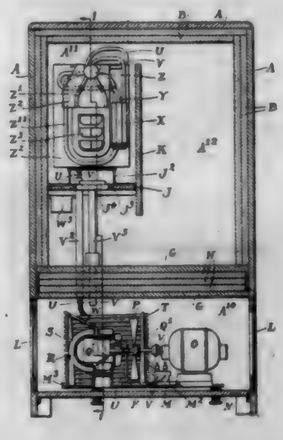
1,537,598. DECANTING APPARATUS. SIGMUND L. GOLDMAN, Chicago, Ill. Filed Oct. 19, 1921. Serial No. 508,755. 6 Claims. (Cl. 210—97.)

3. A sinker formed of an upper, tubular, section, and a lower section releasably connected therewith, the upper portion of said lower section being of openwork construction and at the spaces provided thereby communcitaing with the interior of said upper section.



1,537,599. FLAME-STRAIGHTENING TORCH BURNER. OTTO J. GROEHN, Detroit, Mich., assignor to Clayton and Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 25, 1921. Serial No. 464,333. 1 Claim. (Cl. 158—32.)

In a burner for blow torches or the like, the combination with a combustion chamber having a fuel discharge nozzle at the rear portion, of an adjustable clean-out member for said discharge nozzle, a valve beneath and to one side of the nozzle and clean-out member for controlling the supply of fuel to said nozzle, and a plurality of parallel baffles disposed in said chamber and having ports formed therein to direct the flame toward the forward end of said chamber, said baffles being spaced from said discharge nozzle and said chamber having air inlet ports formed therein between said baffles.

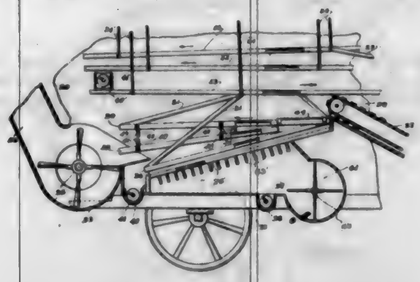


1,537,600. METALLIC RIM FOR MOLDED RECEPTACLES. ROBERT S. GROGAN, Chicago, Ill., assignor of one-half to Chicago Granitine Manufacturing Company and one-half to Charles Wesley Co., both of Chicago, Ill., and both companies organized under the laws of Illinois. Filed July 3, 1924. Serial No. 724,169. 1 Claim. (Cl. 220—73.)

The combination with a molded receptacle, of a polygonal rim comprising side sections, corner sections telescopically engaging the ends of said side sections and arranged to initially permit a relative adjustment of said side sections, and depending flanges extending along the edges of said sections and projecting inwardly so

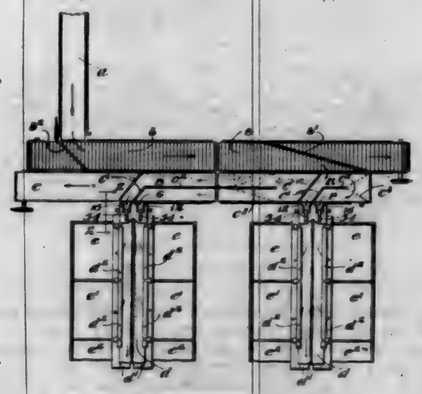
as to be anchored in the material of the receptacle, the flanges of said corner sections embracing the flanges of said side sections.

1,537,601. ELECTRIC HOUSEHOLD REFRIGERATOR. MELVIN SOLOMON GROH, Toronto, Ontario, Canada, assignor to Joseph Mercadante, New York, N. Y. Filed Dec. 31, 1924. Serial No. 759,003. 4 Claims. (Cl. 62—116.)



2. In an electric household refrigerator, a cooling chamber containing refrigerating cooling means including a container, tubes each end of which open into said container, and fins the sides of which are attached to said tubes, said tubes and fins transversely filling practically the entire side and bottom space of said cooling chamber.

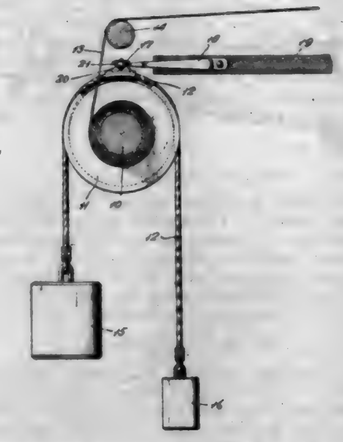
3. In an electric household refrigerator, a condenser adapted to condense a refrigerating medium therein contained, a compressor adapted to convey said refrigerating medium under pressure into said condenser, a water-tight pan open at the top and supporting said condenser, the lower coils of the condenser being below the top of said pan, a cooling element in the refrigerator, means for collecting the condensed water from the cooling element, means for conveying said condensed water from the cooling element into the pan, and an air fan adapted to cool said condenser by means of air circulation and to evaporate the condensed water in said pan.



4. In an electric household refrigerator, a condensing coil, a pump and an air fan inside of said condensing coil, a member adapted to support said condensing coil, pump and air fan, and three machine spring supports sustaining said member, one of said machine spring supports being directly beneath the vertical alignment of the intake and discharge pipes of said pump.

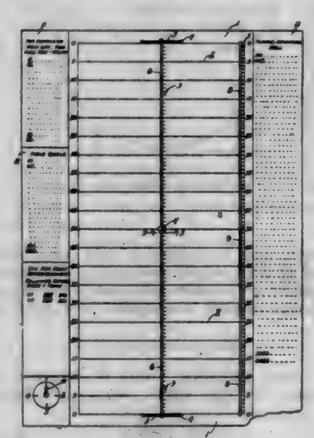
1,537,602. HULLING MACHINE. JOHN A. HACKER, Plainfield, Ill. Filed Jan. 15, 1923. Serial No. 612,801. 6 Claims. (Cl. 130—2.)

1. A hulling machine including a separating table mounted for straight end shake, upper and lower perforated tray members pivotally depending from said separating tray in inclined relation thereto and operated thereby, the lower member having divergence at an angle with respect to the upper member, and a perforated intermediate tray pivotally depending from said upper member and adjustable between said upper and lower members.



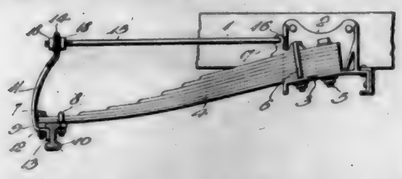
1,537,603. METHOD AND APPARATUS FOR MARKING GRADED CITROUS FRUIT. ARTHUR B. HALE, Tampa, Fla., assignor, by mesne assignments, to F. J. Sevigné Machine Company, Nashua, N. H., a Corporation of New Hampshire. Filed Nov. 26, 1924. Serial No. 752,388. 9 Claims. (Cl. 101—35.)

1. The method of identifying different sizes of fruit by uniform indications of the grades thereof, consisting in first sorting the fruit into different grades, then marking all of each grade uniformly, and then separating those of each grade into different sizes.



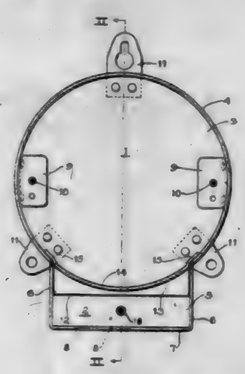
1,537,604. AUTOMATIC WEIGHT-ROPE-RELEASING ATTACHMENT FOR LOOMS. JAMES A. HANNIGAN, Kingston, Pa. Filed Aug. 11, 1924. Serial No. 731,334. 5 Claims. (Cl. 139—100.)

1. A loom attachment comprising, in combination with the warp roll or beam, a tensioned rope looped about said beam, a bumper secured to one of the loops of the rope and adapted to vibrate with the warp roll



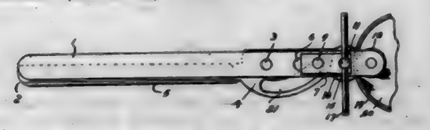
or beam during operation of the loom, and a fixed stop adapted to intermittently engage said bumper, due to vibratory movement of the warp roll or beam.

1,537,605. FOOTBALL GAME. ARTHUR T. HANSEN, Minneapolis, Minn. Filed June 29, 1923. Serial No. 648,457. 2 Claims. (Cl. 273—94.)



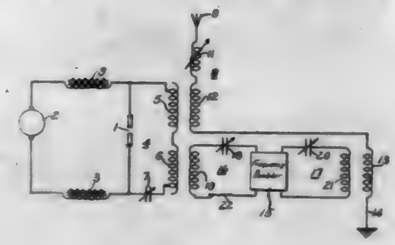
2. A game apparatus comprising a board having a rectangular figure thereon with equally spaced transverse lines, the length of the rectangular figure representing one hundred yards and each line representing five yard distances, a slot extending longitudinally in the board adjacent one edge thereof, short transverse lines adjacent said slot representing one yard distances, a plain marking strip of a length indicating ten yards slidable in said slot and having pointers at its end adapted to register with said short lines, said board having zones thereon at the sides of said rectangular figure, which zones contain tables of numerals, each having a corresponding legend, the number of numerals being different in each table, and a plurality of standard dice adapted to be used with said tables the number of dice to be used corresponding to the number of numerals in the table.

1,537,606. AXLE STABILIZER. CLIFTON E. HERMAN, Columbus, Ohio. Filed Apr. 22, 1924. Serial No. 708,280. 8 Claims. (Cl. 267—41.)



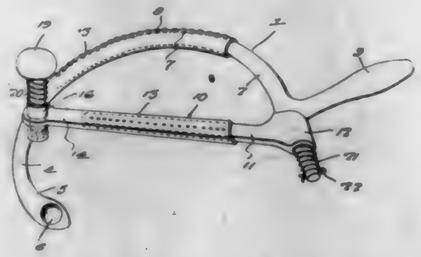
5. A stabilizing attachment for the front axle of an automobile carried by a cantilever spring, said attachment comprising a substantially vertical spring adapted at its lower end to be secured to the axle, a radius rod connected with the upper end of said spring, and means for pivotally mounting the rear end of said radius rod at the rear end of the vehicle spring.

1,537,607. METER CASING. CHARLES M. HOEFTMAN, Newark, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1922. Serial No. 568,875. 9 Claims. (Cl. 171—34.)



2. A meter case comprising a main body portion provided with an arcuate side wall and a separate terminal block supporting member provided with an arcuate flanged portion adapted to complete the wall of said body portion.

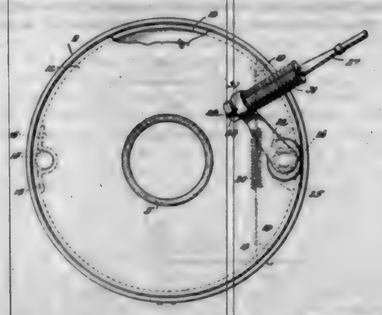
1,537,608. CAN OPENER. JOHN E. HOFFMAN, Chicago, Ill. Filed Oct. 22, 1924. Serial No. 745,128. 1 Claim. (Cl. 30—3.)



A can opener, comprising pivotally connected handle members, a cross head slidably mounted on the upper handle member, a vertically extending shaft revolubly mounted on said cross head, a roller pivotally mounted on the end of the upper handle member, a wheel mounted on said shaft in opposite relation to said roller and having a corrugated periphery adapted for frictionally engaging the outer side of a can to rotate the same, a disk cutter mounted on said shaft in opposite relation to said roller and adapted for severing the head of the can when the can is rotated by said wheel, and a cam device arranged on the lower handle member and movably connected to said cross head and adapted for impelling the cross head forward when the handle members are folding and impelling the same backward when the handle members are opening.

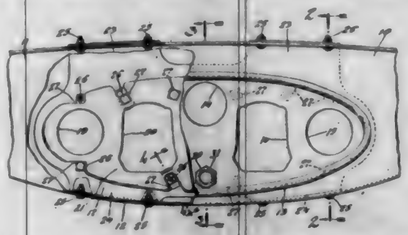
1,537,609. ARC TRANSMISSION SYSTEM. JOHN V. L. HOGAN, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 19, 1922. Serial No. 562,072. 21 Claims. (Cl. 250—17.)

1. The method of increasing the output of a non-sinusoidal generator which consists in multiplying the frequency of the main wave and feeding the multiplied frequency substantially in phase with a harmonic of the output of said generator.



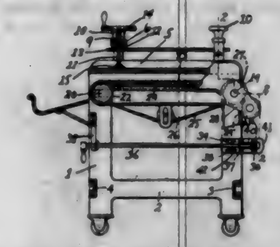
1,537,610. RIVETING DEVICE. GUSTAVUS HUBER, Nashville, Tenn. Filed May 14, 1924. Serial No. 713,275. 1 Claim. (Cl. 1—4.)

A riveting device comprising a curved lever having the forward end thereof provided with a cavity to form an anvil, the rear end thereof having a handle formed thereon, a second lever pivoted on the rear end of the curved lever, means for normally holding the pivoted lever in frictional engagement with the handle on the rear end of the curved lever, said levers comprising adjustable sections, the free end of the pivoted lever adapted to swing into cooperative relation with the anvil end of the curved lever, and a rivet receiving and upsetting means associated with the free end of the pivoted lever.



1,537,611. BRAKE. ROLAND V. HUTCHINSON, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 23, 1921. Serial No. 471,614. 4 Claims. (Cl. 188—78.)

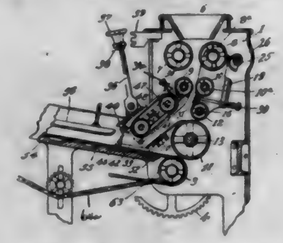
1. In brake mechanism of the class described and in combination in a rear axle housing, a brake shoe supporting flange supported from and by said axle housing; a rock shaft supported within an opening in and adjacent the periphery of said supporting flange; and a brake



operating cam on one end of said rock shaft; the opening in said supporting flange being of such form and size that said cam may pass therethrough.

1,537,612. INSTRUMENT-ATTACHING DEVICE FOR MOTOR VEHICLES. ROBERT K. JACK, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 21, 1924. Serial No. 714,883. 8 Claims. (Cl. 180—90.)

1. The combination with an instrument board having a plurality of openings into which the exposed ends of various indicating instrument casings may enter, of a plate arranged adjacent and overlying a portion of the rear side of said board, and having openings arranged so as to register with the openings in said board; means for fastening said plate to said instrument board; and holding means carried by said plate for holding instruments in place within said openings.



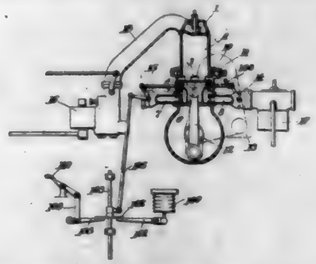
1,537,613. DOUGH-MOLDING MACHINE. FRANK X. LAUTERBUR, Sidney, Ohio. Filed June 14, 1921. Serial No. 477,863. 16 Claims. (Cl. 107—9.)

5. In a device of the character described, a pressure board, comprising a central member, and side members hinged to said central member, and means for supporting the central member, and means for supporting the central member and for retaining the side members in desired annular relation to the central member.

16. In combination with a dough molding machine having an adjustable gear at one end of its frame, an extension unit for acting upon the dough treated in the machine, mechanism in the extension unit, comprising gearing to drive the same, a planetary gear on the extension adapted to serve as the prime mover of said mechanism, and means for retaining the said planetary gear in a variety of positions and for securing the extension unit to the machine, so as to permit a meshing of said adjustable gear on the machine and the planetary gear on the unit.

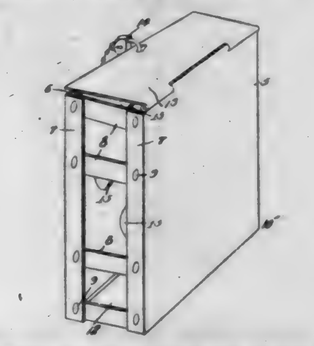
1,537,614. DOUGH-MOLDING MACHINE. FRANK X. LAUTERBUR, Sidney, Ohio. Filed July 8, 1921. Serial No. 483,306. 7 Claims. (Cl. 107—9.)

1. In a dough molder, a pair of receiving rolls and a pair of sheet forming rolls adapted to take a sheet of dough from the receiving rolls, one of each pair of rolls being stationary and the other of each pair being adjustable to vary its space from its companion roll, a swinging frame having its center beneath the sheet forming roll, and both of said adjustable rolls mounted in said frame, and means for controlling the position of said frame, said frame and means constituting the adjusting devices for the said rolls, and said controlling means comprising a rotary member and a calibrated indicator to give readings of the nature of the adjustment.



6. In combination with a device for forming a coil of dough, a trip belt mechanism therefor, comprising a frame hinged to swing in an arc for adjusting its position, an additional frame, said first mentioned frame having guideways into which the additional frame may be slid and locked in place, a pair of rolls and a belt in the additional frame, and planetary driving means for the said rolls.

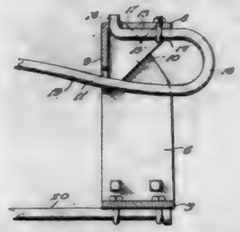
1,537,615. FOOD HOLDER FOR BIRD CAGES. EDMOND CLARK MCCONNELL, Richmond, Calif. Filed Apr. 17, 1924. Serial No. 707,180. 4 Claims. (Cl. 119—18.)



2. In a device of the class described, the combination with a compressible body member having means for engagement with the bars of a cage, jaws pivoted to the said member at an intermediate point of their length, said jaws extending forwardly from said member to provide gripping means for the article of food to be held, and extending rearwardly between the sides of said member so as to be opened when the body member is compressed, and spring means located at the rear of said jaws.

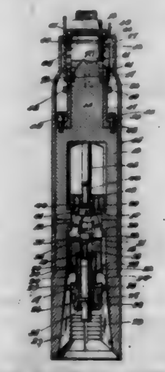
1,537,616. INTERNAL-COMBUSTION ENGINE. GRENVILLE MELLEN, Cranford, N. J. Filed Sept. 11, 1918. Serial No. 253,629. 7 Claims. (Cl. 123—119.)

1. The method of maintaining the power of internal combustion engines under varying atmospheric pressure which consists in suppying to the engine a normal charge appropriate for standard atmospheric pressure conditions and separately supplying in addition to the said normal working charge a supercharge under pressure, the quantity of such supercharge being automatically varied to correspond with the variations in atmospheric pressure.



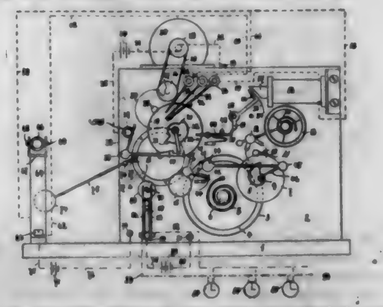
1,537,617. MILK-BOTTLE HOLDER. FERDINAND C. PANTHER, Detroit, Mich. Filed Nov. 21, 1921. Serial No. 516,753. 1 Claim. (Cl. 220—6.)

A container including a front wall, a rear wall and a bottom member, the front wall and rear wall being constructed of sheet metal and having their side edges bent inwardly to provide flanges, connecting bars for connecting the front and rear walls, said bars having pivotal connection with the flanges, each of said bars having a right angled end portion providing a flange, portions of the bars adjacent to the last mentioned flanges being cut away to provide curved edges, the flanges of the bars adapted to engage the front wall of the container to restrict movement of the front and rear wall with respect to each other, and a hinged closure having connection with the rear wall and adapted to be secured to the front wall to hold the front and rear walls in spaced relation.



1,537,618. ATTACHMENT FOR BEAN HARVESTERS. PHILIP PROPER, Pigeon, Mich. Filed Feb. 12, 1924. Serial No. 692,336. 1 Claim. (Cl. 56—400.)

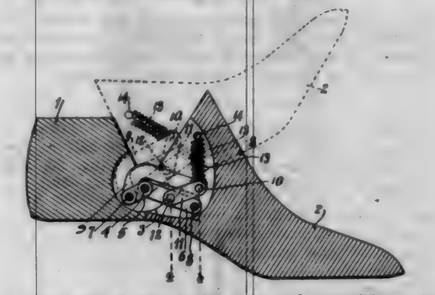
An attachment for bean harvesters comprising a rake head consisting of a top plate, a back plate and depending end plates at the ends of the top and back plates, trunnions projecting from the said end plates, means for rotatably supporting the trunnions, the back plate of the rake head having vertical slots therethrough and the top of the rake head being provided with series of openings in alinement with the respective slots, rake teeth having spring coils at their front ends and extending from the lower sides of the coils through the vertical slots in the back plate of the rake head and further having shanks extending rearwardly beneath the top plate of the rake head and provided with upstand-



ing terminals fitting in the rear openings of the series of openings in the top of the rake head, and hook bolts engaged around the shanks immediately adjacent the coils and secured in the front openings of the series of openings in the top of the rake head.

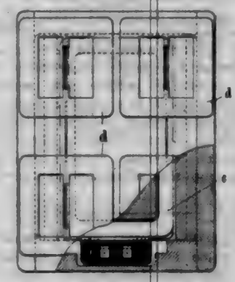
1,537,619. FISHING TOOL. WILLIAM H. PUCKETT, Holdenville, Okla. Filed Mar. 5, 1924. Serial No. 697,089. 49 Claims. (Cl. 294—102.)

1. A fishing tool including a driving element, gripping jaws coupled therewith, means to coact with the jaws and shiftable by said element for closing the jaws, and means slidably coacting with said driving element and said jaw closing means coupling said element with said jaw closing means and supporting said jaws.



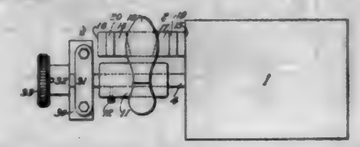
1,537,620. SYSTEM OF ELECTRIC CONTROL. FERDINAND SCHNEIDER, Fulda, Germany. Filed June 5, 1924. Serial No. 718,156. 5 Claims. (Cl. 58—24.)

1. In an apparatus of the kind described in combination, a master clock comprising a clockwork and means for automatically and periodically rewinding said clock-



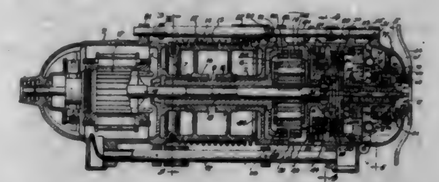
work, an electric circuit including a make and break contact and an electromagnet, the armature of which is attracted when said circuit is closed, locking means holding said armature in its attracted position and adapted to periodically release it, regulating means controlled by said clockwork and adapted to alternately bring said locking means into its locking and releasing positions, said armature when released engaging and arresting the escapement wheel of said clockwork, and when attracted imparting to said escapement wheel an initial swinging movement, said regulating means operating also said make and break contact, a receiver for electric wave impulses in the circuit of said electromagnet and adapted to be prepared for the reception of an impulse by closing said contact just before the impulse arrives to complete said circuit when the impulse does arrive, secondary clocks connected by electric circuits with said master clock, contacts in said connecting circuits and means operated by said clockwork for alternately closing and opening said contacts in said connecting circuits.

1,537,621. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924. Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,759. 2 Claims. (Cl. 12—136.)



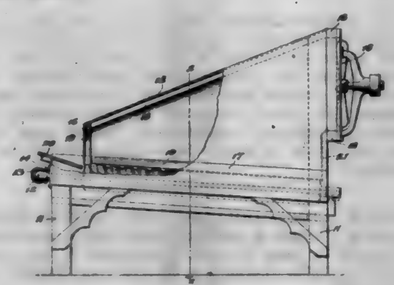
1. In a last of the divided type and comprising a toe part and a heel part, a bearing pin for said last parts, a link having one end attached to the heel part and its other end mounted on such bearing pin, a second link having one end attached to the toe part and its other end mounted on said bearing pin, and means for applying power to said links in a direction to shorten the distance between the points of attachment of said links to the last parts to thereby hold the last parts in extended position and in collapsed position.

1,537,622. METHOD OF FORMING SLIP-MEASURING GAUGES. JOHN EDWARD SEARS, Jr., and ARTHUR JOHN CHARLES BROOKES, Teddington, England; said Sears assignor to said Brookes. Filed Nov. 22, 1919. Serial No. 339,915. 5 Claims. (Cl. 51—278.)



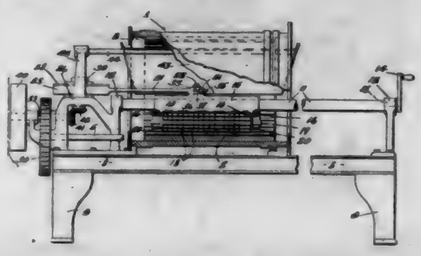
1. A method of producing slip gauges which consists in lapping simultaneously eight single gauges symmetrically arranged in pairs and held against movement during lapping upon an independent lapping chuck and interchanging the position of such gauges between successive lappings.

1,537,623. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, and HARRY R. MEYER, Wilkinsburg, Pa., assignors to Westinghouse Electric Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 19, 1919. Serial No. 283,474. 5 Claims. (Cl. 74—81.)



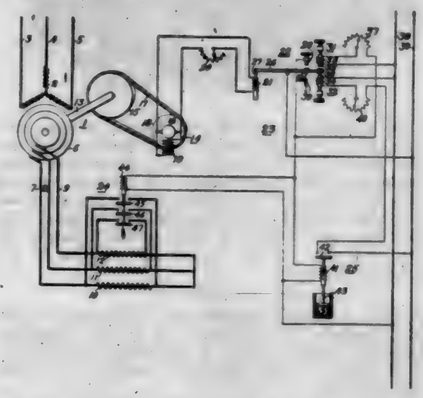
1. The combination with a member adapted to assume a plurality of definite positions when actuated by an operator's foot, of a plurality of foot-rests respectively shaped to conform to the angular positions of said member, whereby the operator may rest his foot without further actuating said member.

1,537,624. HOIST. WILLIAM E. SIMPSON, Highland Park, Mich. Filed Sept. 10, 1920. Serial No. 409,435. 8 Claims. (Cl. 188—187.)



5. In a hoist, the combination with a housing of a driving shaft rotatably mounted therewithin, fixed and rotary brake elements coaxial with said driving shaft, a governor weight controlled by the rate of rotation of said driving shaft for variably forcing said fixed and rotary brake elements into frictional engagement with each other, and means on said governor weight for propelling an air current through said housing to cool said brake elements.

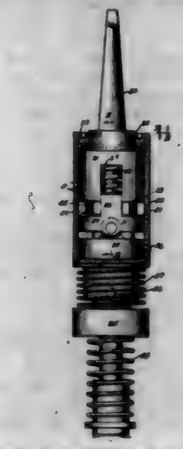
1,537,625. DRYING APPARATUS. BRONSON C. SKINNER, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed June 14, 1922. Serial No. 568,351. 5 Claims. (Cl. 34—1.)



2. Fruit treating apparatus comprising the combination, with parallel sloping revolubie brush rolls arranged in pairs cooperating to provide fruit runways, means for delivering fruit to said runways, and means for forcing a current of a fluid drying medium along said runways counter current to the advancing fruit.

1,537,626. GEAR-LAPPING MACHINE. GEORGE W. SPONABLE, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 20, 1923. Serial No. 626,360. 16 Claims. (Cl. 51—26.)

1. In a gear lapping machine, the combination of a rack carriage comprising a drum, a gear carriage constructed to mount an unlapped gear and hold it in mesh with the rack, and means for effecting relative rotation of the drum and the gear carriage, substantially as and for the purpose described.



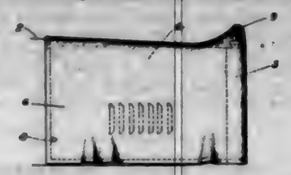
1,537,627. SPEED-REGULATOR SYSTEM. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1919. Serial No. 288,709. 8 Claims. (Cl. 172—274.)

1. In a speed-regulator system for an induction motor having a wound rotor and a plurality of resistors located in the circuit of the rotor, a contact-making voltmeter, means for operating said contact-making voltmeter in accordance with the speed of the motor, means comprising a switch controlled by said voltmeter for quickly establishing a short-circuit around said resistors, and means for preventing a hunting action by the regulator.

1,537,628. TOOL HOLDING AND DRIVING MECHANISM. JAMES A. STREET, Detroit, Mich., assignor of one-half to Hugo C. Zeits, Clarksburg, W. Va. Filed Oct. 30, 1922. Serial No. 597,713. 12 Claims. (Cl. 10—135.)

3. In a device of the class described, in combination, a driving member, a driven tool-holding member, rollers carried by one of said members, a bearing plate for said rollers carried by said other member provided with depressions within which said rollers may engage to couple said members together to rotate as one piece, spring means holding said rollers under pressure to engage in said depressions yieldable under imposition of a determined resistance to rotation upon said tool-holding

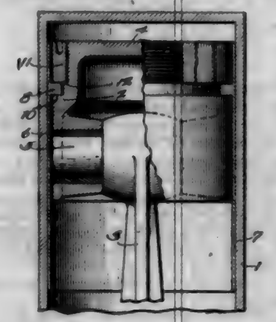
member to permit disengagement of said rollers from said depressions, and means operable to prevent re-engagement of said rollers in said depressions during the continuance of rotation of said driving member.



1,537,629. COUPLING MECHANISM. JAMES A. STREET, Detroit, Mich., assignor of one-half to Hugo C. Zeits, Clarksburg, W. Va. Filed Aug. 25, 1923. Serial No. 659,328. 9 Claims. (Cl. 192—56.)

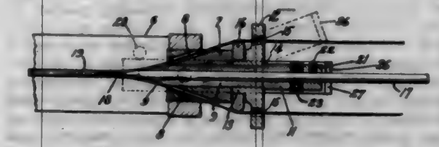
1. In a device of the class described, a driving member, a driven member, a coupler plate having a diametrical recess carried by one member, a coupler device carried by the other member and receivable within said recess to couple said members together to rotate as one piece, a fillet receivable within said recess to fill the same to the exclusion of the coupler device, a fillet control member operable when rotated in one direction to engage the fillet to remove it from the recess to permit the coupler device to egage therein and adapted when rotated in the opposite direction to travel freely over the fillet.

1,537,630. MOTOR ROBE. HENRY TRAGLE, Minneapolis, Minn. Filed Dec. 27, 1921. Serial No. 525,245. 2 Claims. (Cl. 257—132.)



1. A motor robe folded along its middle line and closed at the forward end and top and adapted to be

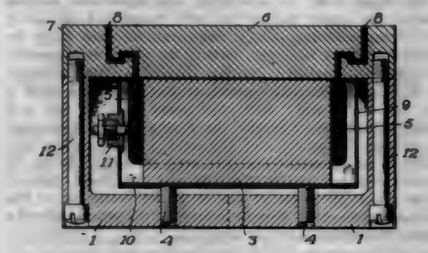
placed over a hood and radiator, with its side portions hanging down loosely on each side of the hood, the rear



end of said cover having clips thereon for engaging the end of the hood, and the middle portion of said cover lying loosely on the hood.

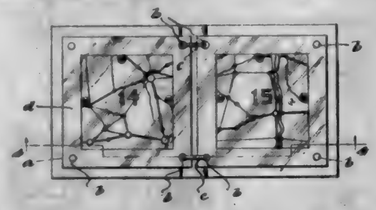
1,537,631. PISTON. RALPH R. TRETOR, Hagerstown, Ind. Filed May 17, 1924. Serial No. 713,995. 1 Claim. (Cl. 74—108.)

The combination with a hollow member having a cylindrical bore; of a piston including a body member and a cylindrical sleeve of spring material in sliding fit with the hollow member within its bore, said sleeve having an internal shoulder formed at an intermediate part thereof seated upon the body member of the piston; a nut screwed upon the piston body member into close but non-clamping relation with said shoulder to retain said shoulder close to its seat, said sleeve being split lengthwise to make it transversely expansible and contractible with respect to said body member to maintain its fit with said hollow member.



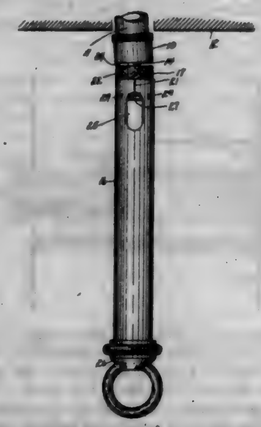
1,537,632. WIRE-COILING MACHINE. EDWARD TURGEON, Minneapolis, Minn., assignor of one-half to Salisbury & Satterlee Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 20, 1923. Serial No. 633,478. 12 Claims. (Cl. 153—64.)

1. A coil-forming head having guides for strands and a core mounted in said head for rotation with the strands or coil thereon.



1,537,633. MAGNETIC CHUCK. OAKLEY S. WALKER and ISAAC FOWLER WILLIAMS, Worcester, Mass., assignors to O. S. Walker Co., Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 31, 1919. Serial No. 286,422. 5 Claims. (Cl. 175—367.)

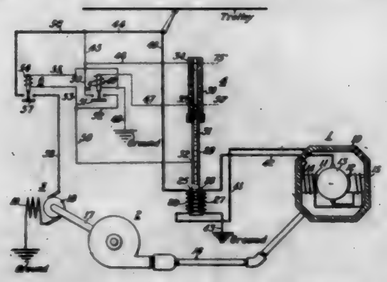
1. In a magnetic chuck, a shell having a detachable face plate, a multiple core casting supporting a plurality of coils above the bottom of said shell, and a thin shield of non-magnetic material surrounding said casting to prevent the access of moisture to said coils from the joint



between said shell and said face plate, while permitting the passage of magnetic flux between said core and said face plate.

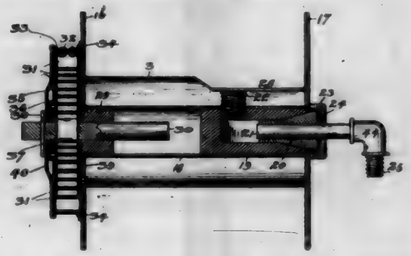
1,537,634. ROAD MAP. HAZEN E. WATSON, Detroit, Mich. Filed July 26, 1923. Serial No. 653,856. 9 Claims. (Cl. 35—6.)

9. In a road map, a loose leaf binder, a plurality of square map sections, and means for temporarily binding the said sections in the loose leaf binder in any one of four positions, whereby a proposed route may be laid out in the proper sequence.



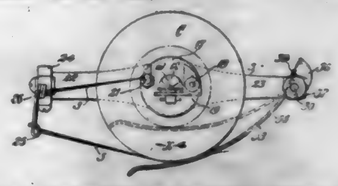
1,537,635. INSULATED SUSPENSION STEM FOR ELECTRIC-LIGHTING FIXTURES. ARTHUR W. WELLINGTON, Waterbury, Conn., assignor to Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Sept. 5, 1923. Serial No. 661,030. 1 Claim. (Cl. 240—85.)

In an insulated suspension-stem for electric lighting fixtures, the combination with an internally-threaded cap formed in its lower end with a stud-receiving opening, of a tubular stem provided at its upper end with an in-



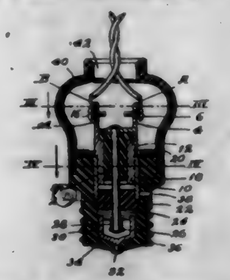
wardly-turned, annular flange, a non-rotatable insulating suspension-washer located within the upper end of the stem in position for the said flange to rest upon the edge of its upper face, an insulating spacing-washer located between the upper face of the said flange and the lower face of the said cap, and a non-rotatable stud made independent of the said cap, having its upper end inserted into the stud-receiving opening thereof, passing through the said washers, and formed at its lower end with a head for engagement with the lower face of the said suspension-washer, whereby the several parts mentioned are coupled together, and the said washers being proportioned in thickness and the stud in length to create a space between the said flange and the lower face of the said cap in excess of the combined thickness of the spacing-washer and flange, whereby the stem may be canted with respect to the cap.

1,537,636. ELECTRICAL SYSTEM. CHARLES C. WHITTAKER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1919. Serial No. 345,632. 7 Claims. (Cl. 175—294.)



1. The combination with a translating device, of a thermal device adapted to be heated at the same rate as said translating device, means for artificially ventilating the translating device, and means governed by the thermal device for effecting the operation of said ventilating means between predetermined temperature limits of said translating device.

1,537,637. SELF-REELING HOSE REEL. CLIFFORD A. JARVIS, Rushville, Ind. Filed Sept. 21, 1923. Serial No. 664,107. 3 Claims. (Cl. 299—78.)

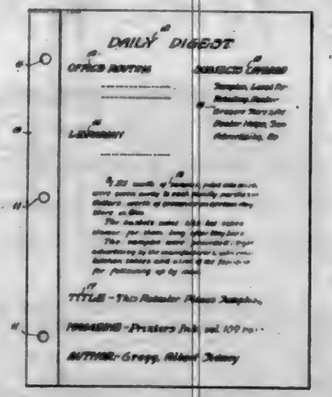


1. In a hose reel, a pair of parallel disks, a cylindrical drum uniting the disks, a pipe within the drum also uniting the disks, a plug in one end of the pipe having a bore in the axis of rotation of the drum, a fixed shaft in the bore upon which that end of the drum rotates, a spring coiled around the shaft and having its inner end fastened to the shaft, means for fastening the other end of the spring to the drum, a cylinder in the other end of the pipe having a bore in the axis of the drum, a lateral hose connection connecting with the inner end of the bore, said bore being expanded outwardly near the outer end which end projects through the adjacent disk and is screw-threaded, a correspondingly tapering plug seated in the expanded bore of the cylinder, a cap screwing on the threaded end of the cylinder and regulating the pressure of the plug in its seat, a gasket between the cap and plug, and a pipe connected with a water supply and the plug and discharging longitudinally through the plug.

1,537,638. TENSION DEVICE FOR WRAPPING AND TWISTING MACHINES. RUDOLPH H. JENNY, Rome, N. Y. Filed June 6, 1924. Serial No. 718,269. 7 Claims. (Cl. 117—43.)

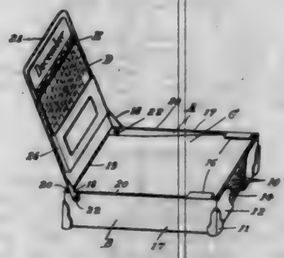
1. In a tension-drive for wrapping, twisting and like machines, the combination of a revolving flier, means for supporting a cop or package of strand material to adapt it to rotate on the axis of the flier, tension-means pivoted on an axis parallel with the axis of the flier to adapt it to swing toward the axis of the cop, means acting on the tension-means to cause it to bear against the periphery of the cop, and a counter-weight acting on the tension-means to resist the action of centrifugal force tending to swing said tension-means outwardly away from the cop.

1,537,639. SWIVEL COUPLING. JOHN M. JOHNSON, Kansas City, Mo. Filed Dec. 28, 1923. Serial No. 683,157. 4 Claims. (Cl. 173—359.)



1. In a device of the character described an inner conductor adapted to be connected to a circuit wire, a tubular conductor insulated from but extending around the inner conductor and adapted to be connected to a circuit wire, a second tubular conductor rotatably connected to the first tubular conductor and abutting a shoulder thereon, an insulator separating said second tubular conductor and the inner conductor, a metallic plate mounted on the inner conductor and bearing against said insulator, and spring means embracing the inner conductor and bearing against said metallic plate to yieldably hold the second tubular conductor in engagement with the shoulder of the first conductor.

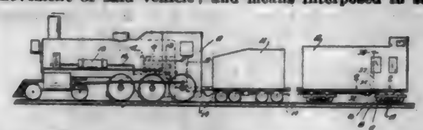
1,537,640. INFORMATION-DISPENSING SET. KARL G. KARSTEN, New York, N. Y. Filed Feb. 19, 1920, Serial No. 359,914. Renewed Oct. 22, 1924. 3 Claims. (Cl. 283—56.)



1. An article to be used in a method of distributing and filing information, including a temporary sheet or newspaper constituting a daily digest sheet designed to be

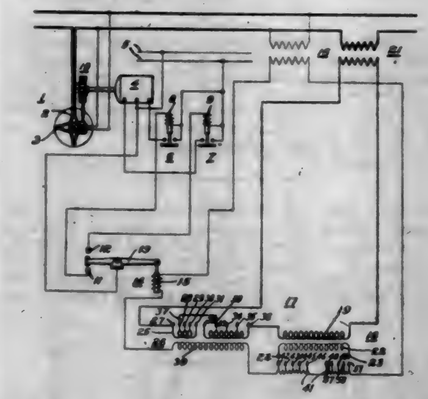
thrown away when read, said sheet provided with a writing thereon and which writing includes a text of the information distributed, a main classification title and a plurality of sub-titles, a plurality of permanent cards, one for each sub-title on the daily digest sheet, each card having certain writing thereon, being each a duplicate of the writing on every other card, said writings

including the text of the information on the daily digest sheet together with the main classification title, and which cards differ from each other in that each card has prominently displayed along the upper edge thereof the text of one of the sub-titles on the daily digest sheet, said cards and sheet adapted to be assembled for mailing as a unit.



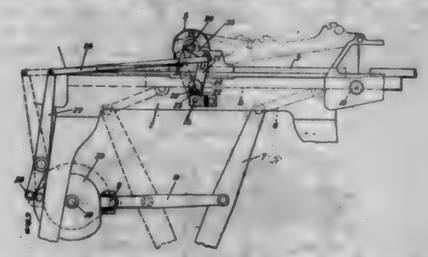
1,537,641. HANDY PAD. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Dec. 20, 1920. Serial No. 431,984. 4 Claims. (Cl. 206—39.)

1. A handy pad comprising a receptacle adapted to collectively support a pad of memorandum sheets and a cover hingedly secured by integral depending ears to the sides of the same in a manner to cause the attached edge of said cover to engage the upper edge of said receptacle to form a shoulder for supporting said cover at an angle in relation to said receptacle when the same is open.



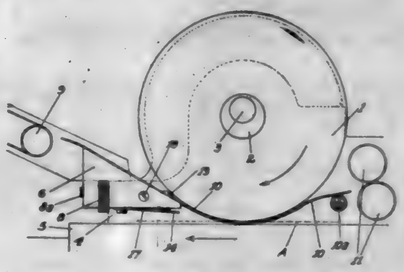
1,537,642. COMBINATION PNEUMATIC BRAKE AND PROPELLING MECHANISM. WILLIAM J. LAUFER, Chicago, Ill. Filed May 5, 1924. Serial No. 711,280. 7 Claims. (Cl. 105—64.)

1. In a train, the combination with the locomotive and its reservoir, a vehicle and an air-brake line extending from said reservoir to said vehicle; of means mounted on said vehicle and actuated by the air from said air-brake line for operating on a rotatable member of said vehicle selectively in reversed directions to modify the movement of said vehicle; and means interposed in said



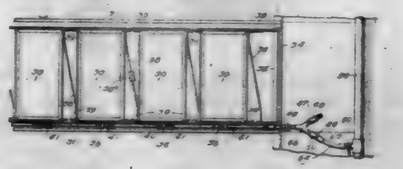
brake line and mounted in said locomotive for heating the air while passing from said reservoir to said means on the vehicle.

1,537,643. REGULATOR SYSTEM. EDWIN E. LEHR, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1921. Serial No. 501,144. 9 Claims. (Cl. 171—119.)



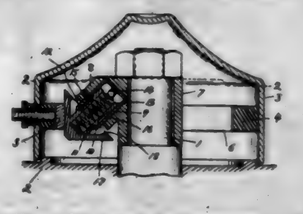
3. In a regulator system for a supply circuit, the combination with an induction regulator having control means therefor energized in accordance with the voltage of said circuit, of means adapted to affect the operation of said regulator to compensate for load variation upon said circuit comprising a plurality of transformers, one of which has a variable winding, a variable resistor and means for varying said transformer winding and said resistor.

1,537,644. PRINTING-RIBBON-WINDING MECHANISM FOR PRINTING PRESSES. CHARLES L. LOW, Fresno, Calif., assignor to Lisenby Manufacturing Company, Fresno, Calif., a Corporation. Filed July 1, 1924. Serial No. 723,514. 13 Claims. (Cl. 101—281.)



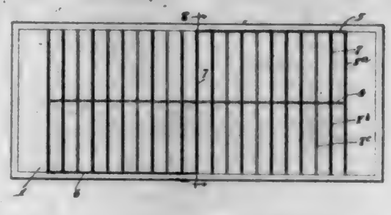
1. In a printing press having a reciprocating moving bed and longitudinally spaced ribbon spools mounted thereon, means for reciprocating the bed, pinions associated with the spools, and a single member for selectively engaging and advancing either at a time of the pinions with the reciprocation of the bed.

1,537,645. PAPER EJECTOR FOR PRINTING PRESSES. CHARLES L. LOW, Fresno, Calif., assignor to Lisenby Manufacturing Company, Fresno, Calif., a Corporation. Filed Aug. 26, 1924. Serial No. 734,214. 7 Claims. (Cl. 271—51.)



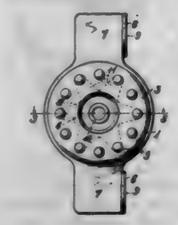
1. A sheet ejector for printing presses having a rotary printing cylinder, including a guide finger to receive a sheet after passing under the cylinder, a ball mounted in connection with the finger intermediate the ends thereof and projecting thereabove for engagement with the cylinder, and means for positively adjusting the extent to which said ball will project.

1,537,646. ART OF MANUFACTURING ICE. OTTO LUHR, Chicago, Ill., assignor to Luhr & Friedl, a Partnership composed of Otto Luhr and Herman Friedl, Chicago, Ill. Original application filed July 11, 1921, Serial No. 483,938. Divided and this application filed Sept. 20, 1924. Serial No. 738,807. 8 Claims. (Cl. 62—172.)



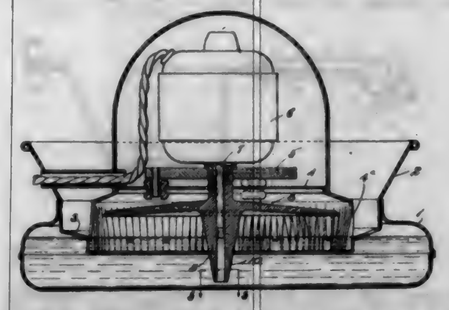
7. The method of manufacturing ice which consists in charging water into the can in which ice is to be formed, freezing the water therein, and thereafter dumping the ice cake from the can and recharging the can with water to be frozen to form another cake therein, and continuously supplying air under pressure to the interior of said can during all of said operations.

1,537,647. TIMER. ALBERTUS W. MCCALMONT and FRANK BRISCOE, Pontiac, Mich.; said McCalmont assignor to said Briscoe. Filed May 21, 1923. Serial No. 640,537. 7 Claims. (Cl. 200—26.)



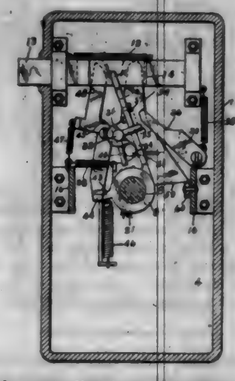
3. In a timer for internal combustion engines, the combination with a ring having alternate segments of insulating and conducting material, of a concentric rotatable shaft, an arm secured to said shaft, a member rotatable about an axis transverse to said shaft and at an angle to the plane of said ring, a spring for yieldingly holding said member in contact with said ring, and a ball between one end of said spring and said arm to allow free rotation of said spring with said member.

1,537,648. GAME APPARATUS. CYRUS D. MCCARRON, Los Angeles, Calif. Filed June 7, 1923. Serial No. 643,896. 3 Claims. (Cl. 273—94.)



2. In a game apparatus for playing "foot ball", a board representing a foot-ball field and having a plurality of transverse divisions representing 5-yard lines, said board having a row of pin-holes on the field extending longitudinally thereon, a pin representing the "foot ball" and constructed so as to be removably mounted in any one of the pin-holes, a second row of pin-holes extending along one edge of the board from one end and terminating at the middle of the board, a marker corresponding to the last named row of holes and constructed to be removably mounted in the holes to indicate yards to be gained by the player at the adjacent end of the board, who has the "ball" in play, a third row of pin-holes located on the opposite edge of the board and extending from the opposite end and terminating at the middle of the board, a marker corresponding to the last named row of pin-holes and constructed to be removably mounted in the holes to indicate yards to be gained by the player at that end of the board when he has the "ball" in play.

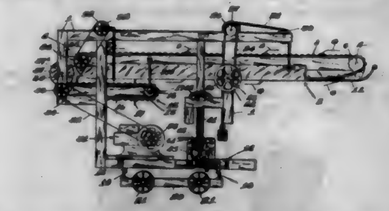
1,537,649. HINGE. JAMES MCGLASHAN, York, Pa., and CARL ROBERT SWENSON, Indianapolis, Ind., assignors to Martin-Parry Corporation, York, Pa., a Corporation of Delaware. Filed June 13, 1924. Serial No. 719,878. 11 Claims. (Cl. 16—140.)



9. A hinge comprising a pair of hinge members composed of metal stampings having dished face portions and an attaching portion extending from each face portion at opposite sides thereof, separated sockets in each dished face portion disposed in a circular row, a friction member between said face portions, spring arms projecting alternately on opposite sides of said friction member, rounded protuberances projecting from said spring arms on the sides thereof near the outer ends of said arms adapted to enter said sockets in said face portions, and a pivot element uniting said hinge members and serving to hold said spring arms under tension.

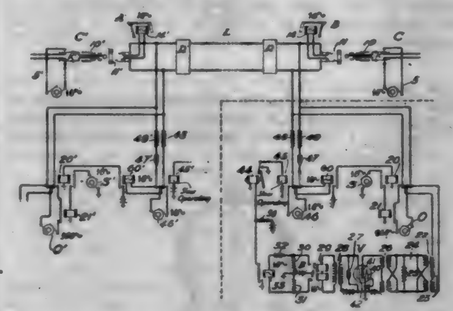
1,537,650. HUMIDIFIER. BERTRAM M. MILLS, Pawtucket, R. I. Filed Mar. 13, 1924. Serial No. 698,884. 6 Claims. (Cl. 261—91.)

1. A portable humidifier comprising a fluid receptacle, an atomizing element, means for feeding fluid from the receptacle to the atomizing element, means for rotating the atomizing element, and means tending to vary the resistance of the atomizing element to rotation in inverse ratio to the height of the water level in the container.



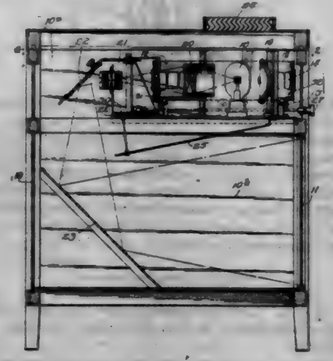
1,537,651. COIN-CONTROLLED LOCK. DONALD C. MORGAN, Indianapolis, Ind., assignor to American Sanitary Lock Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed June 17, 1922. Serial No. 569,039. 11 Claims. (Cl. 194—65.)

1. In a coin controlled lock, a latching ward, a tumbler for engaging and operating said ward, normally operative means for preventing the operation of said tumbler, means carried by the tumbler and relatively movable thereon for temporarily supporting a coin in operative position on said tumbler to render said first mentioned means inoperative, means for normally retaining the supporting means in position to support a coin, and means for causing movement of the coin support on the tumbler for releasing the coin when the tumbler operates the ward.



1,537,652. MANURE-LOADING MACHINE. MORRIS H. MULKIN, Syracuse, N. Y. Filed Nov. 28, 1919. Serial No. 341,123. 1 Claim. (Cl. 198—8.)

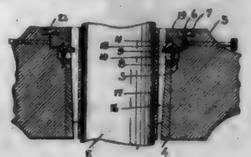
In a loading machine, a main frame, a conveyor having an endless belt and comprising a frame pivoted to the main frame and extending in a general horizontal direction and being movable about its pivot into different inclinations out of the horizontal, a second conveyor extending under the pivoted end of the first conveyor comprising a frame pivoted to the main frame, the frame of the second conveyor being connected to the frame of the first conveyor to move in parallelism therewith during pivotal movement of the first conveyor, means for elevating and lowering the free end of the



first conveyor, and means for actuating the conveyors whereby their opposing sides run in the same direction, substantially as and for the purpose described.

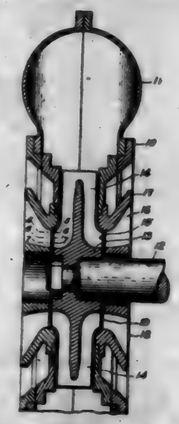
1,537,653. SIGNALING SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1921. Serial No. 514,203. 17 Claims. (Cl. 179—43.)

4. The method of signaling which comprises modifying a single frequency essential in speech at a lower frequency rate, transmitting the modified current, rectifying the modified current, and translating the rectified current into a signal.



1,537,654. PROJECTING APPARATUS. CHARLES A. NASH, Chicago, Ill. Filed Jan. 2, 1923. Serial No. 610,318. 9 Claims. (Cl. 88—27.)

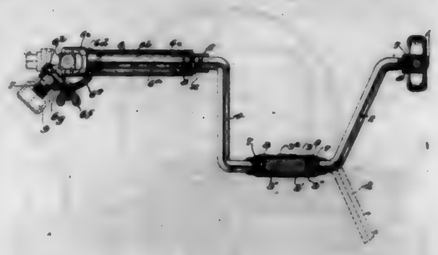
1. In a device of the character described, a flexible cylindrical slide carrier rotatably mounted, and a roller immovably mounted with respect to the slide carrier and in contact with its inner side at a point close to the slide



in display position, the periphery of said roller where in contact with the slide carrier lying outside of the normal circular shape of said slide carrier, whereby said slide carrier where in contact with said roller is pressed slightly out of its normal cylindrical shape.

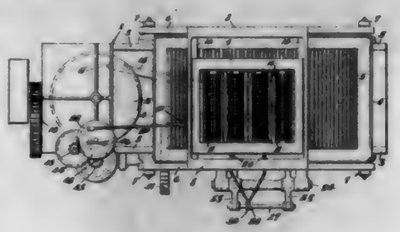
1,537,655. ADJUSTABLE BEARING. FRANK BRICKIE, San Francisco, Calif. Filed Dec. 18, 1923. Serial No. 681,400. 4 Claims. (Cl. 64—55.)

1. An adjustable bearing assembly comprising bearing brasses and a wedge shaped bushing, a plurality of wedge blocks mounted between the brasses and bushing and movable in a direction defined by their longitudinal axes, a plurality of rotatable wedging members formed with interengaging teeth and disposed in a plane at right angles to the blocks and operable thereupon to move the blocks whereby to adjust the position of the same between the brasses and bushing for the purpose defined.



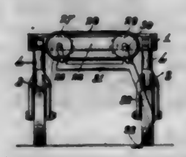
1,537,656. CENTRIFUGAL COMPRESSOR. ALFRED A. BROOKS, Wellsville, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1922. Serial No. 561,397. 3 Claims. (Cl. 230—11.)

1. The combination with a centrifugal compressor having an impeller which has an axially facing inlet at its central portion and a peripheral discharge, of stationary guide vanes for directing fluid to the inlet, said vanes being twisted to provide helicoidal surfaces such that the resultant relative velocities between the absolute velocity of the fluid at the exit edges of the vanes and the velocities at the entrance edges of the eye of the impeller are substantially axial.



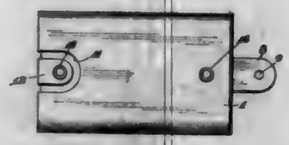
1,537,657. COMBINATION TOOL. LAWRENCE A. RUBCH, Jamestown, N. Y. Filed Dec. 7, 1922. Serial No. 605,457. 3 Claims. (Cl. 81—177.)

1. A tool of the class described comprising a detachable shank section provided with an angular male end, a handle rotatably mounted upon the other end of said section, a coupling section having sockets at its opposite ends into either of which said male end is interchangeably disposed, a second shank section provided with an angular male end to fit the sockets of the coupling section, a grip piece rotatably mounted upon said coupling



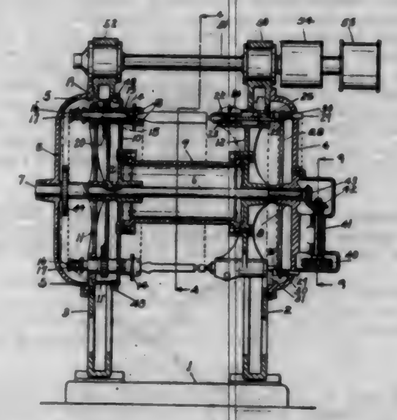
section, and a tool carrier constructed to be detachably interlocked with one end of said second shank section or with an end of the coupling section.

1,537,658. GEAR-LAPPING MACHINE. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 2, 1923. Serial No. 622,407. 13 Claims. (Cl. 51—26.)



1. In a gear lapping machine, the combination of a rack, a gear carriage constructed to rollably mount a gear blank and hold it in mesh with the rack, and means for effecting relative movement of the rack and carriage in directions at an angle to the axis of the blank substantially as and for the purpose described.

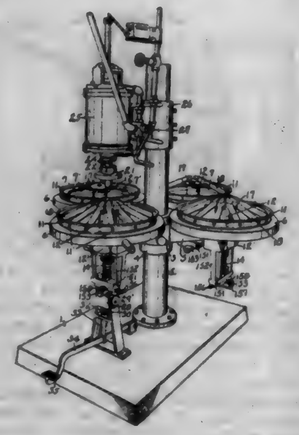
1,537,659. BLOCKER FOR GROWING VEGETATION. STEPHEN DONNER, Toledo, Ohio, assignor of one-half to John M. Gould, Hastings, Mich. Filed Apr. 20, 1922. Serial No. 555,787. 5 Claims. (Cl. 97—18.)



1. In vegetation cutting apparatus, a cutting instrument comprising a channel bar pitman having perforated ears adapted to engage wrist pins of actuating cranks, each of the ears being formed with a slot extending from its perforation to its exterior for enabling application and removal of the ears to and from the wrist pins, blocks detachably connected to and within the channel of the pitman for closing said slots, and cutting means carried by the pitman.

1,537,660. ELECTRICAL CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser and Radio Corporation, a Corporation of Delaware. Filed Jan. 31, 1924. Serial No. 689,754. 8 Claims. (Cl. 250—41.)

1. A condenser comprising a stack, a flattened tubular casing enclosing the stack, the stack comprising conductive elements, the casing having a recess at one end, a clip secured to the stack and located within said recess, said clip being connected to part of said conductive elements, and a terminal for the remainder of the conductive elements.

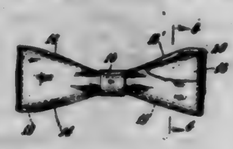


1,537,661. AUTOMATIC SPOKE-TURNING MACHINE. HENRY FLICK, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed Oct. 4, 1921 Serial No. 505,241. 10 Claims. (Cl. 142—5.)

1. The combination with a multiple spindle spoke lathe, of chucks for the spindles thereof comprising opposite and transversely disposed rollers, spring means for pressing the tail centers against the billets, a cam for withdrawing the same and releasing the tail centers for automatically spearing the ends of the spokes, a rotary cutter for rough cutting the spokes as they are swung past the same, dado saws carried by the said cutter between the blades for forming the tenon end of the spoke, a finishing cutter head with a large number of cutters for giving the spoke a finishing cut, and a sander belt disposed on suitably conformed rolls corresponding to the spoke for sanding the same, all coacting as specified.

1,537,662. WHEEL-MANUFACTURING MACHINE. HENRY FLICK, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed Oct. 4, 1921. Serial No. 505,244. 7 Claims. (Cl. 157—1.)

1. A machine for assembling wheels comprising a turntable with a plurality of arms, a circular table carried by each arm, a depressible central locating ring for receiving an expanded felly outside thereof and provided with spoke notches to receive spokes, a depressible plunger center with radial arms for receiving the spokes, a plunger with tapered plug for engaging the inner

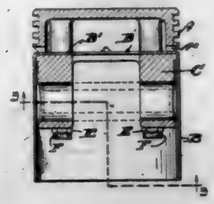


ends of the spokes and with a flange for pressing the same to position, means for actuating the plunger, and means for locating the tables successively under the plunger, coacting as specified.

1,537,663. PROCESS OF PRODUCING DECORATIVE EFFECTS ON GLASS. WILLIAM FOX, Detroit, Mich. Filed June 13, 1924. Serial No. 719,743. 2 Claims. (Cl. 91—68.)

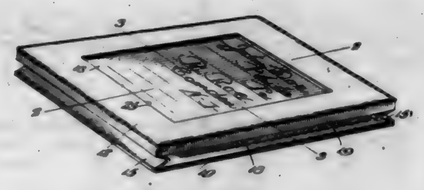
1. A process of producing decorative effects on glass comprising applying drops of paint of various colors on the reverse side of dry clean glass and applying air thereto from varying angles.

1,537,664. BOW TIE. LOUIS FRIEDMAN, New York, N. Y., assignor to Friedman Bros. & Sons Neckwear Co., Inc., New York, N. Y. Filed Sept. 4, 1923. Serial No. 660,709. 3 Claims. (Cl. 2—154.)



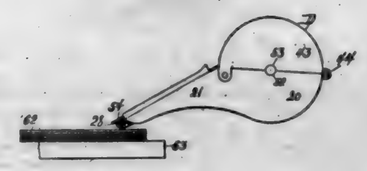
1. A bow tie comprising a single length of material having the ends thereof turned back over the intermediate portion, rows of stitching securing the said end and intermediate portions together adjacent their edges, and pockets formed between the end and intermediate portions, said rows of stitching being omitted at certain points along the top edge of the tie to form the mouths of the said pockets.

1,537,665. PISTON. FREDERICK H. FRUB, Detroit, Mich. Filed Aug. 28, 1924. Serial No. 734,585. 2 Claims. (Cl. 74—108.)



1. A piston comprising a head portion of relatively light metal; a skirt adapted to closely fit the cylinder wall having an inwardly directed flange overlapping the inner end of the head; a boss-plate fitting supported within the skirt having a flange overlaying the flange

of the skirt and co-operating with the end of the piston head to grip the flange of the skirt and also to serve as an oil baffle plate, the downwardly directed portion of said boss-plate fitting in which the wrist pin is



mounted being in spaced relation to the wall of the skirt, and a plurality of studs connecting the head with the boss-plate fitting and extending through the flange of the skirt, whereby the flange of said skirt is gripped between the boss-plate fitting and the piston head.

1,537,666. LOOSE-LEAF HOLDER. JAMES L. GARFIELD, Drexel Hill, Pa. Filed Feb. 12, 1925. Serial No. 8,619. 3 Claims. (Cl. 129—35.)

1. A loose leaf holder comprising a rigid base, a cover-plate having a central, rectangular opening, a flexible and expansible member connecting three sides of said base and cover-plate, the fourth side being open, and a stack of loose leaves between said base and cover-plate, said cover-plate being relatively heavy so that the weight thereof maintains said stack of loose leaves in position for the opening in said cover plate.

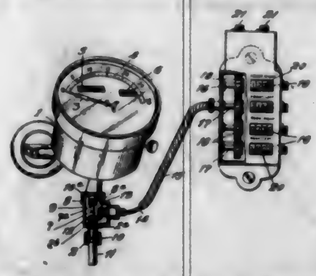
1,537,667. STAMP AFFIXER. ASHER GOLDEN and ELLIS M. POTTER, New York, N. Y. Filed Apr. 18, 1922. Serial No. 552,091. 2 Claims. (Cl. 216—33.)

1. In an affixer of the character described the combination of a compartment, a cover having an opening in one of its walls hinged to a wall of the compartment, a pin for the roll of a strip of material journaled in the side walls of the compartment and cover, a guide plate extending from the compartment, guide flanges over the guide plate, a reservoir for a fluid below the guide plate and outside of the said compartment, and a pocket extending into the reservoir, said pocket having openings leading into the reservoir and a moistening pad detachably supported in the pocket.

1,537,668. ELECTRIC DETONATOR FOR USE UNDER HIGH PRESSURES. HARRY L. GRANT, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 24, 1924. Serial No. 757,847. 4 Claims. (Cl. 102—7.)

1. In a device of the character described the combination with a casing carrying an explosive charge and detonating cap of a pressure resisting closure for said casing having current conducting means passing therethrough, said current conducting means being sealed into said closure by a dielectric body consisting of a powdered material compressed therein under extremely high pressure, said casing being provided with an internal, substantially horizontally disposed grooved portion, into which some of said material is forced, to thereby interlock the dielectric material with the closure.

1,537,669. METHOD OF MAKING CANDY SHELLS. CHARLES R. GRIFFITH, New York, N. Y. Filed Dec. 5, 1923. Serial No. 678,721. 6 Claims. (Cl. 107—54.)

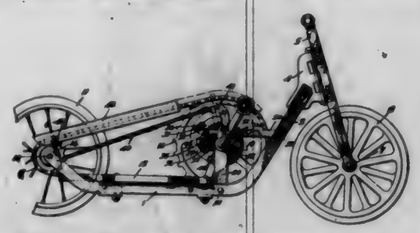


1. The method of making a chocolate shell consisting of pouring molten chocolate into a mold, placing a cover having an opening therein of less diameter than that of the open end of said mold over said mold, inverting said mold with said cover and allowing the greater part of the molten chocolate to drain from said mold, re-inverting said mold and cover, allowing the chocolate to set, removing said cover, and removing the shell from said mold.

2. The method of making a hollow chocolate shell, having an opening in the base thereof comprising casting a molten chocolate shell in the same manner as though it were to be made solid, and inverting the casting while allowing said casting to drain only near the center thereof.

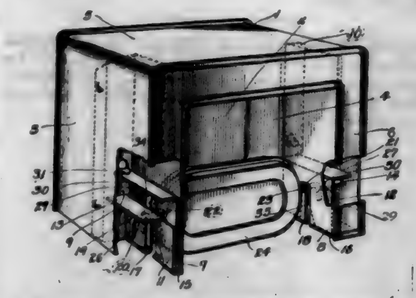
1,537,670. TIRE METER AND DRIVING MECHANISM FOR SUCH INSTRUMENTS AND THE LIKE. WILLIAM P. HAMMOND, East Orange, N. J. Original application filed May 22, 1916, Serial No. 99,088. Divided and this application filed Dec. 24, 1921. Serial No. 524,583. 4 Claims. (Cl. 74—7.)

1. The combination with a flexible power transmitting shaft provided at one end with an instrument, disconnectable means between said flexible driving shaft and said instrument, and an adapter interposed between the flexible shaft and the instrument, said adapter having



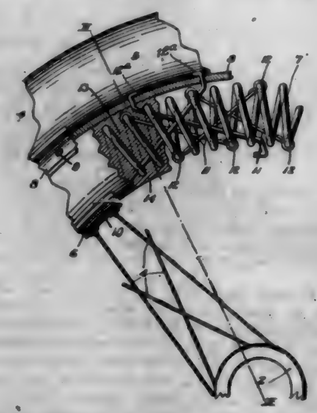
means cooperating with said shaft and instrument and driven in synchronism therewith and a second shaft connected at one end to said adapter and a second instrument connected to and driven from said second shaft.

1,537,671. ENERGY-CONVERTING ELECTRICAL INSTRUMENT. CLARENCE WILSON HEWLETT, Iowa City, Iowa, assignor, by direct and mesne assignments, to General Electric Company. Filed Sept. 9, 1920. Serial No. 409,212. 12 Claims. (Cl. 179—112.)



3. A telephone instrument comprising a fixed pancake coil and a diaphragm consisting of a sheet of non-magnetic conducting material adjacent and parallel thereto covering substantially the entire area of the coil.

1,537,672. CHILD'S VEHICLE. EDWARD J. HIBNER, Hamilton, Ohio, assignor to Clara A. Hibner, New York, N. Y. Filed Feb. 14, 1923. Serial No. 619,027. 5 Claims. (Cl. 280—36.)



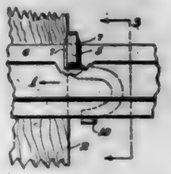
1. In a treadle propelled vehicle, a vehicle frame having two rear wheels and a front steering wheel, a single treadle operable crank shaft journaled upon the frame, a pawl and ratchet propelling mechanism operable by said crank shaft, a rod connected with the pawl for disengaging the pawl from its ratchet, a stop engageable by the rod, at the end of the retreat stroke of said pawl and crank shaft, for disengaging the pawl, and chain transmission means connecting said ratchet mechanism with one of the rear wheels.

1,537,673. PAPER-ROLL HOLDER. NEWTON S. HILLYARD, St. Joseph, Mo. Filed Nov. 26, 1923. Serial No. 676,930. 7 Claims. (Cl. 211—31.)

1. A paper roll holder comprising a bracket, having spaced in walls with vertical slots extending from the bottom edges of the end walls, the upper ends of the slots terminating in offset bearing notches, a core having journals receivable in the notches and removable through the slots and vertically movable dogs, each movable in one position to open the slots and movable in the opposite position to close the slots to hold the journals in the bearing notches.

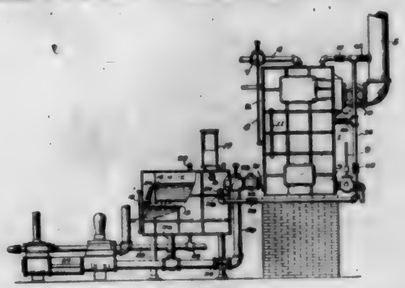
1,537,674. VEHICLE WHEEL. SMITH A. HOOE, Rices Landing, Pa. Filed July 8, 1921. Serial No. 483,150. 16 Claims. (Cl. 152—32.)

10. In combination, an annular spiral spring, tie members connecting outer portions of some of the spiral coils thereof with inner portions of other spiral coils, a continuous filling of resilient material, and an outer enclosing lamina.



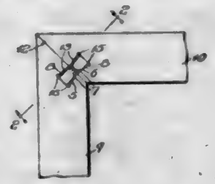
1,537,675. LOOSE-LEAF BINDER. HENRY STANLEY HORN, East Orange, N. J. Filed Jan. 12, 1923. Serial No. 612,195. 2 Claims. (Cl. 129—1.)

1. A loose leaf binder having a spring plate having means for attachment at one end to the binder, a perforation in its other end, a tongue carried by the binder for entering said perforation, and an abutment below



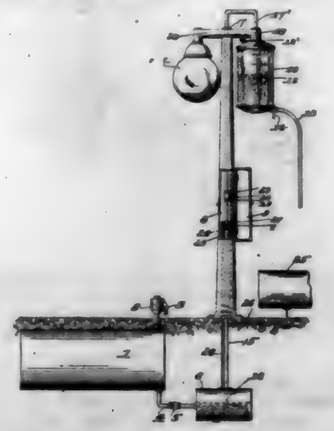
the tongue and below the end of the spring plate against which said end contacts, said abutment comprising depressed portions formed of the same piece of metal as forms the tongue.

1,537,676. RAIL ANCHOR FOR RAILROAD RAILS. JACOB ALVIN HYLE, Philadelphia, Pa., assignor to The Rail Anchor Company, a Corporation of Delaware. Filed Nov. 30, 1923. Serial No. 677,686. 9 Claims. (Cl. 238—330.)



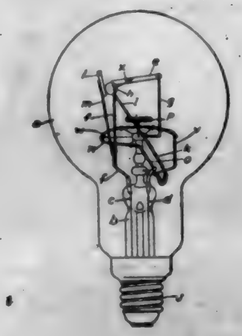
1. A rail anchor comprising a headed portion formed with an overlapping jaw and a downwardly extended member at one end thereof, an upward extension formed at its other end, and an intermediate laterally extended resilient hook-shaped portion.

1,537,677. RETARDED HEATER AND METER CONNECTION. WILLIAM STEELL JACKSON, Bala, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 27, 1919. Serial No. 307,157. 6 Claims. (Cl. 137—78.)



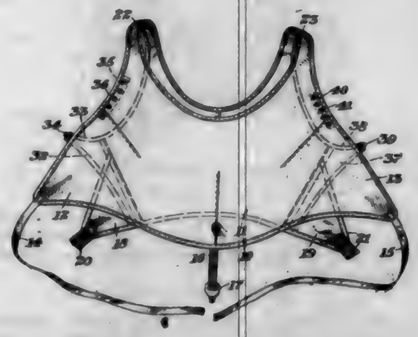
1. In an open feed water heater and weir meter assemblage in which the water space of the feed water heater is connected with the inlet or weir section of the meter and the feed water for boilers is withdrawn from the catch basin section of the meter, the novelty which consists in connecting the steam space of the feed water heater with one of the water spaces of the meter at a point below the water level in said water space.

1,537,678. FASTENING DEVICE. CARL C. JENSEN, Chicago, Ill. Filed June 18, 1923. Serial No. 646,048. 2 Claims. (Cl. 20—92.)



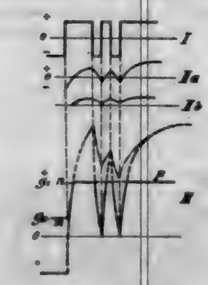
1. A fastening device comprising a pair of channels having webs secured together back-to-back, and flanges projecting from said webs and forming tenons, said flanges having out-turned margins.

1,537,679. GASOLINE-DISPENSING APPARATUS. THOMAS A. KILLMAN and CHARLEY S. NICKS, Nashville, Tenn. Filed Nov. 27, 1922. Serial No. 603,646. 2 Claims. (Cl. 221—100.)



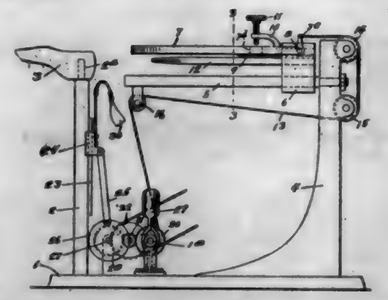
1. A gasoline dispensing apparatus, embodying in connection with a storage tank, a supply tank and air compression means, a vertical hollow support, a horizontal arm mounted on the upper end of said support, a lighting means depending from one end of said arm, a visual measuring container depending from the other end of said arm and illuminated by said lighting means, an opening in said hollow support having a closure, a scale in view of said opening having a series of vertically arranged holes, a vertical gasoline delivering pipe having its intermediate portion in said support, its lower end dipping in said supply tank and having an elbow terminating and discharging in said visual measuring container, a control means for said gasoline delivering pipe, a handle carried by said pipe for raising and lowering it to the desired point, and a stop carried by said handle to engage one of the holes on said scale to secure the pipe at the exact adjustment.

1,537,680. INCANDESCENT-ARC DEVICE. GÜNTHER KLAHRE, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed July 28, 1924. Serial No. 728,530. 6 Claims. (Cl. 176—1.)



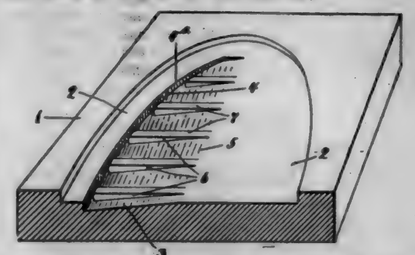
1. An arc device comprising the combination of a cathode, an anode, a thermostatic support for said anode, and a yielding conductive stop member connected to said cathode and located to engage with said anode when said device is not operating.

1,537,681. BRASSIÈRE. WALDEMAR KOPS, New York, N. Y., assignor, by mesne assignments, to Nemo Corset Company, Inc., a Corporation of New York. Filed Jan. 5, 1922. Serial No. 527,070. 2 Claims. (Cl. 2—42.)



1. In a garment of the class described, a front member, a back member, the said front and back members having extensions adapted to overlie each other at the sides of the body of the wearer, the said extensions in both sides of the garment having portions in their upper edges adapted to conform to the under arm section of the body of the wearer, and means for adjusting circumferentially of the arm pit of the wearer the upper portion of one of the said extensions on each side of the garment and connecting the same to the adjacent extension to maintain the overlapping extensions in position on the body of the wearer.

1,537,682. TELEGRAPHIC RECEIVING SYSTEM. GEORG KRAUSS, Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Oct. 26, 1920. Serial No. 419,778. 3 Claims. (Cl. 178—88.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The method of receiving telegraphic signals formed of direct current impulses which consists in highly amplifying the signals to form steep current curves and suppressing the apexes of such secondary amplitudes as might disturb the operation of the receiver before the said amplitudes reach the receiver, in limiting the current of saturation of the amplifying tube for amplifying the signals so that the apexes of said secondary amplitudes are cut off to obtain substantially rectangular current curves in said receiver.

1,537,683. MACHINE FOR RELASTING SHOES. EUCLID I. LA CHAPELLE, Brockton, Mass. Filed Mar. 27, 1920. Serial No. 369,313. 22 Claims. (Cl. 12—15.)

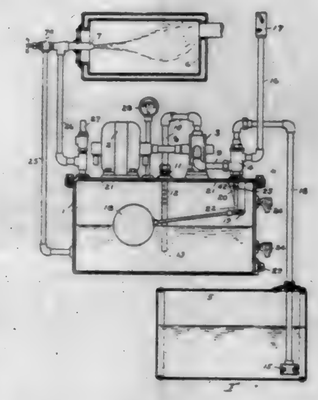
1. A shoe relasting machine, having, in combination, shoe forepart relasting means, comprising shoe sole engaging means for lifting the shoe sole from the last bottom during the time of its shoe forepart relasting operation and a co-operating last holding pin.

1,537,684. SHOE-SOLE MOLD. EUCLID I. LA CHAPELLE, Brockton, Mass. Filed July 29, 1924. Serial No. 728,854. 8 Claims. (Cl. 18—42.)

8. A shoe sole mold, having, in combination, a bevel shaped depression at one of its lateral sides, and a plurality of elements, in the form of ribs, positioned transversely of the said bevel shaped depression and a substantial distance inwardly of the outer wall portion of the said bevel shaped depression.

1,537,685. STENCIL MARKER. WALTER PORTER LADD, Montreal, Quebec, Canada. Filed Mar. 26, 1923. Serial No. 627,644. 3 Claims. (Cl. 101—4.)

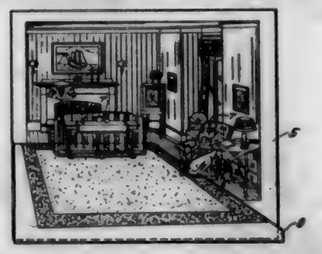
1. In a marking device, pincer arms shaped between pivot and handle to receive a ball and carrying intermediately on one arm a ball cup, and an arc-shaped



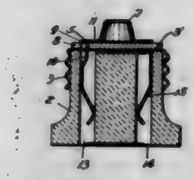
type rack carried by the other handle opposite said ball cup and having means therewithin for holding the type in an arc-shaped row corresponding with the ball surface.

1,537,686. AMUSEMENT DEVICE. AMBROSE E. LYNN, Denver, Colo. Filed Aug. 6, 1923. Serial No. 655,911. 2 Claims. (Cl. 272—1.)

1. In combination a horizontal surface, a shaft rotatably mounted and spaced from said surface, said shaft having an offset portion, a platform having one end secured to the offset portion of the shaft and the other end slidably connected to the horizontal surface, two opposite inwardly and downwardly inclined platforms spaced from the ends of said first-named platform, a platform section hingedly connected to each end of the first-named platform section and having their free ends supported by the surfaces of the two oppositely inclined platforms and anti-friction means between the free ends of said platform sections and the inclined platforms.



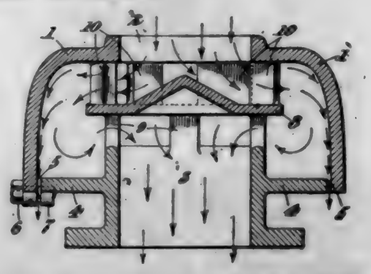
1,537,687. OIL AND AIR PUMPING SYSTEM. WILLIAM L. MORRIS, Chicago, Ill., assignor to Electroil Syndicate, Chicago, Ill., an Association composed of C. P. Jaeger, L. M. Rutledge, William L. Morris, and William K. Booth. Filed Sept. 18, 1922. Serial No. 588,768. 3 Claims. (Cl. 158—36.5.)



1. The combination with a receiver for air and fuel under pressure, of means for utilising air and fuel therefrom, a pump having a single receiving and discharge line, the latter connected with the receiver, a float in the receiver, fuel and air supply pipes, and a double valve connecting the pipes with the receiving line and controlled by the float for continuously regulating the proportions of fuel and air pumped.

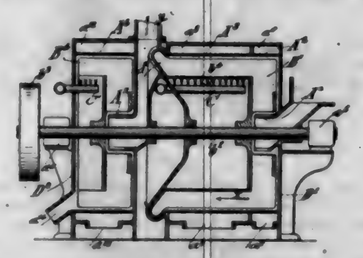
1,537,688. ADVERTISING DEVICE. WALTER E. OLSON and ARTHUR W. PRUSSING, Chicago, Ill., assignors to Olson Rug Company, Chicago, Ill. Filed June 12, 1923. Serial No. 644,863. 2 Claims. (Cl. 35—17.)

1. An advertising device comprising a card bearing a pictorial illustration of the rear and one side wall and the floor of a room, there being a blank space on said card representing the center portion of the floor of the room and outlining a border, and furniture illustrated as resting on the border of the floor along said rear and side wall but projecting into said blank space, there being slits around the lower edges of the furniture illustrated on said blank space; and a plurality of cards bearing illustrations of rugs shaped to correspond with said blank space and insertable in said slits, substantially as described.



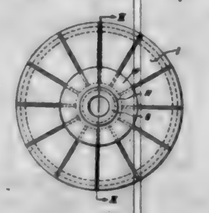
1,537,689. ELECTRIC CONNECTING PLUG. JOHANN G. PETERSON, Hartford, Conn. Filed May 9, 1924. Serial No. 712,036. 3 Claims. (Cl. 173—343.)

1. A connecting plug comprising a body of insulating material having parallel bores, a threaded contact shell fitted over an end of the body and having an end flange engaging an end of the body, a disc fitting against the flange, the body having two hollow rivets embedded therein, extending through the end flange and also through the disc, a disc fitted against the other disc, perforated to receive said rivets, the rivets being extended through both discs and headed over the outer face of the outer disc, the latter disc having a central end contact, and two contacts fitted in the respective bores, one of which has a portion bent between the end flange and said insulating disc, the other having a portion extending through a slot in the insulating disc and clamped by the conducting disc to the insulating disc.



1,537,690. STEAM DRIER. ROLAND S. PORTHAM, St. Johns Wood, and ALBERT E. TOMPKINS, Brockenhurst, England. Filed May 9, 1923. Serial No. 637,902. 1 Claim. (Cl. 183—80.)

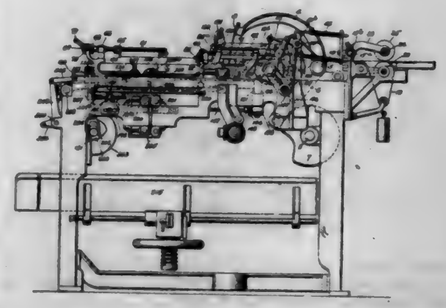
A steam drier comprising a bell-shaped casing structure having a steam inlet at its upper end and a steam outlet constituted by a member contained in its lower end, an annular water separating chamber connecting



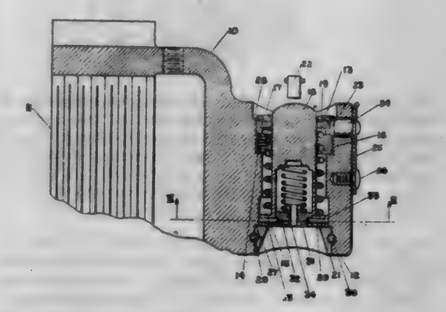
the steam inlet and steam outlet, an annular baffle surrounding the steam outlet, a deflector obstructing direct flow of steam between the steam inlet and steam outlet, a series of fixed vanes surrounding the steam inlet between the casing and said deflector to form a series of deflecting passages arranged in conjunction with the steam inlet and deflector to impart high velocity rotary flow to the steam passing therebetween, and a water discharge outlet constituted between the bell-shaped casing and the member in which the steam outlet is constituted.

1,537,691. CENTRIFUGAL SCREEN. PAUL PRIEM, Heidenheim, Germany, assignor to American Voith Contact Company, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,851. 11 Claims. (Cl. 92—34.)

1. In a centrifugal screen, the combination of a casing provided with a plurality of chambers arranged axially of said casing, a cylindrical screen forming the inner wall of said chambers, and a runner mounted upon a shaft axially of said screen and provided with wings extending opposite to the wall of said screen and the chambers of said casing.



1,537,692. DISK COMMUTATOR. PHILIP W. PROUTY, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 14, 1924. Serial No. 731,951. 8 Claims. (Cl. 171—320.)

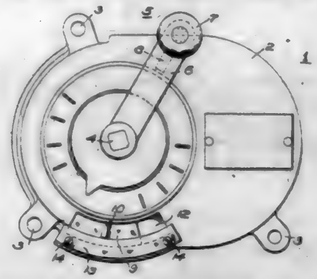


1. A commutator comprising a supporting disk of insulating material, a plurality of conducting segments disposed upon the face of said supporting disk, one end of each of said segments having a portion overlapping said supporting disk to hold the segment in place, and an additional insulating member secured over the other end of each of said segments to hold the same against said supporting member.

1,537,693. SHEET-FOLDING MACHINE. EARL D. RADER, Bedford Township, Westchester County, N. Y., assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1922. Serial No. 595,590. 39 Claims. (Cl. 270—81.)

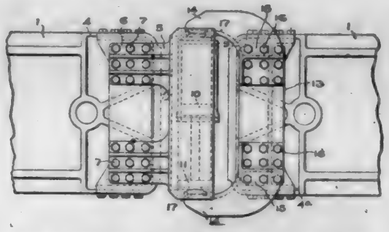
1. In a folding machine, the combination of two sets of second fold folding mechanisms, means for simultaneously supplying once folded sheets to both of said second fold mechanisms, a third fold mechanism, two parallel conveyors leading respectively from said second fold mechanisms to and past said third fold mechanism, a third fold gauge movable into and out of position to arrest sheets upon said parallel conveyors, and third fold registry devices, whereby two sheets can be simultaneously folded and delivered one as an eight and one as a sixteen page signature.

1,537,694. AUTOSTOP GOVERNOR. JOHN P. RIGSBY and WILLIAM T. MANNING, Essington, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1920, Serial No. 387,582. Renewed Feb. 1, 1923. 13 Claims. (Cl. 264—17.)



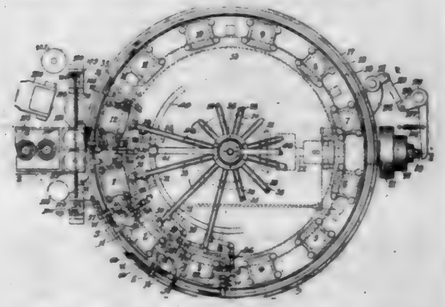
1. In an auto-stop governing mechanism for rotary mechanism, the combination of a transversely movable tripping member, a detachable work member, and releasable locking means for holding the detachable weight member in a single position only with respect to the tripping member, whereby, when the detachable weight member is locked in position the tripping member moves out to tripping position upon the attainment of a predetermined overspeed, and, when the detachable weight member is removed, the tripping member moves to tripping position at a speed below the predetermined overspeed.

1,537,695. CONTROL APPARATUS. LYNN G. RILEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1921. Serial No. 444,922. 4 Claims. (Cl. 74—88.)



1. The combination with a rotatable shaft, of a cover member through which said shaft extends, a rigid member secured to said shaft above said cover member, a recess in said cover member, a movable member disposed

in said recess, and a projecting lug carried by the movable member for stopping the rotation of said rigid member and said shaft after said shaft has been ro-

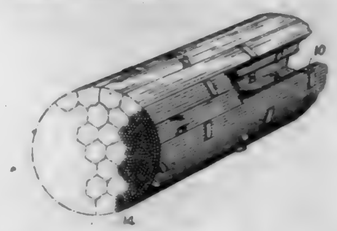


tated through a predetermined angle of more than 360°, said movable member being actuated by said rigid member through a predetermined angle.

1,537,696. CENTERING DEVICE. JOHN GILBERT RITTER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 6, 1924. Serial No. 718,226. 8 Claims. (Cl. 105—165.)

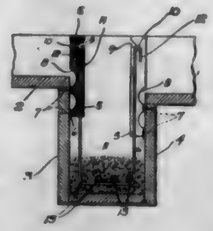
4. The combination with an articulated railway vehicle, of a centering device therefor and means for effecting steering of the articulated members relative to the curvature of the rail, said centering device comprising a plurality of pronged arms secured to the ends of the articulated members and a fluid-pressure apparatus adapted to engage the prongs of said arms.

1,537,697. APPARATUS FOR MOLDING ARTICLES. THEODORE C. ROBERTS, Bridgeport, Conn., assignor, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed July 9, 1919. Serial No. 309,702. 51 Claims. (Cl. 18—53.)



1. A pressing machine including, in combination, a movable support, a plurality of presses carried by the support, and means for successively effecting various treatments of the material in the presses, said means being adapted to be actuated by the movement of the support, and also adapted to be individually actuated independently of such movement and independently of each other.

35. An apparatus for pressing articles, including a movable support, a plurality of pressing units mounted thereon and provided with platens, means for cooling the platens, including cooling fluid-admission and discharge means, and means controlling the admission and discharge adapted to have opening and closing movement distinct from the opening and closing movement of the pressing units.

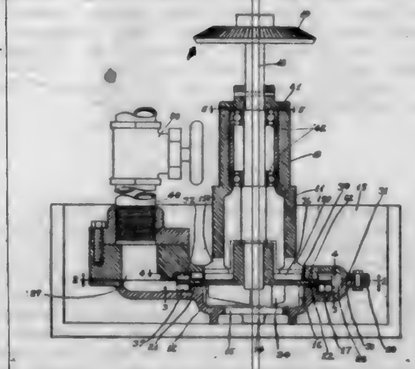


45. In a multiple pressing machine, valve mechanism adapted to be actuated by the movement of the machine for controlling the admission and discharge of hydraulic power used to actuate each pressing unit in proper synchronism with its various operations, and stationary means for actuating the valve mechanism.

1,537,698. LAYING OF AND SEIZING FOR SUSPENSION-BRIDGE CABLES. HOLTON D. ROBINSON, New York, N. Y. Filed Oct. 15, 1924. Serial No. 743,682. 10 Claims. (Cl. 14—22.)

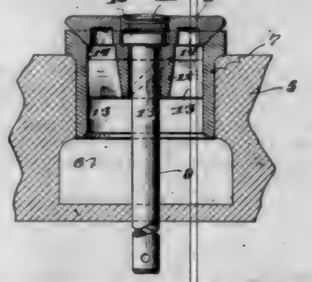
1. The method of laying a cable for a suspension bridge comprising the provision of a series of strands of wire in parallel relation, banding the strands with seizings occupying little space radially of the cable and designed to be readily burst under pressure, laying the strands, and applying pressure to the outermost strands for compacting the cable, while allowing said seizings to remain in the cable.

1,537,699. STIRRUP CHAIR. HARVARD S. ROCKWELL, Minneapolis, Minn. Filed Dec. 29, 1923. Serial No. 683,884. 6 Claims. (Cl. 72—122.)



5. In a reinforced concrete beam construction, stirrup chairs adapted to be secured to the inner faces of a form and having stirrup supports and stirrups carried by said supports and depending within the form.

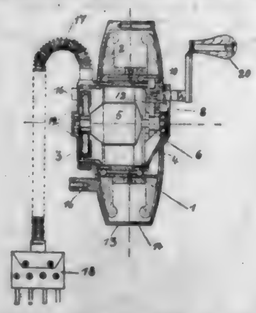
1,537,700. CENTRIFUGAL PUMP. VICTOR ROSENMAGEN, Bellevue, Ky. Filed Apr. 19, 1924. Serial No. 707,730. 8 Claims. (Cl. 103—110.)



1. In a device of the class described the combination of a casing having a rotor chamber therein, the casing comprising ribs extending into said chamber from opposite sides thereof, a rotor within the chamber and lying

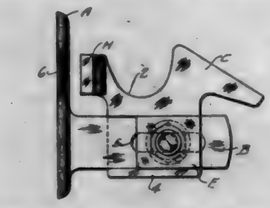
between the ribs extending from the opposite sides of the chamber, the ribs on opposite sides of the rotor dividing the chamber sections on opposite sides of the rotor into a central recess and a way lying outwardly of said ribs, the ribs lying on the same sides of the rotor being spaced at their ends whereby to establish

communication between the central recesses and the ways disposed on a common side of the rotor, the rotor having apertures in it for establishing communication between the central recesses disposed on opposite sides of the rotor, and blades extending from opposite sides of the rotor and operating in the central recesses and in the ways.



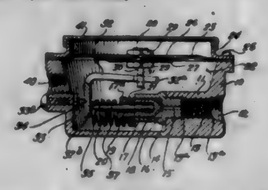
1,537,701. ENGINE VALVE. GEORGE E. R. ROTHENBUCHER, Chicago, Ill. Filed Aug. 11, 1922. Serial No. 581,171. 1 Claim. (Cl. 123—188.)

A valve structure for use on internal combustion engines comprising a substantially tubular member having a hub and a plurality of radial obliquely arranged wings connecting the hub to the tubular member, a valve having a head provided with a plurality of separate pockets in the under side thereof and adapted to receive the fluid which passes between the obliquely arranged wings whereby the fluid imparts a turning movement to the valve head, said valve head being provided with a stem movable through said hub.



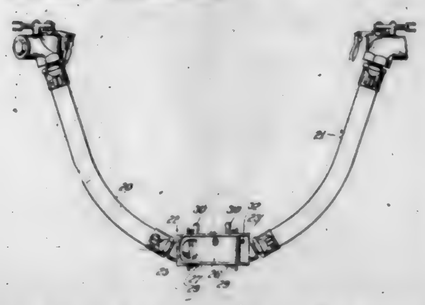
1,537,702. ELECTRIC REEL. KARL ROTTGARDT, Dahlem, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1921. Serial No. 495,598. 4 Claims. (Cl. 242—85.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A reeling device for wireless antenna and the like, comprising an electric motor, a reel revolubly mounted on said motor, means interposed between said motor and said reel whereby said motor may drive said reel, and a separable casing enclosing said reel, motor



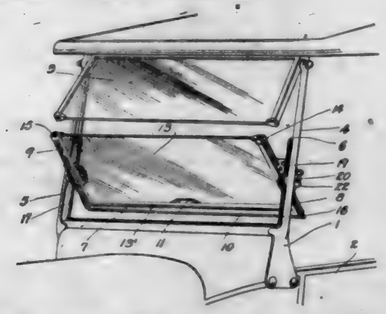
and transmission means, a portion of said casing being removable to expose said reel and transmission means, and the other portion having lugs thereon for mounting.

1,537,703. KEEPER FOR REFRIGERATOR LOCKS. ADOLPH RUBIN, St. Louis, Mo., assignor to Sieber Products Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 11, 1923. Serial No. 650,837. 4 Claims. (Cl. 292—340.)



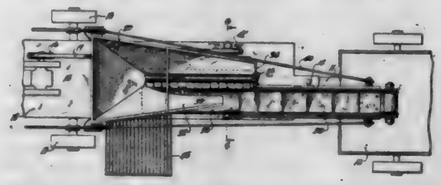
1. A keeper for refrigerator locks, comprising a part adapted to be connected to the refrigerator and provided with a forwardly-projecting shank, and a latch-engaging member adjustably mounted on said shank and provided with a laterally-projecting abutment that is adapted to be engaged by a tripping device.

1,537,704. PRESSURE REGULATOR. JOHN RUMPF, New Milford Borough, N. J., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 24, 1923. Serial No. 620,923. 9 Claims. (Cl. 50—26.)



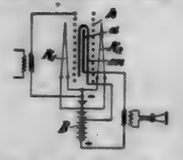
1. In a device of the class described, in combination, a pressure chamber, a valve controlling the entrance of fluid thereto, a diaphragm responsive to fluid pressure within said chamber, a lever connected to said diaphragm and responsive to movements thereof, means connecting said lever and said valve to make the latter responsive to movements of the former, spring means urging said lever in opposition to the effect thereon of fluid pressure upon said diaphragm and holding said lever against its fulcrum, and means for adjusting the position of said fulcrum to vary the force exerted by said spring against said lever.

1,537,705. TRAIN-PIPE-HOSE COUPLING, EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed June 16, 1922. Serial No. 568,673. 15 Claims. (Cl. 285—68.)



1. A hose coupling comprising a coupling member, a lug on one side face thereof, and an arm on the opposite side extending forwardly therefrom, the arms and lugs of mating coupling members being adapted by interengagement to connect said members together, and means to give the two members relative longitudinal movement to disengage them upon the upward movement of the arm of each member from normal engaging position with the lug of the other member.

1,537,706. WINDSHIELD. OLOF HELMER SANDGREN, Kansas City, Mo. Filed Dec. 20, 1923. Serial No. 681,858. 1 Claim. (Cl. 296—92.)

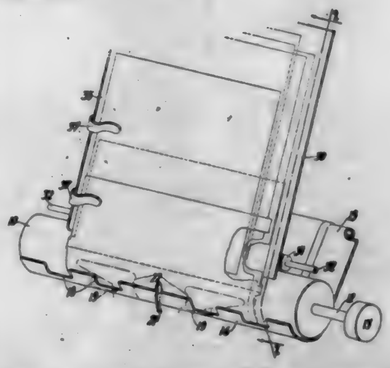


In combination with a wind shield frame, having two side posts, of a glass panel frame, and yielding concavo-convex bracket arms pivoted to the panel frame, the concave portions engaging the posts.

1,537,707. BEET-TOPPING MACHINE. JOHN SCHOLL and JOHN WEILER, Belgium, Wis. Filed Nov. 5, 1924. Serial No. 747,899. 10 Claims. (Cl. 146—85.)

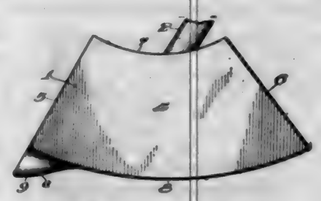
1. In a beet topping machine, the combination with a beet-receiving hopper, of a pair of beet-supporting rolls at the bottom thereof rotatable in opposite directions to receive the tops of the beets between them from above, and cutting means disposed on said rolls, said rolls being disposed one above the other to permit the lateral and downward discharge of the beets from the lower roll as soon as they are topped.

1,537,708. THERMIONIC VACUUM TUBE. WALTER SCHOTTKY, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 27, 1919. Serial No. 320,249. 2 Claims. (Cl. 250—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



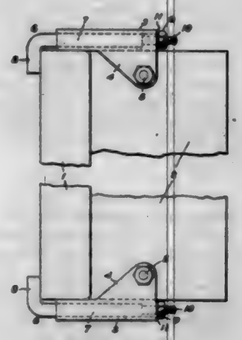
2. In a vacuum tube of the character described in combination, a glow cathode, an anode, a grid electrode and two grid-shaped conductors disposed between said cathode and said anode and insulated therefrom, one of said conductors having a potential relatively to the cathode lower than that of said anode, while in the other conductor has a positive potential relatively to said cathode exceeding the potential corresponding to its position in the space between the cathode and anode.

1,537,709. PROCESS OF REMOVING NONMETALLIC INCLUSIONS FROM IRON OR STEEL. HUGH C. SICARD, New York, N. Y. Filed Nov. 1, 1923. Serial No. 672,177. 3 Claims. (Cl. 75—45.)



1. A process of removing non-metallic inclusions from iron or steel comprising the formation in a suitable furnace of a molten bath of iron or steel, then tapping the furnace into a ladle, then adding to the contents of the ladle titanic oxide, and then adding to the contents of the ladle aluminum.

1,537,710. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Sept. 18, 1920, Serial No. 411,181. Divided and this application filed Jan. 27, 1923. Serial No. 615,231. 9 Claims. (Cl. 197—127.)

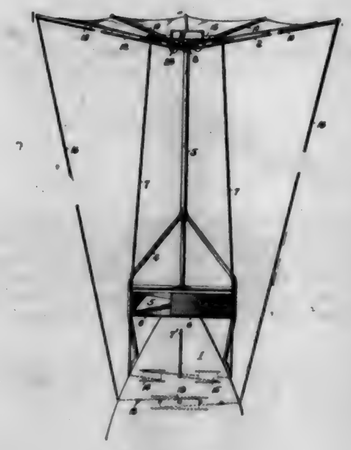


1. In a typewriting machine, a platen, a collating table, and a paper-finger pivotally mounted behind the table, extending around the edge of the table, and projecting over the sheet-field at the front of the table, the finger being movable on its pivot into and out of engagement with the front face of the table.

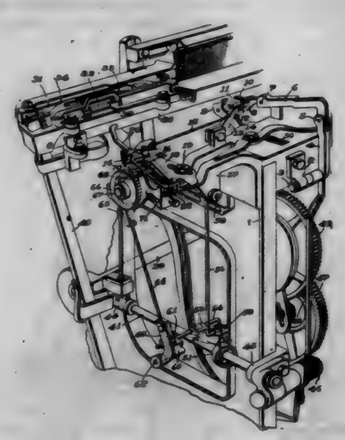
1,537,711. GAME CLUB. LEWIS B. SPAFFORD, Chicago, Ill. Filed Oct. 2, 1924. Serial No. 741,096. 7 Claims. (Cl. 273—77.)

4. A game club having an arcuate shaped head having inclined impact faces at its ends and sides, said head having at one end an inclined projection extending below its under side, and a shaft secured to said head at an inclination conforming to the inclination of the end face at the projection so that the latter may be used to strike a ball in the manner of a billiard cue on inverting the position of the club and giving an end thrust on the shaft.

1,537,712. CLAMP. WOLDEMAR SPECHT, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1921. Serial No. 487,812. 5 Claims. (Cl. 292—256.)



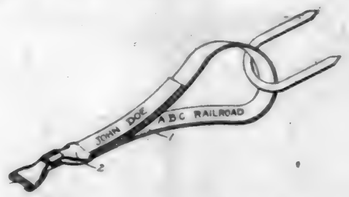
1. In a clamping device of the class described, a channel shaped member provided at one end with extensions to the flanges thereof, in the planes of the flanges whereby said channel member may be secured to an article to be clamped, a member positioned within said channel member longitudinally movable therein and provided with a projecting portion substantially parallel to the extensions of said channel member and adapted to abut another article to be clamped, and means carried on said movable member adapted to draw said projecting portion and said extensions toward each other to hold the articles to be clamped.



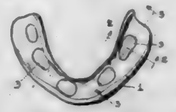
1,537,713. DRAG RUDDER FOR GRAVITY BOMBS. ELMER A. SPERRY, Brooklyn, N. Y., and THOMAS H. PHILLIPS, Jr., Fort Myers, Fla.; said Phillips, jr., assignor to said Sperry. Filed June 4, 1921. Serial No. 474,909. 7 Claims. (Cl. 102—2.)

1. A parachute having its apex at its lowest point in the open position and at its highest point in the folded position.

4. A parachute having a ring fixed thereto so that any movement of said ring causes corresponding movement of said parachute, and means connected to said ring for tilting the same to control the direction of travel of said parachute.

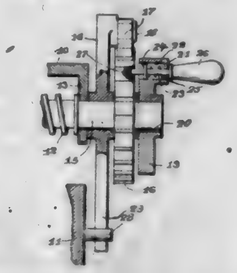


1,537,714. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar 26, 1924. Serial No. 701,888. 10 Claims. (Cl. 139—270.)



1. In an intermittent feeler mechanism for looms, the combination of a feeler, means for holding the feeler in retracted position beyond the reach of the filling on detecting beats during periods of inactivity and freeing it at intervals to periods of activity during weaving with the same supply of filling in the shuttle, and mechanism timed with relation to the picking movements of the shuttle for causing release of the feeler to its periods of activity only when the shuttle is absent from the detecting shuttle box.

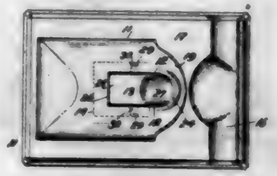
1,537,715. SEAL. SYDNEY W. TREAT, Chicago, Ill., assignor to Signode System Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 29, 1920. Serial No. 377,697. 5 Claims. (Cl. 292—315.)



1. A seal member of the class described comprising an initially flat rectangular body portion having a narrower tongue formed integral with and projecting centrally from one end thereof, both lateral edges of said body member being turned toward each other to provide strip slots parallel with the lateral edges of said tongue.

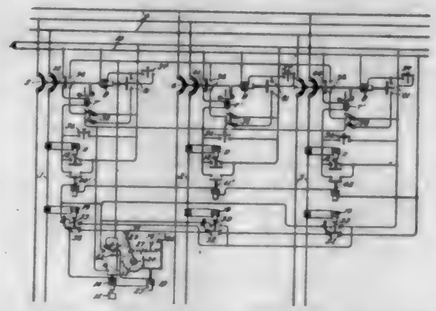
1,537,716. DENTURE. WILLIAM R. TWIGGS, Cleveland, Ohio. Filed Mar. 8, 1924. Serial No. 697,759. 5 Claims. (Cl. 32—4.)

1. A denture formed of substantially hard material and having secured thereto a suction member composed of a hard, relatively porous material, said member having a surface conforming substantially throughout with the contact surface of said denture.



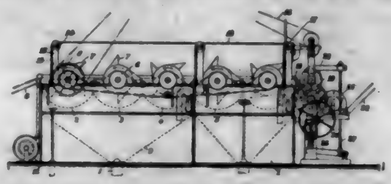
1,537,717. RATCHET MECHANISM. CORNELIS F. M. VAN BERKEL, Rotterdam, Netherlands, assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed Mar. 8, 1919. Serial No. 281,338. 3 Claims. (Cl. 74—54.)

2. The combination with a rotary element, of a ratchet wheel revolubly mounted on said element, a hand-operated device fixed to said element for rotating the same, means for rotating said ratchet wheel, and spring-actuated means on said hand-operated device for connecting said ratchet wheel and hand-operated device to rotate said element from said ratchet wheel.



1,537,718. INKSTAND. FRANK A. WEEKS, Plainfield, N. J. Filed May 24, 1922. Serial No. 563,449. 1 Claim. (Cl. 120—67.)

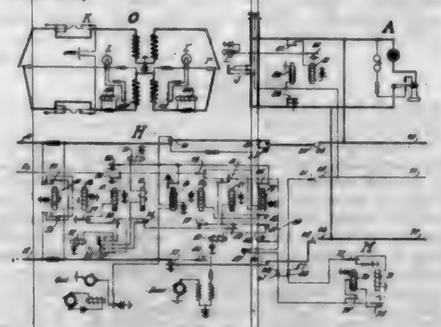
An inkstand comprising a base containing a well for ink and a cover mounted on said base over said well containing in its central forward portion an elongated opening extending close to the forward portion of the cover, said cover being formed in its bottom along the sides and rear end of said opening with a three-sided recess and above the sides of said recess with bearing recesses normally opening downwardly into the same, said cover having within said opening an elongated tiltable self-closing substantially horizontal closure-device therefor



comprising a forwardly extending tongue, a weighted rear portion and side trunnions within said bearing recesses, and said cover having a three-sided frame fastened within said three-sided recess and closing said bearing recesses from below.

1,537,719. AUTOMATIC SWITCHING EQUIPMENT. BENJAMIN S. WEINFIELD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 12, 1922. Serial No. 560,517. 17 Claims. (Cl. 175—294.)

13. In combination, an electric circuit, a circuit breaker in said electric circuit, current responsive means for effecting the opening of said circuit breaker when the current in said electric circuit exceeds a predetermined value, reclosing means for automatically reclosing said circuit breaker when it is opened by the operation of said current responsive means, and current responsive means for rendering said reclosing means inoperative when the current in said electric circuit exceeds a second predetermined value.



1,537,720. WOOL-WASHING MACHINE. JOHN FRANCIS WHITE and WILLIAM HOLLERAN WHITE, Bradford, England. Filed Apr. 29, 1921. Serial No. 465,459. 2 Claims. (Cl. 141—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

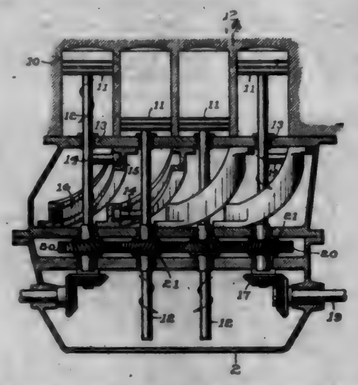
1. A wool washing machine comprising in combination, a vat to contain liquor, a tray disposed therein so as to be submerged beneath the washing liquor formed of a sequence of semi-cylindrical, perforated surfaces, a plurality of rotatable drums provided with solid faced beaks

and spaced apart so that the beaks thereof are out of contact with each other during the revolution of said drums, said beaks rotating in proximity to the cylindrical surfaces of the tray.

1,537,721. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 28, 1922. Serial No. 584,760. 10 Claims. (Cl. 179—27.)

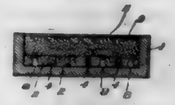
1. In a telephone system, an automatic connector switch, a telephone line having line and test terminals in said switch, a manual jack associated with said line, means for connecting with said line by way of said jack, means for making said line busy by a negative battery connection to the sleeve of said jack whereby a negative potential is placed on said test terminal, means for operating said connector into engagement with the terminals of said line, means in said connector normally operative responsive to a negative potential on said terminal to connect with said line, a relay group associated with said connector, and circuit connections controlled by said relay group for preventing such connection when a negative battery connection exists on said test terminal.

1,537,722. PIPE CONNECTION FOR CONTAINERS. JOSEPH WILLIAM WINTER, Penfield, Pa. Filed July 28, 1923. Serial No. 654,354. 10 Claims. (Cl. 285—53.)



1. In a container, the combination with a sheet metal wall having an opening therethrough; of two sheet metal reinforcements for said opening, including an inner annular reinforcing plate having a central opening smaller than the opening in said wall; the metal of said wall and of said reinforcement extending in coaxial tubular relation, in contact with each other; the tubular portion of the metal of said reinforcement extending within the tubular portion of the metal of said wall, and through said wall; an outer annular reinforcing plate dished so that its circular edge which is radially inward is axially outward with respect to said tubular portion of the container wall and fitted around the latter; the tubular portion of said reinforcement extending through said wall being expanded to a larger outside diameter than the inside diameter of the tubular portion of said wall; whereby said wall and both its reinforcements are interlocked; a film of brazing alloy extending between said reinforcements and said wall, integrally uniting them, and forming a bead at the ends of the tubular portions of said reinforcements and wall and forming a fillet at the junctions of the other edges of said reinforcements with said wall; a coating of zinc alloy extending over said wall and reinforcements; and an internal pipe screw thread formed in the tubular portion of said inner reinforcement which extends in said wall.

1,537,723. CARDBOARD FIGURE. CARL E. YOUNGBERG, Seattle, Wash. Filed Mar. 31, 1921. Serial No. 457,312. 10 Claims. (Cl. 46—40.)

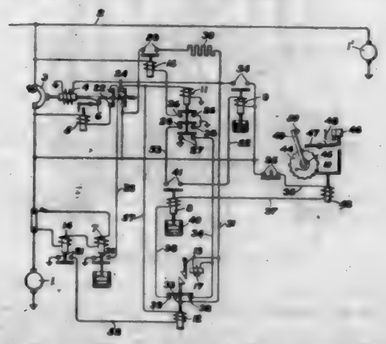


1. A figure made of flat sheet material constructed and arranged to stand erect and having in combination an elongated body portion, a head portion pivoted thereto adjacent its upper end, a pair of arms also pivoted to said body adjacent its upper end, said parts being connected by a single pivot extending normal to the plane of said portions on which they are movably and frictionally held in position, said portions being disposed in a plane which is normal to the direction in which the figure faces, flat leg portions secured to said body portion having feet at the lower ends, said leg portions being movable about vertical axes with said feet, the feet forming the sole support for said figure.

1,537,724. INTERNAL-COMBUSTION ENGINE. MEADE L. ZIMMER, Cordoba, Argentina. Filed Nov. 3, 1923. Serial No. 672,453. 4 Claims. (Cl. 74—14.)

1. In an internal combustion engine, the combination with a set of cylinders and pistons, of a rod connected with each piston, means whereby the longitudinal motion of each rod will cause the rod to turn on its own axis, and means for gearing all said rods together to transmit the motion of rotation from one to another throughout the entire series.

1,537,725. IMITATION TRAVERTIN AND METHOD OF MAKING SAME. SALVATORE S. ZOTTOLI, Quincy, Mass. Filed Nov. 28, 1924. Serial No. 752,743. 7 Claims. (Cl. 18—48.8.)

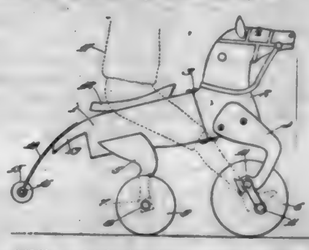


1. The method of making imitation travertin consisting of forming a plurality of cavities in a layer of plastic cement, filling said cavities with cement in a more fluid state than the body of said layer, forming other cavities in said layer while it is still plastic, spreading over the surface to form a bridge of cement over the tops of said last set of cavities and to partially fill them in places, and then allowing the whole mass to dry hard.

1,537,726. BUFFING AND DRAW GEAR FOR RAILWAY VEHICLES. MAXIMILIAN ALMA, Vienna, Austria. Filed July 13, 1922. Serial No. 574,777. 5 Claims. (Cl. 213—8.)

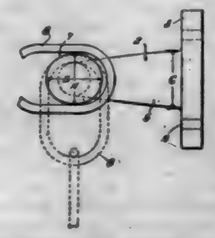
1. In a vehicle and in combination with the frame thereof, draft and buffer rods in alignment and extending longitudinally of the frame of the vehicle, a sleeve in which the adjacent ends of the said draft and buffer rods are slidable, means for mounting the said draft and buffer rods on the frame of the vehicle, and means for yieldingly maintaining the said draft and buffer rods in an initial position in which the adjacent ends thereof are spaced within the said sleeve permitting the said rods to be moved toward and away from each other to a predetermined extent whereby buffer stresses applied substantially simultaneously to the outer portions of the said rods move the same toward each other to bring the inner ends of the said rods together, and draft stresses applied substantially simultaneously to the end portions of the said rods move the same apart connecting them to the said sleeve through which said stresses are then applied independently of the vehicle frame.

1,537,727. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 24, 1924. Serial No. 715,726. 5 Claims. (Cl. 175—294.)



1. In an automatic reclosing circuit breaker system, a source of current, a load circuit, a circuit breaker arranged to connect said source to said load circuit, means operative when said circuit breaker is open to effect the automatic reclosing of said circuit breaker, means responsive to a predetermined overload condition of said load circuit for rendering said automatic reclosing means inoperative to reclose said circuit breaker, and means operative in response to a predetermined condition of said load circuit for automatically rendering said reclosing means operative to reclose said circuit breaker subsequently to said reclosing means having been rendered inoperative.

1,537,728. WIRE TERMINAL. FRANCIS H. BAGLEY, Louisville, Ky. Filed Aug. 26, 1922. Serial No. 584,430. 1 Claim. (Cl. 173—269.)

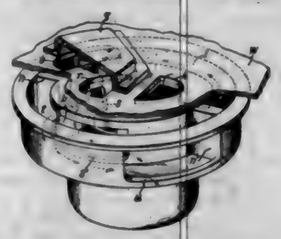


A single-piece eyelet connector for electrical conductors, comprising a metallic body formed with a channel of general circular outline connecting with a flared annulus on its inner edge, a throat projecting from one portion thereof and a general U shaped wire supporting member connected to the throat, said annulus formed with a cut away portion in its edge remote from the channel, the annulus, when rolled over a conductor, forming with said channel portion a housing substantially circular in cross-section conforming to the cross-section of the conductor and said cut-away portion providing a space to receive the conductor.

1,537,729. CHILD'S VEHICLE. WILLIAM H. BANKS, Winthrop, Mass. Filed Jan. 2, 1924. Serial No. 683,860. 2 Claims. (Cl. 208—42.)

1. A child's vehicle having a body portion front and rear leg members and wheels on which said leg members are mounted, means whereby the rider seated on the body portion may propel the vehicle, and a rearwardly extending resilient member normally raised slightly above the level of the surface on which the vehicle is being propelled.

1,537,730. HOOK. HENRY BARKMANN, Chicago, Ill. Filed June 25, 1924. Serial No. 722,236. 1 Claim. (Cl. 248—22.)



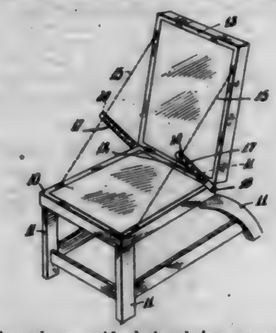
A hook having a head and a base plate, a shank joining said head and base plate, means for securing said base plate to a support with said shank in a horizontal position, the vertical dimension of the base of said shank adjacent said base plate being greater than the vertical dimension of said head and the vertical dimension of said head being less than the horizontal dimension of said head when said hook is thus secured to a support.

1,537,731. COMPOSITE-METAL ARTICLE. DAVID BASCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 11, 1923. Serial No. 638,401. 3 Claims. (Cl. 204—13.)

1. An article of manufacture comprising a foundation metal having a substantial electrolytic potential with respect to cadmium, a layer of tin thereon, and a coating of cadmium on said tin.

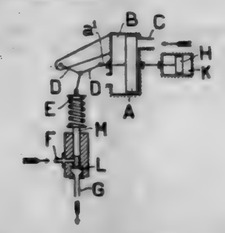
1,537,732. MULTISTAGE SUCTION FAN FOR VACUUM CLEANERS AND THE LIKE. HEINRICH BAUMEISTER, Pankow, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 18, 1923. Serial No. 639,765. 4 Claims. (Cl. 230—11.)

4. In an apparatus of the character described, an impeller wheel having vanes thereon, an inner annular wall having partition means therein to form a plurality of chambers which communicate with the admission sides of the vanes at different points, an outer annular wall in spaced relation to the casing, partition means between said last named wall and the casing which forms therewith a plurality of chambers which communicate with the discharge sides of the vanes at different points, and a wall which forms a passage connecting an inlet chamber to an outlet chamber.



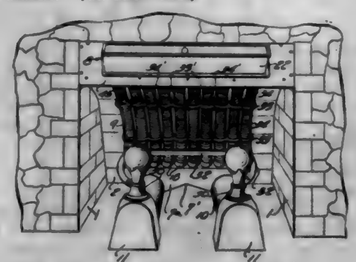
1,537,733. OPHTHALMIC MOUNTING. EARLE J. R. BEATTEY, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 22, 1922. Serial No. 602,621. 5 Claims. (Cl. 88—45.)

1. An ophthalmic mounting having, in combination, two lens-receiving rims, a bridge connecting the rims constituted of non-metallic material, and a reinforcing spring embedded in the bridge having means projecting or indenting beyond a side of the spring into the non-metallic material for securing the spring within the bridge.



1,537,734. RECLINING CHAIR. DORA BECKE, Farrell, Pa. Filed Jan. 9, 1924. Serial No. 685,166. 1 Claim. (Cl. 155—13.)

A chair comprising a seat element, a back element hinged thereto, chains connected at opposite ends to said seat and back element to hold the latter in position, struts hinged at their lower ends to said seat element, said struts each having a hook with upturned bill at its upper end, and a row of hooks with downturned bills



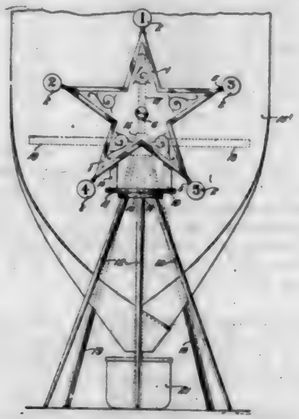
spaced therealong, said chains being passed either over the top hook or selectively under one of the other hooks to support the back element in adjusted position.

1,537,735. DEVICE FOR REGULATING THE PRESSURE OF THE INJECTING AIR OF TWO-STROKE INTERNAL-COMBUSTION MARINE ENGINES PROVIDED WITH SCAVENGING PUMPS. HEINRICH BECKER, Kiel-Hassee, Germany, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Filed Jan. 6, 1923. Serial No. 611,129. 4 Claims. (Cl. 123—33.)

1. In combination with a Diesel engine having scavenging-air and injecting-air devices, a valve for regulating the pressure of the injecting air, a piston influenced by the pressure of the scavenging air, and mechanical transmission means between said piston and said valve for transmitting the movement of said piston to said valve in varying ratio.

1,537,736. FIREPLACE HEATING AND DRAFT-CONTROL APPARATUS. JOSEPH S. BENNETT, Hammondsport, N. Y. Filed July 22, 1924. Serial No. 727,416. 17 Claims. (Cl. 126—121.)

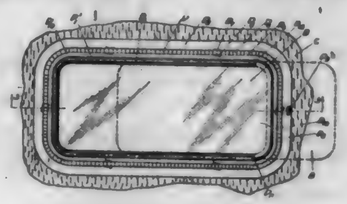
1. A fireplace heater comprising an air collecting header disposed on the hearth and having a direct communication with the atmosphere, a distributing header



communicating with the room and disposed at the top of the fireplace and a plurality of metallic air heating tubes leading upwardly from the air collecting header to the distributing header for effectively heating the atmospheric air during its passage therethrough to the distributing header, said tubes being flexible and individually adjustable in situ to conform to the particular requirements of the fireplace and to regulate the spaces therebetween for the passage of the products of combustion.

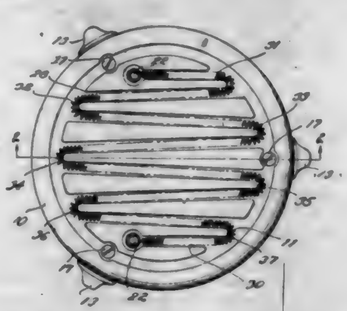
1,537,737. ALTERNATING-CURRENT COMMUTATOR MOTOR. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 3, 1922. Serial No. 572,514. 21 Claims. (Cl. 172—278.)

2. A laminated rotor for an alternating current dynamo electric machine having a repulsion motor winding and a permanently short-circuited winding, a flux path between said windings of sufficient capacity to permit the normal operating flux of the machine to thread the same without excessive saturation and of such reluctance, the major portion of which is due to an air gap, as to cause a portion of said flux to pass beneath said windings.



1,537,738. AMUSEMENT DEVICE. INGHAM W. BISBING, Colwyn, Pa. Filed July 20, 1923. Serial No. 652,710. 3 Claims. (Cl. 273—103.)

1. An amusement device including a plate; disks; means pivoting the disks on the plate whereby the disks will be held against swinging forward from vertical position and permitted to swing rearward into horizontal position, and spring clips extending from the plate for supporting the disks in horizontal position.

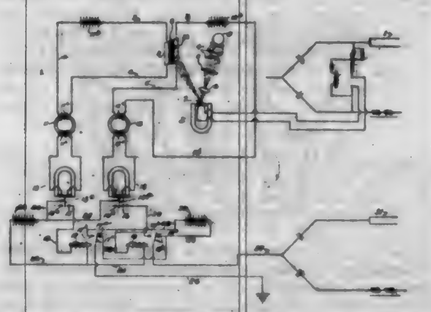


1,537,739. LIGHT FOR VEHICLE CURTAINS. WILLIAM K. BISHOP, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Sept. 15, 1924. Serial No. 737,692. 10 Claims. (Cl. 296—145.)

2. In a curtain light frame comprising members adapted to be nested, a male part for one of the members and a registering female part for the other member, an internal flange for each of said frame members of which one flange is provided with a gap, a pane mounted between said flanges and removable therefrom through said gap,

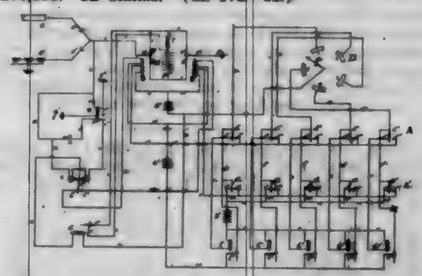
means serving to detachably retain the assembled pane in place, and indented cleat means interlocking said flanges about the pane.

1,537,740. HEATING ELEMENT. RICHARD H. BLISS, Cleveland, Ohio, assignor to Rogers Electrical Laboratories Company, Cleveland, Ohio, a Corporation of Maine. Filed Mar. 12, 1923. Serial No. 624,526. 5 Claims. (Cl. 219—37.)



1. In an electrical heater of the character described, a utensil supporting member formed of heat resisting and electrically non-conductive material, said member having an annular groove formed in the top surface thereof and a plurality of grooves extending in a common direction and communicating at each end with the annular groove, the walls of the annular groove being undercut adjacent the ends of the grooves extending thereinto.

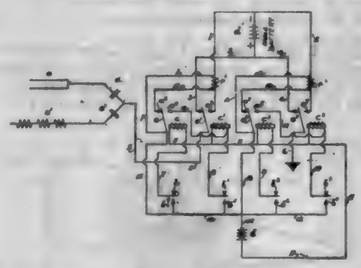
1,537,741. SEALING MEANS. EDWARD J. BROOKS, East Orange, N. J. Filed June 1, 1923. Serial No. 642,729. 1 Claim. (Cl. 282—325.)



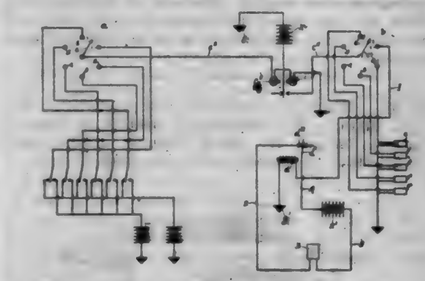
A sealing element comprising: a blank of sheet material having a weakened zone composed of a central elongated aperture and scorings extending in opposite directions from the ends of said aperture, there being a slightly raised portion adjacent each side of the aperture, two upstanding lips substantially parallel to the raised portions aforesaid and located one on each side of the aperture and in spaced relation thereto to admit of the insertion of cord ends, and two guide lugs located adjacent the outer end of each scoring and separated thereby and separated from the upstanding lips aforesaid.

1,537,742. TELEGRAPHY. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed Oct. 4, 1919. Serial No. 328,525. 2 Claims. (Cl. 178—88.)

1. In a system such as described in which current impulses of opposite polarity are adapted to operate a galvanometer in opposite directions in connection with a narrow beam of light focused on the mirror of said galvanometer so that in its neutral position it stands between two selenium resistance elements separated by a space substantially equal to the breadth of the light beam so that as the galvanometer is moved in one direction one element is illuminated and when moved in the other direction the other element is illuminated, two separate and distinct circuits from said elements each of which includes a source of electric energy and the primary of a transformer, the secondaries of said transformers being each in circuit with a separate polarized relay and separate circuits each with its own translating device controlled by the respective relays so that as the galvanometer is moved in either direction the change in either selenium element by its illumination will, through its transformer operate its own relay and translating device for the purpose specified.



1,537,743. TELEGRAPHY. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed Apr. 24, 1920. Serial No. 376,358. 12 Claims. (Cl. 178—51.)



1. In a system for sending and receiving a plurality of messages over a conductor, means for sending current impulses of different polarity for one message and of the opposite polarity for a different message, and causing a zero condition where impulses of opposite polarity appear simultaneously in different messages, and separate means at the receiving end operated by the positive and negative impulses and by the zero condition of the cable, as set forth.

1,537,744. TELEGRAPHY. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed Apr. 28, 1920. Serial No. 377,302. 8 Claims. (Cl. 178—88.)
